PRESIDENT TRUMAN

I now come to the successor of President Roosevelt, President Truman. He has made a splendid start. He has made a fine impression throughout the country. I have no doubt that he has done his duty as he has seen it. He has done many things that the American people wanted done. For instance, as soon as the war was over in Europe he made a recommendation to the Congress that appropriations already made for the war, amounting to something like $7,000,000,000, be canceled. It was a fine start—a splendid start. He has made many other changes and taken many other positions that the American people approve, and my greatest hope is that he will continue to make, and I believe he will make, a splendid President of the United States. If I can say that in view of an appointment that he has recently made in Tennessee, which I opposed, I think any other honest-to-God American citizen can say and hope the same thing.

THE PEACE

Mr. Chairman, ladies and gentlemen, I come now to the peace. America and the various other nations of the world have been writing peace treaties ever since I can remember, and I know from history that they began long before. There have been the most solemn pledges written to keep the peace. Agreements to keep the peace were entered into by Theodore Roosevelt, by Taft, by Harding, by Coolidge, and by all the rest, and yet, whenever any European or any Far Eastern country wants to go to war, they simply call the peace treaties scraps of paper and go on and make war. Perhaps as great a man as I ever knew, the great and immortal Woodrow Wilson, made the greatest efforts to obtain a lasting peace of any man who ever lived. He was already famous, but his advocacy of the League of Nations made him more famous. I was a strong Wilson man, as you all know. I was a strong believer in the League of Nations, as you all know. I fought for it early and late, believed in it then and believe in it now.

The peace treaty that is being prepared, or which may be prepared at San Francisco, is really but a modified version of the League of Nations. I hope they will make an agreement that we can all get behind and stay behind. The agreement itself has but one opportunity to become permanent, and that is for it to have behind it real force and the real force of a nation that is really for peace.

As I have said before, America has the greatest Navy, the greatest Marine Corps, the greatest Army, and the greatest Air Corps in the world, and the greatest production in the world, and we are a peace-loving nation. If we retain our own power and keep our own agreement, the peace of the world will be established, because no nation, or all the nations of the world together, would be willing to make war on us as long as we stand behind the agreement to keep the peace of the world. We might as well be frank about it. We might as well be open about it, and we might as well be honest about it. It takes the American desire for peace and American power behind any peace treaty to make the treaty effective and keep the peace.

It will be remembered that after the First World War Great Britain took advantage of President Harding and had our great battleships sunk, at the same time sinking a few old hulks of her own, and Great Britain thereafter kept the largest navy in the world and America took second place. I regarded that as a mistake then. I did not vote for it. I regard it as a mistake now, and so far as I am concerned I shall never vote to sink or destroy America's first place on the seas or to destroy America's first place in the air, because without America's being in first place and without a sufficient army to look after keeping the peace no peace treaty will be effective.

CHANGES IN AMERICAN GOVERNMENT

Mr. Chairman, I cannot close this address without saying that we must not let enthusiasm for winning the war interfere with our patriotism for America, or interfere with or have a desire to change American institutions. Bills, resolutions, amendments, and discussions on the Senate and House floors recently have been many and numerous, all wanting to change our form of government. Some want to make it a strong centralized government and reduce the Congress to a body whose principal duty will be the recording of the President's will. One amendment to the Constitution suggests that we allow Cabinet officers to appear on the floor of the House and Senate and advise and vote for or against laws that we pass. Others want to change the powers of the Senate and still others want to change the powers of the House. Some want a Communist government; some want a Socialist government; some want an all-powerful central government. I do not agree with any of these changes. I want a government as the great Lincoln said, "of the people, by the people, and for the people." I want a government as Thomas Jefferson wanted a government—a government of freemen, a government of divided powers, a government of divided duties. I want to continue our democratic government.

Think of it, my friends, the United States in 156 years has grown from the weakest government in the world to the strongest government in the world! It has outgrown all other republics. It has outgrown all kingdoms. It has outgrown all empires, and it has accomplished more than any government that ever existed, and here are some of us living under the freedom and under the beneficent influences and principles of this great government who at the height of its success, at the very zenith of its prosperity, want to change it and go back to a superannuated and out-worn government. Others want to change it to a Communist form of government that has never made a success. Others want a Socialist government, and others want any kind of government just so it is not like the one we have. Oh, my friends do not let us follow after these vagaries. We have been successful but let not success turn our heads. We have been victorious over the nations who would have destroyed us. Let us not destroy ourselves after they have themselves been destroyed. Let us stand by the declaration of principles enunciated by Jefferson in the long ago. Let us stand by the Constitution of our fathers; let us stand by the Government that they established. Let us stand by its principles, its policies, its constitution, and its practices. Let not success turn our heads but make us more careful that we continue in beaten paths, continue to let the people rule, continue in our peaceful ways. And another caution, in the settlement of this great war do not let us give away everything that we have.

OUR DEBTS

We will come out of this war owing some three hundred billion dollars. Let us begin the work right away of reducing and finally paying that debt. Let us not continue to give away our substance. Let us not spend untold billions of money in Europe or Africa or Asia or South America or Australia. Let us be generous to all our neighbors wherever they may be; let us furnish relief wherever it is necessary, but let us not spend our substance in riotous living; let us not spend our substance in giving away money that will never be appreciated. We gave billions to Great Britain after the last war. We gave billions to France in and after the last war. We were generous. We gave billions to Italy after the last war. They did not appreciate it. They never returned any substantial part of it. If we were to give everything we had and mortgage our future for further gifts they would not pay it back and they would not appreciate it, but as soon as it gave out they would begin to figure on war again. Let us be practical; let us be sensible; let us be just; let us be generous, but do not let us be a nation of spendthrifts.

The Hope for World Peace

EXTENSION OF REMARKS

OF

HON. ROBERT A. TAFT

OF OHIO

IN THE SENATE OF THE UNITED STATES

Monday, May 21, 1945

Mr. TAFT. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a speech which I delivered yesterday in New York City before the American Polish Association in the East.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I consider it a great privilege to be invited to address this great meeting of American-Polish associations. This war began because Poland was unwilling to surrender its freedom to the brutal demands of the Nazi government. No people has suffered such destruction and slavery and systematic extermination as the Polish people. No soldiers have fought with more bravery and determination than Polish soldiers on every front throughout the world. I have had occasion to hear something of the magnificent work of the Polish Army on the Italian front under the inspired leadership of General Anders. The world has seen no more heroic struggle than that conducted by the Polish home army under General Kor-Komorowski in Warsaw.

I cannot express too forcibly my resentment at the disgraceful propaganda which is being carried on in this country today against the Polish people. It has dared to represent them as pro-German, when Poland alone of the occupied nations produced not a single Quisling. Are the memories of our people so short that they cannot remember the year and a half during which Poland fought with the Allies and the Soviet Government supported Germany? This propaganda represents Poland to be reactionary, controlled by a few landed proprietors when, as a matter of fact, it has a greater percentage of small farms than England or France. It has supported the smear against the 16 Polish patriots who were instructed to make themselves known to the Russians to aid the formation of the democratic government agreed to at Yalta. It is a propaganda designed wholly for un-American political purposes without a shred of fact to support it. I can only say to you that the American people and their representatives in Congress are not deceived.

WORLD PEACE IS A NECESSITY

After 5½ years of the most destructive war in the history of the world, the universal longing is for peace. Peace is a necessity because, in the developments of science, was has become so terrible that the alternative to peace may well be the complete destruction of modern civilization. The great problem before the world is how that peace may be best assured. At the end of every war treaties have been written, all purporting to assure perpetual peace between the parties. Time after time international organizations have been established and have failed in their purpose. What we need is not propaganda for some particular scheme, but careful consideration of its soundness and reasonable criticism to improve it. Among the real services that have been performed by the San Francisco Conference is the substitution of argument and careful thought for a propaganda of hullabaloo to convince the people that the words written at Dumbarton Oaks were an unchangeable revelation.

BUT FREEDOM IS EVEN MORE ESSENTIAL THAN PEACE

Peace is vital, but there is one necessity even above peace. That necessity is freedom. The people of the American Colonies preferred freedom to peace in 1776. The people of this country preferred war to slavery in 1861. The Polish people today are not interested in a peace which does not assure their freedom. This is the fundamental objection to a world state. Theoretically, such a state might insure peace more effectively than any international organization, but I would be wholly unwilling to submit the fortunes of the American people to an all-powerful state, with an all powerful army and navy and airforce, the majority of whose citizens would have no sympathy for, or even conception of American ideals. It is inconceivable to me that any statesman can favor a foreign sovereignty over our internal affairs no matter what the safeguards. And a world state would have such sovereignty because it would have all the power. A world state would soon come to have the same power over our citizens which is enjoyed by the Federal Government over the citizens of our 48 States. I hope that there may be no such conflict between peace and freedom in the postwar world, for if there is, the human determination to be free is likely to destroy the peace.

FIVE POLICIES NECESSARY FOR PEACE

What are the necessary steps to our goal of permanent peace? Certainly there is no panacea, and no panacea can be found at San Francisco. Those who claim the proposed United Nations organization to be the solution of every problem are not its real friends. Their propaganda may easily produce a disappointed reaction from the public no matter how desirable may be the results there achieved. There are five principal considerations affecting the hope for peace at this moment:

First. Overwhelming victory in this war is the most important insurance of future peace. The punishment visited upon Germany by modern weapons, and the same punishment which is being visited upon Japan should certainly prevent any nation from going to war for many years to come. Surely, it has become apparent that when any nation starts out to conquer its neighbors and the world, it arouses forces which can only lead to its own destruction. The fate of Germany and Japan will never be forgotten. Our men who have died in the war have not died in vain because the defeat of the aggressors is a lesson the world will not ignore.

Second. There must be created a world public opinion, supported by all powerful peoples, that disputes between nations must be settled, not by war, but by law, by arbitration and by adjudication. I believe that many peoples have reached this conclusion, but evidently some have not. In particular, Russia is unwilling to abandon its right to veto international action on any matter in which it is concerned.

Third. It is essential that the settlement of political boundaries and the freedom of nations be settled justly and with due regard to the right of people to self-determination. If these principles of the Atlantic Charter are not adopted, then we shall have perpetual turmoil and the constant probability of war from political sore spots throughout the world. No permanent peace can be based on national slavery. The peace conference to come, therefore, has even greater importance than that at San Francisco.

Fourth. There must be established a system of sound economic cooperation between nations. While economic causes are not so likely to lead to war as political and national causes, undoubtedly an economic sore spot creates constant protest and dissatisfaction—perhaps forcing a realignment of nations like the Austrian Anschluss. The San Francisco Conference is taking a substantial step in the right direction in the setting up of the Economic and Social Council.

Fifth. On the foundations of the first four steps, there must be constructed an international organization to concern itself with problems which lead to war, and to take action where such action can avert war. Surely an international body, meeting constantly and discussing every threat to peace, can help to move the world in the right direction. But it will have little hope for success unless the foundations are sound upon which it is built.

It is significant that the five conditions I have outlined prevail today in the American Hemisphere. Nations which desire to be free are free, and their boundaries are almost universally satisfactory. There is active economic cooperation. The peoples of America are willing to submit their disputes to a decision by an impartial tribunal. They have created, first by the Pan American Union, and then by the act of Chapultepec, an international organization which promises peace on this continent.

Unfortunately, these conditions do not exist elsewhere in the world today, and so the new international organization starts under a severe handicap. But with victory in this war, I believe it does offer a hope of future peace.

Of the five points that I have reviewed, I believe we can now count on the accomplishment of overwhelming victory.

THERE MUST BE A WILL TO PEACE

But we are not so fortunate in having a world public opinion supporting a law of nations, and demanding that every dispute must be settled by arbitration and adjudication instead of by war. The lack of this public opinion, particularly in Russia, prevents the formation of an ideal international organization. But even in this country our internationalists have emphasized a peace brought about by force, rather than by law and justice.

I have always favored a League of Nations under which all agree that they will submit all disputes to arbitration and adjudication, and that they will abide by the result of an impartial international tribunal. This implies a preliminary unanimous agreement to a law of nations by which disputes may be determined on the basis of justice and not power. If world opinion exists to back such a procedure, the organization should further be empowered to call upon its members to provide force against anyone which does not keep its agreement to abide by an official decision. Undoubtedly, we would have found many people in America unwilling to agree to submit our own international disputes to the decision of a foreign tribunal, but I believe that if the jurisdiction had been carefully defined to exclude matters of internal concern, the American people would have joined such an organization.

The question does not now arise because Russia has refused to go along. Russia has insisted that it must have a veto power over any decision and over the use of force. Consequently, every one of the five great powers is given the same veto power. I don't believe the people of this country have realized how this changes the whole character of the organization. The existence of a veto power, particularly on the rendering of a decision, makes almost impossible the establishment of an international law since nothing can be law from which nations may exempt themselves. Not only is the organization helpless against the great powers of themselves, but it is helpless against all of their satellites. For instance, if Bulgaria, with the consent of Russia, should attack Rumania, Russia could veto any action against Bulgaria, and this might easily be arranged in advance.

Basically, the organization is only an agreement between the powers holding most of the armament of the world to use that armament if they all decide at some future

time that it is in accord with the national policy of all of them to do so. Assume that after the last war, the five great powers would have been the United States, England, France, Italy, and Japan. If Dumbarton Oaks had been in effect, Japan would have vetoed any action against itself for the invasion of Manchuria. Italy would have vetoed any action against itself for the invasion of Ethiopia. In some ways the organization would have been less effective even than the League of Nations whose weakness arose partly from our failure to join.

The truth is that as long as vetoes are insisted upon, there is no real will to peace because there is no willingness to submit the decision of disputes to anything but the arbitrament of force. While that attitude continues, there is little hope of future peace. We can only hope that in time the position of Russia may change. We must admit that they have today some reason to be suspicious that tribunals made up of foreign nations cannot be impartial as between Russia and its neighbors. We can only hope that the continuous conference provided by the Dumbarton Oaks proposals will gradually convince Russia and other nations that the people of this world propose to be guided by principles of justice.

THE POLITICAL SETTLEMENTS MUST BE JUST

The second difficulty is that in which Poland is so much concerned, the danger that we may set up political settlements containing in themselves the seeds of future war. We see today the unfortunate acquiescence of the world in the incorporation of Estonia, Latvia, and Lithuania into Russia. We see boundaries apparently determined by unilateral action before the question has been considered by the world. The eastern boundary of Poland is certainly unfair to Poland today. Under the Yalta agreement the boundaries of Germany and of the countries of southwestern Europe were to be settled at the peace conference, but they are being determined on the basis of power and not of justice. It is the apparent intention of Russia to attach the province of Brandenberg to Poland and to establish Poles both in Frankfurt and Stettin. The occupation of that province will provoke a constant protest from the German inhabitants and may give Russia an excuse to maintain an army in Poland to prevent its recovery by Germany.

But even more discouraging is the apparent intention of Russia to dominate the governments of Poland and other countries in eastern Europe by maintaining in power governments whose members' first loyalty is to Russia. No reasonable man can doubt that the Lublin government, headed by a Soviet citizen, will prefer the dictates of Stalin to the wishes of the Polish people. Under such conditions Poland is not free. The loyal members of the underground army under a specious pretext are railroaded to prison and perhaps to death, although they fought as bravely against the Germans as any of our Allies. Surely the best test of freedom is whether the Polish armies fighting throughout the world can return and settle down in their homes in Poland. It is clear that they cannot do so today without the danger of sudden transportaton to Siberia. Under these circumstances Poland is no more free than are Estonia, Latvia, or Lithuania. How far the same condition exists in Bulgaria, Rumania, Hungary, Vienna, and Yugoslavia it is impossible to say. The gravest suspicions are correctly aroused because the Russians have almost completely excluded from these countries not only all independent newspaper reporters, but even the representatives of its allied governments. It is ridiculous to hope that future peace in eastern Europe can be based on the destruction of freedom for many peoples who have been and who yearn to be free.

We can only hope that this condition can be corrected at or before the peace conference. Certainly, we cannot and should not go to war with Russia, but we can take our stand firmly on the principles of international justice, and unless we do the San Francisco Conference is a futile gesture. Before the agreement at Yalta, which was perhaps misunderstood by the Russians, their attitude was entirely different. Surely we can present to them forcibly the reasons why their present policy must be reversed. Incidentally, I see no reason why we should continue lend-lease to Russia under present conditions.

Last Sunday, Winston Churchill made a notable statement of the British position when he said:

"There would be little use in punishing the Hitlerites for their crimes if law and justice did not rule and if totalitarian or police governments were to take the place of the German invaders. * * * We must make sure that those causes which we fought for find recognition at the peace table in facts as well as words. And above all we must labor that the world organization which the United Nations are creating at San Francisco does not become an idle name, does not become a shield for the strong and mockery for the weak."

We can well unite with Mr. Churchill. Our failure to insist upon a fair and just political settlement throughout the world will nullify the finest possible work done at San Francisco.

THE ECONOMIC SOLUTIONS MUST BE SOUND

On the surface the economic problems do not seem to present at the moment the dangers of the political problems. At San Francisco we are setting up an economic and social council which should give continuous study to these problems. Many countries require aid, and undoubtedly that aid must be given in relief and reasonable loans for rehabilitation. I believe the United States should participate in such a policy. But international plans to reform the world overnight and bring freedom from want to millions who hardly know what it means should certainly be critically analyzed, particularly when they are based primarily on the continued outpouring of American billions. Furthermore, there are a lot of dangerous economic fallacies abroad in the world today, and I question whether we should entrust much power to an international board where we have only a minority interest. Mistakes in guiding our economy in the 1920's brought down upon our heads the conditions of hardship and depression which contributed to the causes of a Second World War. In my opinion, a completely unsound plan like that of the international stabilization fund imposed upon the nations by our Treasury officials and the British delegation at Bretton Woods is more likely to hamper peace than to assist it.

In the long run, every country will have to solve its own economic problems. All we can do is to advise and help. Any country can ruin itself economically or can fail to take advantage of its opportunities. Too much aid may only postpone the adoption of sound policies. Loans should only be made of a size which can reasonably be expected to be paid. If they are so large as to lead to repudiation, they have only created an artificial inflation, both in this country and abroad, and the reaction will produce depression and hardship. Undoubtedly, tariffs and restraints on trade should be reduced as far as possible, but they cannot be abolished without ruining industries and forcing unemployment. It is ridiculous to claim that the rejection of the further tariff reduction provided in the reciprocal trade acts, or the rejection of Bretton Woods, in any way implies an unwillingness to cooperate with other nations or has any great bearing on future peace. Economic conditions are in no way the threat to peace which are the political outrages to which I have referred; and they can be constantly improved. The question of sound methods of increasing trade should be studied by the economic and social council before vast and untried experiments are adopted.

A UNITED NATIONS ORGANIZATION MUST BE ESTABLISHED

The fifth step toward peace is the formation of an international organization with the responsibility for maintaining peace. I cannot emphasize too often that this cannot be a cure-all, and is only one step in the whole program. Machinery is important, but there can be no doubt that the next generation will only remain at peace if they have the will to peace and the public opinion of that generation continuously demands the proper use of the machinery. But with all the handicaps arising from unsolved problems in the political field, and the unwillingness of key nations to agree to submit their disputes to lawful decision and abide by the results, I believe that the San Francisco Conference has done a great job and is proposing a plan which should be approved by the people and the Senate of the United States.

I do not believe that the failure to solve the other problems at San Francisco in any ground to refuse to proceed with this international organization, for I do not find that it freezes any injustices or prevents a constant effort to correct abuses. It is difficult to analyze the exact nature of the new organization. It is certainly not the establishment of law among nations with a provision for legal enforcement. As originally prepared at Dumbarton Oaks, the proposals apparently avoided entirely the concept of international law or justice. Even now there is no covenant on the part of the nations concerned to observe international law, but only to seek a solution of their problems by peaceful means. In determining issues, the Council is to be guided by considerations only of peace and security. Conceivably it could make a completely unjust decision if it felt that such injustice would maintain the peace. Many amendments have been proposed, and I believe many adopted, emphasizing the importance of law and justice, but I doubt if they change the fundamental concept of force and opportunism which dominated the draftsmen of Dumbarkton Oaks.

This all becomes of much less importance, however, because of the veto power given to each major nation. This veto changes the whole nature of the organization, and since we can veto any decision taken we can obviously prevent the abuses which might otherwise arise from a policy of opportunism. But it cannot be said by any stretch of the imagination that the new agreement establishes a rule of law throughout the world.

It does not seem to me that the new organization removes any of the causes of war. It is far from the ideals advanced in the resolution of the Republican Party adopted at Mackinac. All the nations agree to is to talk together and try to settle their disputes amicably; and to use force if all the large powers agree together that force ought to be used. But serious war can probably result only from aggression of one of the big powers which can veto action against itself or its satellites, and, therefore, the new association is powerless to prevent the development of any real world war.

Nevertheless, it is infinitely better than a military alliance, and it is not a military alliance for a number of reasons. We are not obligated to join Russia or England, either in an offensive or a defensive war, because we can exercise our veto. If a war arises through some nation attempting by force to correct a gross injustice in the peace settlement, even though that nation be an aggressor, we can refuse to permit the use of the new machinery against her. We are obligated to prevent a revolution to secure freedom, or adjust obviously unfair boundary settlements. We do not have to go to the

defense of any nation whose policies we disapprove.

In short, while there may be injustices in the treaty of peace, and political and economic sore spots throughout the world, there is nothing in the Dumbarton Oaks proposals which freezes that condition, or guarantees the status quo, or requires us to take any action leading to war unless at that time our national policy so decrees.

Furthermore, it is not a military alliance because the policy of the organization must be determined in the open after consultation with all the nations of the world. With the exception of Germany and Japan, it is hoped that all the nations may soon become members. Any question may be brought to the attention of the council by any nation, and on that council are representatives of small nations as well as large. A military alliance would be likely soon to produce a counter-alliance until the world again is divided into two camps. If a few nations try to run the whole international organization with a high hand, there is still danger of that result. But it seems most unlikely to occur, for the assembly and the council will presumably afford continuously a forum where questions can be brought into the open and freely discussed.

The great advantage of the organization as I see it is that it does provide a continuing body with representatives accredited from every nation in the world, giving constant consideration to the situation which may lead to war, and taking constant thought as to the means by which those problems may be solved and war prevented. While the veto power makes it possible to nullify the use of force, nevertheless, the presumption is that some action will be taken when unwarranted aggression by a small power occurs, and at least such action will be constantly considered and may serve as a deterrent to aggression by smaller powers.

Under all these circumstances, I believe that the Senate should ratify the treaty, preserving the power of Congress over the American member of the council if his decision is likely to involve us in a distant or major war. Since we do not agree to abide by any law or the decision of any international tribunal, the exercise of the veto power becomes frankly and clearly a question of national policy on each decision relating to the use of force. If that decision involves the question of going to war, and not a mere police operation in the Americas, it should only be determined by Congress. That, however, is a matter for the statute of ratification rather than the agreement itself.

REGIONAL CONFERENCES ARE NEEDED

I frankly do not understand the reasons for the objections made to the establishment of regional conferences. The nations of the American continent agreed to enter into a league which does establish a rule of law and justice between nations, and does contain a willingness to abide by the decisions of an international tribunal. It proposes exactly the kind of set-up which we would like to have throughout the entire world. I cannot see why the Dumbarton Oaks proposal, with its emphasis on force, should permit anyone to veto the operations of such a league.

It is completely different from the bilateral treaties such as that between Russia and Czechoslovakia which are to be freely permitted. It is utterly unlike a so-called Arab league made up of a limited number of nations, but not all of the nations in the area. Mr. Churchill once proposed a Council of Europe. I should think that San Francisco could permit subsidiary leagues if they included all the states in some continental or other world area. Probably the possible areas should be limited to four or five. If all the nations of Europe or all the nations in the Far East can work out a regional agreement like that of Chapultepec, I see no reason why it should not be permitted. Of course, if such a league fails to maintain peace in its area, and disturbances within that area threaten the peace of the world, the World Security Council should be able to step in, subject to the power of veto. But I believe that the Amercan people will hesitate a long time before they send another army to Europe, for instance, in some minor European disturbance, until they are convinced that that disturbance really threatens the peace of the world. Certainly we should not go unless invited by a substantial majority of European nations. The whole league would be stronger through the existence of subsidiary regional conferences on a continental scale. Those who are hampering the establishment of an American conference for fear that it will injure the prestige of a world council do not aid the cause of peace. They are putting their whole confidence in the big stick of the major powers although it is almost completely nullified by the existence of the veto.

I may say further that the whole league will be nullified if it permits the making of bilateral military alliances unless they are related directly and exclusively to the enforcement of the occupation and disarmament of Germany and Japan. This is certainly the effect of the Soviet-French treaty, but the Soviet-Czechoslovakia treaty may be much more broadly construed, almost as an offensive and defensive alliance against any state which the Soviet considers to be Fascist. It should be clearly understood that it is only to be construed as an agreement to enforce the treaty against Germany.

PEACE DEPENDS ON ESTABLISHING AND MAINTAINING A LAW OF NATIONS

In conclusion, I believe the result of the war assures peace for a number of years. We must insist that that peace be just to Poland and all of the United Nations. The hope for world peace 25 years from now cannot be so strong, but the most favorable element is the creation of the international organization. We may hope that this will gradually allay the suspicions of the peoples who come to know each other around the council table and lead them finally to a willingness to abide by a code of law and justice. We may hope that it will lead to a gradual correction of some of the terrible political mistakes which apparently are to be made. We may certainly hope that through the economic and social council assistance may be given to the handicapped nations and a much higher standard of education and economic happiness established throughout the world. The failure to accomplish at this time all that is essential for ultimate success should not prevent the setting up of this great organizations.

But if it is established, we cannot sit back in the delusion that it insures peace. We must correct the evils which have grown and will grow out of the present war. We must go on to remove the fundamental causes of war. We must educate the world to a willingness to live by law, and in our educational processes we must emphasize continuously the necessity of nations abiding by the principles of law. We must not come to rely entirely on force, which, without justice, can only lead again to war.

Tribute to Senator Borah by Paul Mallon

EXTENSION OF REMARKS

OF

HON. DAVID I. WALSH

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Monday, May 21, 1945

Mr. WALSH. Mr. President, I ask to have inserted in the Appendix of the RECORD a letter paying well-deserved tribute to the late Senator Borah by the well-known and much respected columnist, Mr. Paul Mallon.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

MAY 15, 1945.

Mr. RAY MCKAIG,
Borah Memorial Statue
Commission of Idaho, Boise, Idaho

DEAR MR. MCKAIG: I am glad for the opportunity to add my estimate of Senator Borah to your symposium.

I knew him well as a reporter covering the Senate for the United Press for more than 10 years. I have some incidents in mind such as you requested, but none would serve to tell you of my reactions to the long contact with this great, underestimated man.

There is not much to single out and say that particular thing was Borah's work. There is no Borah law, for instance, which history will remember, no single cause of surpassing consequence, no unique great work. He was only a participant with others in the League of Nations fight, and not the leader of it.

Yet no man so greatly influenced the thinking of his time—his important time, 1917 to 1932. His mind reached out penetratingly to the heart of every problem in every corner of the earth. What he said or thought was what other men did. The Harding Disarmament Conference, for instance, was his conception alone. His was the generative spirit of the world course for more than a decade.

His views were so earnestly sought by all, he was the only official in all my time in Washington accustomed to holding daily press conferences. The President and other officials generally held these twice a week. But the newsmen sought him daily, not only on domestic problems but on remote internal questions of far-flung nations and peoples, so great was his acknowledged authority on all these affairs—an authority which was not gained by personal inspection, for he never left these shores.

I have heard many men question his stature because of what they thought was a personal tendency to avoid action. They do not know the measure of the man. His was a greatness beyond easy detection, the man who guided the theories of an era.

All good wishes.

Yours sincerely,

PAUL MALLON.

Why Sacrifice National Defense Under Trade-Agreement Program?

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 21, 1945

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I insert the statement of Russell B. Brown, general counsel, Independent Petroleum Association of America, on the extension of the Trade Agreements Act, before the House Ways and Means Committee:

I am Russell B. Brown, general counsel of the Independent Petroleum Association of America, which association is composed of the independent producers of crude petroleum and a few companies whose opera-

tions include refining and marketing as well as producing. These latter are known in the industry as independent companies.

This association was formed in 1929 when the principal problem affecting the independent producers was imports of oil from South America and Mexico. It sought and obtained the opportunity to discuss this problem with the Congress in hearings appropriate to the subject. In 1932 an excise tax of ½-cent per gallon was imposed by Congress on imports of crude oil and fuel oil and 2½ cents per gallon on gasoline.

The tax on gasoline has not been changed but under the reciprocal trade agreement with Venezuela in 1939 the excise tax on crude oil and fuel oil was reduced 50 percent as to a specified amount, making it ¼-cent per gallon, or 10½ cents per barrel.

That is the slender and the only protection which the oil producers of the United States have today against whatever deluge of foreign oil may be turned against them when military necessities shall have decreased substantially, making available the foreign oil for civilian use and freeing the tankers to carry it. The proposal in H. R. 2652 to authorize 50 percent changes from tariffs and duties existing on January 1, 1945, would confer discretion to reduce the excise tax on crude and fuel oil to 5¼ cents per barrel, or ⅛-cent per gallon.

The trade agreement with Venezuela provides for the importation at the reduced rate of 10½ cents per barrel of an amount of crude and fuel oil equal to 5 percent of the refinery runs in the preceding calendar year. This formula would permit the importers to bring in 228,000 barrels daily this year at the low rate. There is no limit to the amount that can be imported at the full rate of 21 cents per barrel.

We do not recognize that originally in the passage of the Trade Agreements Act it was intended to apply to the excise or import tax on petroleum and its products. In due time and in appropriate manner we expect to raise again the entire question of the desirability or appropriateness of such law. We do not feel that in this time of extreme war emotion it is desirable to attempt greatly to change or modify existing laws under which we are now operating, nor do we recognize this as a proper time for the fixation, great extension, or enlargement of such laws.

That is our situation, and the independent producers over the country are fearful of the future. Because of our apprehensions, we make the following recommendations:

1. That the executive authority to alter tariff structures in percentage or rate and the authority to transfer to or from dutiable lists be at least confined to that which it now is.

2. That the extension of the act, if extended, be for a period of less than the 3 years proposed in H. R. 2652.

3. That the act be amended to require Senate approval of all trade agreements which may be negotiated, and that provision be made for periodical reviews by the Congress of the operations of trade agreements and their effect upon industry and agriculture of the United States.

Whatever authority is provided will be used to the fullest extent. If through technical constructions it can be exceeded, that may be done. We in the petroleum industry have already had our experience with the noncompliance with what we believed was an express understanding. The Honorable Cordell Hull, early in 1940, assured the chairman of this committee, in writing, that in the event of a threat to industry—and the petroleum industry was specifically mentioned—through the operation of the trade agreement with Venezuela, remedial action would be taken by those in charge of the trade agreements. He said that the so-called escape clause provided ample protection to our industry.

The injury we feared did develop. Imports were increased under the reduced duty to the point where their effect on the domestic crude oil producing industry was direct and provable. In the month that the Venezuelan trade agreement was announced, November 1939, imports of oil averaged 165,000 barrels per day. They reached a high point of 289,000 barrels daily in December of the next year. The daily averages by years for 1939 and 1940 were 162,000 barrels and 229,000 barrels respectively. In November 1940 an official of one of the importing companies, in a letter addressed "To Those From Whom We Purchase Oil" declared that, "In our opinion, present conditions in the industry are worse than at any time since the chaotic days of serious overproduction in east Texas when the price of crude was driven far below the average cost of production."

The growing imports contributed directly to this condition. We appealed to the committee on reciprocity information and supplied the factual data to support our appeal. Our protests and evidence were disregarded. It was the familiar pattern of delegation of delegated authority without review by the source of that authority where the remote agency is entirely unresponsive to the legislative intent. Under this system of trade-agreement management, Mr. Hull was unable to prevent the great injury which he had so earnestly agreed to prevent. When we made our protest, Mr. Hull was closely occupied with the many phases of international relations and the drift toward war and it is possible that he heard nothing of our problem.

The last official figures that were released on imports covered the first 9 months of 1941. Then for reasons of military security they were withheld. For that period, however, the trend was still upward, averaging 252,000 barrels daily. Not long after the close of that period we believe there was an abrupt decline; the submarines and not the State Department being responsible for the drop in imports.

Imports of petroleum have long been a part of the oil supply of the United States. At times, and particularly in those years prior to the imposition of the excise tax on oil in 1932, there were imports of such volume as to depress the domestic price and cause severe hardship to the domestic industry.

The proposition that the domestic industry cannot compete on even terms with large-volume foreign production cannot be controverted and, in fact, no attempt has been made to dispute the contention. The domestic producer faces several factors which defeat him at the outset of any contest on even terms. One of those factors is a natural one—it is a matter of geology and the physical forces which formed and stored petroleum and reservoirs. The foreign oil fields which have contributed most to the imports stream entering the United States have been of the large volume per well type. Competition with production from fields so produced negatives and tends to undermine and destroy our own conservation program now recognized as so valuable to our own safety. The advantage of the big volume wells in respect to cost has been still greater in more recent years because of this conservation policy adopted by the domestic industry and written into the laws of nearly all of the oil-producing States. Under this policy, producing rates have been held at levels which would make effective use of the natural energy in the oil reservoirs and add to the total ultimate yield of oil from the reservoir.

Other factors which distinguish the business of producing oil in the United States in comparison with that in foreign fields is the high wage standard and high taxes.

Competition with foreign sources on even terms would be possible only by reduction of domestic costs to the level of those in foreign fields, which would, of course, mean a substantial reduction in the wage and salary rates in the oil industry of the United States, and a reduction in taxes. I am certain both these methods would be rejected if proposed.

The alternative—the only alternative—if the domestic industry is to be encouraged, is protection from the disproportionate cost of foreign oil. That could be accomplished in two ways: by subsidy from the public treasury to be paid on all the oil produced here, or by a tariff or excise tax which would tend to put imported oil on the same footing as domestic oil. I believe the choice here is a simple one.

That oil will be imported there is no doubt, nor is our position one of opposing all imports. We recognize the practical aspects of the situation. Imports on a scale that will not usurp too great a part of the market for domestic oil have their place in the general flow of international trade. The point should be preserved, however, that any volume of imports, produced at costs markedly less than in the fields of the United States, operates to affect realizations of the domestic producer.

We have good reason to be fearful of the menace of foreign oil in the postwar period. Realization of such fear need not wait on final victory in the Pacific. There will be available for entrance into civilian channels of consumption a far greater volume of oil in South America and in the Middle East than ever before. It has also been suggested in a recent Department of Commerce publication that Russia may become an exporter of oil, and other articles by the staff of that Department have indicated that Russian discoveries of petroleum fields have in recent years added enormously to that country's resources.

Under the stimulus of war's needs for petroleum, our Government has given great aid and encouragement to the development of foreign reserves. This has not been confined to any single area. In the Caribbean region, particularly in Venezuela and Colombia, great emphasis was placed on drilling, pipe-line construction, and refinery expansion. Aid has been given to Mexico, both in financing and in obtaining equipment, in the expansion of the Government-owned petroleum resources and their utilization. In Arabia and other oil regions of the Middle East, expansion and greater production were stimulated.

All these measures were necessary. It was imperative to the war effort that petroleum be obtained in the places where it was most accessible to the military and naval forces of the Allied Nations. But the stimulated and enlarged oil-producing capacity in these foreign areas is not a matter for the duration of the war only. The fruits of this endeavor will remain long after the war's end in the form of a great potential production, proved and substantially developed, and the owners and operators of the resources, spurred on by the governments of the countries in which the fields are located, will be seeking an outlet.

Our Government has, therefore, as part of the war effort given stimulus to foreign development and has thus enlarged the danger which the domestic petroleum producer has faced for years. It has been an enormous enlargement.

Ours is the best, the most concentrated market for petroleum in the entire world. The last complete registration statistics are for January 1, 1944, when the total of passenger cars, busses, and trucks in the United States was 30,136,500. The latest available figures for the entire world outside the United States, as published by the Automobile Manufacturers Association (quoting Department of Commerce figures) was 10,309,670 passenger cars, busses, and trucks. Thus, for each vehicle outside the United States, there were 3 in this country.

I quote these figures merely to lend point to the previous assertion that the United States is the greatest and best developed, the easiest to reach market in the world. It is

an alluring market. What is there available—or soon to be available—to seek entrance in this market?

There is the Caribbean area, nearest to us, with a present producing capacity of nearly 1,000,000 barrels a day. This is the highest rate in the history of that region. What the Middle East could produce we have no close estimate. There has been no time, since the first fields were found in that oil-rich region, when the producing capacity did not exceed the market, so far as I can ascertain. The indicated reserves, according to Dr. E. DeGolyer, who was head of a mission to that area in the winter of 1943–44, were twenty-five to twenty-seven billion barrels. The production from the fields of Iran, Iraq, Bahrein, and Saudi Arabia has recently been stated to be more than 400,000 barrels daily. In a recently published article, Mr. H. D. Collier, president of the Standard Oil Co. of California, which company is co-owner of the Arabian-American Oil Co., said that the Arabian and Bahrein production was then more than 60,000 barrels a day and would be approximately doubled late this year. There is every probability that the Middle East production could be increased to 1,000,000 barrels daily.

I have not mentioned the oil resources of the Dutch and British East Indies and Burma, which are now in the hands of the Japanese. In due course, these fields will be recaptured and rehabilitated and will add substantially to the oil which is available in the markets of the world.

The ability of South American producers in the past to capture the markets of the United States through lower costs is well known to the oil industry. It may be a somewhat startling thought that the same is true of Middle East oil. Mr. Ralph T. Zook, president of the association which I represent, has made a careful study of the economics of foreign oil production and he asserts that oil from the Persian Gulf area can be delivered f. o. b. New York by tanker at an out-of-pocket cost of $1.17½ per barrel." In comparison with oil from the east Texas field, which has a difference in refinery realization of 20 cents per barrel, Middle East oil would represent a figure of $1.37½ per barrel. But, east Texas crude oil is now $1.64 per barrel f. o. b. New York Harbor and the Middle East producer has an advantage of 26½ cents per barrel. He found that oil from the Middle East could be shipped to Los Angeles Harbor at a cost advantage of 25½ cents per barrel over that of two representative grades of California oil.

I attach to this statement that portion of a recent address by Mr. Zook in which he presented the results of his study of costs and probable potential production of the principal foreign areas. In this study are the reasons for our fears concerning the future of the oil industry of the United States.

In the late twenties the philosophy of reservation of our oil supply and usage of large amounts of foreign oil was being advanced by some in Government. Some of the large oil companies, particularly those with foreign holdings, favored and actively supported that philosophy. The Congress, after much study of the question, decided to give encouragement to the rest of the oil industry of the United States. The issues were fully and openly debated.

Our war experience has demonstrated the wisdom of the decision made by the Congress in 1932. Had the markets of the United States been used as the dumping ground for foreign oil, discovery and development effort at home would have been ended or so restricted as to make us dependent in war upon foreign sources. As it was we had an established producing capacity that has not only provided for all our military needs but those of our allies as well in a period when no other was available.

In fact, I believe the war would have been lost without our oil. We have been the principal and at times the only supplier. For a long time the British-developed reserves in the Midle East were not available to Great Britain. Japan seized the oil fields of the East Indies and Burma. Russian oil was available to Russia alone and the submarines prevented any substantial movement from the Caribbean area.

An assured supply of oil equal to any emergency is essential. Doubtless there is no disagreement with that statement. Oil is so firmly integrated into the national security that it must be the wish of every citizen that there be at all times the assurance of plenty within our own borders.

Thus far the military needs have been satisfied. It has been necessary to ration civilian supply severely and to draw heavily on above-ground stocks, but the supply program has been met.

Of that achievement the oil industry of the United States is proud. It lays claim to credit only for performance of a duty to the Nation. It indulges in no undue heroics in the matter. It does ask now for consideration of the problems it faces in the immediate future.

In the sense that the excess producing capacity established before the war has been used up, we have a loss in ability to produce. The continuation of the present demand will mean a decline from present high rate of production. That is anticipated for this year. It is imperative that the industry set to work as speedily as possible to repair the inroads that have been made on our producing ability.

The domestic producers have been weakened. They have gone through the war to date under a frozen price and without allowance for their increased costs. Many of them have sold their properties to stronger companies, chiefly those engaged in refining and selling products. It is rare and unusual that one engaged exclusively in producing oil buys the properties of another.

It is still the hope of these producers that their needs will be recognized by those who control prices. To carry on the campaign that is needed for the restoration of the national position in capacity to produce oil, more money than is now available will be needed. It comes from one source—the sale of crude oil.

It requires the exertion of "multiple effort," as one authority on oil discovery has termed it, to produce results; in other words, a great many operators drilling hundreds of wells to test new territory.

I have said that the financial resources of the independent producers have been weakened during the war. It is going to cost more to replace through new discoveries the oil they produced and sold during the war than they realized during this period.

They hope for an improvement in price, but that improvement would be nullified if they became unable, through large imports, to sell the oil they found and produced. The machinery of discovery and development quickly falls apart unless used fully.

The program of unrestricted imports of oil which has been advocated by some is supported by them on two principal grounds. First, they say, we should conserve our oil resources and use those of other nations. Second, we should encourage trade with nations whose principal offering of commodities in world markets is petroleum.

As to the first proposal, it would mean merely the reservation, not conservation, of the reserves that have been found. The oil resources of this Nation would be frozen and they would not be increased. Men do not discover new fields and lock them up. We would cease to find fields and the undiscovered reserves would remain undiscovered.

The first impact of large-volume imports would fall upon the reserves, whose daily yield per well is small. The so-called stripper fields would be the first to be abandoned. Much is being done with these fields through secondary recovery methods of increasing the daily and the ultimate yield. The recoverable oil in such fields is estimated at four to five billion barrels. Progressively, through natural decline of the larger-volume producers, this class of reserves is increased. Every field in time becomes a stripper field. Three-fourths of all the oil-producing wells in the United States today are of the stripper variety. These would be the first to go. With them would go the mainstay of hundreds of communities.

The Nation cannot afford to lose so great a reserve of oil.

The stimulus to foreign trade would be more than balanced by the loss at home. The oil-producing industry is a large employer of men and women of many skills and crafts. Most of them would not choose to seek livelihoods in foreign countries. The oil-producing industry annually pays out many millions of dollars to landowners for the privilege of present and future exploration and development and in the landowners' share of the oil produced. This type of farm income could be greatly curtailed with a large enough volume of imports. The oil-producing industry is a principal taxpayer in several States and an important one in many more. Revenue derived from oil production is of great consequence in the support of many public and endowed educational institutions in many parts of the country. Great public injury would be done through a program of unrestricted imports of petroleum without equalization of cost of production. This is important to millions of our people.

From the standpoint of the consumer it is fortunate that there is a wide distribution of oil reserves in the United States. Their location avoids the shortages that could occur because of transportation difficulties. During this war the East and the Northeast—the shortage area, as it has been known—suffered restrictions earlier and more severely than those parts of the country in which substantial quantities of oil are produced. Let us consider for a moment the effect of a program of substantial dependence upon low-cost imports. As I have said, the producing industry here would be affected to the extent that search for new fields would be curtailed and perhaps almost ended. The higher-cost producing properties would be shut in or abandoned; low price invariably leads to the sale of equipment salvaged from producing wells. The supply of oil needed for the inland refineries would speedily decline.

Just a few of the refining companies are in position to use foreign oil—a bare half-dozen. Imports of oil historically have not been available to any except the companies that produce the oil and transport it to their refineries. The oil production in Venezuela, for instance, is not offered to anyone who would buy it. Venezuela has no domestic oil industry; it consists of American and British and Dutch companies who hold concessions, operate them and refine the oil in their plants. Whatever oil other refiners in this country would get would be at the discretion and through the kindliness of the producers in foreign countries. I can think of no more effective way of establishing monopoly.

To show the ownership of refining facilities in 34 States of this country as between companies with foreign producing position and those who rely solely on domestic crude oil, I submit a table which we have compiled from the latest published report on refinery ownership and capacity. It should be explained that ownership of refining capacity of a stated amount by a company with foreign production is not a guaranty that all its requirements could be met from foreign production. Generally, the coastal plants would be the ones which would utilize foreign oil. The capacity of these is great enough to handle a volume of imports that could wreck the domestic industry.

We in the petroleum industry of the United States have no fear of exhaustion of our domestic resources; our fear is that we shall not be encouraged to find and develop them. We believe that there are great reserves yet to be found. We are greatly impressed with the size of the unexplored areas.

Numerous specious arguments have been published in the past 2 or 3 years by some who would look everywhere except at home for oil. They have attempted to prove that we are on our last gasp in the discovery of oil. It would be an undue use of time on this occasion to debate whether we will ultimately have produced 100,000,000,000 barrels of petroleum in the United States (to date we have produced slightly more than 30,000,000,000 barrels), as one outstanding authority has predicted, or a greater or lesser amount. We know that under encouraging conditions the oilmen keep on finding oil and, historically, they have found the most when the incentives were best. We also know that unless th exploratory effort be exerted, discoveries will not be made. It would be a simple task to become a "have not" nation in respect to petroleum supply.

Back of the natural petroleum we have a second line of defense. We have enormous natural gas and coal reserves and huge quantities of oil shales. The Seventy-eighth Congress authorized a Government program to cost $30,000,000 to conduct research in synthetic motor fuels in plants to be built to adapt known techniques and if possible to improve on them. That work, under the direction of the Bureau of Mines, is under way. Much is already known of methods of producing gasoline from coal and oil shale; numerous foreign countries lacking petroleum supplies have relied in part on such resources for years. The commercial conversion of natural gas to liquid products is not far off.

We have that second line of defense against shortage. Would it not be national folly to establish any policy that would wreck the first line—the discovery and production of crude petroleum?

Daily crude-oil capacity of refining industry in the United States

[Source: Oil and Gas Journal, Mar. 31, 1945]

State	Number of plants	Total crude-oil refinery capacity (barrels daily)	Total capacity owned by companies having substantial foreign production

A Guaranteed Beef-Production Program

EXTENSION OF REMARKS

OF

HON. THOMAS A. JENKINS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, May 21, 1945

Mr. JENKINS. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to say that the Republican Congressional Food Study Committee has been a pioneer in an effort to bring relief to the thousands, even millions, who have a just complaint by reason of the serious food shortages.

The subcommittee, having under consideration the meat problem, have made a report to Hon. JOSEPH W. MARTIN, which is complete and comprehensive. I am asking that it be printed as an extension of my remarks.

REPUBLICAN CONGRESSIONAL FOOD STUDY COMMITTEE REPORT TO THE HONORABLE JOSEPH W. MARTIN, JR., REPUBLICAN LEADER, HOUSE OF REPRESENTATIVES, MAY 18, 1945

A GUARANTEED BEEF-PRODUCTION PROGRAM

The Republican Congressional Food Study Committee submits this report based on investigation of beef production by a subcommittee composed of Representatives J. EDGAR CHENOWETH, of Colorado, chairman; FRANK A. BARRETT, of Wyoming, CLARE E. HOFFMAN, of Michigan, and FRANK L. SUNDSTROM, of New Jersey.

The committee finds that the major bottleneck to adequate beef production is in the feeding of beef cattle. It recommends: (1) Establishment immediately of an incentive program under which feeders of beef cattle can operate; (2) a guarantee that the program will be maintained during the feeding period; and (3) enactment of law requiring such a guaranteed program if responsible administrative agencies do not take action voluntarily.

There have been many suggestions, both official and unofficial, for relieving the meat famine now gripping almost all parts of the country. Some of these suggestions are good and should bring about long-range improvement, if adopted. Among them, establishment of a single head to have full and exclusive jurisdiction over all matters relating to the production and distribution of food has long been recommended by this committee.

It is obvious that the only way to bring about real improvement in the situation is to increase the production and weight of good beef animals coming to market. It is equally obvious that new regulations and controls which do not remove that bottleneck will not add substantially to the retail supply of this country, and are mere empty gestures, designed to make the public think something is being done while the officials responsible sit and wait in hope that a heavy crop of pigs this fall or home production of rabbits will relieve the situation.

Evidence presented to this committee indicates conclusively that the major bottleneck in our beef supply is in the operation known as "feeding." Under normal conditions, range cattle do not move directly to slaughter. They are shipped east into the corn belt and adjacent States and there are fed grain, hay, and concentrated feed for several months. During this period the animal puts on from 300 to 400 pounds of weight. Since practically full growth has been reached before feeding starts, this extra poundage is almost all edible meat.

This feeding operation should continue for a period of 4 to 12 months. Unless it is carried out for that length of time, animals arrive at the slaughterhouse underweight or only "grass fat," with a far lower ratio of good meat to bone and offal than should be the case. This is the condition in which most of our beef is now reaching the slaughterhouses.

As long as this condition continues, those who depend on city markets for their beef may expect to have limited supplies, an excessive proportion of ox tails and other undesirable cuts, and generally inferior quality in what they are able to buy—for this is the kind of meat unfed animals produce.

This is the situation that exists now and will continue to exist until Government officials take the steps that are necessary to remove the squeeze on beef feeders that is limiting production, and permit cattle once again to be fattened for market.

Plenty of feed for these cattle is available—is, indeed, going to waste now in the Corn Belt because it is not being fed. But before this necessary operation can again be resumed, cattle feeders must be assured of two things:

1. A fair margin of profit for their operation.

2. A guaranty that the rules will not be changed in the middle of the game—a guaranteed production program for at least 6 months.

Unlike the range operator, who has no other occupation to which he can turn—and whose cattle are going to breed, calve, and grow into feeders in spite of OPA—cattle feeders do not have to buy cattle and feed them. They can use their hay and grain for other purposes. It is a purely voluntary operation and a risk they will not assume unless they can anticipate a reasonable profit on their labor and capital.

There is nothing in the past performance or present regulations of OPA and WFA to make cattle feeders believe they can make a profit or even avoid a loss, on normal feeding of cattle into good and choice market beef. Evidence presented to this committee within the past few days indicates that feeders are not now undertaking the risk of normal feeding and have no intention of doing so until they are allowed a reasonable margin and guaranteed that the rules will not be changed during the feeding period.

Under present OPA price structures cattle feeders are caught between the lower millstone of demand forcing the price of lean cattle up to the OPA ceiling, and the top millstone of being compelled to sell fat cattle at that same ceiling.

OPA officials do not understand, apparently, the fact that a feeder cannot make a profit merely on the added weight his corn, wheat, and hay put onto the animal. The cost of feed alone is far greater than the market price of the 300 or 400 pounds of added weight. Feeders can operate only when their feeding increases the value of the whole weight of the animal by improving the quality, so that they receive a higher market price per hundred pounds for the whole animal than they paid.

Normally, a feeder may pay $11 or $12 per hundred pounds for cattle coming from the ranges, feed them 4 to 6 months, and sell them as choice or good beef for $15 or $16 per hundred pounds. He can make a living doing that. But he can't make a living if the demand for all cattle—even unfed cattle—forces the price of the stock he must buy up to the price of good or choice beef.

Under present OPA price regulations, there is no distinction between poor cattle and those which grade good or choice. If a packer wants to pay the ceiling for a lean cow that should be going to the feed lots, he can do so—and he cannot pay any higher price for a well-fattened choice steer. This

price squeeze must be adjusted before feeders will again do their accustomed part in bringing cattle to market.

But adjustment of price is not enough. There must be a flat guaranty by OPA and WFA that the price structure and the rules of operation will not be changed to the detriment of the feeder before he has had a chance to turn out a crop. Cattle feeding is a risky business at best. Those engaged in it have carefully calculated the risks they are taking from disease, market demands, feed supplies, and other normal factors. They are familiar with these risks and are willing to take them. But they can't predict the risk of an OPA theorist suddenly changing his ideas about how cattle should be produced, or of a new set of economists suddenly getting the upper hand in OPA and writing their own notions into the regulations. Before cattle feeders will again go into the business of providing good and choice beef for our tables they must have the assurance of the Government that the rules are not going to be changed in the middle of the game.

This policy of a guaranteed program has been applied to vegetables. After conflicting and constantly changing OPA prices and regulations had reduced truck farming to chaos and brought about unnecessary shortages of several important vegetables, Congress wrote into the law the requirement that OPA must announce its minimum ceilings on vegetables at least 15 days before planting time and not reduce them beyond that point during the remainder of the season.

The act by Congress forced OPA to permit stabilization of vegetable prices. It gave growers the assurance that they would be able to operate at a reasonable profit—and our supply of vegetables has not since then been seriously threatened.

But while vegetable growers can plant their seeds with the assurance that OPA will not be permitted to reduce ceilings below a stated minimum, or otherwise change the rules to their detriment before the crop is ready to market, feeders of beef cattle are expected to invest their money in expensive livestock, buy vast quantities of feeds and hay, and take all the normal risk of their business, without any assurance whatever that the rules will not be changed before their crop is ready for market. It just doesn't make sense.

Feeders have lost confidence in Government policies—and with just cause. In the late summer of 1944, just when they should have been buying their cattle for winter and spring feeding, there began to be open discussion in administration circles about establishing ceiling prices on live cattle. Stock raisers didn't like the idea of ceilings, but asked that if they were going to be imposed, action be taken immediately, so they could plan for the future.

In spite of their pleas for action, O. P. A. and the other agencies concerned delayed and quibbled among themselves. It was not until January 29, 1945, that ceilings were finally established. During those 5 months of delay and administrative indecision cattle feeders had no idea what kind of celings would eventually be established. They were prudent enough not to undertake long-range feeding under such uncertain conditions, and we are reaping the result today in a growing scarcity of beef for civilian use.

Since then there have been two other major changes in the price structure and the regulations governing production of beef—one on April 1, 1945, and another on April 23, 1945. The latter is the much-advertised "10-point plan" to solve the meat shortage, that has had no effect whatever on increasing supplies and is obviously so inadequate that it, too, must soon be revised or supplanted.

Beef cattle feeders cannot do business under those conditions. The only sensible conclusion is that they must be given an inducement to fatten cattle, and a guaranteed production program that will be established now and continued for a period of at least six months.

Congress should not be compelled to legislate on every detail of OPA administrative policy, but unless that agency voluntarily establishes such a guaranteed program for the beef production industry, this committee recommends amendment of the Price Control Act to compel such a policy.

Respectfully submitted:

REPUBLICAN CONGRESSIONAL
FOOD STUDY COMMITTEE,
By THOMAS A. JENKINS,
Chairman.
HARRIS ELLSWORTH,
Secretary.

Restore Poland's Boundaries

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Monday, May 21, 1945

Mr. PRICE of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution adopted by the Illinois General Assembly urging the United States to obtain a guaranty in the peace treaty that Poland's boundaries be restored as they originally existed before World War II:

House Resolution 50

Whereas the first European nation to resist the Nazi aggressor and attempt to defend the freedom of their homeland was the valiant and courageous nation of Poland; and

Whereas the war which Poland waged against the Nazi has been unceasing and occupancy of their country only increased the zeal of the Polish patriots attempting to free their homeland; and

Whereas the remains of Warsaw stand as an international memorial to the courage and dauntlessness of its gallant defenders; and

Whereas this nation that has purchased her freedom with the blood of her sons, is now being liberated; and

Whereas with her resources gone, her people exhausted and with only her fighting spirit remaining this courageous country is now being forced to deliver part of her country to a former enemy, Russia; and

Whereas having reached the limit of her endurance, the great nation of Poland is no longer able to resist forcibly this attempt to annex part of her territory; and

Whereas freedom-loving nations the world over should rally to the cause of Poland and effectuate a return to her pre-war boundaries; and

Whereas our own democracy is obligated to aid Poland in her fight; and

Whereas the Big Three in their last conference gave no indication of restoring Poland to her former boundaries, but tacitly implied an agreement to permit Russia to absorb a part of Poland: Therefore be it

Resolved by the House of Representatives of the Sixty-fourth General Assembly of the State of Illinois, That we do hereby memorialize the Representatives in Congress from Illinois and the two United States Senators, and request them to petition the President of the United States to have him obtain a guarantee in the peace treaty that Poland's boundaries will be restored to her as they originally existed before World War II; and be it further

Resolved, That copies of this preamble and resolution be prepared and forwarded by the secretary of state to each Representative in Congress from Illinois and to our two United States Senators.

Adopted by the House, May 16, 1945.

HUGH GREEN,
Speaker, House of Representatives.
FRED W. RUEGY,
Clerk, House of Representatives.

The Dodecanese and San Francisco

EXTENSION OF REMARKS
OF
HON. CLAUDE PEPPER
OF FLORIDA
IN THE SENATE OF THE UNITED STATES

Monday, May 21, 1945

Mr. PEPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very excellent article entitled "The Dodecanese and San Francisco," written by Dr. N. G. Mavris, and published in the New Leader for April 28, 1945. I am sure that the subject is of intense interest and close to the hearts of all who appreciate the struggle for independence which Greece has made in this war.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE DODECANESE AND SAN FRANCISCO

(By Dr. N. G. Mavris)

No people has suffered more tragically because of the failure of previous attempts to achieve collective security than the inhabitants of the Dodecanese Islands. In proportion to their population, no people have contributed more to the Allied cause during the present war. Natives of the islands are serving in the Greek and American armed forces. In the islands themselves, the population has suffered starvation and unspeakable cruelty, and these conditions are continuing under the German occupation. In consideration of these facts, the United States Government officially recognized the Dodecanesians as friends by removing them in 1942 from the enemy alien classification, although their homeland was under Italian domination at that time. Similarly the British Government, in an official statement in the House of Commons, declared on October 18, 1944, that the Dodecanesians "will not be treated as enemies or ex-enemies but as friends."

Yet, the inhabitants of the Dodecanese will be without representation at the San Francisco World Security Conference. Since the capitulation of Italy, the islands are not internationally recognized as belonging to any state, and they have, of course, no government of their own. The repeated claim of the Dodecanesians to be officially recognized as part of their mother country, Greece, still awaits final confirmation by the great powers. Consequently, for technical reasons, the Greek delegates to the Conference will not represent the Dodecanesian people, while, even if Italian delegates were present there, this would afford no representation for the Dodecanesians.

Inevitably it will be asked: Why have the Big Three passed over the issue of the union of these islands with Greece which has been repeatedly sought by their inhabitants? The official view of the United States and the British Government is that "territorial settlements cannot be made prior to the termination of hostilities." Territorial settle-

ments and adjustments refer, of course, to changes in pre-war boundaries.

The record shows, however, that territorial settlements and adjustments of prewar boundaries have been made "prior to the termination of hostilities" in the following areas: Ethiopia, Austria, Korea, Formosa, Manchuria, the Pescadores, Russo-Finnish border, northern Bukovina, Bessarabia, Estonia, Latvia, Lithuania, southern Dobruja, northern Transylvania (subject to confirmation), Polish-German and Russo-Polish boundaries, Danzig. We might even include among "territorial adjustments," the relinquishing by Great Britain and the United States of extraterritorial rights in China in 1943.

In order to explain the settlement of the above-mentioned territorial questions, despite the official declarations that they ought to be left in abeyance until the termination of hostilities and be considered at the peace conference, Churchill declared in the House of Commons on March 14, 1945, that "there are, as is known, cases which fall outside that category." Likewise, Stettinius recalled on December 18, 1944, what his predecessor, Cordell Hull, had said: That "this does not mean that certain questions may not and should not in the meantime be settled by friendly conference and agreement," to which the present Secretary of State added that "if a mutual agreement is reached by the United Nations directly concerned, the [United States] Government would have no objection * * *."

It is, therefore, quite difficult to understand why no settlement of the Dodecanese question has been effected, when so many decisions have been reached upon territorial and controversial issues. The Dodecanese question is not a territorial one; it is a legal issue. One receives the impression that the Big Three consider it a political matter, and that they have avoided making a clear statement for fear that this would constitute a commitment. No such fear can be entertained, however. The commitment already exists, and awaits only fulfillment. There is no room for debate or discussion.

The decision was reached 25 years ago by the Allies, including the United States. The fact that Italy has violated existing agreements, and has upon various pretexts remained in the islands, does not alter their legal status. Rather it calls more urgently for speedy fulfillment of this long-delayed obligation.

Furthermore, on February 23, 1924, Great Britain officially declared through her Prime Minister that the continued severance of the Dodecanese people from Greece "is hardly conducive to that general tranquillity which H. M. Government have so much at heart." On May 17, 1920, the people of the United States, through the unanimous vote of their Senate, affirmed that the Dodecanese must be awarded to Greece.

For these reasons, the Dodecanese question is not a political or otherwise controversial one awaiting a "decision." The issue is purely legal. For the sake of argument, however, let us consider it a political question. Even if this were the case, settlement would in no way threaten the relations among the United Nations. The case is entirely unique, for no country claims these islands except Greece. There is no counterclaimant, and no dispute, local or international, as to their ownership.

Even those who might have had objections, now officially agree to the union of the Dodecanese with Greece. Moreover, the inhabitants have repeatedly asked for and demanded this union. Italy has already surrendered the islands to the Allies, in accordance with the Armistice of September 8, 1943, and she raises no objection to the union of the Dodecanese with Greece. Turkey has twice, in international treaties, renounced her "rights and titles" on the Dodecanese and recently she has declared that she wishes to see them become part of Greece.

For what reason, then, is this one question subjected to some sort of taboo? Justice, international law, and the seemingly forgotten Atlantic Charter demand the settlement of the Dodecanese question. Such a settlement would also demonstrate to all small nations that the declarations of their great allies are not idle phrases uttered for the sake of expediency.

Let us hope that the Great Powers may immediately declare that the Dodecanese are to be assigned to Greece. Then the Dodecanesian people will not be absent from the San Francisco Conference. Then it will be clear that the great members of the United Nations have the same regard for all, whether they deal with a mighty nation of 150,000,000 persons, or with a small and weak group of only 150,000 souls—for this is about the total number of Dodecanesians throughout the world.

Warning on War Criminals

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 21, 1945

Mr. PRICE of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following well-timed editorial from the St. Louis (Mo.) Post-Dispatch:

WARNING ON WAR CRIMINALS

"We again proclaim our determination that none who participated in these acts of savagery shall go unpunished. The United Nations * * * will pursue the guilty and deliver them up in order that justice be done. That warning applies not only to the leaders but also to their functionaries and subordinates." (President Roosevelt, March 24, 1944.)

A properly stern set of principles for the control and disciplining of Germany has been laid down by Maj. Gen. Lucius D. Clay and other high officers of General Eisenhower's staff to whom this vital duty has been entrusted.

There will be a long, strict military occupation, these officers declare. All that is left of Germany's war-making potential will be smashed. So will all vestiges of nazism. And the control group will "see that all war criminals are caught and punished."

This is exactly what the American people, like those of all other allied countries, wanted to hear and expect to see accomplished. Uncompromising treatment of the war criminals and drastic control of Germany for whatever time is required to make sure she can never plunge the world into bloodshed again—these are fundamental war aims in the view of the masses.

The policy statement is fine, but at the same time there comes a disturbing dispatch from Daniel de Luce, a correspondent with American occupation forces on the Rhine. Legal technicalities are binding the hands of Army men in their roundup of war criminals, he reports. Arrests so far are confined to the higher Nazi levels, while equally guilty men of lesser rank are exempt and, in the words of an American lieutenant, "their neighbors are convinced that the Allied authorities are suckers."

Here is an immediate job of issuing emphatic orders and cutting red tape for General Clay and his associates. It is important to catch and punish the big shots, of course, but the value of that example on the German people will be lost if the village and block leaders, the Nazis they know best, are not even investigated.

The Nazis are known to have high hopes in the alleged soft-heartedness and soft-headedness of Americans. They saw our dealings with Darlan and Giraud in north Africa, with Badoglio and the King of Italy, and confidently expect the same forgiving, compromising course in Germany. Past mistakes make a vigorous policy now more than imperative.

Mr. De Luce quotes an Army officer as saying that swift action is taken on crimes against American prisoners, while delays come up if the crimes are against foreign workers. Russia already is suspicious of American intentions and methods. Such discrimination against Russian and other victims is a sure way to cause a dangerous situation, not to mention the loss of faith it will create on the part of the liberated peoples in general.

The De Luce dispatch is a valuable report, even though it may deal only with awkward early moves that will be replaced by swift and efficient action. The point is that a complete program for far-reaching arrests and early trials should have been ready long before our troops took enemy territory.

The reported episodes are a powerful warning against letting Army red tape interfere with the doing of justice. General Clay is noted as a man of decisive and determined character. The people can have faith that the proper steps will be taken, now that he is on the job and under the orders of the uncompromising Eisenhower.

Lt. William Dow Markin

EXTENSION OF REMARKS

OF

HON. THOMAS A. JENKINS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, May 21, 1945

Mr. JENKINS. Mr. Speaker, Lt. William Dow Markin, of my home city of Ironton, Ohio, gave his life for his country on December 20, 1944, under circumstances that won for him the Distinguished Service Cross.

I am glad to add my testimony of appreciation of the worth and character and sacrifice of this very splendid young man. He comes from one of the best families in my home city, where his ancestors on both sides of his family have been most estimable people and have stood for the best in the community.

Lieutenant Markin was a graduate of Virginia Military Institute and was serving as an artillery officer.

The citation accompanying the award of the Distinguished Service Cross carries the following:

When an enemy mechanized attack threatened to overrun friendly positions, Lieutenant Markin left the safety of his foxhole and moved alone through intense hostile fire to an exposed position in which he remained for over 3 hours directing effective artillery fire. A short while later, when an enemy self-propelled gun broke through defensive fire to friendly lines, Lieutenant Markin personally led two volunteers in an attempt to destroy the weapon. In the action that followed, Lieutenant Markin was wounded but immobilized the enemy vehicle.

While he was being treated for his wounds he was again hit by enemy fire and killed.

This heroic young man left a wife and one son, whose sorrow is assuaged by the knowledge of the fact that their husband and father died as a hero.

Reciprocal Trade Agreements

EXTENSION OF REMARKS

OF

HON. HUBERT S. ELLIS

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 21, 1945

Mr. ELLIS. Mr. Speaker, to those who are of the opinion that the Reciprocal Trade Agreements Act will create jobs, I submit the following telegrams from West Virginia labor unions:

Strongly protest the enactment of House bill 2652. We are glass cutters and mold makers, producing hand-made glassware, and we look to you to protect our jobs.

CURTIS E. SOUTH,
President, Local Union No. 59, American Flint Glassworkers Union.

Vigorously protest against the enactment of House bill 2652. We are hand craftsmen and cannot compete with the sweatshops of Europe without adequate tariff protection. This we know from past experience before the present war broke out. We expect you to protect our interests.

LAWRENCE F. LITMAN,
President, Local Union No. 10, American Flint Glassworkers Union.

Strongly opposed to bill 2652. Please help defeat measure.

WEST VIRGINIA GLASS SPECIALTY CO.,
Weston, W. Va.

Wish to enter our protest against the enactment of House bill 2652. We have supported all the war activities and given generously of our earnings to help finance the war. We know from past experience that we cannot compete with European labor and we want to still have our jobs when the war is over. We look to you to protect these jobs.

HARRY W. WILSON,
President, Local Union No. 507, American Flint Glassworkers Union, Moundsville, W. Va.

These telegrams are from labor men, citizens of the United States, if you please, appealing to this Congress to defeat House bill 2652 and protect their jobs from cheap foreign labor. If you are interested enough to investigate, you will find that our exports have decreased under the reciprocal trade agreements.

An Anti-MVA Slush Fund

EXTENSION OF REMARKS

OF

HON. A. S. J. CARNAHAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, May 21, 1945

Mr. CARNAHAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the St. Louis Post-Dispatch of May 15, 1945:

AN ANTI-MVA SLUSH FUND

The launching by power companies of a costly and widespread propaganda campaign to prevent the launching of a Missouri Valley Authority should be about all that is needed to demonstrate to the public the size of the stake it has in this issue.

MVA advocates have been informed of the undercover campaign, and Senator JAMES E. MURRAY, of Montana, brought it to public attention in his address at Jefferson City last week by charging that a large New York advertising agency had sent into the valley nine high-powered public-relations men (at $1,000 a month apiece), to foment opposition to MVA among business and civic groups and State and local governmental bodies.

The power companies are not fighting the Army engineers or the Reclamation Bureau, both of which propose to develop the Missouri River's latent resources, including its potentialities for producing low-cost electric power. They are fighting MVA, and MVA alone.

Why do the power interests single out MVA and in effect support the Army engineers and Reclamation Bureau by forbearing to fight them? Can it be because they believe MVA alone will develop fully the power potentialities of the Missouri River system, because they believe MVA alone will militantly carry the benefits of low-cost power to the people?

Can anyone conceive of any other reasons why the power companies should consider it worth while to spend so much money?

MVA is blessed in its friends, but doubly blessed in its enemies and in the nature of the attack upon it. This opposition is so manifestly anxious to conceal both its identity and its self-serving motives that it discredits itself in advance.

It is an insidious attack which the power companies are making. It is a costly attack. The substantial funds needed for this campaign are being raised, it is said, by the same scheme used for much of the Union Electric's slush funds in the days when it paid off legislators and took a hand in elections; through kick-backs and rebates concealed by connivance in the price of materials purchased. But wherever the anti-MVA fund comes from, it is being charged to the power companies' customers, for they are the only source of company revenue.

If there are still any citizens of the Missouri Valley who even are apathetically uninformed about what MVA means to them, they should be roused by the knowledge that keeping it from them is considered to be worth some hundreds of thousands of dollars to the power companies.

The German Surrender

EXTENSION OF REMARKS

OF

HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 21, 1945

Mr. MILLER of California. Mr. Speaker, on May 8 the Alameda Times-Star, one of the most progressive papers in the West, published a front page editorial pertaining to the surrender of Germany.

That this editorial may be read by all of the Members of Congress, under unanimous consent, I insert it at this point in the RECORD:

(By Everett Johannes)

The document of unconditional surrender has been signed by the Germans. The war in Europe is officially at an end. And yet, what sort of a victory have the Allies actually won?

The Germans have not acknowledged that they were wrong. They have not admitted that Hitler's ruthless designs on the world and the virtual enslavement by Germany of the nations in Europe were sins. The Germans have surrendered their arms but they have not yet surrendered their pig-headed, murderous dream of world conquest. The "Superman" myth has not been exploded in their minds.

There can be no peace until the people of Germany are brought to realize that they are no better and no worse than all the other peoples in the world. There can be no peace until the people of Germany forsake their arrogance and their narrow, ferocious determination that in time to come the entire world must bow to them. The German lust for domination must be stamped out before any peace can be maintained.

The German Nation, now thoroughly whipped on the field of battle, now brought to its knees by the gigantic might of the Allied Nations, has not yet been courageous enough, or honest enough, to own up to its black deeds.

What do the Germans say about the horrors of the Nazi prison camps? Can they deny that thousands upon thousands of German men and women, boys and girls reveled in the victories which were theirs at the beginning of the war? Can they deny that they willingly and in blind obedience to the most arrogant and despised leader of modern times tortured the bodies and the minds of millions of innocent men, women, and children in fellow nations which the German machine raped, pillage, and subjected to slavery?

The German people, in their defeat, only ask for generosity. The German official who signed the papers of unconditional surrender proclaimed that the "German people both have achieved and suffered more perhaps than any other people in the world."

What have they achieved? Do they call their barbarous torture of Jews and Poles and Russians achievements? Do they call their degenerate years under Hitler achievements? Do they regard the war they heaped upon the world an achievement?

The German people have proven themselves to be the black sheep of the world family.

How generous were they to their fellowmen when the German war machine romped violently and notoriously through the countries of Europe? Let the Allied soldiers who have lost arms and legs and eyes in the battle against the Nazis sit at the peace table. Let the Jews who have been herded into ghettos and forced to undergo vile punishments sit at the peace table. Let the Poles and the Czechs and the Frenchmen and all the others who have suffered in Nazi slave-labor bands and prison camps, sit at the peace table. They'll deal out the proper sort of generosity to the guilty Germans.

The Germans have not forsaken desires for world conquest. The German nation should be broken up once and for all. Germany should be divided up among the smaller European nations.

Germany has brought grief to the peace-loving nations for hundreds of years. By wiping out Germany as a nation, the world will rid itself of a ruthless enemy.

While this editorial is attributed to the very competent Everett Johannes, the pertinent thought and pungent wording is characteristic of the publisher and owner, Abraham Kofman.

Administration of Veterans' Affairs

EXTENSION OF REMARKS

OF

HON. A. S. J. CARNAHAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, May 21, 1945

Mr. CARNAHAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address delivered by me on Sunday, May 20, on the Blue Network program:

I am a member of the Committee on World War Veterans' Legislation, but let it be definitely understood that I am expressing my own opinion as a Representative in Congress from the Eighth Congressional District of Missouri. I am not speaking for the committee.

My first interest and concern as one of the 21 members of this important committee is to do my very best to assist the Congress of the United States in seeing that our ex-service men and women receive the consideration that they so rightfully deserve and which we as a grateful Nation so earnestly desire that they shall have and intend that they shall receive.

Serious charges have been made against the Veterans' Administration. These charges have prompted the Congress to authorize an investigation of the Veterans' Administration. This investigation, now under way, should be thorough and cool and deliberate.

If the Veterans' Administration has been and is now being poorly managed, if the veterans' hospitals are understaffed and practicing inferior-grade medicine, and if our ex-servicemen have been and are now being neglected, certainly we should find out why such conditions exist and take immediate and positive steps to correct this situation. If the charges are based on rumor and are overdrawn, then certainly this fact should be generally known.

I am neither accusing nor defending the Veterans' Administration. What has been done for the veterans should be judged on its merit alone. We have a right to expect and should demand the optimum service for the millions of dollars which we so willingly spent for veterans care.

To you who are personally concerned in this problem because you or your relatives are directly involved may I say this; even though cases of neglect may be pointed out, just remember that there are thousands of loyal, efficient, capable, and sympathetic people in the Veterans' Administration who are daily serving you and your people.

It is my wish and I believe that this investigation will be carried out with fairness to all. The facts will be made known. On the basis of facts the American people will pass judgment. We will accept nothing of the Veterans' Administration except the best service which a thankful Nation can give to those who have given so much for us.

I Am an American Day

EXTENSION OF REMARKS

OF

HON. HATTON W. SUMNERS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 21, 1945

Mr. SUMNERS of Texas. Mr. Speaker, yesterday the Washington Post had an editorial on I Am an American Day. It contained some very important pertinent observations and suggestions. I quote from that editorial:

It was a happy inspiration that led Congress in 1940 to proclaim the third Sunday of May of each year as I am an American Day. The occasion affords special recognition of those who have been naturalized or have attained their majority during the past year and have thus come into the privileges and obligations of citizenship. The American stream is fed by a multiude of springs. Some are of such ancient American origin as rightly to be deemed indigenous—the heritage of the *Mayflower*, Plymouth Rock, and Jamestown. Others become Americans by adoption. They are the men and women who seek, as so many generations of Europeans have sought, the freedom and opportunity they cannot find at home.

The war has shown—the casualty lists are an eloquent reminder of this fact—that these new citizens and their children have contributed and are contributing their full share to the defense of the Nation. * * * Since I Am an American Day is a reminder to the new citizens of their newly acquired status and what it means, it should also be a reminder to the rest of us not to take lightly those same duties we share and privileges we enjoy. The day may well bring a reaffirmation of faith by all Americans in their common way of life.

It was 5 years ago that this I Am an American Day movement was initiated at Hollywood. I had the honor to participate in that initiation, and to deliver an address, which I am taking the liberty of asking to be printed in the RECORD with the hope that it may be of service to the public interest.

"I AM AN AMERICAN DAY"

(Address of Hon. HATTON W. SUMNERS, of Texas, at Hollywood, May 19, 1940)

Citizens of America, newly come to that privilege and to that responsibility, we welcome you and declare with you in the spirit of dedication and high unyielding purpose, "I am an American."

If we are to survive as a democracy, the serious, solemn, sacred obligation and the all-but-divine privilege of American citizenship must come soon within the conscious realization of our people. You come to governmental responsibility with many inherited domestic difficulties in what may prove to be for the whole world the most tragic epoch of the ages. Things long established are being shaken to their foundations. The din of battle, the cry of the vanquished, the crash of democracies greet you today as you come to the threshold of governmental responsibility. Upon you as Americans, not upon agents of government, depend the mightiest issues of history.

You have a great opportunity. You are called to responsibility, challenged by a responsibility greater than that which in a thousand years has come to test the fiber and make it possible for a generation, your generation, to tower above all its fellows as they pass again in review before the historian, who must now rewrite the history of the world.

I use no figures of speech. I declare the solemn, challenging truth that either you will be the greatest generation that has lived on this earth in a thousand years, demonstrating your greatness by the greatest achievement which in that time has adorned the history of the world, or you will by your failure to measure up to the challenge of your difficulties go down in defeat, carrying with you the wreckage of what will probably for a long time be the last of the remaining great popular governments of the earth. Will you do that? The answer is, "I am an American." The battle cry is, "I am an American." But the answer is not in the waving of flags, the saluting of flags, the singing of anthems, the reciting of creeds.

They have their place, but they warn us of the danger of our patriotism becoming ritualistic. Patriotism without works, like faith without works, is dead. It is good to honor those who have served their country well, but we honor them best not by worshiping at their shrines but by emulating their example with a patriotism of flesh and blood, willing to work at governing, willing to sacrifice, to suffer that the things in government for which they sacrificed and suffered may live. It does not matter how often we salute the flag and sing the national anthem. Whenever the governmental capacity of a people operating a system of popular government becomes less and remains less for a considerable period of time than their governmental difficulties, the form of their government must change.

This is a challenging thought, a challenging fact. May I give you my conclusion based on the facts which I have got as near their sources as it has been possible for me to approach? Except by conquest, no people privileged to govern themselves ever lost that privilege until they had first lost their capacity for self-government. No people who failed to use their capacity for self-government were ever able to retain it. No people who had lost their capacity to govern themselves were ever able to remain free. I am using no idle words; I am declaring the solemn warning truths of history, that when any people become so inefficient governmentally in proportion to their governmental difficulties that they cannot do the business of government, government of necessity turns from them and lays its hand on a Mussolini or a Hitler to do its work.

Governments are no more accidents than worlds and trees and human beings are accidents. The fact that there shall be government is fixed by nature in human necessity. Human beings have a choice, but the only choice they have is which of two great systems of government they will have. It is either some form of totalitarian government functioning from the top downward, or a government by the people which by its nature functions from the people upward. One is directed by men who believe that might is right; the other is guided by principles which are fixed in the economy of nature.

Human wisdom unaided is not wise enough to operate such a system of government. Confused and muddled by the false belief that men, some human beings in convention, in a creative sense gave to us our system of government, we have been looking to no higher authority than human wisdom to guide us in its operation.

Each of the basic provisions of our Constitution originated out of necessity, and was tested by the experience of a people peculiarly gifted with the genius of self-government long before our constitutional conventions undertook the task of our written constitutional constructions. If we are to emerge from the difficulties that now endanger us, we must rid our minds of the silly, historically incorrect, humanly impossible mythological tales about some supermen having created for us our Constitution and system of government; and, instead of such tales, which have crowded out the truth, and which are as impossible of human accomplishment as the tales of the Grecian gods, we must realize the truth about our Constitution.

The constitution of a popular government comes from the same source that the constitution of your physical body comes from, the same source that a tree comes from. No political philosopher or constitutional convention in a creative sense ever fashioned the constitution of a living government. Constitutions of popular governments are living things; they must be rooted in the governmental concepts of a people

whose governmental capacity is able to sustain them, or they wither and die as a plant withers and dies rooted in a soil which does not sustain it.

We live in a universe of natural law governing everything from the smallest atom to the greatest systems of worlds. In this universe of law there is a live God, a great intelligence, a great power. I say in all reverence He is the Big Boss. We may be His copartners, if we will, but we must work in obedience to His law. Only in the field of government do human beings now ignore this fact, and in the field of government is the one outstanding failure of this age.

We have the choice aided by the guidance of great principles which govern governments, of governing ourselves or being driven by the lash of oppression to the discharge of a neglected duty. This is the fundamental law I would impress. People learn to govern by governing. They retain the ability to govern by using it. They lose the ability to govern by not using it. They acquire the greater ability to meet the greater problems of tomorrow only by using the ability today possesesed to meet the problems of today.

The difficulties of popular government, like all other difficulties, have been provided for the development of people. Nature has no disposition to avoid difficulties for people. It creates them. The development of people is the central objective of Nature. Difficulties are the gymnastic paraphernalia provided for that development. We know by our own experience and observation that no individual was ever greater than his difficulties. No victory was ever greater than the battle fought to win it. The greatest epochs of the world are those in which peoples with a purpose which would not yield, with a courage which sustained, fought their way through the greatest difficulties of time. The history of the world is but a record of difficulties overcome. Being on top of the hill is not important in the scheme of Nature. Had it been so, we would have all been created on the top of the hill. Climbing the hill and gaining the strength from the climbing is what is important, instead of sitting down at the foot of the hill because it is steep and rugged and letting the muscles grow flabby. It is a law, a universal law, and therein lies the philosophy of self-government.

Progress is slow. Progress is uphill. Progress is difficult. Progress is the road of struggle and of strength; along that road lies the thrill of victory, the fitness to live. We are getting soft in America. We want the easy way, the fast way. But the easy way, the fast way, is the road downhill. It is the road of retreat. It may be alluring, but it is the lure of death. Study your own life. Examine history.

When some difficulty comes to our communities, to the smaller units of government, to our States, which function largely through smaller units, where the people choose their chief officers and have the opportunity to control, where the individual's voice may be heard and his influence felt—instead of grappling with that difficulty and adding thereby t. our governmental capacity by the use of the capacity which we possess, we cry out for a supergovernment to come in and do the job for us. As a result we not only fail to receive the increased capacity to govern which nature gives as a reward to those whose use the capacity already possessed but we lose capacity. Nature takes from us the capacity which we fail to use. It is the law of life. Let the greatest athlete go to bed and cease to use his muscles; the strength in his muscles will not remain. Let any self-governing people shift their governmental responsibilities away from themselves and, in proportion as they do, the strength to govern departs.

Basically considered, from the disregard of these fundamental facts, great laws of nature which govern, not only in government but everywhere, which determine sound policy, which limit human discretion, which fix the program for the development and preservation of governmental capacity of the people, from that disregard, basically considered, our major governmental difficulties and dangers have come. That is my judgment. I have examined the facts. I have been trained in the school of practical experience. I have subjected that judgment to every test to which experience has taught me to subject judgment before yielding to its guidance. I give it to you for whatever it may be worth.

"Lord God of hosts, be with us yet, lest we forget" that we live in a world of universal law, that we talk through the air, fly through the air, and do all the other wonderful things of this complex age because we have discovered and are obedient to natural law, lest we forget that long ago great thinkers, practical people who had searched the mysteries of life declared as a discovered fact that "there is a God who presides over the destiny of nations." Young men and women, and those from other lands, coming to governmental responsibility, let me impress that government is not the one hiatus in nature where there is no governing natural law. There is no hiatus in all the universe. Only by obedience to that law can human beings now operate and preserve in his complex scientific age a great system of popular government, such as we have.

"Lord God of hosts, be with us yet, lest we forget, lest we forget."

OWI Propaganda

EXTENSION OF REMARKS

OF

HON. LEON H. GAVIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 21, 1945

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by John O'Donnell, from the Washington Times-Herald:

CAPITOL STUFF

(By John O'Donnell)

The propaganda fireworks and psychological nip-ups which Dr. Elmer Holmes Davis is planning to launch via his Office of War Information into the theater of the Pacific war will receive a careful going over from the Congress before it puts up the $50,000,000 which Dr. Davis plans to spend.

There is the reasonable possibility that Congress may boot the whole OWI set-up out the window, which wouldn't be a bad idea at all. But of immediate importance are the doctor's propaganda plans for the Pacific and more importantly who will carry them out and color them.

The great issue, come the inevitable defeat of Japan, is the disposition of the islands our forces have so bloodily won. The OWI propaganda to be poured out by Dr. Davis's employees will have important reactions among the Dutch, the Australians, and the New Zealanders, to say nothing of the Chinese, who want to know in their quiet but persistent way if we plan to give Hong Kong back to the British.

Already, at San Francisco, the British have indicated that they do not heartily approve of the Navy and Army's desire to have complete and absolute control of those island bases which we have torn from the Japs at tremendous cost. The Dutch eye us warily and the Chinese uncertainly.

Now, who is going to run American propaganda to the peoples in these areas?

The OWI big shot is, and will be, foreign-born George E. Taylor, who never applied for American citizenship until he got on the OWI pay roll long after Pearl Harbor.

The disclosure of Taylor's foreign birth and connections ties in with the revelation of a few days ago by our colleague, Mr. Walter Trohan, of the Chicago Tribune, that OWI's psychological twin, the Office of Strategic Services, is dominated and directed in the Far East by Lt. Col. Lynn M. Coffey, of the British Army, technically "on loan" to Maj. Gen. William J. "Wild Bill" Donovan, Chief of OSS.

The foreign-born Taylor, a self-proclaimed "expert" on the Pacific situation, came to OWI from a professor's chair in the University of Washington at Seattle, where he lectured on Life, Literature, and Politics of Pacific Asia.

This was the job formerly held by Upton Close, radio commentator and writer. Taylor, in fact, succeeded Close to the lecture chair. Now, here is Mr. Close's report on OWI Deputy Taylor, whom he knew well:

"All knew that he was of foreign birth. Previously to Pearl Harbor he had argued favorably to Japan in the case of Japan's seizure of Manchuria.

"When Taylor left his professorship to become associated with the New Deal crowd determining policy in the Pacific, I and others naturally assumed that somewhere along the line he had become an American citizen. * * * The OWI is, of course, ostensibly a United States, not a British agency. No American citizen could hold a similar position with the British Ministry of Information.

"Imagine then my shock to learn that Professor Taylor, although drawing warrants from the State of Washington for years as a State employee, had never applied for United States citizenship until after Pearl Harbor and after he had become an official of the Government.

"I learn from the Seattle office of the United States Immigration and Naturalization Service that he wrote there applying for citizenship January 27, 1942. Not until April 22, 1943, were the depositions of his witnesses taken—that was at Alexandria, Va., Taylor being with the Government in Washington."

The interesting Mr. Taylor, while holding down the juicy post of OWI deputy director, Pacific and Far East area, found time to turn his hand to belles lettres and tossed off a propaganda play on the problems of Asia which the young ladies of Hunter College in New York city produced last January.

We didn't see Brother Taylor's opus, but Burton Rascoe, dramatic critic of the New York World-Telegram, did, and here is what Mr. Rascoe thinks of the viewpoint of the gentleman who is directing United States propaganda in the Pacific:

"The most conspicuous purpose of the play is to idealize the Red army of China under the Communist Party boss, Mao Tzo-tung, and to defame the Chungking government and forces under Chiang Kai-shek.

"Incidentally, the purpose of the play is to slander and ridicule the United States and the political, social, and educational ideas of the vast majority of the United States."

But what interested us in checking up on the play was to discover that one of its sponsors was a gentleman of the air waves who currently used the name of William S. Gailmor, thereby following a not uncommon practice among the most ardent admirers and henchmen of the last administration of ignoring data on a birth certificate.

The gent who calls himself Gailmor is properly the exclusive meat of colleague Westbrook Pegler, who has tossed this cheapjack up for grabs on several lusty occasions. But Gailmor, in the course of his leftist radio blabbering, has cut loose with several below-the-belt slugs at this reporter.

Hence, in the interest of informing the taxpayers of the type of gentry who endorse

the propaganda plays of OWI Taylor, we present the following thumbnail biography of Brother Gailmor:

William S. Gailmor, 38, born William Margolis, in Passaic, N. J., was an apparently successful rabbi until the late '30's. On March 29, 1939, under the name of Margolis, he pleaded guilty in General Sessions, New York, to a charge of grand larceny in the first degree, confessing he had stolen five automobiles. Gailmor was placed on probation for 5 years and sent to Hastings Hillside Hospital for mental treatment. After a year he was released and given a suspended sentence on condition that he change his mode of life and profession.

He wrote radio ads and news scripts and began radio commentating on WHN in 1941. Received repeatedly favorable Daily Worker comment.

Consider the Home Folks First

EXTENSION OF REMARKS

OF

HON. GEORGE B. SCHWABE

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 21, 1945

Mr. SCHWABE of Oklahoma. Mr. Speaker, a very critical food shortage appears imminent in this country. Everyone is willing for our armed forces at home and abroad to have first call on our food supplies and other materials. But many are beginning to think that a lot of our food is being supplied to other countries, and particularly to their civilian populations, in preference to the civilian population of the United States.

The situation is acute, and its effects are being keenly felt by our people. By all means, after supplying our armed forces amply, our own people should be supplied with the food produced in this country before it is given away, or even sold, to the people of other lands. Home folks should be considered first.

On May 9 I received a letter from the Rex Baking Co., of Tulsa, Okla., one of the largest commercial bakeries and users of sugar, fats, and dairy products in Oklahoma, depicting the critical situation which now exists. I immediately transmitted a copy of this letter to the Honorable Marvin Jones, Administrator, War Food Administration, requesting his prompt consideration and reply. To date, I have not heard from Mr. Jones.

For the information of this House, I am privileged to quote the letter from Rex Baking Co., as follows:

TULSA, OKLA., *May 7, 1945.*

Congressman GEORGE B. SCHWABE,
House Office Building,
Washington, D. C.

Subject: Shortage of sugar, fats, and dairy products:

DEAR CONGRESSMAN: If we are to believe the newspapers and trade information, it is apparent that some action must be taken to secure the food needs of civilians and industrial users of sugar, fats, and oils, and dairy products for these United States of America.

We do not question the legitimate needs of the armed forces of this country but concern ourselves merely with the food consumption needs of the citizens of our community. This company is a wholesale bakery, producing bread only for approximately one-quarter of a million people in this community.

Our production requirements of today are approximately 150 percent of 1941 volume. Our usage of sugar is limited to 75 percent of 1942 volume. Fats and oils are limited to 100 percent of 1942 volume. Milk is also limited due to a restricted supply. It is easy to understand how this "stretching" of our formula is reducing the standard quality of the "staff of life."

Further cuts in allocations of these various supplies seem inevitable unless those people who represent the food requirements of civilians in these United States are able to stand up and justify their claims against the steadily rising demands of the armed forces and other agencies concerned with overseas food demands.

The American public has shown a willingness to increase their consumption of cereal products so long as they are offered in an acceptable and palatable form. We feel it our duty to warn those in a position to help, that once the American public becomes dissatisfied with these plentiful cereals, and particularly bread, due to further stretching of the ingredients that give them palatability and nutritional value we will all be subject to a serious situation.

We are informed that the year 1945 will bring the greatest shortage of meat that the United States has even seen. In this event it is logical to assume that the citizens of this country must turn to cereal foods and dairy products as the basic food for their health and well being. Can this country afford to further weaken the nutritional value of these foods by further stretching the formula of the baking industry?

We have supported the program of the War Food Administration to the fullest extent. We have maintained our retail prices at the 1941 levels. We feel that Congress should secure the food supply of the American people so that the cheapest and most economical of foods will not have to be rationed due to an unnecessary shortage.

This is not an emotional appeal but a serious realization of the fact that this country cannot supply the endless demands of other countries for critical foods under the guise of military necessity. We honestly believe that the civilian and industrial needs of this country have first claim on our food supply. Your further efforts in this direction are earnestly requested.

Respectfully yours,

REX BAKING CO.,
By T. N. SLOAT.

The Trade-Agreement Program — The Industrialist Fattens as the Farmer Thins

EXTENSION OF REMARKS

OF

HON. BERTRAND W. GEARHART

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 21, 1945

Mr. GEARHART. Mr. Speaker, in accordance with permission just granted I hand to the Public Printer for inclusion in the CONGRESSIONAL RECORD two official tabulations, one relating to exports, the other to imports, in which is revealed just what has happened to agricultural and nonagricultural products under the so-called reciprocal trade agreements program.

With exports of agricultural products falling off to minus quantities and imports of agricultural products mounting to unprecedented heights, the farmer will find little in these tabulations to encourage him—when he notes the rapid expansion of both exports and imports in the nonagricultural columns, all this at his expense, his heart will be filled with despair.

But, Mr. Speaker, let the truth be known concerning the program that has failed. The United States Tariff Commission's figures, to which I referred, are the following:

United States imports for consumption, 1934 and 1937–40

[Value in millions of dollars]

A. FROM ALL COUNTRIES

Year	Value			Percentage increase over 1934		
	All products	Agricultural products	Nonagricultural products	All products	Agricultural products	Nonagricultural products
1934 [1]	1,635	821	814			
1937	3,010	1,579	1,431	84	92	76
1938	1,950	956	994	19	16	22
1939	2,276	1,118	1,158	39	36	42
1940	2,541	1,286	1,255	55	57	54

B. FROM TRADE-AGREEMENT COUNTRIES

1934 [1]	1,061	513	548			
1937	2,006	1,037	969	89	102	77
1938	1,285	612	673	21	19	23
1939	1,551	718	833	46	40	52
1940	1,776	876	900	67	71	64

C. FROM NON-TRADE-AGREEMENT COUNTRIES

1934 [1]	574	308	266			
1937	1,004	542	462	75	76	73
1938	665	344	321	16	12	20
1939	725	400	325	26	30	22
1940	765	410	355	33	33	33

[1] Imports from the Virgin Islands have been deducted from the reported totals for 1934 to permit comparison with the later years.

Source: Compiled from official statistics of the U. S. Department of Commerce. Figures for 1934 from an arrangement of the basic data by the U. S. Department of State making the agricultural and nonagricultural groups comparable with those of later years.

United States domestic exports, 1934 and 1937–40

[Value in millions of dollars]

A. TO ALL COUNTRIES

Year	Value			Percentage increase over 1934		
	All products	Agricultural products	Nonagricultural products	All products	Agricultural products	Nonagricultural products
1934 [1]	2,099	733	1,366			
1937	3,299	798	2,501	57	9	83
1938	3,057	827	2,230	46	13	63
1939	3,123	655	2,468	49	[2] −11	81
1940	3,934	516	3,418	87	[2] −30	150

B. TO TRADE-AGREEMENT COUNTRIES

1934 [1]	1,272	400	872			
1937	2,140	535	1,605	68	34	84
1938	1,970	583	1,387	55	46	59
1939	2,106	457	1,649	66	14	89
1940	2,842	361	2,481	123	[2] −10	185

Footnotes at end of table.

United States domestic exports, 1934 and 1937–40—Continued

[Value in millions of dollars]

C. TO NON-TRADE-AGREEMENT COUNTRIES

Year	Value			Percentage increase over 1934		
	All products	Agricultural products	Non-agricultural products	All products	Agricultural products	Non-agricultural products
1934 [1]	827	333	494			
1937	1,159	263	896	40	[2] −21	82
1938	1,087	244	843	32	[2] −27	71
1939	1,017	198	819	23	[2] −41	66
1940	1,092	155	937	32	[2] −53	90

[1] Exports to the Virgin Islands of the United States have been deducted from the reported totals for 1934 to permit comparisons with the later years.

[2] Decrease.

Origin and Development of 4–H Club Activities

EXTENSION OF REMARKS

OF

HON. CLIFFORD R. HOPE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 21, 1945

Mr. HOPE. Mr. Speaker, just the other day the House passed the bill 1690 which, when it becomes a law, will permit a considerable expansion of 4–H Club work, as well as other activities of the extension service.

I am in receipt of a most interesting letter from Mr. W. A. Lloyd, director of information service for the Association of Land-Grant Colleges and Universities, which outlines the origin and development of 4–H Club activities.

In view of the great interest which Members of Congress have always shown in 4–H Club work, I am sure that many of them will appreciate the opportunity of reading this letter. Under permission heretofore granted to extend my remarks in the RECORD, I include the same:

ASSOCIATION OF LAND-GRANT COLLEGES AND UNIVERSITIES,
May 18, 1945.

Hon. CLIFFORD HOPE,
Member of Congress,
House Office Building,
Washington, D. C.

MY DEAR MR. HOPE: In the debate in the House on H. R. 1690 the bill providing for the further development of the cooperative extension work of the land-grant colleges and the United States Department of Agriculture, a statement was made in regard to the origin of 4–H Club work which in the interest of historical accuracy should be corrected. The statement referred to occurred in the remarks of Mr. JOHNSON of Illinois on page 4562 of the CONGRESSIONAL RECORD, May 14, and on pages 4555–4556 of the same issue in your remarks and in a colloquy with Mr. JOHNSON. In this colloquy Mr. JOHNSON asks you, "Did the extension organization initiate or set up the 4–H Club work?" etc. You answer this question in part, but in the remarks by Mr. JOHNSON it was indicated that the club work was really initiated by private business interests and that, to quote directly from Mr. JOHNSON's remarks, "This work has been growing and it was picked up by the Extension Service and they are doing a good job with it."

I know that your remarks and those of Mr. JOHNSON were made in perfect good faith and that both of you and perhaps the Members of Congress would be interested in a statement of facts in regard to the origin of this now great and most worth-while organization.

As an extension activity, it is a direct outgrowth of work in the public schools. In the late 1880's and early 1890's, there was much interest in school circles in the study of agriculture, in the public schools in the country districts. In a very direct way this was incident to what was called "nature study work" actively promoted by Liberty Hyde Bailey of Cornell University. County school superintendents in several States developed agricultural clubs, usually they were "corn clubs", among their pupils. O. H. Benson in Iowa, Miss Mable Carney in Illinois, A. B. Graham in Ohio, and superintendents in Texas, Mississippi and other States developed such clubs. There were articles about them in the school magazines and they were a topic of much discussion at teachers and farmers institutes and State and national meetings of school teachers. There was a great pyramid of corn at the Louisiana Purchase World's Fair at St. Louis, produced by Illinois "corn boys" stimulated by the Illinois Department of Agriculture. A. P. Sandless, Secretary of Ohio Department of Agriculture brought a trainload of "corn boys" to Washington for several years. All of this work was done in cooperation with the public schools. During this time (following 1904) Dr. Seaman A. Knapp was developing his farm demonstration work in Texas and other southern States. This work was carried on in part by appropriation by the Congress to the Bureau of Plant Industry of the Department of Agriculture. This work was at first with adult farmers only.

In 1906 the school exhibit of a county school superintendent in Holmes County, Miss., came to the attention of Dr. Knapp, and he made the superintendent a "cooperator" in his work and the club boys' demonstrations, and promoted the organization of corn clubs by farm boys as a part of the demonstration work. It spread rapidly through the South during the next few years. Dr. Knapp brought from Iowa, his home State, a successful school superintendent, Professor Benson, to help organize this work throughout the South. A little later, garden and tomato clubs were promoted for the farm girls. A market was found for the product of some of these tomato clubs at the local stores. A trade name was needed for this product. A three-leafed clover with an H on each leaf had been a badge in some of the clubs. These H's stood for head, hand, and heart. The late O. B. Martin, who was giving special attention to the work with the women and girls for Dr. Knapp, suggested a four-leaf clover, the good-luck symbol, with an additional H to stand for health. This was adopted and was used as a label on the cans of tomatoes produced by the girls' tomato clubs. From this the boys and girls clubs in Dr. Knapp's demonstration work began to be called 4–H Clubs, and the name in a few years came to supplant the earlier official designation, Boys and Girls Club Work.

When the Smith-Lever Act of 1914 was passed this work was already well established in both the Southern and Northern and Western States through county agents appointed by the Department of Agriculture, and it became an important project in the newly organized cooperaive extension work in all of the States. It has been officially a part of extension work from the beginning and a part of the work of the country agents, men and women. From that first boys' corn club, as an extension activity in 1906, it has grown up directly under the sponsorship of the Extension Service of the Department and the colleges until there are now nearly 2,000,000 members.

Very early in the work the extension service stimulated the boys and girls to make exhibits of their product at local, county, and State fairs. Bankers, businessmen, and chambers of commerce offered prizes. Railroads offered trips. It was in connection with these exhibits at fairs and national expositions that the interest of national business leaders and philanthropists like Mr. Wilson, of Chicago, and Mr. Moses, of Springfield, Mass., was aroused. About 1919 a national club committee was organized, of which Mr. Meredith, afterward Secretary of Agriculture, was the first president. This committee was organized to stimulate this work and act as a propaganda agency in securing prizes for national competitions. A national 4–H Club congress has been held by this committee each year at Chicago since about 1921. This national committee employs a full-time secretary and it has done much to help popularize the 4–H Club work of the extension service. It is this committee that Mr. Johnson confuses with the origin of 4–H Club work.

As a national movement in the interest of better agriculture and better boys and girls, and as a part of the organized cooperative extension service, it is entirely due to the vision and industry of Dr. Knapp, his associates and successors. It was he who took an incidental activity of a few school superintendents in scattered States and made it a great national movement directly promoted by the Federal and State governments.

Just who organized the first boys' agricultural club is unknown. There is historical record of a boys' corn club being organized in Sycamore Grove School on Dry Fork Creek in Butler County, Ohio, by school teacher William Bibb in 1828. Mr. Bibb was afterward Governor of Ohio. He does not tell us where he got the idea. This club of more than a century ago had most of the attributes of a 1945 model 4–H Club. Perhaps there were such clubs before this one and undoubtedly there were many in the period between this first club and the resurgence of school interest in the matter in the early 1890's, but the real founder was Dr. Knapp. Without his vision and the financial patronage by the extension service, the movement would have remained sporadic. While this is true it is also true that as an extension project it would have been impossible but for the splendid work of unpaid local leaders of the individual clubs. These farm men and women are the real heroes and their work has been helped and the young people's enthusiasm kindled by the prizes and trips made possible by businessmen. This is just a brief account to help keep the record straight.

W. A. LLOYD,
Director.

Price Control

EXTENSION OF REMARKS

OF

HON. CHARLES R. ROBERTSON

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 21, 1945

Mr. ROBERTSON of North Dakota. Mr. Speaker, at an early date this body will be concerned with legislation extending the life of the price-control administration. We shall of necessity, at that time, give the matter our most serious

consideration. We shall be compelled to weigh the errors of OPA against their accomplishments and then vote our deep convictions.

With the full knowledge that this question is one which involves serious aspects to the daily lives of thousands of people, under unanimous consent, I introduce into the CONGRESSIONAL RECORD a resolution which has come to me from the North Dakota Implement Dealers Association, Fargo, N. Dak., expressing their views in the interest of price administration:

The Price Control Act should be continued, but legislation extending this act for another year should require some revisions in administrative practices.

Additional emphasis should be placed on the requirement that proper industry advisory committees be consulted before any new OPA regulations are issued, and the recommendations of such industry advisory committees should be made public.

Recourse to established courts of law should be easily accessible for an appeal from any action taken by OPA enforcement or prosecuting branches of OPA where there is any question about the legality or justice of their decisions. Summary action by a commission that has investigating, prosecuting, and judicial authority should not be tolerated without ready access to established courts of law.

The Price Control Act should, as its title implies, control prices as a means of preventing inflation, but should not control profits by fixing margins. In other words, costs all along the line should be considered in the writing of regulations controlling prices.

The fact that a business enterprise makes an over-all profit on its entire business operation does not justify any provision calling for the absorption of losses on individual items.

When new regulations are issued calling for revision of price schedules, filing of reports, posting of prices, etc., a minimum of 30 to 45 days should be allowed for the preparation of such reports from the time printed copies of the regulation are made available.

Requirements for reports and accounting records should be reduced to the minimum. Present practice places an undue and unnecessary burden on business by requiring detailed records which are not essential for the enforcement of price regulations.

A reaffirmation that the policy-making and administrative branches of the Office of Price Administration be placed under the direction of business executives with actual experience in the lines of business under their supervision.

NORTH DAKOTA IMPLEMENT DEALERS ASSOCIATION,
GEORGE DIXON, *Secretary.*
FARGO, N. DAK.

It Was Appropriate

EXTENSION OF REMARKS
OF
HON. JOHN R. MURDOCK
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES

Monday, May 21, 1945

Mr. MURDOCK. Mr. Speaker, it was a very appropriate and impressive ceremony we witnessed today when the President of the United States conferred upon a soldier thus publicly in this Chamber the most coveted award within the power of a soldier to earn from this Government. Without my knowing this young hero at all personally, he impressed me as a mild-mannered youth of cultured mien, very likely illustrating the words of the poet:

The bravest are the tenderest,
The loving are the daring.

As General Marshall read the citation, I looked at the slender youth beside him and found myself wondering whether the General could possibly have brought the wrong man.

Honoring the Infantry was a large part of the appropriateness of this ceremony. Having General Marshall take a prominent part in it was another part of the appropriateness. It was General Marshall who months ago called our attention to the vital part the Infantry must play in the winning of the war. In the beginning some of us thought the war could be won from the air alone or on wheels on the ground. We did not know what is meant by the Queen of Battles. Then we heard General Marshall more than a year ago indicate that the hardest part must be done by the Infantry. His soldier's insight, which many of us did not have, makes appropriate his part in the ceremony today even more than his high military rank of Chief of Staff.

The joint session today withheld its cheers from others for the sergeant. How he must have swelled with pride as he heard that prolonged cheering. Yet, undoubtedly, he knew it was not all for him. He was the one hundredth from the Infantry. Ninety-nine had preceded him without this distinctive honor—some had gone to their death without knowing they were regarded as meriting it. All too often the path of glory leads but to the grave. Not alone for 99 heroic infantrymen and himself did our sergeant receive applause and honor today. No; not 100 heroic foot soldiers received our thanks and appreciation in this special session but 100,000 who have died heroically in combat and many times that number who faced death and received wounds in the withering fire of the enemy. He represented that vast host of whom Ernie Pyle wrote so understandingly. Our sergeant today stood for all of them. The sergeant's hair is straight and black, but I thought of an infantryman with light and wavy hair—even so, we loved the sergeant for himself, plus a lot of love for someone else for whom he stands instead.

His parents were there. Most of us are parents of youths in uniform. We understand his parents' feelings and join them in a prayer to be worthy to match our spirit with the spirit of our own offspring. This gray-haired generation cannot properly take pride in our achievement, having brought the world to such a sorry plight. If we are to have any pride it will have to be in the courageous spirit of our soldier sons. In the Infantry theirs was the least dramatic part but cruelest in its toil, hardships, and suffering of cold-steel combat. It was they who in desert sands and mountain snows; in tropic heat and arctic cold; in sticky mud and choking dust; in inky darkness and glaring light with rifles, bayonets, and hand grenades faced and defeated the evil forces which our generation permitted to grow upon the earth.

Mother and Father Lindsey, we understand and appreciate your feeling today. Sergeant Lindsey, we love and honor you, partly for yourself alone, and mostly for those to whom you cause our thoughts to turn in this stark drama of life and death. Our blessings are upon you.

Let's Mind Our Own Business

EXTENSION OF REMARKS
OF
HON. GEORGE B. SCHWABE
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES

Monday, May 21, 1945

Mr. SCHWABE of Oklahoma. Mr. Speaker, recently there is evidence of a growing tendency among our people to wonder just how far our Government should go in intervening in European politics. There are some who think we should not participate at all. Others seem to want to participate in every issue that arises across the Atlantic. There is still a third group, which has thus far expressed itself less often, the members of which are beginning to say that we have perhaps gone far enough, if not too far, and that we should begin to watch our step and proceed with greater precaution.

Some of our independent journalists and newspaper commentators are sensing the new feeling that is developing and beginning to find expression among our people. An illustration of some of the thinking of today is found in the editorial of the Washington Times-Herald of May 16, 1945, which follows:

The United States has just finished helping England and Russia put down Germany, which 5 years ago was the first military power in Europe. Russia is now the first military power in Europe.

Nature abhors a vacuum. Russian power accordingly is flowing into the vacuum left by the destruction of German power—meaning Russia is setting up or sponsoring Communist or semi-Communist governments all over eastern and southeastern Europe.

It swallowed Latvia, Estonia, and Lithuania long ago. The Lublin Polish Government is Communist, and everybody knows it. So is Tito's Yugoslav regime. Italy may fall to the Communists. France's local elections are producing large crops of Communist local officials. Russia rushed an allegedly independent government of Austria into office without a by-your-leave to the western allies. As to other European states—situation unclear.

In his adroit and eloquent speech last Sunday, British Prime Minister Churchill expressed the conviction that England and the United States must go on working together and marching together and sailing together and flying together whenever something has to be done for the sake of freedom and fair play all over the world. A few paragraphs later, he had this to say:

"On the Continent of Europe. * * * There would be little use in punishing the Hitlerites for their crimes if law and justice did not rule and if totalitarian or police governments were to take the place of the German invaders."

That sounds as if Mr. Churchill were contemplating an eventual war to cut down Russian power in Europe, with us to be induced to help England fight Russia in the name of democracy.

Mr. Churchill, now 70, might not live to see such a war. But it has been British policy since Spanish armada times (1588) to swing the weight of Britain and all the allies it could get against any strong leader who threatened to unify Europe—Louis XIV of France, Napoleon Bonaparte ditto, Wilhelm II of Germany, Adolf Hitler ditto.

If we are now so deep in European politics that England can haul us into any war to put down any strong power on the Continent, we are slated to lost a lot more of blood and money in European wars. We have already lost plenty in two of these wars.

The fact is that it is none of our business what kind of social and economic systems exist in Europe or Asia.

Russians like communism, or at least they stand for it. It isn't the old simon-pure share-the-poverty brand of Marxian communism. It is Stalin communism, under which everybody does what the government tells him to do and the smart fellows get more of this world's goods than the dumber fellows get. So it was under the czars, whom the Russians also liked or at least stood for.

LET'S MIND OUR OWN BUSINESS

If Russia is strong enough to spread this system over most of Europe, and into a large part of China after the Japs are licked, that is not our affair, and we should not go to war with Russia about it.

The Kremlin will doubtless go on trying to undermine our form of government through its American stooges, puppets, and dupes, as it has been doing ever since the 1917 Russian revolution. But that is no reason why we should fight the Russians. The thing to do about the local Reds is to keep an eye on them always, and jail any of them who violate any of our laws.

Should Russia try to grab the Aleutians or Alaska, or otherwise muscle militarily onto our territory, we should of course fight Russia. Otherwise, not.

All this illustrates what is meant when it is said, as it often and loudly is said by a lot of influential people, that after this war we shall need the world's strongest navy, and air force, plus a highly trained professional army preferably based on a system of universal military training.

Given such defenses, we can mind our own business, and can most probably keep the Russians or anybody else from chiseling into what is geographically and logically our sphere of influence; namely, the Western Hemisphere. And we can keep out of any more of Europe's wars.

That, we believe, is the ardent desire of most Americans on the home front today, and the even more ardent desire of millions of Americans who have personally witnessed the blood, misery, and tragedy of the fighting fronts.

"Debunking" TVA Bookkeeping

EXTENSION OF REMARKS

OF

HON. CHARLES H. ELSTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, May 21, 1945

Mr. ELSTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Cincinnati Enquirer, of Thursday, May 17, 1945:

SPEAKING OF YARDSTICKS

In the last dozen years—the supposed twilight era of free enterprise—we have heard much about "yardsticks" to measure the failings of private initiative as compared with governmental undertakings.

Perhaps the most celebrated of these yardsticks is the Tennessee Valley Authority, that vast electric power domain established with money from the Federal Treasury to prove—along with other things, of course—that the public utility industry was overcharging users of electricity.

It has proved no such thing. In any economic balance sheet weighing TVA against privately owned public utilities, one promptly is submerged in a morass of bookkeeping which has no real economic foundation. If the comparison proves anything, it proves only that an agency of Government, with unlimited access to the public purse and unhampered by the obligations with which Government saddles free enterprise, can manufacture power cheaper than a privately owned public utility—but then only if the bookkeeping is taken at face value.

Railway Age, replying to a eulogy of TVA published in a weekly paper of the railway unions, did an extremely effective job of debunking TVA bookkeeping in its May 12 issue.

TVA makes a pretense of paying taxes. We say "pretense" only because, as Railway Age points out, the Authority last year paid 6.1 percent of its gross revenues "in lieu of taxes." The figure was $2,168,798. Meanwhile, the privately owned electric power industry was taxed at approximately 23.8 percent of its gross revenues, In other words, applying the private enterprise "yardstick" against TVA, we find that it fell short by $6,263,434 of paying the taxes it would have paid had it been privately owned.

TVA last year charged $621,579 to interest. Its total assets meanwhile are listed as $763,666,809. Any privately owned utility has to pay interest on the money it uses—and so does the Government. Although the Government enjoys an extremely low interest rate, the fact remains that the great investment in TVA costs money. If it was not money invested in the Authority, it could have been money applied against the Federal debt, with a corresponding reduction of the amount on which the taxpayers must pay interest annually. Thus, even if we figure an interest rate of only 2 percent against the TVA investment, we find that the Authority is overlooking the neat sum of $14,651,757 in its allowance for interest on capital used.

These two items alone—taxes not paid and interest not paid—total $20,915,191. And that is three times the amount of net income reported by TVA last year.

In other words, had the Authority attempted to do business last year on its present rate schedule without the benefit of this bookkeeping evasion, it would have lost $14,333,562, which the taxpayers of the entire Nation would have been forced to make up as a contribution to the people of the limited area served by TVA. Or, conversely, had TVA's rates been increased to cover the item which private enterprise must include in its rate structure, charges to consumers of electric power would have been stepped up 43 percent.

It's quite a revelation, in other words, when you start to measure the yardstick of socialized enterprise against the rigid, accurate yardstick of orthodox economic practice. The result is not to make the private utility industry look bad, but to make it look better.

Postwar Position of California Grape and Wine Industry

EXTENSION OF REMARKS

OF

HON. FRANCK R. HAVENNER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 21, 1945

Mr. HAVENNER. Mr. Speaker, I have received a letter from the Wine Institute of California which contains a comprehensive statement of facts concerning the postwar position of the American grape and wine industry and its production and marketing problems, particularly in relation to imports. The letter is as follows:

WINE INSTITUTE,
San Francisco, May 15, 1945.

The Honorable FRANCK R. HAVENNER,
House Office Building,
Washington, D. C.

MY DEAR MR. HAVENNER: In connection with H. R. 2652, we wish to call attention to certain facts pertinent to the postwar position of the California grape and wine industry, particularly in relation to imports. There has been some public discussion as to the possibility of using substantial wine imports as a basis for making credits available to foreign wine-producing countries. We believe that much of this thought is based on lack of information, both as to the nature of our internal market and the type of commodity which would be available from abroad for that purpose. Hasty or ill-advised action under the broad authority proposed in H. R. 2652 would mean for this industry a return to the depressed conditions of 6 years and more ago, which the industry has since put behind it.

The California grape grower cultivates about 500,000 acres of grapes with an average annual yield of 2,500,000 tons. This crop is dependent on three major outlets for its disposal. Raisin packing would normally take about 1,000,000 tons, fresh shipment for table and juice purposes would normally take about half a million tons, and the remaining quantity must go to the winery. This means a crush of 1,000,000 tons, or 100,000,000 gallons of annual average wine production. In the event of a good crop, or if the markets in the first two outlets are unsatisfactory, then the wineries must be in even a better position to absorb the excess if they are properly to perform their function of carrying that excess. If the full crop cannot be absorbed, grower returns, of course, diminish.

During the thirties, it became clear that the raisin and fresh shipment outlets were tending to reach their saturation point. On the other hand, a definite under-consumption of wine was preventing the vintners from absorbing the remainder of the crop. By 1938 the annual consumption of California wine was tending to level off at about 55,000,000 gallons. Grape prices and wine prices were at dangerously low levels.

In 1938, a determined campaign to eliminate underconsumption of wine in the United States was inaugurated under the State Agricultural Marketing Act. Consumption of California wine began to increase by about 10,000,000 gallons each year, reaching a total of 96,000,000 gallons in 1942. With more assurance as to his markets the vintner was able to afford the grower a greater return. Where formerly prices as low as $10 per ton had been common, annual average returns to growers began to increase, reach-

ing $20 in 1941 and $30 in 1942. Wineries began to market their own brands, instead of selling off most most of their wine in bulk as a semisurplus commodity useful primarily to obtain current operating funds. Both grower and vintner finances have improved, and it is estimated that vineyard and winery loans have now dropped to about one-sixth of the amount formerly carried. The improved internal market was likewise beneficial to wine-producing States other than California and the consumption of other United States wines increased from about 9,000,000 gallons annually to 10,000,000 gallons in 1942.

This development of our internal market followed the pattern of most wine producing countries. In general, not more than about 2 percent of world production is shipped in export, the remainder being consumed locally. Export trade in wine, other than to nearby markets has almost always consisted of specialty or fancy wines, rather than the standard grades which constitute the majority of wines produced. For this reason, imports into the United States have usually been wines in the fancy or specialty categories for sale to a relatively limited clientele. Prior to the war their consumption here was at a low but fairly steady level (somewhat less than 4,000,000 gallons annually), and their importation did not tend to affect general grower conditions in this country any more than their exportation tended to affect general grower conditions in foreign wine producing countries.

In 1940, and again in 1941, California produced approximately 100,000,000 gallons of wine and was able to market 96,000,000 gallons in 1942. The inauguration of the Government's wartime raisin-drying program in the autumn of 1942 (and its subsequent continuation) brought about reduced production, lowered inventories, and lowered sales against the consumer demand that had, in 1942, been brought up to the point where it began to correspond to the grower's outlet needs. Sales of California wine fell to about 75,000,000 gallons in both 1943 and 1944.

In the meantime shipping space for importation was gradually becoming available. In 1944 importations about doubled their pre-war level, and reached nearly 8,000,000 gallons. This takes into account only a nominal amount of Italian and French-Algerian production, for which internal and export transportation was not yet available.

With an abnormally large percentage of the California grape crop being dried into raisins during the war, the internal wine market has not been as necessary an outlet to the grower as in normal times. We are now, however, beginning to return to the normal condition in which the vintner will again perform that function. Some reduction in last autumn's drying requirements brought production up to 90,000,000 gallons; the still lower drying requirements in prospect for 1945, plus prospects of a bumper crop, indicate a production this coming year of between 100,000,000 and 120,000,000 gallons.

We do not believe that there can be any substantial increase in the total volume of importations without (a) drawing on foreign wines of standard average grade that would normally go into local consumption abroad and (b) entering directly into the identical market upon which American grape growers rely as a main outlet for their crop.

Consumer demand for wine is being gradually developed in the United States, but we are not of the opinion that it has yet developed at a rate which would justify large-scale importation against the volume of our grape crop that must first have its own adequate outlets. The industry should not return to the grower and wine-price conditions that existed in the depressed thirties, and believes that their best interest makes necessary a program that would insure further continuance of the gradually improving conditions first attained in 1942. We have contacted the wine growers in other wine-producing States and find them in a substantially similar position with respect to their own production and marketing problems.

It is, therefore, recommended that H. R. 2652 be modified by confining the authorization for tariff reductions to the 50 percent reduction currently authorized, and by limiting the life of the authorization to 1 additional year instead of 3.

Sincerely yours,

WINE INSTITUTE,
HARRY A. CADDOW,
Secretary-Manager.

Cattle Upon a Thousand Hills

EXTENSION OF REMARKS
OF

HON. CLARENCE CANNON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 22, 1945

Mr. CANNON of Missouri. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include a letter just received from Mr. J. W. Burch, State director for Missouri, representing the University of Missouri, the Missouri College of Agriculture, and the Missouri Agricultural Extension Service.

Mr. Burch has had a long and distinguished service in the educational institutions and agricultural activities of the State, and is in position to speak with authority on the matters discussed in his letter.

His statements are on a subject of vital interest and importance to the Nation, and I trust will have the earnest attention of the legislators, economists, and administrative officials who have the responsibility of providing a solution for one of the most pressing problems of the time.

Mr. Burch's letter is as follows:

DEAR MR. CANNON: I have read with a great deal of interest House Report No. 504, on food shortages. I am in agreement and sympathy with most of the statements contained in this publication and certainly feel that some steps must be taken in order to remedy the situation as soon as possible.

I have also seen the reports in the papers of the proposals to take steps which will encourage an expansion in the feeding of cattle as a means of increasing the available meat supply.

As previously stated, I am in agreement with the statements regarding the need for encouraging an expansion of meat production, but I think it would be a mistake to overlook any methods which might result in an appreciable increase in the marketing of livestock during the next 3 or 4 months. Both of these proposals which I have read have to do with the encouragement of cattle feeding. The feeding of cattle, as you well know, requires considerable time, and steps taken now will not increase the supply of meat by this method before early next year. If we can do that and also take steps which will give us additional meat during this summer, we would be that much better off.

Another thing we need to keep in mind is the timing of these programs. Unless we are quite certain that the demand for meat will be adequate to take care of all the expansion which might be secured during the latter part of 1946, it might not be helpful to take those steps now and disappoint producers some 12 to 18 months later.

To be perfectly honest, we have two objectives in the proposals which I am going to make to you. Our consumers need meat now and I would like to see that demand cared for insofar as possible. Of equal importance, however, from the standpoint of the producer is the fact that we now have in this country an all-time record number of beef cows and heifers in our breeding herds. We feel that it is extremely important that these cattle numbers be adjusted before there is any probability of a reduction in demand or an appreciable drop in the prices paid for beef cattle.

These two objectives are entirely compatible in that a reduction in the number of breeding cattle would also satisfy the demand for meat.

As stated above, most of the emphasis now has to do with an encouragement of the feeding of cattle. Last year we slaughtered approximately 33,900,000 head of cattle and calves and our 1945 goal calls for a slaughter of 35,000,000 head. Probably no more than 5,000,000 head of these cattle will be grain fed. On January 1 this year there were approximately 4,100,000 head of cattle on feed.

That means that approximately six-sevenths of our cattle slaughtered are not grain fed and almost that large a proportion of meat is in the lower grades. Last year there was slaughtered under Federal inspection a total of 5,860,000 steers and 7,392,000 cows and heifers. Cows and heifers made up 52.9 percent of all cattle slaughtered under Federal inspection.

A War Food Administration publication reports the total production of beef, by grade, in 1943 was distributed as follows:

	Percent
Choice	19.4
Good	31.1
Commercial	23.1
Utility	14.7
Canner and cutter	11.7
Total	100

Any program designed to increase beef marketings must include consideration of the cattle furnishing the bulk of the beef—butcher cattle rather than good and choice steers.

This same publication shows that the seasonal distribution of federally inspected slaughter of cattle in 1943 was as follows:

	Percent
January to March	23.1
April to June	19.4
July to September	25.4
October to December	32.1

While I do not have any figures conveniently available, there is some unevenness in the seasonal distribution of cattle marketed in each grade. For example, a large proportion of the grass cattle are marketed at the close of the pasture season during the fall of the year. Since finished cattle make up such a small proportion of our total cattle marketings, that explains in part the large proportion of all cattle marketed during the last quarter of the year.

My proposal, based on these facts, is as follows: In addition to the steps now contemplated, a plan should be developed which would stimulate the marketing of so-called butcher cattle, those not finished on grain, during the next 4 months rather than allowing producers to follow the usual custom of waiting until the end of the pasture season

and marketing all of these cattle in a short period of time.

To induce cattle owners to market butcher cattle before frost will require the development of a program that will make the producer confident that marketing his cattle early will be more profitable than it will be for him to wait and secure some additional gain on grass.

It seems to me that it probably would be necessary to provide a support price on the market, not through the packer, but direct to the shipper for slaughter cattle marketed between now and sometime in September before the main run of grass cattle starts. This support price would have to be high enough to make it obvious that more could be secured for animals sold early than late. That support price or guaranty probably should be withdrawn entirely on some date in September and an announcement of that fact should be made at the time an announcement of the support price was made.

The Kansas City Times for May 19 announces "Effective May 19, 1945, the Commodity Credit Corporation will pay a subsidy of 50 cents per hundred pounds to the seller of AA and A grade cattle marketed for slaughter (sold for $14.25 or more per hundred pounds, Chicago basis) weighing 800 pounds or more, which have been owned by the seller 30 days or more. * * *

"('The subsidy will be a lot of help to feeders if the packers don't take advantage of it by lowering prices', Joe R. Hoover, president, of the Joe R. Hoover Commission Co., said last night * * *.)"

I feel that producers may be as skeptical as Mr. Hoover. The assurance to producers should be in the form of a support price on the market as in the case of the $13 floor for hogs at Chicago.

This announced plan is limited to AA and A grade cattle. It will have no effect on most butcher cattle which make up half our total beef supply and this plan will not secure more beef this summer.

Last year "good" cows averaged as follows during the last half of the year.

	Average price
July	$13.05
August	13.43
September	13.41
October	13.62
November	13.72
December	13.81
January, 1945	14.23

Obviously the support price would have to be higher during the summer than the market price is likely to be and enough higher to offset any additional gain in weight that might be secured by holding these cattle until October to December. It is also probable that if a uniform support price was provided from now until, say, September 20 producers would hold most of their cattle until about September 19 in order to get as much gain at this fixed price as possible.

I am not proposing to submit a finished foolproof plan, but it appears that something in the nature of having a support price, say at $15 per hundred for "good" cows during the month of June with a gradual reduction each month until September when the support price would be $14 per hundred would have a tendency to encourage early marketing. If it were announced that the support price would be withdrawn entirely at some specified date in September there should be a tendency for those producers who could to take advantage of the guaranteed minimum price.

That sort of a program should spread the marketing of butcher cattle over a considerably longer part of the year than is normally used, and the extension should be back into the summer when our shortage of meat is going to be most acute.

The encouragement of the marketing of cows and heifers which will bring a reasonably good price on the market will also tend to reduce our breeding herds and put the beef-cattle industry in a much sounder position for postwar developments.

While I have limited my discussion to a support price for good cows, I do not mean to imply that a similar program should not be developed for other grades of butcher cattle. I recognize that any program of this nature will be somewhat complicated, but I do think that it is feasible and will help to secure meat now when it is needed and will strengthen the beef-cattle industry in the future.

Another way in which we could get some meat reasonably soon would be to encourage an expansion of the production of broilers during the last half of this year by those producers in position to do so economically. As you know, the OPA program calls for a lowering of the ceiling on poultry each month from now until the end of the year.

This year, with the shortage of all sorts of meat, it might be worth while to encourage the production of broilers and other chickens. Actually that sort of a program might reduce the transactions in the black market.

I know that you are concerned with this problem of the food supply and also with the welfare of our agricultural group. I have talked this proposal over with some of the folks here in Missouri who feel it has possibilities. I hope you will have an opportunity to give it some consideration and make such disposal of it as you think best.

Very truly yours,

J. W. BURCH,
Director.

VE-Day Prayer

EXTENSION OF REMARKS
OF

HON. JAY LeFEVRE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 22, 1945

Mr. LEFEVRE. Mr. Speaker, I have just received a letter from Mr. Seitz, director of public relations in the Port Ewen, N. Y., Hercules Powder Co. plant. This Port Ewen plant is in my district. It has done an outstanding production job from the beginning of the war and expects to continue until the Japs are vanquished.

On Saturday, April 14, the program, Bob Browning and the Local News, over the Kingston, N. Y., radio station, sponsored by the Hercules Powder Co., asked Bob Browning to read a prayer written by a Herculite. This prayer, along with a prayer offered at the plant's VE-day celebration by the Reverend Michael Curley, pastor of the Church of the Presentation, of Port Ewen, received such wide acclaim that I am placing both of these prayers in the RECORD so more Americans will have the opportunity to read them and learn of the praiseworthy work being performed by the employees of this Hercules plant:

VE-DAY PRAYER

(By Rev. Michael Curley)

The bells are ringing and the hearts of men are cheering, the bluebirds are over the White Cliffs of Dover, the hideous black night of war has lifted from Europe, the lights are going on in the world, O God, and millions of our loved ones have ceased firing after their epic battle march from the shores of Oran to the Brenner Pass, from the bloody beaches of Normandy to Prague and the center of Germany. Victory in Europe is won. With a profound knowledge that without Thy help, O God, we could never have achieved this glorious day, we humbly say from the bottom of our hearts, "Thanks to Thee, O God!"

Thanks for the iron and the ores that you placed in our land, thanks for the food from the fields, thanks for giving wisdom to the men who guided us, thanks for the sinew and the brawn of our men and women who used the God-given resources of this mighty Nation—that loves peace and fights mightily in war. Thanks for the ships and the guns, for the planes and the ammunition, for every single item that helped to win this triumph, we humbly thank Thee, O God of Victory.

Thanks for Thy protection to the boys who rode the sea, thanks for the fighting hearts that nerved brave men to stand up against the withering fire from the ruthless foe. In their name and in the name of all who love them, we say a thousand times, "Thank Thee, God of Justice and Right."

Thanks for the peace that comes to millions of European people who crouched in fear of tyrant forces, thanks for the light that is coming to their lives, thanks for the freedom of body and soul that starts once again from this hour, thanks for the bright skies in Europe to which little children may once again look without fear of thundering bombs, or deadly machine gun fire. Thanks to Thee that over there on the western side of the globe men may worship Thee as their conscience dictates—great and true God of the living and the dead!

Inspire us here with renewed vigor to accomplish the unfinished task ahead—to carry the light of liberty to millions still hiding in terrible fear of a pagan foe across the wide reaches of the Pacific sea. Protect our boys there, O God, as you did our dear ones across the Atlantic. Let this work of thanks, God of justice and of peace bring protection to them as they battle against a reckless enemy. Let there be no idling in the market place while work is to be done, inspire in us new zeal to push forward, let there be no slackening of pace, no pausing when our brothers call for help, let no obstacle block us, no false enthusiasm freeze our energy. Let the strong arms and nimble fingers of those here before me work more strongly and move more nimbly still to complete the redemption of men from horrible satanic war—that the whole wide world may one day join in chorus and say to Thee, "Thank God for victory, thanks for peace—peace in our time."

IN MEMORIAM

O God of the living and the dead, we pray Thee bless the great soul of our departed President, Franklin Delano Roosevelt. The eyes that once gleamed have now lost their luster in death. The cheery voice that brought hope to millions is hushed forever. Because of all he did for us, O God, vouchsafe to him grace and mercy before divine tribunal and let him attain to everlasting rest and happiness in Thy eternal kingdom.

Keep forever green in the mind of every American the memory of his virtues, his courage under difficulties, his zeal to help the distressed, his fight to keep freedom alive in the hearts of men all over the world crouching in fear of dictators and tyranny and let no man forget his magnificent devotion to duty in every trying circumstance to the end and limit of his mortal strength.

Inspire the children of future generations with the spirit of the man who began his

administration with the heartening words, "The only thing we have to fear is fear itself." Let the recollection of his physical handicap spur others to go forward in spite of every obstacle.

Bow down Thine ear in pity to the wife and children of this good servant of the people. Grant that they may not languish in unavailing grief, but through their tears look meekly up to Thee, the God of all consolations. Amen.

Office of Price Administration

REMARKS

OF

HON. EDWARD J. GARDNER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 22, 1945

Mr. GARDNER. Mr. Speaker, I am inserting in the RECORD copies of correspondence which passed between Thomas L. Conlan, chief enforcement attorney for the Cincinnati district Office of Price Administration, and Mr. C. Herbert Clemens, of Dayton, Ohio, an investigator for the Cincinnati district.

This is evidence of reprisals which are being visited upon people within the Cincinnati district office when they seek to make the OPA more efficient and fair in its handling of violations. This is another sample of the indiscriminate attempt to break down efficiency within the Cincinnati district office.

Mr. Clemens was one of the best investigators employed in the Office of Price Administration, while he is apparently being replaced by a Mr. Robert E. Yelton, who was formerly connected with an automobile finance company and whose past record as an investigator for the Office of Price Administration clearly shows that he is not capable of making a full and complete investigation of matters which are assigned to him. It is proof again that the Cincinnati district heads are bound and determined to administer the Office of Price Administration without complete equity and fairness.

I believe that the only way in which this condition can be corrected is by instituting the congressional investigation that is called for in House Resolution 241, which is now pending before the Rules Committee.

The matter referred to follows:

MAY 2, 1945.

Memorandum to: Mr. C. Herbert Clemens.
From: Thomas L. Conlan.
Subject: Disclosure of information procured by you in the course of your duties as an investigator for the Office of Price Administration.

Acting upon my request you came to the Cincinnati district office this morning to discuss certain pending cases in connection with which, in the course of your duties as investigator for this Enforcement Division, you had handled. During the course of our conversation you stated that you had information pertaining to the operations of the Cincinnati district office, and to the operations of the Enforcement Division of the Cincinnati district office, which I, as district enforcement attorney did not have knowledge of. I requested that you disclose to me in my official capacity, or to any other authorized personnel of the Office of Price Administration either in the district, regional, or national office, any information you may have affecting the operations of this Cincinnati district office, and in particular the Enforcement Division.

This information you refused to disclose, and further stated you would refuse to disclose it to any other employee of the Office of Price Adminsitration.

In my official capacity, as district enforcement attorney, I demand that you furnish me by the close of business on May 3, 1945, either in writing or verbally, which you have, and are concealing from me pertaining to the operation of the Cincinnati district office of the Office of Price Administration, and particularly the Enforcement Division thereof. If you persist in your refusal to disclose this information I demand that you put your refusal in writing in a memorandum addressed to me stating the reasons therefore.

(Not delivered until 3 p. m. May 3. Extension of time for answer to close of business May 4, 1945. Thomas L. Conlan.)

MAY 4, 1945.

Memorandum to: Mr. Thomas L. Conlan.
From: C. Herbert Clemens.
Subject: Memorandum of May 2, 1945.

In conformity with your summons, I appeared at the Cincinnati district office on May 2 last to discuss with you such matters as you had chosen.

I categorically deny that I did, at any time in the course of this interview, make any statement or statements averring, affirming or even implying that I was in possession of any information pertaining to the operations of the enforcement division of the Cincinnati district office of which you, as district enforcement attorney, had no knowledge.

I further deny emphatically any refusal upon my part to disclose any such knowledge, since I do not admit such knowledge to have been in my possession.

It is, therefore, with regret that I confess my inability to accede to your demand that I furnish you such information verbally or in writing, by the close of business May 4, 1945; how can I furnish you with any information I claim never to have possessed and which I firmly deny concealing from you?

Obviously, compliance with your request that I refuse, in writing, your demands of May 2, 1945, is impossible, since I do not, cannot and will not admit that I have the knowledge to make such refusal.

OFFICE OF PRICE ADMINISTRATION,
Cincinnati, Ohio, May 17, 1945.

Mr. C. HERBERT CLEMENS,
Dayton, Ohio.

DEAR MR. CLEMENS: This letter is writtten notice to you that as of the close of business May 22, 1945, you shall be terminated from service with this agency. I am compelled to take this action, which I sincerely regret.

You stated to me in the presence of Mr. Edward H. Brink, Jr., food enforcement attorney, on May 2, 1945, and again in my presence alone on May 3, 1945, that you had certain information of great importance relative to the operation of this Cincinnati OPA district office, and particularly, the Enforcement Division. I requested you to advise me what your information was, so that I could act upon it. You stated that you would not give me the information; nor would you release it to any other person within the Office of Price Administration. Rather, you said you would have to decide yourself how best to use the information. My demand in writing to you for such information met with a written denial on your part that you ever admitted or stated that you had such information. As I have stated to you verbally, your written answer is completely contradictory to your statements on May 2 and 3, and is most unsatisfactory.

You must recognize that every employee of this agency (or of any agency), including yourself, has a firm responsibility to exercise his or her best talents to improve the operation of this agency. This responsibility covers all improvements or corrections of operations whether they be procedural or otherwise, and compels you to report to your superiors information at your command affecting the operation of this district OPA office, and particularly the Enforcement Division thereof. This responsibility is in addition to the responsibility you have as an OPA investigator to investigate and report to your superiors fairly and honestly and without limitations upon full disclosure of the truth. From your statements and conduct on May 2 and 3, 1945, I cannot determine which of these responsibilities you have point-blank refused to carry out. Through your failure in either respect, or both, which you alone can decide, you have compelled the action set forth in this letter.

I believe you will agree with me that the position that you occupy as an investigator for OPA requires the highest degree of fidelity and trustworthiness. The relationship between you and your superiors within the OPA must be on the highest plane attainable. Your superiors must look to you for accurate and complete reports of information which you acquire, having to do with your and their official duties. Such information must be transmitted to your superiors without omissions or additions. Your actions on May 2 and May 3 destroyed the confidence so necessary between investigators and their superiors. I can never know whether you are reporting accurately to me and to your other superiors. I will never be able to tell whether you are exercising your own judgment with respect to what information that you shall pass on. In brief, you have destroyed the confidence that I must have in every investigator in this highly confidential work. I regretfully conclude there is no place in my Division or elsewhere in OPA for a person who refuses to report to his superiors matters affecting their respective responsibilities. Therefore, I am compelled to take this action.

Upon receipt of this letter you shall be suspended from your duties and shall remain suspended until the effective date of this release of you from your duties with the OPA. You have 5 days on receipt of this notice within which you may file a written reply to the foregoing reasons for your release from duty. Upon the effectiveness of the release you have the right to appeal to the district director of this OPA Cincinnati district office for review of my actions in this regard.

Please take immediate steps to surrender all property of the United States Government which is now under your custody as the result of your official position with this agency.

Very truly yours,
THOMAS L. CONLAN,
District Enforcement Attorney,
Cincinnati District Office.

OFFICE OF PRICE ADMINISTRATION,
CINCINNATI DISTRICT OFFICE,
Dayton, Ohio, May 17, 1945.

Memorandum to: Mr. Thomas L. Conlan, district enforcement attorney, Cincinnati district office.
From: C. Herbert Clemens, Investigator.
Subject: Surrender of OPA investigator's credential and credential case.

Today, May 17, 1945, and orally effective on this day I have been requested by you, through Mr. Robert E. Yelton, to surrender my OPA investigator's credentials and credential case.

Please be informed that I will surrender the above-mentioned Government property

directly to you there in the Cincinnati district office.

DAYTON, OHIO, *May 19, 1945.*

Mr. THOMAS B. CONLAN,
District Enforcement Attorney,
Office of Price Administration,
Cincinnati, Ohio.

DEAR MR. CONLAN: I am in possession of your letter of May 17, 1945, annotated 6F: 3-6: 4: TLC.

You permit me 5 days from the receipt thereof to file a written reply to the reasons set forth for my release from duty. This letter constitutes such written reply.

I begin by referring you to your memorandum to me dated May 2, 1945, and reiterate my positive adherence to the facts in reply thereto addressed to you in a memorandum from me dated May 4, 1945.

On April 30, 1945, an article in regard to the operation of the OPA in the Cincinnati district, based upon purported statements by Congressman EDWARD J. GARDNER, Third District of Ohio, appeared in the Cincinnati Enquirer. The same day you and I had telephone conversations in regard thereto, and on May 2, 1945, I was summoned to your office for a personal interview, during which you charged me with withholding from you official information obtained by me in the course of my duties. From your conversations via telephone and in person, I am positive that you assured me that your opinion was derived from the article in the Cincinnati Enquirer referred to above. A second personal interview between us occurred on the following day, May 3, 1945. At all times, over telephone and in person, I have never denied having an interview with Congressman GARDNER, but have always refused, still refuse, and will continue to refuse to admit that I have ever possessed any information relative to the OPA, and particularly to its Enforcement Division, which you do not have. I specifically deny that I ever admitted to you, alone or in the presence of Mr. Edward H. Brink, Jr., food enforcement attorney, the possession of any such data.

I left a responsible position with the United States Government to become an investigator for the OPA for one reason, and one reason only, to wit: I did, do, and will continue to believe in the OPA program, its worth to the Nation, and its contribution to our war effort. Any and every move I have made since joining OPA is the result of considered thinking toward the furtherance of our program, and a deliberate withholding of information from you, as my superior, would, therefore, be not only contrary to my oath of office but against my innate instincts.

I believe that I have served the Dayton and Cincinnati district offices both faithfully and well for almost 3 years, and apparently no fault has been found with my work except that I deigned to discuss some aspects of it with my elected Representative in Congress. This latter I believe to be my prerogative, and hence I object vociferously to my termination on any such account.

Very truly yours,

C. HERBERT CLEMENS.

Jack Savage, Billion-Dollar Engineer

EXTENSION OF REMARKS

OF

HON. JOHN R. MURDOCK

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 22, 1945

Mr. MURDOCK. Mr. Speaker, the retirement of John Lucian Savage, Chief Designing Engineer of the Bureau of Reclamation, Interior Department, after 34 years of service, leads me to make a few observations regarding the fine, loyal men and women who serve their country in the civil service.

Mr. Savage is a good example of these faithful servants. A modest and unassuming man, he has given most of his working years to the Government, not for wealth, because his pay never reached more than a fraction of that which he could have commanded elsewhere; not for glory, because while fame as an engineer belatedly has overtaken him it embarrasses him more than it pleases him; but out of loyalty and in the quiet satisfaction of doing big things well, even if in comparative anonymity. There are thousands like him in the civil service. They give a continuity, strength, and dignity to our Government that is no small part of its power.

Knowing some of these men and women, it pains me to hear, as I occasionally do, epithets such as "bureaucrats" and "feeders at the public trough" carelessly thrown around. I believe we will all have a greater confidence in our Government if we know about Jack Savage.

Therefore, Mr. Speaker, I want to insert at this point the announcement issued by the Interior Department on the retirement of Mr. John Lucian Savage:

John Lucian Savage, world-famed designer of Boulder and Grand Coulee Dams, has retired as chief designing engineer for the Bureau of Reclamation, it was announced today by Secretary of the Interior Harold L. Ickes. Member of the staff for 34 years, Mr. Savage has drawn plans for the construction of more than a billion dollars worth of dams, including the mightiest ever built.

He has been chief designing engineer for the Bureau of Reclamation since 1924, having first joined the staff in 1903 after the agency, then known as the Reclamation Service, had been in existence less than a year. In that time the Bureau has built scores of dams to harness the waters of western rivers for irrigation, power development, flood control, and navigation, and the man who designed these projects has won international renown in the engineering field. Secretary Ickes said Mr. Savage will continue to serve the Bureau part time in the capacity of consulting engineer.

He has recently returned from a special mission to China and India where he represented the State Department in its cultural relations program. He made preliminary surveys and studies for several huge reclamation projects under consideration for postwar development, including one in the Yangtze Gorge.

Commenting on Mr. Savage's decision to retire at 65, Commissioner of Reclamation Harry W. Bashore said:

"Jack Savage in a very real sense has epitomized the Bureau of Reclamation. He grew up with the organization. His extraordinary gift is the ability to bring a fresh mind to new problems in engineering. His approach is daring, but his plans are sound. Neither the necessity of building the highest dam in the world in Boulder Canyon nor the requirement for the construction of the most massive concrete dam so far conceived at Grand Coulee on the Columbia River dismayed Jack Savage. He simply proceeded to design the dams, and they now are the pride of the engineering world."

Mr. Savage was the designing engineer on the three largest concrete dams in the world—Grand Coulee, Shasta, and Boulder. Other famous dams that he has designed include the Norris Dam in the Tennessee Valley, and the Wheeler, another of the key structures in the basin-wide development of that area; Friant Dam, important coworker of Shasta Dam in the Central Valley reclamation project (California); and Madden Dam at the Panama Canal. The Marshall Ford Dam in Texas, Imperial Dam on the Arizona-California border, Parker Dam on the Colorado River, and American Falls Dam (Idaho) are among the numerous reclamation dams he has designed.

At the request of the Chinese Government, Mr. Savage in 1944 made extensive surveys for the postwar development of China's great natural resources, including the huge Yangtze Gorge project to irrigate 10,000,000 acres of land and develop some 10,000,000 kilowatts of electric power capacity. He also spent several months in India, visiting projects for irrigation and other developments in the United Provinces, Bengal, Madras, Mysore, and the Punjab.

When a cable came from London in 1940 asking the United States for Mr. Savage's assistance in connection with the Burrinjuck Dam in Australia, attention was directed to the law which prohibits officials of the United States from accepting emoluments from foreign countries. Rather than delay the voyage in this emergency, Mr. Savage wired former Commissioner John C. Page of the Bureau of Reclamation: "Any assistance given Government of New South Wales will be gratis and I shall not accept any fee or other form of compensation or any reimbursement." He said he needed a vacation, anyway.

In 1940, Congress passed a bill specifically authorizing the President to send Mr. Savage to Australia and India as an engineering consultant. He spent 4 months in Australia in 1941-42 as consultant on two projects—the Upper Yarra Dam for the Melbourne and Metropolitan Water Board of Works and the Kiewa Dam for the State Electricity Commission of Victoria.

Engineer Savage has been honored many times for his achievements. On his recent visit to China he received a gold medal from the Ministry of Economic Affairs for Humanitarian Services. The American Society of Civil Engineers awarded him this year the John Fritz medal, one of the highest honors of the engineering profession. In 1934, the University of Wisconsin conferred upon him the honorary degree of Doctor of Science. He was presented in 1937 with one of the most prized awards given to anyone in the engineering profession—the gold medal for outstanding engineering service of the Colorado Engineering Council, which represents all engineering organizations in the State. The award had been made only once in the previous 10 years.

John Lucian Savage, the son of Edwin Parker Savage and Mary Therese (Stebbins) Savage, was born on a Wisconsin farm near Cooksville, December 25, 1879.

His early years were spent in Wisconsin. He attended private school at Spring Green. He went to high school in Evansville and in Madison. In 1903 he received a B. S. degree in civil engineering from the University of Wisconsin.

After graduation he left Wisconsin for field work with the United States Reclamation Service, now the Bureau of Reclamation, on the Minidoka project in Idaho. The next 4 years he worked in the Boise office, designing irrigation structures under the guidance of Arthur P. Davis, chief engineer; D. W. Ross, project engineer, and A. J. Wiley, consulting engineer. In 1908 Savage left the Reclamation Service to become associated with Wiley in an engineering practice in Boise.

During this time he designed many important structural works, including the Salmon River Dam, the Swan Falls Power plant on the Snake River, the Barber Power plant on the Boise River, the Oakley Reser-

voir Dam, and the American Falls Power plant. He also received a special assignment from the Reclamation Service to design gates for the Arrowrock Dam on the Boise River.

In 1916 Mr. Savage reentered the Reclamation Service in charge of civil engineering designs in the newly organized office of the Chief Engineer at Denver, Colo., where important design work of the Bureau is done. In 1924 he was placed in charge of all electrical and mechanical designing with the title of Chief Designing Engineer, the position which he held until his retirement, April 30.

On June 1, 1918, Savage married Jessie Burdick Sexsmith, who died on July 17, 1941. They had no children. He makes his home in Denver, Colo.

The Farmer and the Trade Agreements Act

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 22, 1945

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks, I am inserting the following article by Fred Brenckman, Washington representative of the National Grange:

THE FARMER AND THE TRADE AGREEMENTS ACT

(By Fred Brenckman, Washington representative of the National Grange)

When the Trade Agreements Act was passed in 1934, it was regarded as a temporary measure, and it was, therefore, made self-repealing at the end of 3 years. We were in the midst of a world-wide depression, with approximately 13,000,000 people unemployed; large surpluses of farm commodities had accumulated, and the theory was that we should do some "Yankee trading" to dispose of these commodities. The act has been thrice renewed, the last time for a period of 2 years. Unless again renewed, it will expire on June 12, 1945.

Under this measure, the President is authorized to raise or lower tariff rates to the extent of 50 percent in negotiating trade agreements with other nations. In a recent message, the late President Roosevelt informed Congress that so many concessions had been made to other countries under the original 50 percent limitation that little flexibility remains. He, therefore, suggested that to give the Government more bargaining power, the act should be brought up-to-date by amendment, making it possible to reduce 1945 rates to the extent of 50 percent.

UNDUE GRANT OF POWER

Where the rates of the Hawley-Smoot Tariff Act have already been slashed 50 percent, another reduction of 50 percent would be equivalent to a total reduction of 75 percent. It should be kept in mind in this connection that in case of certain commodities, rates had already been reduced under the flexible provisions of the Tariff Act of 1930 before the passage of the Trade Agreements Act. To grant the President authority to further reduce rates on such items would be almost equivalent to granting authority to transfer items from the dutiable list to the free list, which is denied in the Trade Agreements Act.

It is likewise noteworthy that while this legislation empowers the President to revise rates upward to the extent of 50 percent, not a single rate has been increased, for the simple reason that an upward revision of rates would not be well calculated to facilitate the negotiation of trade agreements with other nations.

Fifteen years have gone by since the last general tariff act was passed by Congress. If the Trade Agreements Act should now be extended for another period of 3 years, the span would be lengthened to 18 years. Under the Trade Agreements Act, Congress has for 11 years delegated to the President, or to the State Department, one of its most important constitutional prerogatives, namely, the power to regulate foreign trade, which also involves the raising of revenue. During this period Congress likewise delegated many other extraordinary powers to the executive department of the Government, and if our constitutional system is to be preserved, it would seem that the time has come when Congress should make a manly effort to recapture these delegated powers.

CONFLICTING POLICIES INVOLVED

In considering the extension of this act for another period of 3 years we must not lose sight of the fact that under the Wagner Labor Relations Act, the Fair Labor Standards Act, the Walsh-Healey Act, and our social security legislation, we have been trying to improve the American standard of living. By this process we have raised our cost of production all along the line. All this is a manifestation of a very definite trend toward economic nationalism. The policy we have been pursuing under the Trade Agreements Act might be termed one of international altruism. It is manifestly impossible to successfully pursue both of these policies at one and the same time in the same country.

Nor must we overlook the fact that before the lapse of another year the national debt will probably amount to $300,000,000,000. The interest on this debt, even at the rate of 2 percent, will amount to approximately $6,000,000,000 per year. This will call for heavy taxation, which will naturally increase our costs of production. In theory our tariff rates are intended to equalize the difference in the cost of production as between the United States and foreign nations. It is pertinent, therefore, to keep in mind the factors which have just been enumerated.

GRANGE ATTITUDE DEFINED

In appearances before the Ways and Means Committee at former hearings on the Trade Agreements Act, we have always made it plain that we are in favor of all the foreign trade we can get under proper conditions. The attitude of the National Grange has been that in our dealings with other nations we should take from them such commodities as we need and do not produce domestically, but that we should not make it easier for the rest of the world to send us the things that we do not need, or commodities of which we already have a surplus under normal conditions.

That is the only reasonable basis upon which a sound foreign-trade policy can be built. Manifestly, there is no advantage in trade merely for the sake of trade, nor is there any virtue in exchanging identical or competing commodities.

It has long been the settled policy of the United States to admit free of duty the productions of other countries that we really need and that are not indirect competition with articles produced domestically. We have the biggest free list of any country in the world. For many years, nearly two-thirds of our imports have been entered free of duty. These facts are cited to show that our tariff policies have not been as selfish as many people seem to believe.

The Grange believes in reciprocity in the true sense of the word.

M'KINLEY ON RECIPROCITY

As William McKinley so well expressed it in the address which he made at the Pan-American Exposition at Buffalo the day before he was assassinated:

"By sensible trade arrangements which will not interrupt our home production, we should extend the outlets for our increasing surplus. A system which provides a mutual exchange of commodities is manifestly essential to the continued and healthful growth of our export trade.

"We must not repose in fancied security that we can forever sell everything and buy little or nothing. If such a thing were possible, it would not be best for us nor for those with whom we deal. We should take from our customers such of their products as we can use without harm to our industries and labor."

While we believe in "sensible trade arrangements," there are various features of the Trade Agreements Act, together with the way in which it has been administered, to which we have objected from the beginning.

FINDING THE FACTS

Under the act, the President is authorized to enter into trade agreements with foreign governments "whenever he finds as a fact that any existing duties or other import restrictions of the United States or any foreign country are unduly burdening and restricting the foreign trade of the United States." Scarcely anyone would seriously contend that the State Department, acting for the President in this connection, has seriously undertaken to establish the facts in any given case before entering into trade agreements with other nations. The United States Tariff Commission was established and is maintained as a fact-finding body to assist Congress and the President in matters relating to the tariff. While individual members of the Commission may have been consulted by the State Department when trade agreements were pending or in process of being negotiated, we do not believe that the Tariff Commission as such was ever consulted.

Be that as it may, we believe that the Trade Agreements Act should be so amended as to provide that whenever the President finds as a fact that any existing duties or other import restrictions are burdening and restricting the foreign trade of the United States, he should make a detailed report to Congress setting forth such facts as he may have in his possession. This should be done before entering into any trade agreement. By following this procedure, the finding of facts would mean something more than a mere perfunctory gesture on the part of certain officials of the Department of State, which we believe has been the case in the past.

The Trade Agreements Act repealed section 516 (b) of the Tariff Act of 1930, thus making it impossible to seek relief in the courts or otherwise by the injured party. This has had the effect of depriving citizens of the United States of the right of property without due process of law. There has been no opportunity to even test the constitutionality of the act.

The act has been administered as if it were surrounded by all the protection accorded treaties with foreign nations, and yet the agreements entered into have not been submitted to the Senate as treaties.

CONCESSIONS NOT RECIPROCAL

We have also felt that in the agreements into which we have entered with other nations the United States has made greater concessions than it has received in return by virtue of the unconditional most-favored-nation policy which we have pursued. We do not believe that this policy should be carried out to the extent of granting concessions to all nations without equivalent or reciprocal concession on their part.

Again, some foreign nations have found it to their advantage to devalue their currencies, to block credit balances, to enter into

compensating agreements, or to otherwise control and manipulate their monetary or financial structure. Through any one or more of these processes they have been able to substantially modify the effectiveness of customs duties determined by our own Government as fair and equitable. If the present act is to be extended, it should certainly make provision for the protection of the American market in the event that any foreign nation engages in practices such as have been enumerated.

The same must be said with reference to subsidies, embargoes, quotas, licenses, and barter arrangements, any one of which might have the effect of adversely affecting the interests of the United States.

When it is found that foreign nations are engaged in dumping or other unfair methods of competition, or are discriminating against the trade of the United States, provision should be made that the Chief Executive shall take immediate action to protect our national economy.

WHAT THE RECORD SHOWS

In 1934, when the trade agreements bill was introduced, the farmers of the country were told that by virtue of the authority delegated to the President under this measure it would be possible to find new markets or restore old foreign markets for surplus farm products but that it would not result in any increase of imports of competitive farm products.

In the light of these promises, the following figures with reference to farm imports, compiled by the Department of Agriculture, make interesting reading:

Value of agricultural imports

Year	Total	Supplementary or competitive
1932	$613,737,000	$282,428,000
1933	838,952,000	418,515,000
1934	933,774,000	497,892,000
1935	1,141,191,000	641,622,000
1936	1,155,136,000	866,796,000
1937	1,155,136,000	588,316,000
1938	988,648,000	486,165,000
1939	1,239,444,000	571,443,000
1940	1,475,288,000	627,888,000

Imports of so-called supplementary or competitive products were admittedly larger during 1935–37 because of the drought situation in this country. But leaving those years out, it is noted that imports of competitive farm products increased from $282,428,000 in 1932 and $418,515,000 in 1933 to $571,443,000 in 1939 and $627,888,000 in 1940. Thus the value of competitive farm imports considerably more than doubled from 1932 to 1940, while physical quantity increased from an index number of 60 in 1932 to an index number of 104 in 1940. It is generally agreed that reductions in tariffs on competitive farm products let in more imports and made it more difficult to build a sound farm program. Incidentally this reduced the ability of the farmer to buy the products of labor and industry.

EXPORTS OF FARM PRODUCTS

When it comes to exports, we can find no evidence that foreign concessions resulted in any increase in volume of farm products sold abroad. Back in 1910–14 exports of farm products accounted for an even 50 percent of total exports. By 1932 farm exports were down to 41.7 percent of total exports. It was to rebuild the export market that farmers were asked to support the trade-agreements bill. Here, again, let us look at the record.

The United States Department of Agriculture furnished the following data:

Value of United States exports

Year	Total domestic exports	Agricultural exports	Percent farms of total
1932	$1,413,397,000	$589,650,000	41.7
1933	2,008,484,000	787,343,000	39.2
1934	2,085,092,000	668,713,000	32.1
1935	2,375,415,000	766,303,000	32.3
1936	2,790,880,000	732,474,000	26.2
1937	3,361,699,000	890,771,000	26.5
1938	2,884,687,000	682,962,000	23.7
1939	3,743,930,000	737,640,000	19.7
1940	3,959,262,000	349,821,000	8.8

While the dollar value of exports of farm products was about the same in 1938 and 1939 as during 1932 to 1935, they were held there only because unit prices were higher and through the paying of huge export subsidies, and not because of foreign concessions to us.

AMENDMENTS AND SAFEGUARDS

1. If the Trade Agreements Act is to be renewed, we respectfully urge that the extension be limited to 1 year. After the close of the war we will be able to make a more careful appraisal of the situation with reference to world trade than under present conditions.

2. The request for authority to reduce 1945 rates to the extent of 50 percent should not be granted.

3. Before the present system of negotiating trade agreements is extended, we should have a comprehensive definition of the term "reciprocity." No agreements should be entered into unless concessions received from any country are fully equivalent to concessions granted by the United States. Concessions should not be granted to any country unless that nation is clearly the principal supplier of any commodities covered by the agreement.

4. The right of court review, as provided by section 516 (b) of the Tariff Act of 1930, should be restored.

5. We favor an amendment to the act providing that whenever the President finds that any existing duties or other import restrictions are interfering with the foreign trade of the United States, he shall report his facts and findings in detail to Congress before entering into any trade agreement.

6. The act should be so amended as to provide that whenever the landed cost of any imported commodity commercially available in the United States falls below our wholesale selling price, or parity price, in the case of an agricultural commodity, then the President shall impose an additional duty to equalize competitive conditions.

7. The act should be further amended so as to provide that before becoming operative trade agreements shall be submitted to both Houses of Congress for ratification or rejection by a majority vote. The Underwood Act of 1913, which empowered the President to negotiate trade agreements with other nations, contained such a provision.

The Meat Problem

EXTENSION OF REMARKS

OF

HON. THOMAS A. JENKINS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 22, 1945

Mr. JENKINS. Mr. Speaker, under leave to extend my remarks, I wish to say that the Republican Congressional Food Study Committee, through a subcommittee assigned to give a special study to the meat problem, has made a written report of its study on that subject. That report is directed to Hon. JOSEPH W. MARTIN, the Republican leader of the House. I wish to commend to the Members of the House and to the country this fine report. I hope it is perused by many for it is informative and interesting. It comments with conviction on the recent announcement made by Director Fred Vinson, to which I refer as follows:

REPUBLICAN CONGRESSIONAL FOOD STUDY COMMITTEE REPORT TO THE HONORABLE JOSEPH W. MARTIN, JR., REPUBLICAN LEADER, HOUSE OF REPRESENTATIVES, MAY 22, 1945—SUBJECT: VINSON MEAT ORDER

The order concerning meat issued May 18, 1945, by Mr. Fred Vinson, reportedly without clearance with the Office of War Information or review by the Office of Price Administration indicates, apparently, that Mr. Vinson has been given some measure of personal responsibility for control of both production and distribution of meat.

If this is the case, his authority should be announced openly by the President and should be extended to cover all foods and all food production. Centralized control is essential, but to be effective it must be centralized control over all foods, and it must be a public responsibility for both production and distribution—not merely someone acting on private orders from the President.

The placing of some control over meat in the hands of Mr. Vinson is not enough. There is a co-relation between foods and feeds and they should be administered together. Sugar and dairy products and farm machinery and farm labor are serious problems in themselves—and all with direct bearing on the volume of our food supplies.

The Vinson order does not give cattle feeders the full assurance they need to again undertake normal feeding. While it promises that ceilings of Good and Choice cattle will not be lowered without notice, it makes no promise that the price of corn and other feed will not be permitted to rise—nor in fact that corn may not again be frozen, as it was in April 1944, when for 2 months corn could be sold only to the Government and not a grain could be purchased in most parts of the country for feed.

The subsidies proposed by the Vinson order for packers of beef may be sufficient to prevent additional packers from going out of business, but they are obviously grossly inadequate to serve as a real incentive for packers to operate at fullest capacity. The promised additional subsidy on beef amounts to only one-fourth of 1 cent a pound at the wholesale level. Testimony before congressional committees has indicated that an increase of 1½ to 3 or 4 cents a pound is required to permit packers once again to handle beef and veal at a reasonable profit.

The bookkeeping system on live cattle which the Vinson order promises to set up will be ineffectual in eliminating at least one major source of black-market meat—purchases direct from farmers and feeders. No set of regulations and no system of bookkeeping can prevent farmers from selling their cattle and hogs at a price sufficient to give themselves a reasonable profit, if such a price is offered to them.

The whole Vinson order, therefore, is still trying to do by compulsion and by insufficient subsidies what can only be done by an adequate profit incentive and a return to the normal processes of orderly marketing. As long as farmers are offered 2 or 3 cents a pound more for beef, veal, and hogs by black-market operators than legitimate packers are allowed to pay, they are going to sell to black-market operators. We might as well be realistic about this matter.

There is only one honest and effective way to eliminate black markets and whip the meat shortage—and if Mr. Vinson is acquainted with Bureau of Labor Statistics indexes or retail food prices, he knows what that way is. It cannot be done by punitive regulations. It can be done only by giving legitimate producers, processors, distributors, and retailers of meat the incentive of a reasonable profit to operate at top capacity. This can be accomplished either by bringing the price structure of meats more nearly into line with the prices of other food commodities, or by subsidies which are so substantial they will have that effect. Half-way measures will not do the job.

In the summer of 1939 food was relatively plentiful and was moving on a free market. Prices were at a natural level in relationship to the cost of production, the demand, and the supply. Between August 1939 and February 1945 (as is shown graphically in the accompanying chart) the price of all foods was permitted to go up 46 percent; the price of eggs advanced 68.8 percent; the price of chicken 61.6 percent; dairy products were permitted to go up 43.4 percent; fats and oils 46.2 percent; sugar and sweets 32.1 percent; fish 116.1, and fruits and vegetables 82.8 percent. But in that same period, the price of beef and veal was permitted to advance only 18.9 percent. Such a situation doesn't make sense.

In later figures on specific food items the fact that the present price structure on meat is seriously out of balance with other food prices is even more evident. Between August 15, 1939, and March 13, 1945, there have been the following increases in retail price of specific food items:

	Percent
Green beans	180.6
Apples	159.1
Potatoes	125.0
Fresh and frozen fish	119.9
Dried prunes	98.9
Dry Navy beans	94.8
Lard	89.9
Other shortening in cartons	70.9
Wheat flour	79.3
Sweetpotatoes	70.9
Rice	70.6
Carrots	69.6
Butter	62.5
Fresh eggs	55.1
Evaporated milk	49.3
Rolled oats	45.1
Canned corn	42.3
Tea	40.1
Coffee	35.9
Fresh milk	30.0
Sugar	28.8
Chuck roast	24.0
Pork chops	19.7
Rib roast	13.1
Round steak	11.0
Sliced ham	7.8
Veal cutlets	2.8

It might be noted that while frozen fish, green beans, and wheat flour seem to be relatively plentiful, it has become somewhat difficult to buy round steak, veal cutlets, or sliced ham. It is obvious that if food prices were anywhere near in balance in 1939, they are seriously out of balance now—and that if the subsidy method is to be used to bring them into balance, the subsidies must probably be considerably more substantial than those announced by Mr. Vinson in his order.

Unfortunately for the city consumer of meat, a reasonable return to producers and distributors is not the only factor which determines when he will be able to go openly to the corner market and buy a good steak or a pork chop again. There is on the statute books of the United States a law which makes it illegal to transport across a State line and sell meat not killed in a federally inspected packing plant, and the Federal Government is taking a large portion of meat which can cross State lines.

Again seeking to do by compulsion what can be done in the United States only by adequate incentive and orderly marketing, the Office of Price Administration has recently issued orders requiring the relicensing of meat packers who do not have Federal inspection—with the announced intention of putting many of them out of business—and has severely restricted the amount of meat those who remain in business can slaughter. The Vinson order announces no modification of this program.

The following table indicates the extent to which residents of the various States are dependent on these nonfederally inspected meat packers for their supplies:

Per capita supply of nonfederally inspected meat [1] by States 1944, arranged according to volume

State	Total	Farm slaughter [2]	Wholesale and retail slaughter
Texas	94.07	23.42	70.65
Montana	93.06	36.87	59.16
Oregon	91.33	15.93	75.40
Idaho	83.68	31.80	51.88
North Dakota	83.62	57.35	26.27
Oklahoma	78.37	27.81	50.56
Nevada	75.10	30.17	44.93
Michigan	74.04	7.70	66.34
Arkansas	71.14	35.93	35.21
Washington	68.96	13.54	55.42
Georgia	68.74	39.71	29.03
Nebraska	65.95	33.27	32.68
Louisiana	64.66	17.08	47.58
Arizona	64.64	16.51	48.13
Colorado	58.62	16.23	42.39
Mississippi	58.22	38.35	19.87
Utah	58.14	11.67	46.47
South Dakota	57.91	43.80	14.11
Ohio	57.86	11.39	46.47
Kansas	56.66	23.43	33.23
Iowa	56.54	37.00	19.54
Wyoming	55.56	34.48	21.08
South Carolina	55.51	26.26	29.25
New Mexico	55.28	22.38	32.90
North Carolina	54.41	32.46	21.97
Tennessee	53.16	34.72	18.44
Kentucky	52.93	33.83	19.10
Florida	52.52	12.12	40.40
Vermont	51.94	32.12	19.82
Wisconsin	51.05	21.13	29.92
Alabama	50.43	30.01	20.42
Indiana	50.13	18.45	31.68
Virginia	45.79	28.57	17.22
Minnesota	45.37	28.26	17.11
Missouri	44.91	24.60	20.31
Delaware	44.50	14.25	30.25
Maine	42.29	10.17	32.12
West Virginia	41.31	19.27	21.86
Maryland	38.33	10.95	27.38
Pennsylvania	37.14	8.88	28.26
Illinois	30.86	10.77	20.09
Connecticut	28.75	1.93	26.82
California	24.74	1.89	22.85
New Jersey	23.81	1.29	22.52
New York	18.89	3.44	15.45
New Hampshire	16.41	9.53	6.88
Massachusetts	16.12	1.22	14.90
Rhode Island	15.01	1.21	13.80
District of Columbia	4.53	----------	4.53

[1] Total supply in 1944 (Federal and non-Federal) was 150 pounds per capita.

[2] No appreciable quantity of the farm slaughter reaches city markets.

It will be noted that the volume of meat available to consumers from these plants which cannot ship across State lines is almost a direct measure of the acuteness of the present retail meat shortage. In the States where most of the per capita consumption normally is provided by nonfederally inspected packers, the meat shortage has been thus far moderate. Where the chief supplies normally come from federally inspected plants, there is less meat; in the District of Columbia, where consumers depend almost entirely on federally inspected plants, there is none.

The reason for this is obvious. Meat for the armed services and other Government uses is taken only from federally inspected packers. During the first 3 months of 1945, federally inspected plants produced a total of 4,000,000,000 pounds of meat. Of this, the Government took almost exactly half. This left only 2,000,000,000 pounds of meat for the civilian population from federally inspected plants—exactly 16 pounds per capita for those 3 months—less than 1 pound a week, and this had to supply restaurants, hotels, and hamburger stands as well as retail markets. In areas largely dependent on federally inspected packers, 1 pound a week obviously doesn't go very far.

The situation would be bad enough in such areas if the packers without Federal inspection were encouraged to operate at top capacity. But many of them have suspended operations, or are slaughtering only at part capacity, because they say they cannot operate at existing prices. In the District of Columbia, for example, the few slaughterers who served the local market in 1944 have closed their doors.

The order further restricting production of meat by nonfederally inspected plants does not appear to be a sensible solution to the situation. The theory is that this will force more of the meat to go through plants with Federal inspection so that it can be shipped interstate. If this move is successful, the meat shortage may be reversed—with the areas dependent on interstate shipments finding it easier to get meat, while those normally dependent on nonfederally inspected plants feel the pinch of the shortage. And, ironically, some of these will be areas where cattle are grown and are today more plentiful than ever before.

By its quota system OPA may be able to force nonfederally inspected plants to reduce their production, but it is doubtful whether it can force federally inspected plants to increase their output against their will.

A competent authority in the Department of Agriculture has informed this committee that federally inspected plants have sufficient capacity that they could be supplying both the Government and their usual civilian customers today with the normal amount of meat, if they had the incentive to operate at top capacity. If they have no such incentive, it is hard to see how restrictions on nonfederally inspected plants will increase the production of interstate plants.

That is may have serious consequences for residents of States dependent chiefly on local packers is attested to by a national organization of such packers, which says: "The effect of this order is to cut down very sharply, and in some instances to cut in half and more than cut in half, the production of these plants as measured by their 1944 output. * * * All over the United States small plants are either closing, severely curtailing their operations, or selling out to chain stores or big packers."

This committee recommended a week ago that the quota restrictions on beef applying to nonfederally inspected packers be rescinded at once. It believes that failure of Mr. Vinson's order to take any action on this matter is a serious omission, and reiterates its recommendation that the quota restrictions be rescinded immediately.

Respectfully submitted.

THOMAS A. JENKINS,
Chairman.
HARRIS ELLSWORTH,
Secretary.

Percentage increase in cost of foods from Aug. 15, 1939, to Feb. 13, 1945

	Percent
Eggs	68.8
Dairy	43.4
All meats (including chicken and fish)	36.6
All foods	46.0
Fish	116.1
Beef and veal	18.9
Fruits and vegetables	82.8
Fats and oils	46.2
Sugar and sweets	32.1
Chicken	61.6

Office of War Information Appropriations

EXTENSION OF REMARKS

OF

HON. LEON H. GAVIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 22, 1945

Mr. GAVIN. Mr. Speaker, I understand the Appropriations Committee has not as yet reached a decision on the OWI appropriation. I have been told the committee has not yet made up its mind as to what they will or will not do. But previously I understood the OWI was requesting $42,000,000.

That is a lot of money for the OWI, particularly when we are asking little school children to buy war stamps to help win the war and then tossing it out the window on agencies such as OWI. So, I sincerely hope the Appropriations Committee will cut out the OWI appropriation and, like many other Federal agencies that have faded out, it will be something to be remembered but not talked about.

It might interest the Members to know also that the assistant to Dr. Elmer Holmes Davis, Director of the Office of War Information, whose recent rulings were reversed by President Truman and General Eisenhower, is, according to a local news story, none other than foreign-born Georgie Taylor, who never applied for his American citizenship until he caught on with OWI and landed on the pay roll some time after Pearl Harbor.

Certainly there must have been some able American who could have been assistant to Dr. Davis. Why it is necessary to place in a spot like Assistant to the Director of War Information a foreign-born individual is beyond my powers of comprehension. We certainly have developed talent here in America which could fill this position in a most satisfactory manner. Evidently American news writers do not rate too high with the doctor. This American, Byron Price, of the Office of Censorship, has certainly turned in a magnificent performance, which is proof that we have men of ability who could handle these jobs. I think this spot as assistant to the chief should be held by some native American, and there are plenty of them around who could handle it and not have the bungling confusion that has characterized the OWI since its inception.

Everything today here in Washington is pro-British, and a lot of stuffed shirts in the various departments think more about an invitation from the British for tea and cocktails than looking after Uncle Sam's interests. You would not find the British putting on the pay roll some foreign-born citizen as assistant to the chief of British War Information. Evidently a lot of our executives have overlooked the fact that we declared our independence from Britain on July 4, 1776, and it is about time we put soundthinking Americans in these key positions in the various agencies that have to do with the war effort who can look after our interests.

I also note a newspaper story that the Office of Strategic Services, a companion buddy to OWI, and another outfit that should be blotted out by the Appropriations Committee, is dominated and directed in the Far East by Lt. Col. Lynn M. Coffee, of the British Army, technically on loan to Maj. Gen. W. J. "Wild Bill" Donovan, Chief of OSS.

I just want to say to the Members that we certainly have gone far afield from what I was taught in public school. What is the matter with getting a little pro-American and sound off about our American press and the great job they are doing and have done? Get rid of not alone the OWI but the OSS. The War and Navy Departments and the other departments of the Government along with the American people would draw a sigh of relief if both of them were booted out unceremoniously.

The Office of Censorship under Byron Price could handle the war news as could the War and Navy Departments, and the other departments of the Government could handle the other news and the American press could cover them all and do a good job with a saving of approximately $100,000,000.

There should be no compromise on this agency as it would just prolong the agony of its existence. These pleas which we shall hear to continue either one of these agencies as being necessary are in my estimation an insult to the intelligence of not alone the American taxpayers but to every man and woman who wears a uniform. If we want to start to save money, and we have to start soon, here is a good place to do a little housecleaning.

Next year we are going to be looking for votes and the voters are going to be checking the record, so I want the record to show that I am vigorously and viciously opposed to a continuation of either one of these agencies. And the folks back home in my district in Pennsylvania, who are saving every dollar they can to buy war bonds, feel the same way about it.

We have been patient now for many years on a lot of this psychological stuff. Let us get back to that good old American common sense. It is about time Congress reasserts its prerogatives, and demand a voice in determining what the American people will or will not be compelled to accept.

[From the Washington Times-Herald]

CAPITOL STUFF

(By John O'Donnell)

By all the rules of the game and the record of past performances an official censorship organization by its very nature should rub the working newspaperman the wrong way.

Usually, it does. And by the same rules and on the record of the past, an outfit established to provide the reporter with facts, provide them accurately, swiftly, and honestly—just the plain, unvarnished truth—should earn his benedictions, praise, and lusty support.

In a reasonable, intelligent wartime society that's the way things would have worked out. They certainly didn't under the Roosevelt regime. Things are in the process of change under President Truman, but the record might as well be kept straight. This is what has happened.

Within a fortnight after Pearl Harbor, the Office of Censorship was created by White House Executive order and placed under the direction of Byron Price, executive news editor of the Associated Press.

From its first day to the present, Office of Censorship has operated intelligently, exercised sound and reasonable judgment and so far as this writer knows has had the professional respect and willing cooperation of every honest reporter in Washington.

Now this was the outfit designed to whittle down, control and restrict the one commodity a newspaperman deals in and which he jealously defends—news.

A few months later, in June 1942, the White House set up the Office of War Information under Mr. Elmer Davis.

Its job was to see that working newspapermen got the news about the war to inform their readers and radio listeners.

It was welcomed with huzzahs and cheers by the newspapermen who had been bedeviled, misguided, and harassed by such New Deal press agents, incompetents, and screwballs as those collected in the world-saving and do-good menageries of Archibald MacLeish's Office of Facts and Figures (known as the Office of Fuss and Feathers) or Lowell Mellett's Office of Government Reports—better known as Mellett's Mad House.

This was the outfit, greased up with a lush load of the taxpayers' dough, passed out by a somewhat confused Congress which was to help out the Capital correspondent on his wartime chore.

From the spring of 1942 on, the OWI of Elmer Davis has received—and deservedly—nothing but Bronx cheers and hoots of derision from the working newspapermen.

They would welcome its demise and have nothing but professional contempt for the newspaper ability of the pseudo reporters, rewrite men, and editors who are in fact a collection of panting crusaders, drooling their world-saving global goo to pervert and twist simple statements of fact to suit their peculiar political, racial or ancestral affections.

It now appears that Dr. Davis and his OWI pay roll patriots are in for a very tough time in their fight for more cash from the Treasury. All of which is very fine. Now take the case of Director Price's Office of Censorship.

Price's office has established a splendid record and deserves the thanks of newspapermen and the gratitude of the country.

Office of Censorship was a success, whereas OWI has been a wretched and contemptible mess, because Price staffed his outfit with experienced, hard-boiled newspapermen who knew their job.

He cajoled some to working for him through personal friendship and appeals to patriotism, he put the slug on publishers to borrow some of their best men on a temporary leave of absence from their Washington assignments; he told them what their job was and let them do it.

The system worked. There were a few bobbles and fumbles on both sides—censorship and reporters. None was serious. There was mutual confidence and respect among fellow craftsmen.

Above all, there was none of the slobbering hyprocrisy and phoney propaganda goose-grease which reeked through the offices of the OWI.

Juggling Figures and Contorting Facts to Justify Trade-Agreements Program

EXTENSION OF REMARKS

OF

HON. BERTRAND W. GEARHART

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 21, 1945

Mr. GEARHART. Mr. Speaker, when I recently read again the oft-repeated assertion that our exports to trade-agreement countries had, during the administration of the trade-agreements program, increased much more rapidly than had our exports to nonagreement countries during the same period, I asked my friend, Dr. John Lee Coulter, who is, incidentally, one of the greatest living experts on foreign trade, to make a thorough-going study and analysis of the facts and figures upon which such assertions are based in order that the truth might be revealed.

Because the report which Dr. Coulter has recently released demonstrates quite conclusively some startling facts and conclusions which should be brought to the attention of the country, I ask that the results of this study, a document which this eminent scientist has entitled "Unfortunate Use of Statistics by the Government in Connection With the Trade-Agreements Program" may be spread upon the pages of the CONGRESSIONAL RECORD.

And in tendering this most interesting manuscript for inclusion in the RECORD, I cannot help but wonder who it could have been that so ingeniously juggled the figures and contorted the facts and then palmed them off upon the then Chief Executive who, trustingly, incorporated them in his message to the Congress of March 26, 1945.

But all this, notwithstanding, Mr. Speaker, the report of Dr. Coulter to which I have just referred speaks for itself. It is the following:

MAY 1, 1945.

UNFORTUNATE USE OF STATISTICS BY THE GOVERNMENT IN CONNECTION WITH THE TRADE-AGREEMENTS PROGRAM

In order to make it appear that the Trade Agreements Act has served a useful purpose and, among other things, that it has resulted in a measurable increase in volume of mutually profitable foreign trade, Government agencies have resorted to the use of combinations of figures which call for objective examination.

The most recent illustration of such use of statistics in this manner is the statement put out over the name of the President in the form of a special report to Congress about a month ago, on March 26, 1945.

In this special report the then President is quoted as saying:

"The record of how trade agreements expand two-way trade is set forth in the 1943 report of the Committee on Ways and Means. This record shows that between 1934–35 and 1938–39 our exports to trade-agreement countries increased by 63 percent, while our shipments to nonagreement countries increased by only 32 percent; between these same periods our imports from agreement countries increased by 22 percent as compared with only 12 percent from nonagreement countries. The disruptions and dislocations resulting from the war make later comparisons impossible. The record, published in 1943, is nevertheless as valid today as it was then. We know, without any doubt, that trade agreements build trade and that they will do so after the war as they did before. All sections of our population—labor, farmers, businessmen—have shared and will share in the benefits which increased trade brings."

This quotation, or the same figures, have now been used during testimony before the Ways and Means Committee by several witnesses and on several occasions. The table to which reference is made appears on page 7 of the report of the Ways and Means Committee above referred to, and reads as follows:

[Values in millions of dollars]

	Average 1934–35 value	Average 1938–39 value	Increase	
			Value	Percent
Exports (including reexports):				
Total, trade-agreement countries	[1] 758	[1] 1,232	475	62.8
Total, nonagreement countries	[2] 992	[2] 1,306	314	31.7
Total, all countries	2,208	3,136	928	42.0
General imports:				
Total, trade-agreement countries	[1] 774	[1] 942	168	21.6
Total, nonagreement countries	[2] 772	[2] 868	97	12.5
Total, all countries	1,851	2,139	288	15.6

[1] These figures do not include Ecuador, Turkey, Venezuela and the United Kingdom, Newfoundland and nonself-governing British colonies with which agreements have been concluded but where the period during which the agreements have been in effect is too short to justify inclusion for purposes of comparison.

[2] The apparent discrepancy shown by these figures in comparison with the other totals is due to the noninclusion of trade with Ecuador and the United Kingdom and its Crown colonies.

Attention is particularly called to the exclusion of Ecuador, Turkey, Venezuela, and the United Kingdom and Crown colonies, because of the short time the trade agreements were in effect. The trade experience of this group of countries, excluded from the table was as follows:

[In millions of dollars]

	Average, 1934–35	Average, 1938–39	Increase	
			Value	Percent
Exports (including reexports)	476	662	186	39.1
Imports (general)	329	362	33	10.1

The first observation is that the trade experience of the group excluded by Government spokesmen was even worse than the experience of all of the non-trade-agreement countries combined (excluding countries at war). Little wonder that they were excluded from the table.

The second observation is that during 1938–39 several countries were already in a state of war or interior revolution and yet these were all thrown in with the non-trade-agreement countries. These included Germany, Italy, Spain, Japan, and China (including Kwantung). Actually exports to that group fell off $20,524,000, and imports from them fell off $14,714,000 between 1934–35 and 1938–39. If it was proper to exclude one group of nations to make a good showing for the trade-agreements group, would it not be equally proper to exclude countries engaged in war or revolution in order to get a fair comparison?

For the record, it must be remembered that Japan seized Manchuria during 1931–32 and the invasion of China began in 1937. It must also be remembered that Italy attacked Ethiopia in December 1934, and the invasion of Albania began in April 1939. In the case of Spain, while the Republic was established in 1931, the revolution began in April 1936 and was not completed until March 1939. German occupation of Austria was during 1938 and the seizure of the Sudetenland area of Czechoslovakia took place during the first 10 days of October 1938. The general invasion of Czechoslovakia began in March 1939. The invasion of Poland began September 1, 1939.

Separating these two groups, we have made a comparison of our exports to and imports from by groups of nations, which will be found in the table.

From the table it appears that when contrast is made between (1) the completed trade-agreement countries in effect during all of 1938–39 and (2) the non-trade-agreement countries carrying on normal trade, the increase in value of exports to the trade agreement countries was 62.8 percent while the increase in exports to the non-trade-agreement countries was 57.3 percent or differed only slightly. From this there is no indication that exports were stimulated as a result of trade agreements.

When we turn to an examination of general imports (without again listing the countries omitted from the trade-agreements group or those included in the non-trade-agreements group) we find that (1) imports from trade-agreement countries increased 21.6 percent while (2) imports from the other non-trade-agreement countries increased 24 percent. These were naturally, substantially the same, since concessions to one were extended to all—except Germany.

The only other point of significance is that exports increased almost three times as fast as imports. This is entirely accounted for by the tremendous volume of exports of automotive equipment, electrical and industrial machinery, agricultural implements, office appliances, etc. These items were largely exported by important domestic industries who believed that the world market was getting into position to absorb very large quantities. Actually, exports of these items increased between 1934 and 1937 about 120 percent.

Here again, the point of greatest significance is that when the countries in a state of war or revolution are excluded the exports were larger in amount and increased at a more rapid rate to the non-trade-agreement countries than to trade-agreement countries, as follows:

Increase to trade-agreement countries, $144,322,366, or 117.9 percent.

Increase to non-trade-agreement countries, $216,267,277, or 126.4 percent.

In addition to the reason just stated for more rapid expansion of exports over imports, it is important to remember that during 1937–1938–1939 important agricultural products were exported with benefit of export subsidies. Futhermore, many foreign countries were already beginning to build stock piles in anticipation of a possible outbreak of new international conflicts. It was during this period that the United States exported unsual amounts of iron and steel scrap, high-octane gasoline, and many other materials particularly needed in connection with military operations. All of these factors tended to stimulate exports entirely apart from any possible influence of foreign concessions in reciprocal trade agreements.

For detailed comparisons of exports to and imports from trade-agreement and other groups of coutnries, see following table:

United States exports and imports for the period 1934–35 contrasted with those for 1938–39

[Values in millions of dollars]

	1934–35 average	1938–39 average	Increase [1] Amount	Increase [1] Percent
Exports (including reexports):				
To trade-agreement countries with agreements in effect during—				
All of 1938–39	757	1,232	475	62.8
Part of 1938–39 [2]	476	662	186	39.1
To non-trade-agreement countries:				
Those in war and revolution [3]	473	452	−21	−4.5
All other	502	790	288	57.3
Total exports	2,208	3,136	928	42.0
General imports:				
From trade-agreement countries with agreements in effect during—				
All of 1938–39	774	942	168	21.6
Part of 1938–39 [2]	329	362	33	10.1
From non-trade-agreement countries:				
Those in war and revolution [3]	324	309	−15	−4.5
All other	424	526	102	24.0
Total imports	1,851	2,139	288	15.5

[1] Minus sign (−) denotes decrease.
[2] Ecuador, Turkey, Venezuela, United Kingdom, and the Crown Colonies.
[3] Germany, Italy, Spain, Japan, China, and Kwantung.

Congress Should Pass the Federal Aid Bill to Education at Earliest Possible Date

EXTENSION OF REMARKS
OF
HON. JAMES H. MORRISON
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 22, 1945

Mr. MORRISON. Mr. Speaker, I am firmly convinced that we could greatly improve our educational system in this country if we would enact the Federal bill to aid education. This bill gives Federal aid but not Federal control.

The following is an excellent article on this subject which every Member should read:

HOW TO AVOID FEDERAL CONTROL OF EDUCATION

The threat of Federal control of education: For more than a quarter of a century, education in the United States has drifted toward Federal domination. This drift has continued at an accelerated rate during the war. Present indications are that, unless this movement is sharply checked by an alert citizenry, it will continue even more rapidly after the war.

Following 1929 a mounting number of school systems, especially those in the poorer sections of the Nation, found themselves in a serious financial situation. The Federal Government responded through a series of indirect measures. Under the Works Progress Administration, funds were made available to help keep schools open. Other relief funds were used to establish and operate nursery schools and other educational services.

More recently, through the Lanham Act the Federal Government is distributing hundreds of millions of dollars for educational purposes in communities where war industries and training centers have been established. Again, meticulous Federal controls accompany these allocations. The GI bill of rights bypasses State educational authorities almost completely.

Continuance of recent and current trends in Federal-State relations in education will, within a short period of time, result in the transfer of responsibility for the control of education in the United States from State and local communities to the National Government. If our education become federalized, it will not be because the people desire it. In fact, the federalization of education is inconsistent and the best interests of our future American life.

If national control of schools becomes a reality, it will come by a process of accretion and infiltration. It will result from responses to many small emergencies and from the pressures of many special interests. It will not come as the fulfillment of a policy consciously adopted after mature deliberation by the majority of the American people; it will happen by default, resulting from failure to give this important matter the attention it deserves. No one presidential directive or piece of legislation will be decisive in itself.

Although new factors in our contemporary civilization require closer organization and increased centralization of some of the areas of our life, a central control in other areas is a definite threat to our American plan of social organization. The fact that the National Government must be the predominant authority in waging warfare and in determining the routes of transcontinental highways does not mean that it should similarly dominate such areas as the distribution of news and the education of the young. Education should be placed high on the list of services to be continued under State and local control. The ability to make distinctions as to what should be and what should not be centralized permits some nations to preserve their liberty. Those who cannot so distinguish may succumb to totalitarianism.

Sound Federal-State relationships: Federalization of education in the United States can be prevented by application of the following principles:

1. The Nation as a whole, as well as the States and localities, has a stake in education, and the Federal Government should continue to exercise, within properly defined limits, educational functions demanded by changing national conditions and needs.

Citizens are citizens of the Nation as well as of States and localities and thus the outcomes of education have their effects, both good and bad, upon the Nation as a whole. Accordingly, the Nation should exercise educational responsibilities which are essential to its welfare. Requisite Federal action, however, can and should be limited to functions which supplement and assist, rather than displace, States and localities in the conduct of education.

2. In its relations to education in the States the Federal Government should limit its action to two broad functions: (a) financial assistance and (b) leadership of a stimulating, but noncoercive character.

Four factors now largely determine whether a child is offered adequate or meager school facilities. These are economic status of the family, fiscal competence of the community, place of residence, and race. Education should be a major force in eliminating class distinctions and in equalizing the social conditions under which men live. However, as it operates in some parts of our country, education accentuates class difference, creates and perpetuates disparities in the conditions of men, and thus imperils the very foundations of the American way of life.

Federal financial assistance to education in the States is absolutely necessary if educational opportunity is to be provided throughout the Nation. This fact has been clearly established by a series of fiscal investigations. That such aid can be extended by methods which do not invalidate State and local control of education has also been demonstrated.

The requirements accompanying Federal grants to the States should be limited to minimum items, such as post-audit and the publication of reports to assure the use of these funds for the purposes for which they are granted.

By the Federal leadership function is meant all activities such as research and investigation, conferences, the encouragement of interstate communication and cooperation, the preparation of reports and recommendations for educational development, and all other similar methods which lead to educational progress on the basis of understanding and consent, as opposed to coercion and compulsion.

3. The Federal Government should limit such direct control and administration of education as it exercises to certain special enterprises.

This proposition recognizes that there are certain educational undertakings which the Federal Government should directly control and administer, such as the Academies at West Point and Annapolis. The number and scope of Federal educational enterprises and functions, however, should be kept within restricted limits. There is justification for the direct administration of an educational activity by a Federal agency when this activity is an integral part of some recognized function of the Federal Government and does not duplicate activities nor involve the administration of education in the States.

4. The Federal Government in its relations to education should recognize that this is a service of primary importance, which makes its greatest contribution to the general welfare as a well organized, integrated enterprise designed to develop well balanced citizens for democracy, rather than as a means of advancing unrelated aims or special interests.

This proposition holds that education is a matter of primary concern; that youth can be best prepared for democratic citizenship when their activities are guided by the mature experience of qualified teachers; that the curriculum should not be a patchwork of poorly related activities dictated by passing enthusiasms, ephemeral needs, and pressure groups; that the educational systems must be well organized, both as to their general control and administrative direction, eliminating competition between Federal and State Governments.

5. The decentralized pattern of public educational organization developed in the United States during a period of more than a century and a half, involving basic control and administration of education by the States and localities, is sound policy and should be continued.

The inherent merits of decentralized control derive from the necessity of keeping education attuned to the evolving demands of a dynamic industrial nation; from the desire to permit educational diversity; from the wish to keep education close to the people; and from the fear that if education became centralized in the Federal Government it might more readily be captured for political or other improper purposes. Educational progress in this country is due in substantial degree to the experimentation and adaptation which go on continuously in the State and local school systems.

The distribution of Federal funds for education: The mistake is often made of assuming that financial aid for education is synonymous with control of its program and administration. This is not the case. The presence or absence of control, as a byproduct of financing, depends upon the terms of the legislation. Federal funds for education should be allocated to the States in terms of the following six policies:

1. General grants are preferable to special grants: A grant of so many dollars per pupil

in attendance, available for the financing of all phases of education, or a grant to aid States in establishing an acceptable minimum of financial support in all districts, is a general grant. A specific grant is one specified for use in developing a particular school subject or type of service at some particular educational level or for a limited age group of children or youths. General grants permit the development of balanced educational programs with the needs of children and of society as a whole in mind. Special grants tend to direct attention unduly to particular phases of education.

2. The proportion of a Federal grant for education going to each State should be determined on the basis of objective factors: Objective factors would be, for example, the number of children attending school, or the number of youth of a certain age in the school district, or the fiscal capacity of the district. An objective basis of allocation is one that two competent persons can use independently and get the same result as to the amount due each State.

3. The granting of Federal funds for special educational purposes, accompanied with the requirement that similar sums be appropriated from State or local revenues, is undesirable. The two most serious objections to such "matching" requirements are: (a) The richest States or localities tend to receive the largest amounts of Federal money since they can most readily match Federal appropriations; and (b) subsidies so granted result in unbalanced educational programs.

4. State plans for the use of Federal educational funds should be prepared prior to their distribution and these plans should be worked out jointly between the agents of the States and the Federal Government. The role of Federal officials in this process should be limited to advisory functions.

5. Each Federal act to aid the financing of education should provide that the State legislature must formally accept the provisions of the act and designate the State office to administer it.

6. Federal funds granted to a State should be available for use in schools which the State itself recognizes as eligible to be supported from public funds.

Federal leadership in education: The National Government will be unable to organize properly its relations to education until it establishes an adequate Federal educational office. The present inadequacy of the United States Office of Education results neither from lack of competence nor from lack of effort on the part of its leadership and staff. Rather, it stems from its lack of status and financial support, and from the willingness of Congress to authorize or permit noneducational Federal agencies to develop their own elaborate, and often expensive and overlapping, agencies for dealing with education in the States, and even for the direct control and administration of major educational functions.

An essential step in correcting this situation would be the establishment of an adequate Federal educational agency as an independent office of the Federal Government. This agency must not be a subordinate bureau of some powerful department or independent agency of Government. It must have sufficient rank to deal directly with Congress and the President so that the voice of education will be heard in Washington.

Until such time as Congress takes fundamental action to establish an appropriate Federal educational office, the existing Office of Education should be granted more adequate funds. The President in his latest Budget message recommended more funds for a far-reaching improvement of the Office of Education. Such funds are necessary if the Office is to undertake the services which should be provided by such an agency. These funds would be a small fraction of the appropriations now made annually by Congress for a variety of educational activities.

The functions of the reorganized Federal educational office should not be mainly administrative, so far as the conduct of education in the States is concerned. Some of the principal duties of the new office would be: To serve as the agency of the Federal Government for dealing with education in the States; to administer all Federal educational undertakings except those which, for peculiar and valid reasons, are exercised by some other department of the Federal Government; to serve as an agency through which the Federal Government transmits funds appropriated for education in States; to conduct over-all national investigations and researches; to organize temporary demonstrations of promising new educational undertakings; to collect and disseminate useful information concerning education.

Our democratic technical society requires an abundance of good education. In the long run, the best way to provide that education is under a decentralized pattern of educational organization which keeps the schools close to the people and responsive to their needs and wishes.

A Fifty-Million Baby

EXTENSION OF REMARKS

OF

HON. LEON H. GAVIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 22, 1945

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Oil City (Pa.) Derrick of May 21, 1945:

A FIFTY-MILLION BABY

Do you know what the OWI is? It is the Office of War Information. This agency was created to propagandize the American people and to keep them informed of what was being done. The Director of this organization is Dr. Elmer Holmes Davis, a graduate of Queen's College, Oxford. It spends $50,000,000 a year of the American taxpayers' money.

Davis made a ruling which has just been reversed by President Truman. He barred all American newspapers and magazines from occupied Germany. In their place he proposed to print newspapers in German cities staffed by OWI pay-rollers. American funds were to be used for this purpose.

Director Davis gave the correspondents the impression that this decision was reached by the United States military chiefs in Europe, that the authority behind it was of American Army origin, and that OWI had merely concurred in this decision. Davis said that a reading of certain American newspapers would give the people of the occupied area the impression that there might be a division of thought and policy among the United Nations. When this situation was called to the attention of Truman, he called up General Eisenhower and asked for the facts. Then before the White House reporters Truman made this statement: "General Eisenhower has advised me he has issued no policy or order dealing with the importation of publications into Germany."

Do we need the OWI any more? Why does it need all of $50,000,000 a year of our Government's money? Do we need paid propagandists, press agents, psychologists, and advertising experts to sell the war to America? Fact of the matter is that this agency has never functioned expertly or efficiently. Says one writer: "Under it the news of the surrender of Germany was ridiculously messed and botched. Under it the British and Russian press consistently scooped the American press on vital and important war developments—such as the meetings of the Allied leaders at Cairo, Tehran, etc."

Fifty million dollars is more money than it takes to run the largest newspaper in the United States. What are these thousands of OWI employees doing? Here we have an example of the horrible waste of this war. We do not mind waste in the case of the Army and Navy. The winning of the war is up to them. But what of those costly excrescences which have increased the number of Government employees to 3,500,000, many of these young men who were fit for the armed services?

This is the greatest job facing President Truman. He must cut out this waste. He must see to it that the existence of these agencies is justified. The war with Japan calls for no such organization as the OWI. War publicity is a matter for the Army and Navy. Why not let General Eisenhower handle it for Europe and General MacArthur and Admiral Nimitz for Japan?

England To Pay Advertising Subsidy to the American Press

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 22, 1945

Mr. REED of New York. Mr. Speaker, it would appear from an article published in Printers' Ink that our Nation's press is to be subsidized in part by the British Government. With further concessions in our tariff rates to Great Britain under the proposed H. R. 3240 and with the advantage of Government subsidized advertising carried in the American press to sell goods exported to us, the proposal of another 50-percent reduction in tariff duties is a bit realistic as well as ironical. Under leave to extend my remarks, I am inserting the article in Printers' Ink:

BRITAIN WILL SUBSIDIZE ADS IN UNITED STATES MEDIA FOR INVASION OF AMERICAN MARKET

British manufacturers will make greater use of advertising in American media after the war in a determined effort to "corner some of the rich, lucrative market that the United States represents," Gordon Boggon, vice chairman of the London advertising agency, Mather & Crowther, Ltd., declared in a press interview in New York last week.

In addition to Scotch whisky which Mr. Boggon thinks is the only British product now well sold in the United States, British firms intend to increase their exports to this country of Irish linen, lower-grade chinaware, glassware, woolens, cotton goods, leather goods.

Advertising for these products will be placed in American media through offices of the British Export Trade Advertising Corp., opened in this country to represent British advertising agencies. The British Government will subsidize part of British advertising in this country through the Trade Development Bank.

Mr. Boggon declared that although Britain was before the war one of America's principal

customers with an unfavorable balance of trade of about 4 to 1, it will be an even greater customer for American goods after the war. Its greatest immediate needs are for prefabricated houses, lumber, plumbing, housewares, hardware, furniture, and home furnishings to replace millions of dwellings destroyed by war. "The next three governments will fall in Great Britain over the housing question," he asserted. "We will need at least 300,000 new dwellings a year for many years to come. After the last war the Government was able to supply us with only 60,000 dwellings per year. I'm afraid the housing situation is going to give us a great deal of trouble in England."

The British have learned much about advertising and merchandising techniques from Americans, Mr. Boggon asserted, and hope to learn more. He proposed that there be a two-way exchange of advertising ideas, information and knowledge between advertising agencies and advertisers in the two countries. Some 40 percent of all advertising in British publications has come from American firms, he estimated, and added that this has influenced advertising done by British firms.

Commercial broadcasting to Great Britain is inevitable, Mr. Boggon said. There is some doubt that the British Government will allow the export of money to any foreign radio stations to pay for commercial broadcasts into Great Britain. "That will cause a great deal of trouble," he predicted. "The Government eventually will be forced to allow the British Broadcasting Corp. to license two or three stations within Britain for the purposes of commercial broadcasting."

Before the war British manufacturers did an amateurish hit-or-miss job of export marketing, said Mr. Boggon. They will not make the same mistake in the future, he indicated, but will employ the newly organized British Export Trade Research organization to learn about the requirements of every market so that British goods can be manufactured to fit those requirements. "We're going to make the right goods for the right market."

"After the war, we shall do our utmost to sell you more than we did before the war," he said. "I don't know whether you will lower your tariff further. I hope you do. But I have to proceed on the assumption that you may not do so, and that British exports must do such a good job of merchandising in this country that they can jump clean over your tariff walls. I think we can do it; anyway in certain territories."

Discharges From the Armed Forces

EXTENSION OF REMARKS

OF

HON. PETE JARMAN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 22, 1945

Mr. JARMAN. Mr. Speaker, I am strongly impressed that middle-aged men many of whom made much greater sacrifices to enter the service than did their juniors, whose age has prevented them from advancing nearly as rapidly, and whose age has so frequently prevented their participating in battle or even going overseas, should receive special consideration in the matter of being discharged.

A hurried perusal of the point system prompts me to believe that they should have received more consideration in its establishment. I am impressed, for instance, that a certain number of additional points should have been given to men who are 30 years old, a still greater number to those who are 35, and a larger number to those who are 39. Certainly, the awarding of such points would not have discriminated against anyone else but would have, in my opinion, been quite fair.

I do not know whether this point system has been fixed and finally established or whether it is subject to change. In the event it is, I urgently suggest that some such consideration be given those gentlemen whenever a change in this system occurs.

I quote without mentioning his name a letter from a very high-class man who finds himself in this situation and who is naturally thinking of the future, just as I am confident all in his age group are doing:

MAY 9, 1945.

DEAR PETE: I would like to acknowledge your long letter which I received many weeks ago. I have read and reread it many times and enjoyed its contents very much. It is my purpose to answer it in the near future and discuss some of the matters which it contains. I apologize for not having already done so, but we have all been straining so hard to bring about victory in Europe that many of our duties to our friends have been sadly neglected. This is not an answer to your letter, but pertains to what I think is a pressing matter now at hand.

You no doubt, in the course of your many daily duties, have occasioned upon a discussion of the increasingly popular subject of the older men in the Army. There have been so many things said already concerning their precarious plight that it is hardly necessary for me to enlarge upon it here. However, by way of putting in my bit, I might state that many of these men left good positions and professions and came into the Army as a good, bona fide dogface purely out of a desire to do their patriotic duty toward our Government. Most of them were excellent officer material, but due to their physical disabilities they were unacceptable. For the same reason they have never left this country and have therefore not accumulated any points on the proposed point system. Most of these men have no children, otherwise they would never have been drafted and would be home with many of their compatriots, making a wad of money practicing their professions. Many of them, as in my case, have exhausted their private savings trying to maintain their families in a respectable fashion. A large portion of them have other dependents besides their wives. This also is true in my case. They have little time to recover before passing middle age. Those who must earn their living with their hands will be lost in a field of young, robust competition.

In the matter of the GI bill of rights they are total strangers. Their benefits after the war (other than hospitalization) seem to be negligible. About the only effective help that I see for these men is to allow them to return to civilian life where they may join their professional brethren who were made secure by the lowering of the draft age many months ago, and thereby allow them to recoup some of their business before the competition becomes too keen.

I am ready to admit that my interest in this matter is, to a great extent, selfish, because my case is a glowing example of the circumstances stated above. On the other hand, I have the opportunity to observe many other cases of extreme misfortune among my fellow soldiers in this category. I acknowledge my presumptuousness in writing this letter. In defense of myself, however, I might add that I am not trying to tell Congress how to run its business. My purpose is to do my bit in conveying to Congress, through my good offices with you, what I believe it would like to know. I have never written a letter before regarding congressional policy and probably will never write another one.

It is my hope that you will give your support and your colorful influence to any bill which may arise calculated to give aid to the men described herein. I am well aware that the war must go on even though VE-day is a matter of history. On the other hand, more than 2,000,000 men will be discharged. The group herein referred to would constitute an infinitesimal fraction of that group. Most of these men have served well in improperly classified assignments. They have done their best at great personal sacrifice. I believe they deserve a break. Any consideration they get now will be a landmark in their lives and will be enthusiastically remembered many years to come.

My wife joins me in wishing for you and Mrs. Jarman the very best of everything, and hope for you many years of continued success in Washington.

Respectfully yours.

Black Markets Are Treasonable—Article by Oscar Vogl

EXTENSION OF REMARKS

OF

HON. EMILY TAFT DOUGLAS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 22, 1945

Mrs. DOUGLAS of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein an article by Mr. Oscar Vogl, of Chicago, entitled "Black Markets Are Treasonable," which appeared in the National Food Distributors' Journal:

In Chungking a 10-cent package of American cigarettes is sold for 70 cents. A pound of butter in Rome, Italy, costs $6. In the United States potato farmers are paid $2.25 for 100 pounds of potatoes (the ceiling price) plus $1 for loading it on the truck. On the New York jewelry market they are paying ceiling prices for watches, but lay down a cash bonus for the cases they come in. There are dealers in stolen goods all over the world, just as there are black-market operators who spring up like weeds every place where restrictions appear.

The law-enforcing agencies have not sufficient manpower to cope with this problem. War restrictions, like prohibition, are not popular. Such a situation always produces illegal traders, who thrive and profiteer while honest merchants suffer and get nervous prostration.

Only the other day the head of the meat department in one of the finer supermarkets located in a swanky Chicago suburb became so nervous under the high tension created by answering questions and sparring with grievances of his best customers that he threw up the sponge. He put on his hat and coat and walked out of the place saying, "I can't stand it any longer. Here we are living up to the law, turning down trade, while the bootlegging black-market operators do a land-office business and make life miserable

for us who want to help the country win the war."

Virtue and honesty have their own rewards, yet with temptations lurking from every corner there will be many who cannot stand up as did this one butcher. Who is to blame? What causes these disastrous conditions? How can we solve the problems? These are most difficult questions to answer.

There are always people who will justify any act from forgery to murder. There can always be found defenders of illegal and treasonable acts. Even Benedict Arnold had his defenders.

In a realistic world where the principles of morality, decency, justice, and Christianity have been trampled on from one end of the globe to another, it is most difficult to find a solution.

What is needed to discourage black markets is not morality preaching nor drastic law enforcement, though the latter would help immensely, but a general awakening. A national consumers' movement that will demand exactly what we are fighting for. These bootlegging black market operations are a defamation. They are an insult to our fighting forces. They are a scourge that must be eradicated or our national prestige will suffer immeasurably all over the world. What moral right have we to preach peace terms or suggest postwar policies if we cannot control our own back yard?

We made heroes out of prohibition era bootleggers and gangsters. We promoted war profiteers to high places. We pardon income-tax violators, and we give new trials to saboteurs. These actions are considered weakness by those who look upon us from a distance.

Black markets are a matter for our consuming public to take into hand. Let the service organizations, women's clubs, trade associations, labor unions, churches, and others on the righteous side of life institute a general boycott of the bootleggers and black markets.

In America we can do things, once we become sufficiently aroused and convinced that a condition which only profits a few and demoralizes the masses has no place in a democratic republic dedicated to justice and equal opportunity for all.

Palestine

EXTENSION OF REMARKS

OF

HON. LEONARD W. HALL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 22, 1945

Mr. LEONARD W. HALL. Mr. Speaker, under leave granted me, it is my privilege to include in the RECORD a speech by Hon. Nathaniel L. Goldstein, attorney general of the State of New York, on the subject of Palestine, given before the Albany Zionist District at the Shaker Ridge Country Club, on May 21, 1945, at Albany, N. Y. Mr. Goldstein's address is as follows:

On all of the battlefields of Europe, the roar of the cannon has been stilled. The madmen have died or vanished in the nowhere, but their names will, forever, carry with them a long and lasting burden of agony and misery.

Democracy now sights its guns toward the eastern fiend. The other half of the Fascist terror will soon be vanquished and with it will come the opening of the floodgates for the world of tomorrow.

The barbaric atrocities of the past 10 years illustrate what can happen to the human being when he fails to answer Cain's question, "Am I my brother's keeper?"—what has happened and can happen are portrayed by the specters who stalk the highways and byways of the world today. If a humane civilization is to survive, based on the rights of man and the sacredness of the individual, the world must be concerned with man's treatment of man everywhere.

Palestine has ceased to be a Jewish problem. It lives as part of a world problem, for peace is indivisible and can only be preserved on a global plan. When I speak of Zionism, I speak of a free and democratic Jewish Commonwealth for Palestine, and when I speak of Palestine, there are three important questions which arise in the minds of those who are not Zionists. First: Is Zionism consistent with Americanism? Second: What are the legal and moral rights of the Jews to Palestine? And, thirdly: Is there any other solution for the Jewish refugee problem of Europe?

Is Zionism consistent with true Americanism? Not only is there no possible conflict, answers the late Mr. Justice Brandeis, but there is a positive synthesis: "To be good Americans," he maintains, "we must be better Jews, and to be better Jews, we must become Zionists." Far from it being inconsistent with Americanism, "loyalty to America demands rather that each American Jew become a Zionist." "Multiple loyalties are objectionable only if they are inconsistent."

America is full of nationalities which accept their new American citizenship, yet look to some center in the old world as the source and inspiration of their national culture and traditions. No one impugns the patriotism and the loyalty of the Belgian, the Italian, the Greek, and the Pole, on account of their national origin or because of their desire to help the land of their forebears.

What are the legal and moral rights of the Jews to Palestine. Notable and crystal clear is the fact that the claim of the Jewish people to Palestine is based on those very principles of law and morality for which free democracy now fights. Not only does history furnish us with the facts on which the moral claim rests, but civilized nations have solemnly and formally recognized the legality of such claim. For 2,000 years Palestine was a Jewish land. There the Jews lived and toiled, struggled, and died, and gave to civilization its exalted moral and ethical concept. Palestine was more than a Jewish State. It was the core of the Jewish religious framework. There lie the greatest episodes with which Jewish history is identified. When the Jews were forcibly exiled, Palestine assumed a greater importance to them. The Jewish furnish the only instance in history of a disfranchised people neither losing its identity nor relinquishing claim to its homeland. Toward the end of the First World War came the first day of light. Legal recognition of the right of the Jews to Palestine was given by the world.

The Allies recognized that the Jews had a national character. The first great manifestation of such recognition was the historic Balfour Declaration of November 1917, which declared:

"His Majesty's Government view with favor the establishment in Palestine of a national home for the Jewish people, and will use their best endeavors to facilitate the achievement of that object."

Then came the mandate for Palestine, which affirmed with legal finality the right of the Jewish people to Palestine. It stated with respect to the Balfour Declaration that:

"Recognition has hereby been given to the historical connection of the Jewish people with Palestine and to the grounds for reconstituting their national home in that country."

This mandate of the League of Nations, representing the will of upward of 50 powers conferred the mandate for Palestine on England. It became the trustee for the establishment of the Jewish national home. The intention was clear. At the peace conference President Wilson stated:

"The Allied Nations with the fullest concurrence of our own Government and the people are agreed that in Palestine shall be laid the foundation of the Jewish Commonwealth."

The United States Congress, by resolution adopted in 1922, gave force to the attitude of the American people as to Palestine, when it called for "the establishment in Palestine of a national home for the Jewish people." Thereafter the Anglo-American Convention of 1925 made British action in Palestine subject to the approval of the United States.

A quarter of a century has passed. In these 25 years, based upon the representations of the great powers of the world, the land has been rebuilt and a people has been reborn. Acting on the promise of the Balfour Declaration, the Jews brought over half a million people into Palestine. They founded 300 agricultural colonies invested over $600,000,000, built 2,000 industries, and more than 5,000 handicraft establishments. The dead soil has been revitalized—out of the dirt, neglect, and stagnancy, there has arisen a new life, molded by the sweat, blood, and tears of these pioneers. Side by side with its agricultural rebirth, Palestine has progressed industrially and in this Great World War had already proven itself as the military arsenal for democracy. The waters of the Jordan have been harnessed and electrified; great chemical plants draw minerals from the Dead Sea—life has been breathed into the dead.

What will the world do with the European Jew for whom exile is enforced; who cannot return to his old habitat, and who cannot find refuge in any other free country in the universe? Unless civilization has so reverted to the Nazi and Fascist role, as to wish the destruction of these homeless Jews, it must encourage the proved medium to solve the problem—Palestine.

James G. McDonald, chairman of President Roosevelt's Advisory Committee on Political Refugees, and former League of Nations High Commissioner for German Refugees, sums it all up when he says, "On the record Palestine offers incontestably the primary hope for the solution of the problem of Jewish refugees. The conclusion which emerges inescapably from a realistic résumé of 25 years of intergovernmental dealings with refugees and from a realistic appraisal of the world situation is that in Palestine and only there can the mass of Jewish refugees hope to be welcome and to be assisted to integrate themselves into the life of the community. Only in Palestine will most of them feel that they have returned home."

Deeply imbedded in every people is the desire for full development; the longing to contribute their share to history. Nationality like democracy has been one of the potent forces making for man's advance. A people to survive need an address; a symbol of sovereignty; a home; a flag and a coat of arms. Switzerland, Norway, Greece, Belgium, Holland, Ireland—we can call the roll—all have standing in the world of today and of tomorrow. Yes, let us clearly keep in mind that Zionism is not a movement to remove all the Jews of the world to Palestine; it is not a movement to compel anyone to migrate there. It is a movement to enable the Jews to exercise the same right now exercised by practically every other people in the world—to live at their option in the land of their fathers—or in some other country. Zionism seeks to establish in Palestine, for such Jews as choose to go and remain there, and for their descendants, a legally secured home. Our Jewish pilgrim fathers have laid the foundation. It remains for you and for me,

for the architects who are to draw the peace, to build the superstructure.

The Jewish people have too long been waiting in the anteroom of history. Just as frontiers all over the world will be moved, so must the great nation return to its own, those fertile coastlands of the Mediterranean, where 40 centuries ago the Jews built a nation dedicated to the worship of God and the practice of His moral laws.

Development of the Third Congressional District of Arkansas

EXTENSION OF REMARKS

OF

HON. JAMES W. TRIMBLE

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 22, 1945

Mr. TRIMBLE. Mr. Speaker, under leave to extend my remarks in the RECORD, I insert the following address which I delivered over Station KUOA, Siloam Springs, Ark., in my district on February 19, 1945, with additional comment as of today:

Friends, I take this opportunity to speak to you about a matter which is important to our district, and I hope you will not think me presumptuous. I think the third district is one of the best congressional districts in the United States. I say this with quite a bit of pride. When I consider the 10 counties, predominantly agricultural, which comprise the district, I know of no comparable, compact territory in the State. Starting on the east, we have minerals, timber, and power; coming west to the counties of Benton and Washington, we have developed one of the greatest poultry industries in the United States, not to mention the great canning industry and the dairy development, where he had, at one time, one of the best fruit sections in the world.

With all of its fine natural resources, I believe there is still ahead of us our greatest period of development. Believing this, I have asked the Department of the Interior to make an industrial survey of the district, indicating each locality and getting ready with projects for the time when the war will have ended and we can get back to peacetime status, with the boys at home from the war. They have agreed to do it as soon as the manpower situation eases to the point where they can spare the men. The Congress has already authorized, as you know, the construction of Bull Shoals, Table Rock, and Lone Rock Dams. These dams, with the power generated there and with the aid of the private power companies in the State, will furnish plenty of power to develop the great mineral resources of the eastern end of the district where Tom Shiras, of Mountain Home, has pioneered for years. He is really the inspiration of the idea. We can use to the full one of our greatest resources, the fine timber, in all the counties and do it in an orderly and systematically planned fashion in order to keep the supply coming on through the years by the growth of new stock. We have wasted enough timber in the past 50 years to pave all the roads in the 10 counties in my humble judgment.

I think Harry Atwood at Berryville has an idea that will mean much to the people of our section of the State in his plywood experiments. He has developed a plywood which I understand is revolutionary. I am told, also, that certain chemicals have been recently discovered which make softwoods, like pine and maple and elm—quick growth woods—just as durable as oak and hardwood maple, when the lumber from them is treated. I can see, too, that with the development of the dams and the flow of power to private companies, as well as to the REA, the various processing plants for fruits, vegetables, berries, and chickens, will make available storage space for the small farmers of our section and enable them to settle on firm competitive ground in the production and marketing fields.

I was amazed to learn while at Yellville, not long ago, that there is a prosperous little industry down there distilling the sassafras. That is just an example of what I mean. I can see in the future many ways for our enterprising people to find new occupations and to improve the ones which now exist. With our lakes and streams and hills, we have recreational facilities untold. I can remember as a child that the one who thought of an airplane was a mystic, impractical, or just plain crazy. But we lived to see the airplane revolutionize world thinking, and today the Congress is planning and debating peace proposals that, some years ago, would have been unthinkable. In fact, the airplane has changed our whole future outlook in the business field as well as in the political field. Of course, we cannot as a people, or as a nation, if we wished—which we don't—get away from the old fundamentals which made our Nation great, of patience, hard work, thrift, faith, dependability, and perseverance. These are basic; so is progress.

I hope I am not beginning too early, but I am asking the cooperation of the chambers of commerce and all the people interested in the district to assemble projects peculiar to their own localities. As soon as funds are available the Interior Department will have a group of men in the field to get right down to earth on a long-time planning basis, founded on the fundamentals of good government and good citizenship which I have mentioned above. I have already received inquiries from those who are interested in our section and who have capital to invest in these projects. These things will not come in a day, or a month, or year, nor will they come without the good old American process of going after them.

It might be of interest to you to know that this week the House passed an appropriation of $150,000 for preliminary work on Bull Shoals. It also passed a further sum for the completion of Norfolk. I would appreciate the help and suggestions of everybody in this work of planning. I happen to be one of those who believes that there is work enough, profit enough, and room enough for us all in the great third district, and that the surface of its potentialities has only been scratched, as indicated by the little distillery of sassafras juice at Yellville, which I mentioned a moment ago. That is a symbol of the great possibilities at home which await the magic touch of enterprise.

There are two methods of approach to the development of the dams as dual-purpose projects: One is set forth in the Flood Control Act adopted by the last Congress, and under which the Corps of Engineers develops the rivers. The Department of the Interior makes the sale of the power generated by the dams. The other method is that one of the various authorities, such as the Tennessee Valley Authority, which are authorized by Congress to dispose of the power and develop the industry around it. Apparently now the consensus of public opinion is that free enterprise should be given as much leeway in the use of power developed from these dams as possible, as it is more of what we have come to consider a democratic process, and follows what we have been taught by long tradition and sound judgment, known as the American system of free enterprise.

However, if private enterprise cannot do the job of building and developing the dams or refuses to do it, then, of course, some authority will be established in order that the whole people who really own the rivers will have the benefit of their property.

As I have stated, the Interior Department has agreed to make an industrial and mineral survey of the district and that is now being undertaken. Of course, we are handicapped by lack of appropriations but we hope to have that remedied before long. It was my idea in asking for the survey, to secure a great many small industries rather than a few large ones. It is my concept that a smaller industry near the towns in our district—none of which are large—is much better than the larger. For instance, say at Yellville, an industry employing 100 heads of families, who own their homes in the town or near, and who are interested in seeing the industry prosper, has a far more favorable set-up both for labor and management, because each one has the interests of the industry at heart.

One of the chief handicaps of the towns is the lack of water.

Another thing about this industrial survey prospect for the future that encourages me very much is the fact that the last legislature passed a law which has been signed by Governor Laney setting up an industrial and resources planning committee for Arkansas. Already this committee is at work dovetailing its activities with those of the Interior Department and I think that in the very near future we can get some real work done. The University of Arkansas Bureau of University Research, under the direction of Dr. C. O. Brennen, has already started out with a program as follows:

First. Forest-products utilization.

Second. Agricultural processing.

Third. Ceramics, including both heavy and light utilization.

Fourth. Minerals, with immediate emphasis on construction materials such as marble and cement.

Fifth. Study of water resources.

The work on each of these will be in two parts—laboratory work at the university, and field work involving inventories of basic raw materials and present utilization. For example, in the wood-products field we are conducting a close study of available timber stands with information on volume, quality, location, accessibility, and so on, and we are planning to set up a wood-processing laboratory at the university for the purpose of experimenting with all types of chemical and physical treatments with all wood species common to this State. The idea of this last is to determine methods of raising the value of material and bringing about higher types of utilization. For example, our common black oak timber is now used for fence posts, also rough undressed lumber and the like. If it can be determined through experimentation that this material, which is fundamentally of high quality so far as concerns strength and durability, can be used for

furniture manufacture, indoor construction material, and other of the higher-type uses, the value of this resource would be greatly increased and some increase in industrialization would materialize.

Along with this phase, close study is being made of wood-processing industries of the higher type, such as furniture factories, to determine the prospect that these industries have of continuing as at present, or the possibility that they may in the near future begin to substitute other raw materials, including plastic types. The idea is to try to get some view of the future of good-processing industries in the State.

In most respects the method of study is practically the same for the second, third, and fourth. In the case of the fifth, water resources, the Bureau will concentrate its attention on local studies of water as to type, volume, mineral content, temperature, or other quality, all of which would be interpreted in terms of industrial use of the adequacy of water for new industries. Included in this phase will also be close study of alternative methods of producing water, such as impounding through the construction of dams on streams. This work will be done in close coordination with the United States geological surveys that are being made in the State, and it is hoped that our specialized activity on this point will be conducted cooperatively with the United States Geological Survey. We have some promise that this can be worked out. In addition to the foregoing, the Bureau, as soon as it has more personnel, will cooperate to some extent on postwar planning studies wherever possible. In fact, a limited program is already moving along this line. Also the Bureau will proceed, as early as possible to study some of the over-all basic factors which constitute advantages or disadvantages to industrial development in the State, such as transportation, interstate trade barriers, market outlets, State policies and State taxation, and the like. This information will be brought to bear upon all local situations where plans are being made for the development of any type of industry.

We are on our way in the Third District. With your help we will not fail.

Report on Meat Shortage in Canton, Ohio, by Office of Price Administration

EXTENSION OF REMARKS

OF

HON. WILLIAM R. THOM

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 22, 1945

Mr. THOM. Mr. Speaker, critical shortage of meat in the city of Canton, Ohio, where a large industrial population must be adequately supplied with meats if war production is to be maintained, impelled me to ask the Office of Price Administration at Cleveland, Ohio, to send special agents to that city to study the situation.

A full report of this investigation has now been furnished to me, and I have submitted it to packers, dealers, and consumers in Canton, Ohio, for reading and criticism.

Out of this discussion it is hoped that measures will emerge to relieve appreciably the meat shortage that is now troubling Canton and its vicinity.

The OPA report follows:

The general conclusions reached are:

1. Canton until recently probably has been getting more than its fair share of the Nation's meat supply for reasons indicated hereafter.

2. At present Canton apparently is getting approximately its share.

3. The situation may improve somewhat in the near future but—

4. Canton's meat supply will not improve greatly until the Nation's over-all civilian supply improves.

The basic reason why Canton until recently probably has received more than its fair share of meat is this:

A. Canton has received 65 percent of its meat from nonfederally inspected slaughterhouses in or near Canton. About 35 percent of its meat supply came from western federally inspected plants. The plants without Federal inspection which supply Canton with most of its meat provide no meat for the armed forces. All their output goes to civilians.

Communities depending for their supplies mainly upon federally inspected plants are in a less fortunate position. They have lost a substantial portion of their civilian supplies, because of the large set-aside for the armed services. At present war needs are taking 60 percent of all pork and from 60 to 80 percent of all the beef produced by federally inspected plants (60 percent of choice and good grades and 80 percent of utility and canner and cutter grades).

B. Inasmuch as only federally inspected meat may legally move across State lines, there was only one way to get to nonproducing areas, especially the Nation's big cities, their fair share of meat. That was to cut down on the kill of nonfederally inspected slaughterers and the meat supply of areas served primarily by such plants. Canton was such an area.

C. Nonfederally inspected slaughterers on May 1 had their kill of hogs cut to 50 percent, and their kill of cattle cut to 25 percent below their 1944 kill. This was less than the percentage set aside for the armed services by federally inspected plants.

Broadly, that is the reason why Canton, until recently, got more than its just share of the Nation's meat; why, recently, it has been cut to approximately its just share. But let's get down to concrete facts:

1. Four nonfederally inspected local plants have provided 60 percent of Canton's meat supply. It gets an additional 5 percent from 4 nearby plants and 2 country slaughterers. The balance of its supply has come from 12 western federally inspected plants.

2. One of the four Canton plants has been closed recently, due to the fact that it was located on a leased farm, which was sold. It is now out of operation. A quota, however, remains with the operator. A plan is being worked out to have one of the other plants kill his quota. This should somewhat increase the supply of meat in Canton.

3. The three other Canton packers had their pack cut about 25 percent the first quarter of the year, compared with last year. They have had their kill reduced approximately 25 percent more recently. Nearby nonfederally inspected plants have cut their shipments of meat into Canton from 5 to 60 percent since last year. The federally inspected western packers have cut their shipments of meat to Canton from 45 to 90 percent. The cut-back in nonfederally inspected plants should provide more meat to federally inspected plants and increase their excess for civilians over the large military set-aside. This should in time and to some extent restore Canton's meat supply from these sources.

4. One of Canton's packing houses, buying bulls in the Chicago market for manufacture of sausage, found prices going too high for purchase if ceiling prices on sausage were observed. As a result it has cut down on production of sausage, and laying off some of its help. The cure for this situation is better enforcement to keep black-market operators from bidding too high for cattle. Then the local plant may restore this production.

5. Local Canton plants report difficulty buying cattle in nearby cattle auctions, from which they formerly got many cattle. Reason: Small newly established plants are bidding cattle up above prices permitted by wholesale meat ceiling prices. The cure for this is better enforcement. The 700 additional meat enforcement inspectors just authorized by Congress should improve this situation.

6. Of Canton's present three operating plants, two are planning to take Army inspection and provide a set-aside for the armed forces. This will increase their kill; should improve their financial operations. It will not provide more meat for Canton civilians.

The third Canton operating slaughterer has not yet decided to apply for either Army or general Federal inspection; will do so, it is stated, if the Government will guarantee it against loss. The new Government program guarantees against loss those who formerly operated profitably and whose slaughter is cut back by the meat control program, the purpose being to prevent anyone being driven out of business by the program. There is no guarantee against loss for slaughterers whose slaughter is not restricted.

7. Canton food stores report a cut in their meat supplies of 55 to 60 percent over a year ago; a considerable drop coming since March 1, 1945.

These stores showed no carry-over of meat of any kind from Saturday to Monday when this investigation was made. Receipts for Monday were light, with little meat on display.

8. Hotels and restaurants checked reported a 45 to 60 percent cut in meat supply from a year ago. They averaged 2 meat dishes on the menu per meal; about the same as hotels and restaurants in similarly situated areas.

9. All facts taken together indicate that Canton is having a more severe meat shortage than any it has yet experienced. It is felt, however, that it is not worse than that being experienced by similar areas elsewhere.

The meat supply of Canton may be somewhat increased by these steps:

(a) Opening of the closed Canton slaughterhouse or by immediate arrangements for the kill of its quota by one of the operating plants.

(b) Better enforcement of ceilings on cattle purchases may divert more cattle to Canton's packers—restore curtailed sausage production.

(c) The meat-control program should increase somewhat the civilian supplies from federally inspected plants serving Canton.

While these developments may slightly increase Canton's meat supply—now probably at its lowest ebb there will be no marked improvement until the percentage of the Nation's meat supply, taken by the armed services, is considerably reduced.

A good illustration of the advantage which Canton until now has enjoyed in meat supply is illustrated when it is compared with

Cleveland. Both cities have received about 30 percent of their supply from western packers. Canton, however, received all of the rest of its meat from plants providing no meat for the armed services. Seven of Cleveland's local packing plants have Federal inspection and have been required to set aside 60 percent of their pork and 60 to 80 percent of their beef production to meet war needs.

There is nothing the matter with the Nation's meat production. While pork production is down from last year, beef production is at an all-time peak. Total meat production is 38 percent above average production for 1935–39. But millions of American families which formerly ate meat only once a week are now able to afford it several times a week. And quite rightly, we are giving our fighting men all the meat they want. That leaves less meat for all of us than we ate on the average before the war. For medium and well-to-do families, accustomed to meat two or three meals a day, it means a very severe cut.

Canton would not if it could, we believe, escape sharing with the rest of the country the shortage of civilian meat.

MAY 16, 1945.

The Cattle Industry Looks at Further Reduction in the Tariff

EXTENSION OF REMARKS

OF

HON. EDWARD H. REES

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 22, 1945

Mr. REES of Kansas. Under leave to extend my remarks in the RECORD, I am including a statement from the American National Live Stock Association that presents some very important statistical information with respect to this problem. I trust the Members of the House will read it carefully. The cattle industry is one of the most important of all industries of this country.

The statement follows:

We present below some statistical information as to the cattle population in the United States, Canada, Mexico, Cuba, and in South American countries. Also figures on United States beef production, cattle and calf slaughter, and the amount of beef exported from Canada in recent years. Also figures as to existing cattle quotas and the tariff cuts already made under the reciprocal-trade program to date on cattle, dressed beef, canned beef, and hides.

Cattle population

United States:	
1940	68,801,000
1945	81,760,000
Mexico:	
1930	10,083,000
1940	11,603,000

No recent figure available. Cattle numbers thought to have increased since that time.

Canada:	
1939	8,375,000
1944	10,346,000
Argentina:	
1937	33,207,000
1942	31,460,000

Decrease no doubt due to severe drought of last 2 or 3 years.

Uruguay:	
1937	8,297,000
1943	6,256,000

Decrease no doubt due to severe drought of last 2 or 3 years.

Cattle population—Continued

Brazil:	
1938	40,076,000
1942	42,500,000
Cuba:	
1936–40 average	5,024,000
1941	5,335,000
1942	4,897,000

Beef and veal production

	Pounds
United States:	
1936 (high for peacetime)	8,433,000,000
1939	8,002,000,000
1944	10,779,000,000

For first quarter 1945 total beef and veal production 345,000,000 pounds above same quarter 1944.

Canadian exports

	Pounds
Total Canadian exports of cattle and beef converted to dressed-beef basis:	
1938–42 average	90,000,000
1944 exceeded	112,000,000
1945 estimated to exceed	134,400,000

Note 1945 figure is increase of approximately 50 percent over 5-year average, 1938–42.

Total slaughter, cattle and calves

	Pounds
United States:	
1942	27,619,000
1943	27,683,000
1944 (revised)	33,700,000

Total slaughter (farm slaughter not included) first 4 months of 1945 14 percent above same 4 months of 1944.

Quotas under trade agreements made with Canada and Mexico now suspended for the duration

CANADIAN AGREEMENT

1936:	
Cattle weighing less than 175 pounds	51,933
Cattle weighing more than 700 pounds	155,799
1939:	
Cattle weighing less than 200 pounds (superseding the original quota on cattle weighing less than 175 pounds)	100,000
Cattle weighing more than 700 pounds	225,000

MEXICAN AGREEMENT

1943: Cattle weighing over 200 pounds and less than 700 pounds	400,000

Recently Canadian meat interests have suggested that the British market for Canadian beef may not extend beyond 1946 and have suggested seeking a raise in the quota on cattle weighing more than 700 pounds from 225,000 head to 500,000 head. If this request were granted it woul make a total quota for the two countries of exactly 1,000,000 head of cattle.

Reduction in tariff

CANADIAN AGREEMENT

1936: Cattle weighing more than 700 pounds reduced from 3 to 2 cents per pound; calves weighing less than 175 pounds reduced from 2½ to 1½ cents per pound.

1939: Cattle weighing more than 700 pounds reduced from 2 to 1½ cents per pound.

MEXICAN AGREEMENT

1943: Cattle weighing between 400 and 700 pounds reduced from 2½ to 1½ cents.

CUBAN AGREEMENT

1942: Dressed beef reduced from original preferential rate of 4⅗ to 3 cents per pound. (This reduction does not apply to other countries.)

ARGENTINA TRADE AGREEMENT

1941: Canned beef reduced from 6 cents per pound to 3 cents per pound; hides reduced from 10 to 5 percent ad valorem; tallow reduced from one-half cent per pound to one-fourth cent per pound.

You will note from the above that the cattle industry in this country is at a peak in numbers and that beef production is expanded to a wartime basis and that under the existing trade agreements law the full 50 percent cut in tariff has already been made on most of the important items affecting the cattle industry; that further reduction of the tariff as proposed in the pending bill would leave only a semblance of tariff protection for this great industry. It should not be forgotten that considerably more than half of the land acreage in this country grows grass and that much of this area cannot be used for any other purpose.

That use of the power to cut tariffs has not been limited to items where existing rates were a barrier to imports is clearly evidenced in practically all of the above items. Cattle imports have moved into this country freely from Canada and Mexico under the rates prescribed in the original Hawley-Smoot Tariff Act. Dressed beef has come in considerable quantity from Cuba in recent years and it is now indicated that Canada, having expanded its processing facilities during the war, will seek also a reduction in the tariff on dressed beef in order to send part of its exports to this country in that fashion.

Our imports of canned beef from South America prior to the war ran around 80,000,000 pounds per year—some years higher than that. About the time the war began, when the Army made its first purchases of South American canned beef, it was found that they could undersell the domestic product close to 15 cents per pound. The cut in the tariff from 6 cents to 3 cents was entirely gratuitous.

On hides the original 10 percent ad valorem was a nominal tariff and certainly by no stretch of the imagination could be considered a bar to importations. Records show large importations annually from South America and other countries. There was no excuse whatsoever for the reduction in the tariff on this item.

It is our fear that further cuts in the tariff made at request of foreign interests without regard to the effect on American cattle producers can bring disaster to this industry when the war is over and we have to return to a basis of only domestic consumption. We have had no export trade in beef for more than a generation except during the two war periods. The possible heavy imports of cattle, dressed beef and canned beef from Canada, Mexico, Cuba, and South America with cattle numbers expanding particularly in Canada and Mexico constitute a major threat to our industry and there should be no further reduction in the tariff. The only way to prevent it is to strike that provision from the pending tariff bill.

Respectfully submtted,

AMERICAN NATIONAL LIVE STOCK ASSOCIATION,

By F. E. MOLLIN,

Executive Secretary.

DENVER, COLO., *May 18, 1945.*

Development of the Missouri River Basin

EXTENSION OF REMARKS

OF

HON. CHARLES R. ROBERTSON

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 22, 1945

Mr. ROBERTSON of North Dakota. Mr. Speaker, yesterday I appeared before the subcommittee of the Senate Committee on Appropriations and introduced a statement urging the Senate committee

to view with favor a restoration of the Budget estimate for development of the Missouri River Basin. The appropriation as it passed the House greatly reduced the item for irrigation and reclamation below the Budget estimate and to a point which flirts with danger.

My statement follows:

Mr. Chairman, a great many plans and programs have been advanced in recent months as the answer to our problem of keeping the national economy on an even keel during the postwar period. One of the soundest of these programs, in my estimation, is that proposed by the Bureau of Reclamation. It calls for the construction of multiple-purpose projects by which the waters of our western rivers can be more fully utilized in developing the agricultural economy and stimulating the industrial growth of the 17 States lying west of the Mississippi.

One of the areas for such proposed development is the Missouri River Basin. The Congress has already authorized more than 30 of the projects included in the coordinated program of the Bureau of Reclamation and the War Department's Corps of Engineers for irrigation and flood control. Needless to say, the people of North Dakota and the other Missouri Valley States, are wholeheartedly back of this program. I have had hundreds of letters from my constituents urging that action be taken toward harnessing the great river that courses through almost the entire width of our State. The people of North Dakota have waited and worked a long time for such a development program. They will not take kindly to suggestions for further delay.

So in their behalf, I want to express disapproval of the action of the House in making a drastic reduction in the appropriations for carrying out the preliminary work that will be necessary before the actual construction of these development projects can get under way. I hope the Senate will vote to restore those funds for Missouri Basin development and for general investigations by the Bureau of Reclamation to the full amount originally recommended by the Bureau of the Budget. Those funds are needed if we expect the Bureau of Reclamation to do its job, and if we want the preliminary work done on the program which the Congress has approved and the projects which it has authorized. In passing the Flood Control Act last year, we authorized $200,000,000 each for the bureau of Reclamation and the Corps of Engineers for the initial phases of the work necessary in developing the land and water resources of the Missouri Basin. We are asked now to appropriate $4,480,000 as the first funds to be set aside under that authorization. I think that that request should be granted and that there should be no reduction in that fund.

Eight North Dakota projects have been authorized under the Bureau of Reclamation plan for Missouri Basin development. These are the Heart River, the Knife River, the Missouri-Souris project, and five pumping units on the main stem of the Missouri. When completed, these projects will irrigate more than a million acres of land in the State, and the total estimated cost of construction would be about $120,000,000. Let me say that I know of no better investment we could make for the purpose of stabilizing our grain and livestock industry in western North Dakota. Back in the drought years, the Federal Government spent only a little less than that—some $92,000,000—for relief. Projects like those proposed by the Bureau of Reclamation will do much toward developing our resources so that we will be better able to meet similar problems in the future.

All of you realize that many things have to be taken into consideration before construction can be started on any of these multiple-purpose reclamation projects. They involve much more than the mere building of a dam, complicated as that phase of the operation may be. All kinds of surveys, investigations, and studies have to be made before a shovel of dirt is turned. Engineers, economists, and other specialists have to be sent into the field to make studies of the land, the water supply, the types of farming, the construction sites, and of many other factors that have a bearing in determining the feasibility of each project. Studies on some of these projects are already under way. They should be brought to completion. On projects which have been authorized, work on detailed surveys, preparation of plans and specifications and the performance of other work, preliminary to construction of the initial stages, has not yet been started, and will not be started if we fail to provide the necessary funds.

The Congress gave the Bureau of Reclamation a vote of confidence last year in approving the coordinated program for development of the Missouri River Basin, but it takes more than that to put such a plan into operation. I think we ought to back up that vote of confidence with a vote of adequate funds so that the Bureau can go ahead with the necessary preconstruction work; so that we will be ready with the plans and blueprints and that construction of these projects can be started immediately when our returning veterans and demobilized war workers come back and ask for jobs and the opportunity of making homes.

I, for one, do not want to be in the position of telling them that they will have to wait; that before we can provide those jobs we will first have to do a lot more preliminary work and studies and draw up the plans and specifications. The time to do that preconstruction work is now. I urge this committee to recommend a full restoration of the appropriations in funds for Missouri Basin development and the general investigations work of the Bureau of Reclamation.

I want also to point out to the committee that the proviso at the end of the Missouri River Basin item will hamper the prosecution of this work.

I refer to the proviso which reads as follows: *"Provided further,* That no part of this appropriation shall be available for transfer to any other bureau or office of the Department of the Interior."

This proviso apparently repeals the Economy Act insofar as it would apply to the Department of the Interior bureau since, under the Economy Act, which is the existing law, an agency such as the Bureau of Reclamation can employ the experts of another bureau or office that is better qualified to do special parts of its work. This seems like a wise provision in our basic law and I do not see how this prohibition in the bill as it is before you serves any good purpose. If the Geological Survey or the Indian Bureau or the Fish and Wildlife Service can render expert assistance to the Bureau of Reclamation in the prosecution of this Missouri River Basin work, they should be permitted to do so. As I know the plan and the program, there will inevitably be times when these other Interior bureaus can be helpful. Any work these other Interior agencies do for the Bureau of Reclamation would be chargeable to the appropriation made in this item. As contemplated in the Economy Act, these other agencies would actually save money in the process by eliminating the necessity on the part of the Bureau of Reclamation otherwise to hire such experts as biologists, special hydraulic engineers, and air photographic experts that are already on the staff of the other agencies.

Address by Hon. Josiah W. Bailey, of North Carolina, at Commencement of Meredith College, June 3, 1940

EXTENSION OF REMARKS

OF

HON. CLYDE R. HOEY

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, May 24, 1940

Mr. HOEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a commencement address delivered by my distinguished colleague the senior Senator from North Carolina [Mr. BAILEY] at Meredith College, Raleigh, N. C., on June 3, 1940. This address was prophetic in nature and reveals how clearly Senator BAILEY visualized the developing conditions. I feel sure that it will be read with interest and profit.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Young ladies of the class of 1940, you are now to receive your diplomas and enter upon your respective careers under circumstances without precedent. It is the hour of the death throes of a great epoch in history—of world convulsion, surely marking the end of an age, and, since humanity will carry on, and an extension of existing conditions is unthinkable, marking also the birth of an age that is to be.

Let me say at once that your first obligation, in the midst of terrors and alarms, is not to be either terrified or alarmed; and in the presence of circumstances darker than the blackest prophecies of the pessimists, not to yield to pessimism. Nothing may be gained by despair, nothing by cynicism, nothing by the philosophy of escape. Calmness and hope, when there is no argument for either, and the poise that they give, are their own argument and justification. Faith itself is founded in hope—it is, said the great apostle, "The substance of things hoped for," which is to say that where there is no hope there can be no faith.

And this reminds me to say that faith, hope, and love are still the great trinity of life, and so long as they are available even to one human being, come what may for the moment, the structure of the good life, the good society, the redeemed race may be rebuilt. And they are guarded by a citadel which no earthly power can ever reduce.

It is, therefore, your first duty to face the circumstances as they are, without excitement, to be calm and confident even though all in this world that you have until now been looking to for standards, for security, for reassurance, may seem to be sinking out of sight. "Well roars the storm to him who hears a greater voice across the storm."

Of the character of the age that is now dying this occasion affords me no time for description. I must be content to refer you to your studies in history. It was the age of the New World, of liberty and democracy, of the relief for a time of that economic pressure which had crowded down all preceding generations; the age of an exceedingly great and happy release of the minds and the energies of men; of matchless progress and general elevation of our race; and, I regret to say, of a gross worldliness and materialism and moral degeneration in its latter stages.

Of what the new age is to be, I dare not make prophecy; and it would be idle to at-

tempt it. But I can say that at once you are to discover vast differences. Individualism is gone. Freedom long since gave way to ordered liberty; and ordered liberty now demands economic liberty and security. A people who have been thinking in terms of what they could get out of their government must now think in terms of what they must do for their government in order that it may preserve to them the ultimate conditions of civilization and progress.

This is the meaning of that new phrase you are now so often hearing—the national defense, the common defense, as our fathers put it. We have been living under a regime of personal privilege, of the exploitation of personal rights, and generally of a gay self-indulgence. We must now live under a regime of duty and sacrifice, of those self-imposed restraints known as morals and of those law-imposed restraints known as statutes. We must gird our Republic to defend her people and her shores from any invader from without or any conspirator within, and that girding must be both personal and collective. We may not make war, but if we shall escape that ordeal, it will be because we convince all who rely upon force, that we can match them unit for unit and overmatch them with a faith in God besides, to which they are stranger; that our Republic can unite and move as one, not under the command of a dictator, but under the impulse of self-preservation, and of devotion to our historic ideals. It is perhaps for us alone to demonstrate that freemen are, after all, stronger than slaves—or failing, to surrender to force that last citadel of democracy, the rights of the soul, and those spiritual qualities which we embrace in two words—Christian religion. At once we must purge the Republic of the selfishness of its people.

Your second duty, therefore, for the present, is to consider that nothing that you have or may acquire is yours. You and all you have is your country's until the hour of peril shall have passed, and those responsible for it shall have been disposed of.

We do not know what will be the outcome in Europe, and there is little we can now do to determine that outcome. We do know that in any view of that outcome we must at once prepare our country's defenses and keep them prepared for years to come, and that to do so will require of each the utmost readiness to sacrifice. It means a new order of living, new discipline, new attitude, a new patriotism, a patriotism of piety, but I would not say that we will be the worse off for it. It is not unlikely that at length we will be the better and happier for it, for there has been too much soft living, too much soft thinking, too much easy living in our land, and if we may now learn how each may live for all and all for each in a free Republic, not only ourselves but the whole world and all generations will be the gainers thereby.

Many have long been convinced that we could not hope to go on much longer after the manner we have maintained these last 20 years. Our national scene has presented the spectacle—immeasurably depressing—of individuals and groups in unashamed and unrestrained scramble for advantages of their government and their fellows and of public leaders who dared not deny any demand lest they be thrust out of office by even more subservient successors. If the necessities of the common defense of the firesides of our fathers and the altars of our God shall serve to make an end of this and substitute for it a universal devotion to the common good and shall bring on an era in which the public servant who dares to serve all and therefore yields to none, who seeks the right and refuses to pander for votes, if we may have an end of pandering in politics and a beginning of genuine service, if the hour of opportunism shall pass and the hour of that righteousness which exalteth a nation shall come on in this new necessity for unity in the common defense, who will say that it were not better so?

But my theme relates more directly to each of you, young ladies—for months ago I informed your president that it was my intention at this hour to speak on the Personal Problem in a Dying Age.

You wish to know how you may proceed in a period of so vast transition. Perhaps I do not know. But what I have to say is not my own so much as it is the lesson of the ages confirmed at length by the observations and experiences of a long life. You cannot solve the riddle of existence, but you can make your contribution. You cannot determine events, but you can determine your character. And it will be sufficient if you give to your generation just one example of the good life. To this end I propose four standards as follows:

1. Fear of God and none other. Fear to offend Him, fear to displease Him, fear to disappoint Him. The fear of the Lord is the beginning of wisdom.

2. Do the day's work and do it with all your might. There may not be gainful employment, but there always will be profitable employment for you—right at hand. Not in high places, perhaps, but high work.

3. Be kind to every one of your fellows. The cup of cold water is the symbol of every man's obligation and every man's need. The kindly judgment, the kindly thought, the kindly deed are the solvents of mankind's deepest problems, the healing of humanity's deepest wounds.

4. Have faith in God. It will give you the courage that is born only of faith. And let me define faith for you. It is not to believe that good things hoped for will come to pass. It is firmly to hold when all good things are denied, when the worst has happened or is about to happen, that all is nevertheless well. It is to disregard immediate consequences, to hold a true course under any circumstances in the conviction that there is an eternal making for righteousness, that it cannot be defeated, and that its rewards are sure.

Take these four standards with you in the new time and they will take you through.

The Light Metals Industry in the West

EXTENSION OF REMARKS

OF

HON. WAYNE L. MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Thursday, May 24, 1945

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very able address on the subject The Light Metals Industry in the West, delivered on April 20, 1945, by the Governor of my State, the Honorable Earl Snell, at the Western Governors' Conference at Reno, Nev.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE LIGHT-METALS INDUSTRY IN THE WEST

These are very busy days in the office of governor in any State. The presence at this conference of nearly all of the governors of the 11 Western States is indicative of their appraisal of the importance of this gathering and of their interest in the questions and problems to be considered.

One of these questions is the future light-metals industry in the West. I was assigned that topic. It seemed that the extra time necessary to prepare even this brief discussion simply was not available. Yet, I realized that the great importance of this industry to the future development of the West suggested the burning of a little more midnight oil on the part of all of us. It has a particular application to my own State of Oregon.

A unanimity in thought and action is necessary on the part of the western governors in connection with some of these problems if we are to obtain the results desired. Hence, the primary purpose of this conference.

And so, for the purpose of our discussion, I submit these few thoughts for consideration and subsequent action.

It seems to me that in any discussion of industrial development there are certain fundamental questions that must receive early consideration. Indeed, the retention and further development of the light-metals industry in the West is no exception.

Three of the more important questions which come to mind and which I would list for early exploration and analysis are these: Raw materials, cost of manufacture, markets.

LIGHT METALS

Magnesium

In discussing the light-metals industry, aluminum properly occupies the spotlight position but the importance and utility of magnesium is not to be minimized. Even though lighter than aluminum, the tensile strength of its alloys is practically the same as that of the best steels. Apparently its most practical use and its greatest commercial value are derived from being alloyed with other metals, principally aluminum.

The ore or raw material for magnesium is found in each and all of the 11 Western States. However, there was no production whatever of light metals here prior to the war. Now several large plants are operating in a number of our Western States producing a major portion of the Nation's magnesium capacity. The use of magnesium may be expanded considerably in the postwar period.

Beryllium

Beryllium is another light metal, but its total use is very small.

Aluminum

In the manufacture of aluminum during this war emergency period, the West has established records which are the envy of the entire Nation. Our case has been proved. However, the retention and continued operation of these plants is a question not quite that simple in its solution.

In my approach to the question I shall follow the steps previously outlined—namely, raw materials, cost of manufacture, and markets.

Raw materials

Bauxite is the accepted raw material for aluminum manufacture. From bauxite comes alumina. Alumina is then processed with electric power into aluminum.

The known supply of high-grade bauxite ore in this country is very limited. The greatest reserve of bauxite, known and potential, lies in the State of Arkansas. There are scattered deposits in some of the other Southern States, but the supply is either very small or the quality deficient. Large quantities of bauxite ore have been imported from Dutch Guiana.

The question of costs will be discussed a bit later, but I think it is timely at this point to mention that the manager of one of the Northwest aluminum plants recently made the statement that the costs of manufacture of aluminum at this particular western plant were so low that the raw material could be shipped to the West from Arkansas, processed here, and the finished product shipped across the continent again to the East, all at a cost less than the like aluminum product could be processed in the East. However, the need for a bauxite or alumina plant in the West is obvious. According to Admiral Emory S. Land, Chairman of the War Shipping Administration, transportation savings from such an installation would total about $13 per ton of aluminum.

Materials other than bauxite from which alumina may be extracted offer promise here in the West.

Alunite is found in some of our Western States and large deposits of alumina clay have been discovered in Oregon, Washington, and Idaho.

An alunite reduction plant is located in Utah, and, through the facilities of the Defense Plant Corp., the Columbia Metals Corp., and the Chemical Construction Corp. are constructing and will operate in Salem, Oreg., a four and one-half million dollar alumina-from-clay reduction plant. The economic success of this process has not yet been determined, but if successful, it should open the door to a great development. An experimental plant also has been located at Laramie, Wyo., where large anorthosite deposits appear.

Recently, extensive deposits of iron-bauxite have been discovered in Oregon. Some of the tests show the alumina content to be nearly 50 percent. It is estimated to average about 35 percent and the iron content 25 percent. Eastern officials are now making additional tests. This discovery is cause for much optimism and encouragement.

COST OF MANUFACTURE

Electric power represents a big item and major classification of cost in the operation of a light metals industry. The West has the biggest block of cheap electric power to be found any place in the Nation.

The 11 Western States possess 66.7 percent of the potential water power of the United States. Washington, Oregon, and California alone have over 50 percent.

The ultimate rated capacities of the bigger hydro installations are as follows:

	Kilowatts
Grand Coulee Dam (Washington)	1,620,000
Boulder Dam (Arizona and Nevada)	1,322,000
Umatilla Dam (authorized) (Oregon and Washington)	690,000
Bonneville Dam (Oregon and Washington)	518,000
Shasta Dam (California)	375,000
A grand total of	4,525,000

To be added to these figures are the capacity ratings of the plants of the private utilities, both hydro and steam as well as many smaller hydro installations under public ownership. And there yet remains in the West a tremendous amount of undeveloped water power, a great never-ending source of cheap electrical energy.

Likewise is the West rich in the expendable items which are used for power development, for fuel and for industrial production—coal, wood, gas, and oil. Coal is found in all of the 11 Western States, the chief producers being Colorado, Wyoming, Utah, Montana, and New Mexico. Gas and oil are found in California, Colorado, Montana, New Mexico, Utah, Washington, and Wyoming. Substantial drilling operations are now underway in Oregon and I understand in some of the other States as well.

Twenty-three million tons of coal annually are produced in the West, as well as 25 percent of the crude petroleum supply of the Nation.

Three-fifths of all wood produced in the United States comes from the Pacific Coast and Rocky Mountain States.

LABOR

Another item to be considered under the general heading of costs of manufacture is labor. The availability of a stable and dependable labor supply is important to the success of any industry. In the West we have just that. The western spirit prevails. On the whole, labor relations in the West have been very satisfactory. The men—and women, too—have been cooperative and understanding. They are definitely interested in the development of new industries in the West and can be counted on to cooperate and assist to the fullest extent.

I take pride in pointing to the fact that during this emergency, labor relations in Oregon have been outstanding in the Nation.

At this point it should be mentioned that the most favorable and desirable climatic conditions prevail in the Western States. Such is an asset of great advantage when measured in terms of costs.

TAXES

The next subhead I would include is that of taxes. The Western States have adopted the usual and accepted forms and methods of levying and collecting taxes.

Partly because of our limited population, no doubt, we find that the average per capita tax in the 11 Western States is $48.57 as against a national average of $42.58. The per capita tax runs from a low of $34.95 in Wyoming to a high of $75.74 in the State of Washington. The per capita income, however, of residents of the 11 Western States totals $1,069 as against a national average of $1,031.

Several of the Western States are now undertaking thorough studies of their tax structures with a view to improving the systems and providing greater incentive to prospective industrial development.

One item of great importance and one that gives rise to considerable concern is the large bloc of federally owned lands in the 11 Western States. The Federal Government now owns nearly 50 percent of the total area of lands in these Western States—47 percent, to be exact.

Such Federal ownership runs from a low figure of 26 percent in Washington to a high of 78 percent in Nevada. Obviously, those lands are not on the tax rolls.

There is a bill now pending in Congress which is designed to remedy this situation, as far as the question of taxation is involved. The proposed law would provide that the States be reimbursed by the Federal Government in amounts equal or nearly equal to the loss in taxes sustained by the States on account of such Federal ownership. Such a law would be very beneficial in further distribution of the tax load in these Western States and would in effect broaden the tax base to a considerable degree.

Recent reports indicate that passage of this proposed law this year is quite likely. We western governors should give unanimous support to the measure.

TRANSPORTATION

The Western States have access to all modern forms of transportation—rail, water, highway, and air. Barges, ships, and tugs operate on the inland waters and streams, while oceangoing vessels ply from the ports of the Coastal States. Transcontinental railroads and truck operations serve practically all of the main cities of the 11 Western States. Thus is assured dependable transportation at low cost. The States likewise are served by transcontinental air lines, which service is to be extended and improved in the postwar period.

MARKETS

The subject of markets and foreign trade undoubtedly will be discussed extensively at another period during this conference. However, I wish at this time to call attention to a few items which I deem pertinent and which have particular application to this subject of light metals.

Looking out over the broad Pacific toward the Orient—China—Russia—we can visualize a postwar potential market in the light-metals field of tremendous proportion. Then, too, we can anticipate a vast amount of business from the Americas alone—21 nations, with a population of 250,000,000 people.

Let us for a moment, however, give consideration to the possibilities of our own western division and to the Nation as a whole. In our 11 Western States we have a population of 15,000,000 people. Inclusion of the western Territories and possessions adds another 17,000,000, for a grand total of over 30,000,000, and, in my opinion, the West is on the eve of a great growth and development. However, with our very low cost of manufacture in the light-metals field, together with the advantage of excellent transportation facilities, we are placed in a favorable competitive position in the markets of the East.

The low production costs of aluminum here in the West give rise to the likelihood of greatly expanded use of this light metal. Consideration is now being given to its use in the building of trains, trucks, busses, boats, various building materials, irrigation pipe, and an endless number of appliances, utensils, and gadgets. Here lies opportunity for the development of untold numbers of small business concerns. Include also the necessary numbers of small plants, shops, and foundries turning out castings, forgings, and the like.

With proper development there is real opportunity in this western light-metals field to provide for the economic rehabilitation of large numbers of our returning veterans.

Aside from a considerable use of aluminum by the aircraft industry, a big potential field for expanded use of the product rests with the automotive industry. It has been predicted that, if and when the cost of aluminum is lowered and there ceases to be virtually a monopoly of the product, there then would develop a wide-scale use of this light metal in automotive equipment. Lighter-weight equipment obviously means longer life for our highways.

Last month the circuit court of New York handed down its Alcoa antitrust decision, which may have far-reaching effect in the disposal of the Government aluminum plants and the future of the industry in the West. In discussing the question of plant disposition, the court said that the disposal agency "may well believe that it cannot do so without some plan or design for the industry as a whole, some comprehensive model which shall, so far as practicable, reestablish free, independent, private enterprise, discourage monopoly, strengthen small competitors, foster independents, and not foster monopoly or restraint of trade."

The Western States have an unusual interest in the program of disposition that will be adopted by the Surplus Property Board.

Another policy of Government of vital interest and concern to the future of the industry in the West and to the industry as a whole, for that matter, is the one having to do with the American subsidized Shipshaw aluminum plant in Canada.

In 1941, the United States Government loaned, without interest, to the Canadian Aluminum Co., $68,500,000. This money was used in the construction of the power dam at Shipshaw and the adjacent aluminum ingot plant. Not only was the money loaned without interest but the obligation was to be repaid by the sale of aluminum to the United States Government. Furthermore, the price at which it was sold is higher than the price paid for aluminum to firms in the United States.

The amount of aluminum involved in the Canadian deal totals 1,370,000,000 pounds, with 245,000,000 pounds to be delivered in 1945.

There is just cause for all of us who are interested in the postwar development of the light-metals industry in the West to view this entire transaction with considerable alarm and much concern.

CONCLUSION

In developing this discussion I have attempted to point out the great possibilities for future development of the light-metals industry in the Western States and yet at the same time to focus attention on the obstacles to be met and these things that need action now and in the future.

Briefly, then, may I summarize with the following statements and suggestions:

1. The 11 Western States should become actively interested in the development of a plan for the disposition of aluminum plants by the Surplus Property Board that gives promise of a long-range, systematized program of development of the light-metals industry in the West.

2. The future success of the industry strongly suggests a suspension of settlement of the Shipshaw Canadian aluminum contract.

3. A bauxite or alumina plant, properly located, should be constructed in the West.

4. The Government should render assistance in making available to the West low-cost raw materials, particularly from foreign countries at least until local sources and methods have been proved.

5. It seems highly desirable for the Government to create emergency stock piles of aluminum as well as exercise care in the disposal of surpluses, if any, following the war.

6. The Western States should conduct surveys for future markets both here and abroad, as well as surveys looking to the location of light-metal plants, shops, and factories.

7. Through the medium of advertising and through the facilities of appropriate agencies, both public and private, we should "tell the Nation" of the great manufacturing advantages of the West.

8. Some of our educational institutions should establish courses in the light-metal fields and promote research in new uses and processes.

9. The Western States should review and analyze their tax structures with a view of offering every possible inducement to future growth and development. Immediate support should be given to the bill providing for payments in lieu of taxes on federally owned lands.

10. This conference, by resolution, should provide for the creation of a select and qualified committee, appointed by the Governors of these 11 Western States, to pursue actively all phases of this question so important to the future welfare and development of the West. In unity there is strength. The time for action is now.

American University of Washington, D. C., Graduates Class of National Service Officers for Disabled American Veterans

EXTENSION OF REMARKS

OF

HON. WILLIAM R. THOM

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 22, 1945

Mr. THOM. Mr. Speaker, the Disabled American Veterans, recognizing the need of furnishing expert advice and assistance to their veteran members who are seeking compensation or other benefits from the Government, are sending candidates from their membership for the position of national service officer to the American University, of Washington, D. C., to participate in its special course for such a career.

On Sunday night, May 20, a class of 22 World War II veterans, all disabled and a number of them having lost an arm or leg in combat, graduated from American University after completing its course for national service officers. Appropriate ceremonies were held at the Metropolitan Memorial Church in Washington, presided over by the aggressive and popular president of the American University, Dr. Paul Douglass.

The graduates after an apprenticeship in several Veterans' Administration facilities will become permanent employees of the Disabled American Veterans, and will be stationed as representatives of the DAV at facilities of the Veterans' Administration where compensation and pension claims are adjudicated.

It was my privilege to deliver the graduation address for this class, and I am appending herewith the text of my address:

Perhaps some of you will be properly inquisitive as to why out of 435 Members of the House of Representatives, I should be selected to take part in this graduation ceremony. The answer is that one of the class members, Mr. Albert Hasler, is a native of Massillon, in my Congressional District—that city known so widely as the home of General Coxey who marched the unemployed to Washington back in the nineties; of the Gish sisters so beloved by moving picture devotees; and lastly of the Massillon Tigers football team. If any of tonight's graduates is in ignorance of the record of the Tigers, Mr. Hasler and I are in accord that this ought easily to deprive him of the right to graduate.

The standard pattern for an address to a graduating class, if I remember those of my school days correctly, is to be profoundly philosophical, to moralize broadly and to supply an all too liberal measure of counsel. With due apology to any educators who may be in the audience, I must say that this type of discourse too often bewilders, and sometimes leaves the graduate, on the threshold of his departure into the world of affairs, wondering whether things are really so complicated and so difficult of comprehension.

I have determined to stray from this usual tendency and to say something to this class that will touch intimately on the type of work its members have chosen, to analyze if I may the scope of their duties; all of which observations I hope will exalt in their minds the profession of service officer, and cause them to leave this college that has served them so well with a higher consciousness of their responsibilities. This is, indeed, no mean calling they are about to pursue.

This class of graduates, all of whom were injured in the line of duty, is just a pitifully small segment of the thousands who will go through life under a physical disability as a result of the war. I am fearful that as the job opportunities diminish—and, of course, this is sure to occur—and as the emotional uplift of war vanishes, employers will begin to prefer men who are sound physically and without any physical impediments. That is why Government through the Congress will have to be vigilant to keep the door of opportunity open to these battle casualties, especially when the natural sympathy aroused by their plight begins to disappear.

It is difficult in these days to find anything in the recent history of Germany, corrupted and dishonored as it is by the cruel fanaticism of the Nazis, to applaud, but it is a historical fact that the German Republic in its constitution promulgated at Weimar, compelled employers to provide jobs, in certain ratio to the total employment afforded, for German soldiers of World War I, crippled or maimed, and therefore looked upon as undesirable. With the revelations of their concentration camps I am almost persuaded that this was not so much an evidence of humanitarianism and fair play as it was a token of encouragement to future soldiers who might be worried about being left permanently crippled.

This program of the Disabled American Veterans, by which it enables handicapped soldiers of World War II to equip themselves for trained and important civilian service, and to insure to their families a proper income, is a significant step. Disabled American Veterans, as an institution, is not just patriotically preaching to others about aid to the crippled soldier but as an employer it is making room in its own household for the disabled soldier.

With this example the Disabled American Veterans have a right in the future to ask the thousands of employers through the length and breadth of the land likewise to find in their organizations certain types of jobs under their control, that by their nature can be set aside for disabled soldiers and permanently occupied by them. That would be a comparable approach to the solution of the problem of the handicapped soldier with what the DAV are themselves doing. With assured knowledge that sufficient employers were ready to receive into their employment disabled veterans, the United States Government, through its educational aid, could keep a steady flow of soldiers emerging from schools and colleges, such as American University, prepared and technically trained for the jobs they know would be awaiting them.

In this instance these graduates are being educated at the expense of the United States Government for a certain career, and whilst in this course of preparation they are assured that when they leave the school they will not have to stand in the out-of-work line at a factory, perhaps to discover that the training they received is not needed, or that there is a surplus of workers with similar aptitudes. The Disabled American Veterans have managed to correlate training and actual jobs in existence.

It was only when I began reflecting about what I should say tonight, that it suddenly dawned upon me that I have some peculiar right to talk to men aspiring to the position of service officer for veterans. I came to Washington back in 1910 as private secretary to a Member of Congress, and in those days, when local organizations of veterans did not advise their members through local post and chapter service officers, the Congressman—or more accurately, his secretary—was the service officer extraordinary for all the veterans of his district—then confined, of course, to Civil War and Spanish-American veterans. I struggled enough with soldiers' folders, bulky with letters from pension departments, affidavits of doctors, and petitions from neighbors, to give me a picture of what you are going to face when you take your apprentice training in the facilities of the Veterans' Administration. Even when I came back here as a Member of Congress, the veterans of World War I were still depending upon their Congressman for advice and assistance, and I suppose I had as many as 1,000 soldier cases in my office. Other Congressmen had at times two or three thousand cases, especially if they were located in a district where a veterans' hospital operated.

Going back to my secretarial days, I recall the many trips I made to the old Pension Building, that immense red structure still standing in this city, where the pension files were kept and where the Commissioner of Pensions and his force were located. Old Grand Army men, proudly displaying in their coat lapels the little Grand Army button of bronze, met you kindly and courteously. After you revealed the pension case you were interested in, the clerk at his individual desk, talked socially with you until a colored messenger, after sometimes a prolonged wait, arrived on the scene with the bulky roll of papers, designated by case number, and hav-

ing inscribed in handwriting on its face the name of the veteran. If you were lazy-minded, you let the clerk give you his opinion on the case, but if you were inquisitive and alert, you listened respectfully to his judgment, than you asked for the papers and began the arduous task of beginning at the inception of the case and hastily reading over the innumerable reports and papers, sometimes yellow with age, specially noting medical examinations. Then if you amounted to anything you decided for yourself whether the pensioner's status could be improved and you acted acccordingly.

The most active cases, of course, back in 1910, were those of Spanish-American War veterans. As a boy, I had seen the soldiers of this war come back to my community, emaciated and some almost skeletons. Every time I see the current views of inmates of German concentration camps, my imagination summons up pictures of our Spanish War veterans being lifted into horse cabs and old-time street cars to be hauled from the depot to their homes. Fevers and malaria had brought most of them low. Invariably, dysentery had haunted them all the days they were in Cuba or other islands occupied in the Caribbean.

When their pension cases came up for adjudication, there was in uncounted cases, the same old medical opinion that dysentery and malarial fever had no lasting effects, and that the applicants therefore were not entitled to relief. I never venture to question medical science, especially when I am in urgent need of it myself, but I never as a layman could swallow the judgment that those Spanish War veterans whom I had seen—mere shadows of themselves, for I had known them before they marched away from my home town—did not carry in their systems to their dying days, vestiges of the poison that during their service filled their bodies.

Reviewing my experience in this field, I want to tell you after examining the curriculum of your present course, how much better equipped you will be than was I to handle and dispose of pension and compensation claims. You have had a course of elementary physiology. Come to think of it, I never in my study of claims ever tried to reinforce my limited knowledge of the human body and the diseases it is heir to. Upon reflection, I should say that my work was imperfectly done, if I could not properly interpret medical reports and apply to them well-known rules of medical science. You see, now, the great advantage of educational guidance, such as this college has given you.

It is properly suggested that you will lean heavily in your work on the technique and methods of the lawyer to interpret pension laws, and more particularly the regulations that flow from them. I presume, above all, that you must obey some of the professional ethics of the lawyer, in that the conversations you have with applicants for aid must be received in confidence and so kept. As advisor and confidante, you will often find yourself in the role of priest or preacher, and that which is whispered into your ear must remain your exclusive possession.

I can't help relate, at this juncture, an observation during my career as congressional secretary. It was before I had entered the legal profession. The Member of Congress I served had been a lawyer. Whenever a dispute about some phase of law arose in our office, the participants, including myself, ventured our opinion about what the law said, but it was only my chief who had sense enough to end the dispute by calling for the law volume. I can see him yet, adjusting his steel-rimmed spectacles, then leafing the pages of the volume—without uttering a word—and then finally terminating the dispute, now grown hot, by calmly reading the letter of the law. There was the answer, and not in our speculations. I think your instructors will agree with me that it is an invaluable rule always to follow, to get the law books down from the shelf and see what they say. That example of my old chief was never forgotten while I was in the active practice of the law.

But, then, you can never succeed as a service officer, endowed as you may be with medical and legal knowledge, and possessed of an acquaintance with methods of the Veterans' Administration, unless you have a patient and equable disposition that makes it possible for you to advise, without being irritable or dictatorial; that enables you to reduce instead of inflaming the tempers of some men who believe themselves unfairly dealt with; that enables you to look far and study deeply how to extricate unfortunate men from their dilemmas that have overwhelmed them and oftentimes have left them fighting mad. I know the unreasonable visitor, and however difficult at times, it must be your aim to bring him into an attitude where he can be made to see the right and wrong of a position.

I cannot help saying to you that, however much the disabled American veterans will want to retain your services if they are intelligently and conscientiously performed, your entrance into this field does not by any means freeze you in an occupation and preclude you from either promotion or successful performance in other capacities. The truth is that if you assimilate the body of intelligence which the university has tried to introduce you to in this course, you will—providing the end of the training is not the end of your search for knowledge—become a personality endowed with the talents of lawyer, doctor, and diplomat. With such qualities, the doors of ambition to many other fields will be opened to you, especially those fields where experience in social service is valued, and, not least of all, you will be ably equipped to fill offices of responsibility in your city, State, and National Government.

Besides your family interest, your occupational attachment, you will remain above all in your community, a citizen of the country you have all served so recently with so much sacrifice. I plead of you to keep in one corner of your mind a faith that will survive all cynicism and outlive as many temporary defeats as may come, in the eventual creation of a world where war will be banished as a determinator of national rivalries and differences. No one more than you, who have seen war, should realize its insanity, and should therefore for the sake of the generations that follow you, dedicate yourselves to the present movement for the preservation of a lasting peace.

Men once slew each other over a line fence dispute. Courts took over these personal controversies, and adjusted them without violent behavior. Until less than 100 years ago, educated men in colleges were insistent that honor required them to participate in duels, but this brutality has succumbed to the demands of public sentiment. Preservation of the peace has moved from the local community, to the State, to the Nation, and less slowly to the relationships between separate and independent states. Who would have prophecied that the United States and Canada, when they entered a treaty to keep their long boundary line unfortified and the great waters that separate them free of men of war, would have remained peaceable neighbors so long that there has grown up an atmosphere today that makes war unthinkable among their peoples. No, the whole trend is toward a world of peace and however much we shall falter on the way, the objective, I firmly believe, will be reached some day.

Reciprocal Trade Agreements

EXTENSION OF REMARKS

OF

HON. RICHARD M. SIMPSON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 24, 1945

Mr. SIMPSON of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following correspondence between Mr. W. L. Clayton and myself with respect to certain products upon which the United States offered to reduce our tariffs in its negotiation of the trade agreement with Great Britain. It will be noted that Mr. Clayton pleads diplomatic immunity in refusing to furnish the desired information. This is a perfect sample, Mr. Speaker, of the secrecy surrounding the administration of the Trade Agreements Act:

WASHINGTON, D. C., *May 16, 1945.*

Mr. WILLIAM CLAYTON,
Assistant Secretary of State,
Department of State,
Washington, D. C.:

Re letter May 11 received May 14 in reply my letter May 1: Your letter artfully dodges questions asked you in hearings. List you mailed published prior to public hearings on proposed agreements and prior to negotiations of such agreements. What I want as you know is list of items on which concessions were offered the representatives of the United Kingdom at last stages of negotiations whether accepted, rejected, or accepted in part. Request immediate reply either giving information or stating basis for your refusal. Believe information essential to proper consideration of renewal Trade Agreements Act and proper for committee member.

R. M. SIMPSON.

DEPARTMENT OF STATE,
Washington, May 18, 1945.

The Honorable RICHARD M. SIMPSON,
House of Representatives.

MY DEAR MR. SIMPSON: Your telegram of May 16 reached me yesterday. I am afraid you have misunderstood my letter. The list enclosed was exactly what I had at least understood you to ask for, namely, the items which were considered by the trade-agreement organization for possible concession in connection with the preparation for the British negotiations but on which no concessions were in fact made. The list I mailed you is not the list published prior to the public hearings but something quite different, namely, a carefully compiled list of the things which were (1) included in the public list and (2) not included in the final agreement.

What you now ask for is something quite different, namely, items on which "concessions were offered representatives of the United Kingdom at last stages of negotiation whether accepted, rejected, or accepted in part." In other words, you are now asking for the detailed contents of negotiations with a foreign government. I think you must be aware that since the time of President Washington the view has been taken by the executive department of the Government that the detailed course of negotiations with a foreign government leading up to an international agreement cannot in general be disclosed consistently with the public interests. I agree with this view and even if I did not

I regard myself as bound by the long practice of the executive branch in this respect.

I must therefore respectfully decline to make available the information now requested.

Sincerely yours,

W. L. CLAYTON,
Assistant Secretary.

Ellison DuRant Smith

MEMORIAL ADDRESS

OF

HON. JOSEPH R. BRYSON

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 23, 1945

On the life, character, and public service of Hon. ELLISON DURANT SMITH, late a Senator from the State of South Carolina

Mr. BRYSON. Mr. Speaker, observing today the time-honored custom established by the First Congress, we pause amidst our arduous tasks to pay tribute to departed comrades.

Our thoughts for the moment are of a distinguished Senator, the Honorable ELLISON DURANT SMITH, who departed this life on November 17, 1944, after having served continuously in the Senate for a period longer than any of his predecessors.

From my earliest recollections of South Carolina's political history I have known the name of Senator SMITH. By reason of his active life in the State's political arena, extending over a period of half a century and his strong convictions in reference thereto, the name "COTTON ED" SMITH has become a household word.

Upon my election to Congress, thus being thrown closer to Senator SMITH in my official capacities, I found him to be patient, sympathetic, and courteous. Eager to serve my own constituents I often drew helpful suggestions from the long and valued experience of Senator SMITH. His office was most cooperative with the offices of other members of our State delegation in Congress and took pride in rendering effective coordinated service.

President Taft, the only individual who ever attained the distinct honor of being both President and Chief Justice, said on one occasion:

> Indecision is worse than adverse decision; one who cannot make up his mind is not to be dealt with, whereas one who decides against you at least takes a position and can be dealt with.

Anyone who knew Senator SMITH knows that he was a man of firm convictions, one who could and would make up his own mind, and when having thus done so he stood his ground "though the heavens fall and the hells boil over."

With many of his views we did not agree, but none ever doubted that he spoke the strength of his own convictions and none questioned the courage of his determination. In the storms of life he stood as firm as a rock.

The unswerving champion of States' rights, of white supremacy, of agriculture, and spokesman for cotton—cotton, he liked to say, was "his king" and again "his sweetheart."

As chairman of the mighty Committee on Agriculture, Senator SMITH wielded great influence in bringing better ways of living to those who till the soil for their livelihood.

His family has the sympathy of those who agreed with him and those who did not—all of whom join in paying tribute to his long service and in acknowledging his devotion to the principles in which he believed.

Senator SMITH was a master on the stump and was never happier than when participating in the many political battles of our State, from which he emerged victoriously over many formidable opponents, save only his last.

Quietly, surrounded by members of his own family, at his ancient and impressive country home, near Lynchburg, S. C., the Senator answered his last roll call. His passing was sudden, without struggle or pain, as I am satisfied he would have chosen.

Many gathered from the highest to the humblest on that bleak November day for the funeral services at the Smith home. It was my privilege to attend, as one of the official honorary escorts, and to stand with uncovered head in the rain as we paid our last respects to a statesman worthy of his steel.

Gently borne to his final resting place, in the midst of fertile fields white with unpicked cotton, six husky, faithful Negroes over whose dark skins coursed tears of regret, Carolina's stalwart son now sleeps.

Viewing the multitudes of those who came from far and near expressing their sorrow, I thought "were every one for whom he did some loving service to bring a blossom to his grave he would sleep tonight beneath a wilderness of flowers."

Sorrowing at the passing of a friend should remind us anew that all of us shall, one by one, be carried to the tomb by those in turn who shall follow after us.

Often amid the clash of conflict and the whirl of business, we may be tempted to forget the gravity, if not the certainty, of this last great call. But we here pay a sincere tribute to a noble man who carried in his soul a fearless answer to the last great summons.

Senator SMITH held off the shadowy ferryman from across the uncharted sea of eternity as long as possible because life was sweet and he hated to leave his loved ones and his numerous friends, to whom his devotion and loyalty were outstanding.

In his love of good literature, in his honesty of dealing, in his purity of purpose, in his devotion to truth, Senator SMITH was an ideal gentleman. Here we can strew sweet words, knowing that they are no sweeter than the life and memory of our departed friend. I am glad that though we cannot hear his voice, we can still feel his life. His body rests in peace, but he still lives within our hearts. The good influence of his life shall never die.

Senator SMITH was no Mammon worshiper. Though opposed by the high and mighty, he stood his ground. He was frugal, yet unstintingly gave of his means. He placed human service above price, and always the man above the dollar. Had he lived other than as he did, had he majored in material pursuits, he would not have been the exemplary man, the outstanding character whom we honor, and to whose memory we now pay tribute.

An outstanding citizen, a devoted and faithful husband and father, whose name is written across the sky—such was our friend. To think of him is to think of all that is best in life.

Our friend is not dead; he is sleeping

> There is no death! The stars go down
> To rise upon some fairer shore,
> And bright in heaven's jewelled crown,
> They shine forevermore.
>
> And ever near us, tho' unseen,
> The dear immortal spirits tread,
> For all the boundless universe
> Is life—there are no dead.

There is no more mystery about death than there is about birth. If his dear heart grew tired with the labor of years, if weary with a life of suffering, he sought oblivion in peaceful slumber, shall we complain or deny to him this boon?

What men call death is but the beginning of a richer life; it is but the transition from worthy strife to that bigger, better fuller life which our friend so richly merits. He is gone on the one-way trail where all who were worthy since the beginning of time have preceded him, and where all to the end of time shall follow

In the glory and reward beyond the grave, Senator SMITH, whose life was spent in the service of his fellow men, will be bathed in the waters of that fountain from which all mercy and justice flow.

We miss him. But think of him merely as on a trip. Partings are of the essence of Nature; as the butterfly emerges from the cocoon into God's sunlight, as the bird leaves its nest to try its wings in the far heavens, as our children forsake the paternal roof and build their homes in far distant lands, we do not complain, we must not grieve; we recognize the fact that they are following Nature's plan, nor would we deny them the happiness and the opportunity that is theirs.

Our lives have been made brighter and better by having had the opportunity to associate with Senator SMITH and to know him so well. He was always actuated by the highest aims and the noblest thoughts. He, indeed, believed that "an honest man is the noblest work of God." He has gone to his reward, but has left a record of which his family, friends, and acquaintances may well be proud. The world is better because he lived here and mingled with his fellow men.

Far from grieving, let us rejoice that his was the life full and rich and strong, and that we were privileged to know and share it. Let us rejoice in the example of courage, hope, and service that he gave to the world.

A great man, a prince among people, has ended his earthly career; a man rich in the many gifts with which God en-

dowed him, who devoted himself for a generation to the service of his country and the people, winning the confidence and affection of all his countrymen, passes from us mourned, honored, and loved.

Senator SMITH, hail and farewell! Light lie the earth upon you; soft be the sands that cover you; green be the carpet beneath which your ashes rest.

And now let us go forth resolved that his life has not been in vain; that the high principles which actuated him shall henceforth have an uplifting influence upon us so that the good which he did may endure forever.

Let us not mourn his going;
Let us rejoice to know
That—earthly labors finished—
He was prepared to go.

Let us emulate his virtues,
That men of us may say
The world is brighter, better,
Because he passed this way.

May the Lord deal with him as one who has gained the palm and may his place in the world beyond the grave be even higher and more glorious than that which he won for himself among men.

Peace to his ashes! Honor to his name! And immortality to his memory!

James Vandaveer Heidinger

MEMORIAL ADDRESS
OF
HON. WILLIAM S. HILL
OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 23, 1945

On the life, character, and public service of Hon. JAMES VANDAVEER HEIDINGER, late a Representative from the State of Illinois

Mr. HILL. Mr. Speaker, again the Congress of the United States pauses a few moments in memory of our dear friends who in the past year have folded their tents and quietly slipped into the Great Beyond. Those of us who must struggle on in this finite world appreciate the privilege we have today to pay tribute to the principles and the concepts our friends had of this great Government, and the unfailing patriotism and love of country they exhibited in the service they rendered to our great democracy.

One of the Members of the House who passed away on March 22, 1945, was the Honorable JAMES V. HEIDINGER of the Twenty-fourth Congressional District of Illinois.

Congressman HEIDINGER was a personal friend of mine. He came into the House the beginning of 1941, the first session of the Seventy-seventh Congress. I was a freshman Member of that Congress. Together we learned the routine and the procedures of the House of Representatives. We visited together on the great issues facing this Nation as we gradually drifted closer and closer to the great war we must prosecute to a successful conclusion. Congressman HEIDINGER was a man of clear vision, with a mind that understood the great fundamentals upon which this Nation was founded. Growing up in the very heart of America, he had absorbed the principles, the precepts, and the basic teachings that is America, and that will be the foundation stone that shall guide and direct us throughout the perilous period of civilization that will follow the end of this great catastrophic struggle which we are now forcing to a victorious conclusion.

I was influenced by his sound thinking, his balanced judgment, his calm, quiet and judicious decisions. Everyone loved him for his purity and his Americanism. No picturesque oratory, loud, ringing phrases or demagogic appeals to prejudice affected his balanced thinking. The House was better qualified to come to conclusions because of his influence.

To his dear wife, his son and family, I express my sympathies in his passing, and may a Divine Spirit grant them understanding and give them courage to carry on in the spirit for which JAMES HEIDINGER gave the last full measure of devotion.

James Francis O'Connor

MEMORIAL ADDRESS
OF
HON. JESÚS T. PIÑERO
RESIDENT COMMISSIONER FROM PUERTO RICO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 23, 1945

On the life, character, and public services of Hon. JAMES FRANCIS O'CONNOR, late a Representative from the State of Montana

Mr. PIÑERO. Mr. Speaker, on the opening day of the Seventy-ninth Congress, a great day for any baby Congressman like myself awaiting the moment of being sworn in, after being stopped by the doorkeeper for identification, I quietly and cautiously looked for a seat in this Chamber. As I sat gazing around watching my future colleagues gathering up and exchanging greetings after their reelections, one of these gentlemen came and sat by my side. He introduced himself as a Congressman from the State of Montana, JAMES F. O'CONNOR. He proceeded to talk to me in a very friendly way. He had singled me out—a new face in Congress—and was trying to make me feel at home in my new environment. I talked to him about the island of Puerto Rico, its products, its people, our war activities, our hopes, and desires. To my amazement the westerner, with an Irish name, who lived more than 5,000 miles away from my island, was quite versed in the affairs of my birthplace.

He told me that I had a big job before me. The only way, he said, to get anywhere was to fight one's way through like an old-timer would do. He promised to give me guidance and help at any time I would like to call on him.

The Speaker's gavel calling the House to order ended the conversation with my new acquaintance. I was feeling most fortunate. My friend left and my eyes followed him until he was lost in the swarm of Members who greeted him right and left as he moved away. Who could imagine at that time that I was to see him no more.

The news of his passing away stunned me a short time later. I listened to speeches from his colleagues all over the States when this House mourned his departure. I came to know more about him. He had outgrown the boundaries of his district, his State, and colleagues from the four cardinal points of the Nation paid tribute to his memory. Out in the West, I am sure, the Indians, whom he loved so well and for whom he fought his whole life, at the news of his departure must have stood in silent prayer by the setting sun.

I am sure he was also a good friend of Puerto Rico. Had he lived to see the days to come he would have been the ally of the dependent people of Puerto Rico.

May the Lord reserve for JAMES F. O'CONNOR a place beside Him for eternity. His love and kind heart for all humanity in the life he led fully warrants it.

James Vandaveer Heidinger

MEMORIAL ADDRESS
OF
HON. C. W. (RUNT) BISHOP
OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 23, 1945

On the life, character, and public service of Hon. JAMES VANDAVEER HEIDINGER, late a Representative from the State of Illinois

Mr. BISHOP. Mr. Speaker, one of the saddest features of one's service in this great legislative body is the time when a colleague by the stroke of inscrutable destiny, is removed from our midst. The handclasp which once gladdened our day is no more—yet the memory of the fellowship and of the statesmanship will linger with us throughout the years.

Born on a farm near Mount Erie, Wayne County, Ill., JAMES VANDAVEER HEIDINGER loved his fine people of the Twenty-fourth Congressional District who made possible his serving in Congress. He has served and served well. A lover of the soil he wanted to be known at all times as a dirt farmer, and endeavored to farm his land which today is producing oil. Having been a farmer boy, a school teacher, a lawyer, a judge and Congressman, a Mason, a Shriner, and an active member in the Methodist Church, "the judge was known to a large circle of friends who cherished his excellent counsel and advice. He was kind. He was never too busy to be courteous and was a favorite with the people in all walks of life. He was just naturally big-hearted. His honesty, simplicity, ruggedness, and stainless character are priceless heirlooms. He labored among many nationalities, of many creeds and many faiths. He labored in the office and in the mart, in the sick ward, in the temples, and in the halls of justice; but his labors were all

united in one great cause, the betterment of humanity.

A wonderful family man, he loved very dearly his son, James S., a lieutenant in the United States Navy, his grandchildren, Sharon Elizabeth and James V. and their charming mother, and the beautiful association which he and his fine wife enjoyed will ever be an inspiration and example to us all. As a statesman, he was a great lover of the Constitution, having the best interests of his country at heart always. For the 4 years that I have known Judge and his fine family they became our very closest friends. We cherished the companionship and our visits together. During my last visit with him in Phoenix, Ariz., he realized that his stay on earth was short but had every confidence in the future, appreciating the comradeship of and association with his friends and colleagues in the House of Representatives. I know that my life has been made richer because of intimate contacts and genial fellowship with this great and grand friend and fellowworker.

Within the last few months of his life, JAMES V. HEIDINGER reached a decision to retire from Congress at the end of his present term. His cherished dreams was to return to his beloved State "to live by the side of the road and be a friend to man." It is mysteriously strange how a beautiful dream can be realized—the magnificent preparation to live becoming the magnificent preparation to die. The Judge has returned to his beloved State to rest forever beneath its peaceful, cloudless sky. No amount of hardships, no obstacles ever daunted his courage. He faced the frontiers of the next world confidently and with the same serene and courageous spirit. He fought a good fight. He kept the faith. We recall here his zeal and unselfish interest, and we glory in his accomplishments. These shall remain with us—our heritage forever.

Our Departed Colleagues

MEMORIAL ADDRESS

OF

HON. ELLIS E. PATTERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 23, 1945

Mr. PATTERSON. Mr. Speaker, I think that our most fitting desire, on this day when we honor those of our colleagues who have died in pursuit of their duties, is to forward those goals toward which they, and all of us, were striving. These goals were the complete eradication of fascism the world over, and the establishment of a permanent peace and increasing prosperity.

Our colleagues, and their comrades on the battlefields, will not have died in vain if we can outlaw war for all time; if we are a step nearer to the brotherhood of man in a real and practical sense.

Let us put our own house in order. Racial, religious, national, prejudice, and discrimination of every kind must be absolutely destroyed here in America, as well as in every land of the earth. Prejudice and discrimination go hand in hand with the fascism we are striving to destroy.

There must be unity and understanding between the nations of the earth. If we break faith with our allies, with Britain, or Russia, or China, or France, or others, then we break faith with those who have died, our colleagues and our sons and brothers on the fighting fronts.

Let us, then, with quiet and indestructible determination, dedicate ourselves, strengthened by the memory of our colleagues who fought so long and well, to the goals of unity, between men and nations of men, and permanent peace.

James Vandaveer Heidinger

MEMORIAL ADDRESS

OF

HON. LESLIE C. ARENDS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 23, 1945

On the life, character, and public service of Hon. JAMES VANDAVEER HEIDINGER, late a Representative from the State of Illinois

Mr. ARENDS. Mr. Speaker, each year the House, in memorial service, pauses to pay respect and tribute to the memory of our departed colleagues who during the past 12 months have passed on from this busy world. Today we honor our former colleagues in this fitting ceremony, remindful that they too gave their lives in the service of their country.

On March 22, 1945, Congressman JAMES V. HEIDINGER passed away. He came to Congress on November 3, 1942, and capably served his district with honor and distinction until the Angel of Death called his name and the Judge, as we affectionately knew him, answered his last roll call.

I am glad I was privileged to know Judge HEIDINGER. We became fast friends during the years we were permitted to serve together in the House of Representatives. He was a true American. His honesty, sincerity, and personality made one love him. He was kind and generous, always intent on being helpful to his fellow man. He rendered great service to his district, State, and Nation. We all miss him.

Death is only a quiet door
Set in a garden wall;
On gentle hinges it gives, at dusk,
When the thrushes call.
Along the lintel are green leaves,
Beyond the light lies still;
Very willing and weary feet
Go over that sill.
There is nothing to trouble any heart,
Nothing to hurt at all.
Death is only a quiet door
In an old garden wall.

James Vandaveer Heidinger

MEMORIAL ADDRESS

OF

HON. RAYMOND S. SPRINGER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 23, 1945

On the life, character, and public service of Hon. JAMES VANDAVEER HEIDINGER, late a Representative from the State of Illinois

Mr. SPRINGER. Mr. Speaker, while we meet today to pay our respect to the memory of our departed colleagues, we face the realization of the deep personal loss we have sustained in the death of our beloved and esteemed friend and coworker, JAMES VANDAVEER HEIDINGER, of Illinois. Throughout the years of his service in this great lawmaking body he was ever at his post of duty as long as his health would permit. It is my personal privilege to express the very high esteem and the warm affection in which he was held by all Members of Congress. He was my personal friend, and it is with that treasured memory of him that I speak these few words in eulogy of his attainments. He was an outstanding American, a good citizen, a great statesman, and a loyal and sincere friend.

Judge HEIDINGER, as we affectionately called him, was a splendid legislator. He was born and reared in the great State of Illinois, and he loved that great commonwealth and her people with the ardor and affection of an illustrious son. In that environment, and among his own people, he came to the bar and became one of the great lawyers in his State. His practice of his profession was extensive and successful. His people called him to render a greater service for his country, and he was sent as their representative in the Congress of the United States. During his service in that great law-making body, as the years passed, he grew in stature and in his attainments. He was sound in thought and deliberate in action. He was as kindly as he was brave.

When I first met our friend—and that was at the commencement of his service as a Member of the House of Representatives—I then recognized in him those rare and outstanding qualities which appeal to all of us; he was a man of the highest character and his sincerity of purpose and his sturdy honesty was never doubted. I conferred with him when we faced the stress of turmoil and anguish respecting our country, and its future; I knew him when his constant concern was for the welfare and progress of all the people in our land; I knew him when he was gravely concerned respecting our form of government and for our Constitution. He loved our form of government, and he revered the American way of life; he was a true patriot. He was a constant American.

When great men pass across the pages of life and disappear, their acts and deeds will continue after them; the precedent which they have established

will be followed by others. So with our friend. He has fixed the standard. He has touched into activity forces which, influencing still others, will move on forever. I will long cherish the memory of my friend because of his unswerving Americanism, for his constant struggle for the people he loved, and for his sterling character and honesty. With these high ideals he lived, and with these same ideals before him he died. Thus, the outstanding career of this brilliant man has passed from the stage of life, leaving the rest of us to take up his labors where he left them.

Judge HEIDINGER needs no eulogy today. His life and the living of it stand before us in pristine beauty and in splendor—a beacon light for others. In bidding a fond and a last farewell to him, I speak those words which were uttered at the passing of a great hero in the years gone by—

"This was a man!"

Hampton Pitts Fulmer

MEMORIAL ADDRESS

OF

HON. JOSEPH R. BRYSON

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 23, 1945

On the life, character, and public service of Hon. HAMPTON PITTS FULMER, late a Representative from the State of South Carolina

Mr. BRYSON. Mr. Speaker, this hour is full of solemnity and inspiration.

It is full of solemnity because it reminds me that I, like my late colleague and friend, Congressman HAMPTON P. FULMER, who departed this life on October 19, 1944, shall some day be called upon to close my books for the last time, to write my last brief, to make my last plea before the courts of this world, and to stand in final judgment before the supreme court of the universe.

Inspiration flows from the life of this distinguished statesman to all who knew him because of the contributions he made to the age and generation in which he lived.

Years ago in conversation with a fine young college student, I learned from her that a successful country merchant and banker was making it possible for her to continue her education. It was from her that I first learned of HAMPTON P. FULMER, whom later I met as a member of South Carolina's General Assembly, and still later as my yokefellow here in the Congress of the United States.

A friend has parted the curtain and passed behind the scenes off the stage of life from whence he came. For a few fleeting moments, we who remain must play our parts in the drama of life, then silently follow him. Our late colleague, "UNCLE HAMP," as he was affectionately called, lived the maxim of Emerson, "the only way to have a friend is to be one." Ours is a rich heritage from the life of this friend. For us, yet live in our memories the eyes with their merry twinkle, the keen and whimiscal humor of speech, the generous hand, the heart of gold. Let us grasp and hold fast to this precious gift that flowed from him to us. May the virtues of him whom we call dead ever live in our hearts that ingratitude, meanest of all vices, may never gain entrance therein.

Congressman FULMER was one of the noblest men in our ranks. The welfare of humanity was always in his heart. His like adorn the State and honor humanity.

As a storyteller, recalling the many experiences he had had in the always successful political battles in which he engaged, he had no peer. To have served for a longer period in the House of Representatives from South Carolina than any of his predecessors is of itself a very high distinction.

Undertaking the task of this hour, I stand with bowed head and trembling heart. To speak words that shall be worthy to the memory of this good man is a difficult if not hopeless task. I never craved more than today the gift of clear insight and accurate, sympathetic statement. For I think that the real lessons of this man's life are tremendously important to us at this hour. His spirit would arise to smite me if I simply gave way to eulogy. You would neither be comforted, nor strengthened, to carry on by simple, formal, conventional words. I must try, therefore, to speak of him as I knew and loved him.

Would that we could do justice to his memory, and properly express the high need of praise so justly his due. We can truly say none knew him but to love him, nor named him but to praise.

Congressman FULMER was a man of fine character. Though born and reared poor, by reason of his energy and devotion to business, he was able to accumulate and leave his widow and children in comfortable circumstances. He was cheerful and always had an understanding attitude for others, especially his juniors.

A place is left vacant that will not soon be filled. A bright light at the fireside, the social circle, the sick chamber, is utterly extinguished, and the sad wail of lamentation for his death vibrates and finds an echo in every heart.

Kindly will we remember him until our hearts have ceased to beat their "funeral marches to the grave."

And so, in the quiet and peace of this hour, let us turn again, the leaves of memory and pay tribute of love and friendship to our beloved friend and neighbor whose chair is vacant.

Congressman FULMER was a genial, gracious, kindly gentleman, who treated all who came within the circle of his influence, rich or poor, exalted or lowly, with the same rare and exquisite courtesy. He was the noblest type of American manhood, self-reliant and self-made, incorruptible in private and public life. To the poor and humble, he was always accessible.

"His life was gentle, and the elements so mixed in him that nature might stand up and say to all the world, this was a good man."

His long and practical experience as a dirt farmer preeminently qualified him for the chairmanship of the House Committee on Agriculture in which capacity he served until the end of his life. He believed in the words of Henry W. Grady that—

> When every farmer in the South shall eat bread from his own fields and meat from his own pastures and, disturbed by no creditors and enslaved by no debt, shall sit down among his teeming gardens and orchards and vineyards and his dairies and barnyards, pitching his crops in his own wisdom and growing them in independence, making cotton his clean surplus, and selling it in his own time in his chosen market and not at a master's bidding; getting his pay in cash and not in a receipted mortgage that discharges the debt but does not restore his freedom—then shall be breaking the fullness of our day.

Congressman FULMER was preeminent among his fellows. He loved mankind and all who felt the kindly touch of his hand or caught the inspiration of his honest eye, felt their enchantment and loved him, too. He was a man of unsullied honor, of unswerving integrity and unwearing zeal in the cause of right. In every assembly he was recognized as a masterful force.

Congressman FULMER had a golden heart, a generous mind, and a knightly soul that inspired friendship, trust, and confidence. He was true to his friends and loyal to his convictions. He was an upright, conscientious, and industrious public servant. The world is better for his having lived in it. The influence of his life and his goodly deeds, will never die.

As evidence of this good man's popularity he was repeatedly elected over strong opposition by larger majorities each succeeding term, and when at last his voice was silenced his constituents further honored him by electing his widow, the Honorable Willa E. Fulmer, his successor.

He came into life and performed his part to the grand delight of those who knew him, and to the great benefits of those who may read the record for their future guidance. He was as unselfish as any man we ever knew. He knew his facts in everything he undertook. He had a temperament that fitted him peculiarly for the burdensome task that he had to perform during this troublesome period.

He was a man of deep sympathies. He had humanitarian views. His sympathies were as earnest, as tender, and as generous as his conceptions of his duty to humanity. He was a man of great intellectual vision. He did not live in the valley of ignorance and superstition, but scaled the heights of knowledge. He was able to look far and wide and had a broad vision of the activities of men. To all of these he measured up magnificiently and nobly.

Good will and cheerfulness were gospels his conduct radiated, his life proclaimed. Harsh words or words unclean were alien to his lips. He wished ill fate to none. With charity, he judged the race of men; and multitudes who came within the circle of his benefaction and

regard will hold him in the gentlest memory.

"What is the real good?"
I asked in musing mood.
"Order," said the law court;
"Knowledge," said the school;
"Truth," said the wise man;
"Home," said the sage;
"Fame," said the soldier;
"Equity," the seer.

Spake my heart full sadly,
"The answer is not here."
Then within my bosom
Softly this I heard:
"Each heart holds the secret;
Loyalty is the word."

Our friend's work here is finished. His enfranchised spirit has departed hence to join in sweet and perfect harmony and comradeship that innumerable host of immortals who wrought faithful and well here and who are enjoying their just deserts on the other shore.

Attitude of the South on the FEPC Bill—Article by Thurman Sensing

EXTENSION OF REMARKS

OF

HON. THEODORE G. BILBO

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Thursday, May 24, 1945

Mr. BILBO. Mr. President, the most outstanding, worth-while, and influential industrial organization in the South is known as the Southern States Industrial Council, whose headquarters are at Nashville, Tenn. The director of research of the council is Hon. Thurman Sensing, who is one of the most correct thinking leaders of the entire South.

I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "The South Takes a Stand," which was written by Mr. Sensing and recently released for publication. I ask to have it printed at this time because I noticed during today's proceedings that the Committee on Education and Labor has reported to the Senate the much-discussed FEPC bill. It should be known as the UEPC bill, because many of us take the position that instead of it being a Fair Employment Practice Commission bill it is an "unfair employment practice commission" bill.

I shall not take time to read the article which I have asked to have printed in the Appendix of the RECORD; but I ask my colleagues to read it because it is the most convincing argument which I have seen in print against the provisions of the FEPC bill.

There being no objection, the article was ordered to be printed in the Appendix as follows:

DOWN SOUTH

(By Thurman Sensing, director of research, Southern States Industrial Council, Nashville, Tenn.)

THE SOUTH TAKES A STAND

During the past several years there have been promulgated in this country certain theories of government and philosophies of life directly contrary to those under which this Government was founded and on which this Nation was builded. It was inevitable that sooner or later the matter should come to a head in a way that would bring a "fight to the finish" clash between these two divergent views.

This has apparently now happened in the submission of H. R. 2232, the so-called Fair Employment Practice Act, in the Halls of Congress. This bill proposes to make permanent the Fair Employment Practice Commission, a bureaucratic control originally set up by Executive order as an emergency war measure, and proposes to "prohibit discrimination in employment because of race, creed, color, national origin, or ancestry."

The intents and purposes of this bill are such that to the people of the South at least there can be no compromise between its provisions and the principles of government which they cherish. While they may not mean much to others, such principles as racial integrity, local self-government, and rights of the individual mean much to the people of the South. The bill is, in fact, exceedingly dangerous to the whole Nation, but it is aimed directly at the South. Of this there can be no question because its main intent is to control relationships between the races and because it sets up certain restrictions and regulations which the people of the South would never accept unless by force.

So far as the South is concerned, it has no race problem. The people of the South settled the race problem long ago in the only sensible way in which it could be settled; namely, by segregation, which is not discrimination but instead works to the benefit of both races. The South will not accept any measure which has the undoubted intent of destroying this segregation and on the other hand of promoting social equality between the races in all its phases. The people of the South believe that they are now the best friends of the Negro race, and that they are giving the Negro race its best chance for self-development. They believe that it is only those outside the southern region, who have not settled the race problem and who do not seem to know how to settle it, who are interested in promulgating any acts which will affect race relations.

The South believes that this is a matter for local government, that the people of a State desiring such a bill should have the privilege of voting for it, and that the people of a State not desiring such a bill should not have it forced upon them. The South sees no reason why a bill that has almost the unanimous opposition of its people should be crammed down their throats.

Moreover the people of the South believe that the title of the proposed bill is a misnomer, that it is unfair rather than fair. They believe it is unfair to the employer because it takes away from him the right to select his own employees, a direct violation of all the individual rights upon which this Government was founded. If an employee should have the right to apply for work where he pleases certainly the employer should have the right to employ whom he pleases. It is also unfair to the majority of employees because it would force the employer against his will to place all his employees on an equal social level, something which both employer and employees do not want, but something over which they would have no control.

The bill is even unfair to the Negro race itself. The proponents of this bill would have us believe that their main intention is the professed purpose of protecting the rights of the Negro and his opportunity to secure employment. However, even if they believed what they profess to say, which is doubtful, they can hardly be so ignorant as not to realize that actual enforcement of the bill would lead to certain racial conflict more far-reaching and more disastrous than any this country has ever experienced. In other words, reaction against the Negro race would set back immeasurably its chances for self-improvement and advancement of its position in the life of the Nation.

The only conclusion that can be reached, therefore, is that the proponents of the bill are mainly interested in securing bureaucratic control over the business and industrial life of the Nation by throwing control of employment into the hands of a central governmental bureau rather than leaving it to the decision of the individual employer, and that they are interested in doing this in such a manner that it must be forced upon the people of the South who of themselves and in accordance with their own beliefs and principles would never accept such restrictions and regulations.

The Fair Employment Practice Act is bad enough in itself and in the various restrictions and regulations which it provides. In the light of its intentions and purposes, however, and in view of the administration it would receive at the hands of its proponents, it is immeasurably worse. The South can, and would want to, do no other than take a steadfast stand against this measure and all it represents. Visits to many sections and correspondence throughout the whole region are convincing that the people of the South are determined to do everything in their power to prevent its passage.

Other regions of the country would do well to examine the bill carefully in the light of their own self-interests and the welfare of the Nation as a whole.

Wood-Pulp and Paper Industry

EXTENSION OF REMARKS

OF

HON. ROBERT SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 24, 1945

Mr. SIKES. Mr. Speaker, one of the most important of the new southern industries is the wood-pulp and paper industry. It is providing a profitable market to timber growers, providing jobs for workers, and providing a stimulus to trade. The industry is just establishing itself on a firm footing. Its continued well being is of great moment to the southeast. But unless there is reasonable protection from ruinous foreign competition in postwar years, I cannot feel that the industry will survive the postwar slump.

We must realize that the wood fiber business now, in volume, is greater than the cotton-fiber business. We shipped, last year, the equivalent of 16,000,000 bales of cotton, in wood fiber. This business is too large to be ignored, and the utilization of our fine trees has brought such a demand for cut-over pine lands that this asset and the jobs it creates are playing a far more fundamental part in the expansion program of the South than any of us dream that it is. We must have protection for the tree farmers of the South, for the forest workers in the South, and for those who have

investments in the South. Capital investment in this industry now has reached over $600,000,000, and the jobs in the woods and in the mills now exceed 75,000.

I have this suggestion to make: Forestry itself can succeed only if we have, as a condition precedent, a healthy, profitable market for the trees that we propose to raise in our forests. If we give foreign nations our pulp and paper industry, or if a substantial majority of the pulp and paper consumed in the United States is made out of trees raised in foreign countries, our forestry program shall receive a set-back that will put back into the public domain millions of acres of land now owned privately, and whose owners are managing same for the profitable production of trees. No forestry program in the United States can carry on without income, and American forestry will not have an income if we are called upon to compete freely with forests located in countries that have substandard wage scales.

In connection with my remarks, I want to present a statement presenting the position of the United States Wood Pulp Industry on the subject of adequate protection for this promising and growing industry:

STATEMENT PRESENTING THE POSITION OF THE UNITED STATES WOOD-PULP INDUSTRY IN RESPECT TO THE PROPOSED EXTENSION OF THE RECIPROCAL TRADE AGREEMENTS ACT

The interest of United States producers of wood pulp in the proposed 3-year extension of the Reciprocal Trade Agreements Act centers in the potential use of that act to deny to American producers the opportunity to protect themselves against imports of foreign pulp at prices which they cannot meet and continue to provide maximum employment of the industry's labor and capital under American standards.

NECESSITY FOR A STRONG DOMESTIC PULP INDUSTRY

The domestic wood-pulp industry, recognizes as its paramount consideration, the welfare, security, and economic progress of the United States. It is convinced that it can operate successfully only when our national economy is on a healthy and profitable basis.

The industry believes that the interests of this country will be best served by the adoption of trade policies and practices which make possible the maintenance of a strong and vigorous domestic wood-pulp industry, with maximum employment of its labor and capital.

The necessity of maintaining a strong domestic pulp industry has been amply demonstrated by the industry's contribution to our national war effort.

When war came, it was necessary for American industry and commerce to concentrate immediately on the production of essential goods and services. The wood-pulp industry of the United States met that challenge. Despite increasing difficulties resulting from shortages of labor, wood, and transportation, thi basic American industry increased its production of the specialized pulps essential to the war effort, and at the same time also increased its production of the pulps required by the Government agencies and the civilian population of the United States and those of many of the Allied Nations.

It seems assured that the demand for wood pulp will increase substantially in the postwar period. The domestic pulp industry must of necessity provide most of the wood pulp needed to satisfy that demand. Therefore, in order to ensure both our national security and economic progress, it is clearly evident that the wood-pulp industry of the United States must be maintained in a strong and vigorous condition. Its normal and logical growth must not be prevented by unfair foreign competition if this country is to be assured of the supplies of wood pulp which may be needed in both war and peace.

The wood-pulp industry of the United States is not seeking tariff protection. It will, however, endeavor to maintain its essential position in our national economy by seeking, through every possible legitimate means, to prevent unfair competitive trade practices which enable foreign producers to dump wood pulp in this market at less than fair values based on equalized currency relationships and United States costs of production.

The domestic wood-pulp industry will consider as unfair competition any form of dumping or sales of foreign pulp which are fostered by depreciation of foreign currencies, foreign subsidization and other inequitable practices.

WOOD PULP "BOUND" ON THE FREE LIST

Wood pulp was placed on the duty-free list by paragraph 1716 of the Tariff Act of 1930, conforming to legislation enacted by Congress in previous tariff laws. Under the Reciprocal Trade Agreements Act this duty-free status was bound by agreements with Sweden, Finland, and Canada. These countries, with Norway, have always been the principal shippers of foreign pulp into the United States market.

A duty-free status tends to restrict expansion of American productive capacity, needed to meet the economic growth of this country. When such duty-free status is coupled with depreciation of foreign currency the resultant situation becomes so serious as to necessitate legislative action to preserve the essential position of the domestic pulp industry in our national economy.

PROPOSED AMENDMENT TO OFFSET CURRENCY DEPRECIATION

United States producers of wood pulp therefore ask that if the Reciprocal Trade Agreements Act is extended, amendments be included which will automatically make action mandatory to offset any burdensome differences in currency values between the United States and foreign countries shipping into this market.

Although the present agreements stipulate that terms shall be changed if the depreciation of the currency of a nation shall burden the commerce between them, no Government action has ever been taken to change or cancel any trade agreement. The currencies of the Scandinavian countries and Canada have depreciated from 8 to 11 percent since these agreements were made. This depreciation is sufficient to seriously burden the pulp industry in peacetime.

PURPOSE OF PROPOSED AMENDMENT

The purpose of this proposed amendment is to provide for an automatic control of import competition based on foreign currency depreciation, so as to eliminate that type of unfair foreign competition which utilizes depreciated foreign currencies as a means of pricing competitive foreign products in the United States market.

This requested amendment is designed to enable domestic producers to sell competitive products in this market on a basis of equality of opportunity with foreign producers and continue to provide adequate employment of labor and capital under American standards.

In the absence of tariff protection, the domestic pulp industry is entitled to a legislative guaranty of currency relationships which will prevent the sale of foreign competitive products in this market at prices which do not equalize the difference between foreign and American currency values, and which therefore are not on an equivalent basis with our national competitive domestic prices. Without such legislative guaranty of currency equalization, the domestic pulp industry will continue to be subjected to unfair foreign competition based on foreign currency depreciation, with resultant periodic domestic unemployment, the profitless destruction of forest capital, and other economic ills which follow market demoralization.

FOREIGN CURRENCY DEPRECIATION AND DOMESTIC MARKET PRICES

From 1931 to 1933 foreign currency depreciation resulted in ruinously low prices for pulp and many other commodities in our domestic markets. When the United States left the gold standard in 1933, normal foreign exchange rates were restored. This resulted in increased prices in the United States. A period of recovery followed, which reached its peak in 1937. Then came the prewar foreign currency depreciation and further dumping of foreign pulp in this market.

When war came in September 1939, higher ocean freight and insurance rates, together with interruptions in shipping, removed the pressure of abnormal foreign competition, whereupon domestic pulp prices advanced to levels more in line with domestic costs of production. It is that relationship which we are seeking to have maintained by the amendment advocated in this statement.

The cost of a product in any given country largely depends on the wages paid for manhour output, including the wage costs of the materials used. It is obvious that domestic prices must reflect these costs if the national economy is to remain solvent and healthy. Our high American living standards are supported by wages far higher than those of other countries which sell competitive products in this market.

Foreign competitors have the same efficiency in their machines and technique that we have; but the wages paid in the Scandinavian countries of Europe, where most of our foreign competition has come from, range from one-third to one-fifth of the American wages paid in the woods and pulp mills. Also foreign ships' low ocean-freight rates to our Atlantic and Great Lakes ports, during normal peacetimes, permit European producers to deliver pulp to our domestic markets for about one-half of the freight cost of our Pacific coast producers, who supply much of the domestic pulp sold in our markets.

Despite these conditions imported pulp is still on the free list, and foreign producers can still dictate prices of pulp in our domestic markets.

Since abandonment of the gold standard by the trading nations of the world in 1931 and the formation of the sterling bloc there has been a close relation between variations in the pound-dollar exchange rate and the differential between price levels in the United States and in countries which belong to the sterling bloc. Their currencies follow the pound. Sweden and other Scandinavian countries have been members of that bloc.

When the exchange rate is lowered for the pound and the currencies of sterling bloc countries, in terms of dollars (foreign currency depreciation), our prices are lowered in relation to prices in such countries, because their producers can sell in our domestic markets at prices reduced by the amount of the depreciation in their currency and yet receive as much for the goods in their own money as they did before such currency depreciation.

Example: If a foreign producer is satisfied to sell a ton of pulp for 205 kronor, then in order to get this same return at the varying rates of exchange indicated below he would only have to ask the indicated prices in United States money:

	Exchange rate	Would sell at—
Foreign producer to get—		
205 kronor	August 1931, at 26.8 cents.[1]	$55.00
205 kronor	December 1932, at 17.9 cents.	36.70
205 kronor	January 1934, at 26.8 cents.	55.00
205 kronor	January 1939, at 24 cents.	49.20
205 kronor	July 1939, at 23.8 cents.	48.80

[1] Par value.

NEED FOR CURRENCY EXCHANGE CONTROL

Competition of foreign low-wage producers selling competitive products in this market at prices based on depreciated foreign currencies tends to lower our domestic prices below those dictated by our costs under American standards. This makes it difficult to maintain our high living standards and buying power, and tends to undermine our national economy.

Thus the effect of this type of unfair foreign competition clearly demonstrates the need for such amendment to the Reciprocal Trade Agreements Act as is herein recommended by the United States Wood Pulp Industry.

UNITED STATES PULP PRODUCTION ASSOCIATION.
(On behalf of the Wood Pulp Industry.)
APRIL 19, 1945.

Rhode Island Industries in Relation to the Trade-Agreements Program

EXTENSION OF REMARKS
OF

HON. AIME J. FORAND

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 24, 1945

Mr. FORAND. Mr. Speaker, under leave to extend my remarks, I include an analysis of the effects of the trade-agreements program on the industries in my home State of Rhode Island, together with a number of tables:

The Trade Agreements Act was passed in June 1934 and thereafter a number of trade agreements were made which affected the industries of Rhode Island, notably the French agreement of June 15, 1936 and the United Kingdom agreement of January 1, 1939.

Rhode Island income in 1939 approximately equal to 1927: Rhode Island's industrial production increased very materially from the early thirties to 1939, but it had not recovered by 1939 to the level of 1927–29. Net income of both individuals and of corporations in Rhode Island rose from the low level of the early thirties until they reached a level in 1939 about the same as that of 1927. Since the outbreak of war, production and income in Rhode Island has increased very sharply. (See table 1.)

Woolens and worsteds: The principal industries of Rhode Island are the production of woolens and worsteds, various other textile products (such as Bradford spun and French spun yarn, lace, etc., cotton fabrics, rayon, etc.), machinery, jewelry, and insulated wire and cable. (See table 2.)

The Rhode Island woolens and worsteds consist largely of medium and high priced materials. The principal type, men's suiting and panting worsteds, was valued at $1.34 per pound in 1939 which was about equal to the average unit value of the total United States production, $1.32 per pound. The average foreign unit value of the United States imports was $1.33 in that year, equivalent to a duty paid landed United States price of at least $2.33. It is apparent, therefore, that the imported materials sell at a much higher price in this country than the bulk of the Rhode Island production. Imports supply a substantial portion of the domestic market for high-priced woolens and worsteds, but the imports have accounted for from 1 to 4 percent of the total domestic market for woolens and worsteds since 1929. The United States duty on woolens and worsteds was reduced from 50 or 60 percent ad valorem, under the act of 1930, to 35 or 45 percent in the United Kingdom trade agreement, January 1, 1939—the specific duty of 40 to 50 cents per pound compensatory on wool in the woolens and worsteds remaining virtually unchanged by the trade agreement. The Rhode Island woolens and worsted industry reported a higher net income in 1939 and 1940 than in any year during the preceding decade. (See table 3.)

Other industries: Cotton fabrics represent an important textile industry in Rhode Island, although much smaller than the worsted industry. There are various rates of duty on cotton fabrics and very little duty change has been made on cotton fabrics under the trade agreements act. The principal prewar competition came from cheap Japanese cotton textiles.

Rhode Island is a large producer of jewelry, an item upon which tariff reductions have been made under the trade agreements. The duty, after the reductions, ranges from 30 percent to 110 percent ad valorem, many of the items being dutiable at 65 percent ad valorem. United States imports came from Czechoslovakia, France, Germany, and Japan before the war. Imports supplied only a relatively small portion of the domestic market. The United States exports of jewelry were many times larger than imports.

Machinery, iron, and steel products and insulated wire and cable are important products in Rhode Island. There will probably be a large export market in Europe and Asia for such products after the war if those foreign countries are able to sell something in this country to obtain the means of payment for American machinery and iron and steel products.

TABLE 1.—*Rhode Island: Manufactures and State income*

[Money figures in 1,000 dollars]

	Manufactures[1]			Net income from all sources[2]	
	Wage earners	Wages	Value of product	Individual returns and taxable fiduciary returns without income	Corporation returns
1927	120,009	138,896	592,233	157,465	32,853
1929	126,048	144,172	665,534	184,531	34,756

Ice Cream a Food

EXTENSION OF REMARKS

OF

HON. ANTON J. JOHNSON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 24, 1945

Mr. JOHNSON of Illinois. Mr. Speaker, I understand that a representative of OPA testified before the special committee investigating foods that the sugar quota for industrial users would be cut to 50 percent of the base period use.

What a tremendous loss of milk such a cut would entail if applied to the ice-cream industry. For the third quarter alone the ice-cream industry would have to turn back over a half billion pounds of milk to dairy farmers.

The ice-cream industry produces 36 percent of its gallonage during the 3 months July, August, and September. If the cut suggested by OPA is applied to the ice-cream industry, it would save only 10,000 tons of sugar. But with that sugar the industry can produce 34,000,000 gallons of ice cream and would utilize 522,000,000 pounds of milk. I would like at this point to place in the RECORD a short table which was prepared by the International Association of Ice Cream Manufacturers, which shows the disastrous effect if a cut in the sugar quota from 70 percent to 50 percent is put in effect on ice cream, one of the most wholesome and nutritious foods known to man.

The following table was prepared by the International Association of Ice Cream Manufacturers, Barr Building, Washington, D. C.:

What a cut in sugar quota from 70 to 50 percent in the third quarter of 1945 would mean to the ice-cream industry's ability to take care of flush milk:

1942, WFO–8 base:	*Percent*
July	13.86
August	12.42
September	10.08
Percent of year's gallonage	36.36

The ice-cream industry in July, August, and September will use for civilian make 1,854,600,000 pounds of milk [1] at the present WFO–8 quota.

Sugar: July, August, and September

	Tons
1941 base [2]	54,904
70 percent	38,433
50 percent	27,451
Difference	10,982

Ten thousand, nine hundred and eighty-two tons of sugar will make 34,863,490 gallons of ice cream, 34,863,490 gallons of ice cream use a milk equivalent of 522,952,350 pounds of milk; therefore, a cut in sugar quota from 70 to 50 percent for the third quarter of 1945 will cripple the ice-cream industry's ability to absorb the summer's flush milk to over one-half billion pounds.

[1] Based on an estimate of annual usage of 5,100,000,000 pounds of milk.

[2] Based on data from OPA that ice-cream industry's base in 1941 was 151,000 short tons of sugar.

Data for State-Wide Planning of Veterans' Education

EXTENSION OF REMARKS

OF

HON. ELBERT D. THOMAS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Thursday, May 24, 1945

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have printed in the RECORD the excerpts from United States Office of Education Bulletin 4, 1945, which Commissioner John W. Studebaker sent me. The bulletin, Data for State-Wide Planning of Veterans' Education, prepared by Dr. Ernest V. Hollis, shows, by States, the age and education of 7,144,401 Army enlisted men and of 729,123 Army officers at the time they entered service and provides some cues for estimating the number likely to return to school and college.

This bulletin should be read by all citizens who are interested in the further education of men now in the Armed Forces. It is required reading for leaders who are responsible for the provision of facilities for the education, training, and placement of veterans. Every Member of Congress will be interested in the table which shows the situation in his

own State. I have particular pride in the showing made by soldiers from Utah.

There being no objection, the excerpts and comments by Dr. Hollis were ordered to be printed in the RECORD, as follows:

DATA FOR STATE-WIDE PLANNING OF VETERANS' EDUCATION

(The bulletin is based on data supplied by the Adjutant General's Office and the Information and Education Division Headquarters of the Army Service Forces, and on published data from other sources.)

Age and previous education are the two most important factors to use in estimating the number of men now in the armed forces who are likely to avail themselves of veterans' benefits for further schooling to fit themselves for good postwar jobs. These estimates must be made on a State-wide rather than a national basis because more than four-fifths of the men are expected to return to their home States for schooling and employment, and because the States individually are responsible for planning programs of education and training for veterans.

The accompanying table 1 has been constructed from data supplied by the Adjutant General's Office to show the educational status of two-age groups at the time they entered the Army. Since it includes approximately half the expected total size of all of the armed forces, by doubling the number of men in any category one can get a rough approximation of the total postwar veteran load for each State. Age 25 years was taken for separating the men into two groups because the Research Branch of the Information and Education Division Headquarters of the Army Service Forces had found from a study of 20,000 enlisted men that only 10 percent of the soldiers who in the summer of 1944 planned to return to school full-time at the end of the war were over 25 years of age. Said another way, the branch found that over 90 percent of the men who had such plans were under 25 years of age. This, of course, does not mean that 90 percent of all men under 25 years of age plan to come back to school. After calculation for a number of contingencies, the branch estimated that 8 percent of the men of all ages and levels of education would return to full-time schooling and that an additional 18 percent would want part-time schooling. The age division of table 1 is therefore simply to indicate the two age groups in each State that may be expected to furnish 10 or 90 percent of the men who now plan to return to school and college.

Table 1 presents a detailed analysis of the group likely to furnish 90 percent of the men who return to school. This is done because different proportions of each educational category are expected to come back to study, if the State groups follow the pattern set by the 20,000 men polled in every theater of the war. Without regard for age, table 2 provides a key for making a rough estimate of the number of men from each State at given levels of education who are likely to return for full-time or part-time schooling. Each reader is left to make his own calculations, but it should be noted that up to college graduation the more education soldiers had when they entered service the more likely they are to return to school. Table 2 also indicates that larger proportions (not numbers) of Negro than white soldiers now have definite and tentative plans for further education and training.

ILLUSTRATIVE STATE SITUATIONS

Distribution showing the formal education of Army personnel by States is of interest to two groups of people—those who want to compare soldier education by States, and those who are responsible for planning educational opportunities in a given State for returning servicemen. The latter group, for whom this bulletin was prepared primarily, undoubtedly know that better school opportunities for young men and women now in the Army are most likely to come through improvements open to all youths. In postwar civilian life young veterans who return to school will differ from other similar age groups largely in having funds provided for their education—not in their educational needs. It follows, then, that in planning postwar educational opportunities for veterans, State leaders face anew most of the perennial unsolved problems of prewar days.

Those who are interested in understanding the situation in the States will find useful a comparative study of the education of Army personnel in New Mexico and Utah. Selective Service rejections for the two States (see table 92 of the bulletin), indicate over-all educational differences greater than are warranted by their difference in ability to support education and greater than the differences in the education of their Army enlisted men. New Mexico rejected 40 percent of its military-age men—9 percent of them for educational deficiency—as compared to 26 percent rejections in Utah, where only 1.1 percent was rejected for educational deficiency.

The vastly different social composition of the population and equally different educational history of the two States account largely for New Mexico's having 33.4 percent of its enlisted men who are 25 years of age and younger at the eighth grade or below, as compared with 5.2 percent in Utah. The favorable elementary and secondary school situation in Utah combined with the existence of a comparatively well developed group of junior colleges was perhaps the determining factor in the State's superior showing in the category of men eligible to begin or resume college work. In other words, educational facilities in Utah carry the mass of its youth through junior college, but it will be noted that Utah does not equal bi-cultural New Mexico in the proportion of young enlisted men who have completed 4 or more years of college work.

Table 1 shows more pronounced educational differences in the 17 States that maintain separate schools and colleges for the white and Negro races. References must be made to the bulletin for tables showing a composite or average picture of educational achievement of Negroes in the 17 States and in other States of the Nation. However, for the purpose of comparison the first row of figures in table 1 show the average education of 7,000,000 soldiers from all of the States.

Further Invasion of States' Rights

EXTENSION OF REMARKS
OF
HON. GEORGE A. DONDERO
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 24, 1945

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein a resolution passed by the Committee on Interstate Cooperation of the State of Michigan relative to the proposal by the Federal Government to grant permits and issue licenses for the development of oil upon tide and submarginal lands lying offshore in States of the Union bordering upon the oceans and its tributary waters.

This language could be interpreted to include all land bordering on the Great Lakes and its tributary waters because these waters find their way to the oceans. Such a proposal is dangerous to the rights of the States in which tributary waters to the oceans exist and it is doubtful if any State would be excluded. It is a well declared policy that the States are the owners of all land beneath navigable waters within their boundaries. It is not difficult to foresee a sharp conflict arising between State rights and the Federal encroachment contained in this proposal. It is well for the people and their representatives in Congress to be alert to the danger that confronts them and especially in the States abutting the oceans and its tributaries, including the Great Lakes States and their tributaries.

This is but another example of the continuing and increasing threat to the sovereign States of the Nation to invade their rights and centralize all government and authority in Washington. This is the method by which totalitarian governments are established and by which freedom perishes.

The resolution follows:

Whereas information indicates that the United States Government is contemplating the granting of permits and issuance of leases for the development of oil upon certain tide and submerged lands lying offshore along States of the Union abutting upon the oceans and tributary waters thereof; and

Whereas such a policy, if engaged upon, would invade the rights of the States and ultimately might affect the State of Michigan by virtue of its proximity to international waters; and

Whereas by virtue of the sovereignity of the respective States, the States have heretofore been declared to be the absolute owners of all lands beneath navigable waters within their boundaries; and

Whereas the proposal of the United States Government to issue prospecting permits for oil and gas leases beneath tidewater and on lands beneath navigable waters, and in connection therewith the United States Government has asserted the United States to be the owner of such lands, thus creating clouds upon the titles of the true owners thereof; and

Whereas such a policy, if pursued, would work great harm to the people of the several States and would constitute an invasion of the sovereign rights of such States: Now, therefore, be it

Resolved by the Committee on Interstate Cooperation of the State of Michigan, That protest be entered against such a policy and that copies of this resolution be transmitted by the chairman of this committee forthwith to all Members of the House of Representatives and the United States Senate representing the State of Michigan urging them to use their best efforts in the Congress to prevent the Department of the Interior or any other agency of the United States Government from adopting or pursuing any such policy invading the rights of the State.

Fig Garden Center Farm Bureau Vigorously Opposes Continuance of Trade Agreements Act

EXTENSION OF REMARKS
OF
HON. BERTRAND W. GEARHART
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 24, 1945

Mr. GEARHART. Mr. Speaker, as further and most impressive evidence of the rising tide of opposition in agricultural circles to the extension of the so-called reciprocal trade agreements program, I ask that a resolution of the Fig Garden Center of the California Farm Bureau Federation may be spread upon the pages of the CONGRESSIONAL RECORD as a part of my instant remarks.

The area in which Fig Garden Center is established represents some 15,000 acres planted to figs, a great and most profitable enterprise which has been developed under the protective-tariff system. If this tariff protection were withdrawn and the fig growers residing in this neighborhood should be required to compete with the near-slave-labor-produced figs of the Near East, ruination would be the lot of thousands of prosperous American families, an unhappy consequence which it is impossible to contemplate with equanimity.

The resolution of the Fig Garden Center, Mr. Speaker, to which I have just referred, is the following:

FARM BUREAU FEDERATION,
FIG GARDEN CENTER,
Fresno, Calif.

"Be it resolved by the Fig Garden Center of the Farm Bureau Federation in regular meeting assembled:

"That we vigorously oppose H. R. 2652, to extend the Reciprocal Trade Agreements Act and give the President arbitrary power to reduce tariff protection for American industry and agriculture and labor, which reduction must reduce wages and income and destroy purchasing power needed to give employment to returning veterans and unemployed munition-factory workers; also it will impair American ability to carry the tax burden of interest and principal of our enormous war debts, destroy agriculture in the United States, and only benefit creditors holding hundreds of billions of dollars of city, county, State, and national bonds, and other forms of receivables and money on hand by increasing the value of money.

"We declare that any persons claiming to represent the agricultural interests of the country who favor any tariff reduction do not represent us in our opinions. We support the statement of our State president, Ray Wiser, that such tariff reduction will destroy California agriculture, and we support the position of the California Fig Institute, the Walnut Growers Association, the Almond Growers Association, the Raisin Growers Association, Orange and Lemon Growers, Livestock Growers, Dairymen, and others: 'We cannot sell at home unless we buy at home.' "

I, E. A. Munier, secretary of the Fig Garden Center of the Farm Bureau Federation, hereby certify that the foregoing is a true copy of a resolution duly adopted at a regular meeting of the Fig Garden Center held on the 11th day of May 1945.

E. A. MUNIER,
Secretary.

United States Must Eat Less or Watch Europe Starve

EXTENSION OF REMARKS
OF
HON. WALTER A. LYNCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 24, 1945

Mr. LYNCH. Mr. Speaker, no American is blind to the fact that the people of the liberated countries are starving. The disclosure of the condition of these people has horrified our country. It is un-American to stand by and watch other people suffer. America has never failed to respond to the call of people in distress. It will not now.

How we can respond is told in an article by Malcolm Logan, published in the New York Post on April 17, 1945, as the fifth of a series of six articles which he has written on the food situation. I desire to include in my remarks this article which reads as follows:

UNITED STATES MUST EAT LESS OR WATCH EUROPE STARVE

(By Malcolm Logan)

This country, despite our food shortage, is in no danger of going hungry.

But to most of liberated Europe, already underfed and in some areas starving, this shortage is not an inconvenience; it is a potential disaster.

During the years that preceded our invasion of the Continent, we repeatedly promised that we would relieve the hunger which the Nazis planned to leave behind them.

Yet today food shortages in most of Europe are actually much greater than they were under Nazi occupation.

IT MEANS WE EAT LESS

We can meet European food needs only in grain (except rice) and dried beans and peas. But we are short of the meat, fats, and oils, sugar and milk which Europe most desperately needs. We cannot keep out promises unless we ourselves go on slimmer rations.

"Our civilians during the war have eaten more food per capita than they did prewar," War Food Administrator Jones said last March 21. We are the only major United Nations power of which this is true.

Last year, according to Agriculture Department figures, American civilians had an average of 3,236 calories a day. In every liberated European country, up to the end of last year, the daily food consumption averaged considerably under the minimum 2,000 calories.

EUROPE'S FOOD NEEDS GROW

Last June, the Office of Foreign Agricultural Relations of the Agriculture Department in its monthly publication, Foreign

Agriculture, warned that the need for food in Europe would probably be greater than we had estimated:

"The outlook for domestically produced food supplies in continental Europe during 1944–45 is by no means favorable. The cumulative effect over the war years of the shortages in agricultural manpower, in fertilizers and manure, and in draft power and machinery does not augur well for crop production in 1944.

"For the first time since the outbreak of the war, there is also an imminent prospect that the impact of military operations upon general production and transportation may have significant repercussions upon the output, distribution, and utilization of food supplies during 1944–45."

BYRNES WAS OPTIMISTIC

Most of that prediction has come true. But apparently the WFA did not believe it. Only last September 9 War Mobilizer Byrnes, who must have relied upon the WFA for his figures on food, painted a very optimistic picture of food for Europe after VE-day.

"It is estimated," Byrnes said, "that in the year following VE-day our military food requirements will decline about 50 percent, or approximately 4,000,000 tons." This food, he said, would be available for European relief.

But it is now clear that this was a tragically optimistic estimate, a mistake as serious as refusal to stock pile food when we had it and to run the risk of food shortages rather than take a chance on surpluses.

ALL-TIME HIGH FOR DEMANDS

For the last week Assistant War Secretary Patterson said, "In 1945 the schedule of Army food purchases is 20 percent above 1944. The fact is that as the year 1945 brings the war to a climax it also brings food demands to an all-time high."

The situation generally in liberated Europe reached its most desperate point early this year. Little of the food which foreign governments and UNRRA were able to buy here could be moved to Europe because practically all Atlantic shipping was being used to carry arms for the smash into Germany.

DRASTIC ACTION FORCED

But shortly after the Yalta Conference the War Shipping Administration announced a big increase in the number of ships allocated for civilian relief supplies for France. This was followed by the appointment of a new agency, headed by Foreign Economic Stabilizer Crowley, to determine what food and other relief materials the United States could send abroad.

These two actions were interpreted in Washington as a recognization of the fact that liberated Europe's civilian economy was so near disaster that immediate action was imperative.

When it becomes possible to release the bulk of United States troops from Europe, our officials expect a period of about 3 months during which a large number of ships will have food cargo space.

But unless Americans are willing to share their reduced food supplies with Europe, and unless extraordinary steps are taken to get the food to Atlantic ports, we will not have the food to fill those freighters.

Collective Bargaining

EXTENSION OF REMARKS

OF

HON. CLINTON P. ANDERSON

OF NEW MEXICO

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 24, 1945

Mr. ANDERSON of New Mexico. Mr. Speaker, I feel that there should be printed in the CONGRESSIONAL RECORD an excerpt from the introduction to the recently published book, Management at the Bargaining Table, by Lee H. Hill, vice president of Allis-Chalmers and industry member of the War Labor Board, and Charles R. Hook, Jr., secretary, Rustless Iron & Steel Corp.

While there is much in this book with which I disagree, there can be no question of the integrity of its authors. In the following paragraph I believe they have kerneled the right approach to postwar stability between the forces which work, and which must work together, in a system of free enterprise:

The goal of collective bargaining, like that of the complete industrial-relations program, is the establishment of a sound and stable relationship between employees and management. That goal cannot be reached by blindly refusing to grant any demand made; nor can it be reached by simply yielding to the demands of union negotiators; nor can it be attained by engaging in what might appear on the surface to be a good trade.

Increased Pay for Over-Point Servicemen

EXTENSION OF REMARKS

OF

HON. FRANK T. STARKEY

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 24, 1945

Mr. STARKEY. Mr. Speaker, on May 17 I introduced in the House a bill to recognize special sacrifices on the part of individual members of our armed forces, a bill that would, so far as monetary reward can do so, compensate enlisted personnel of the services who, because of long and meritorious service, have earned the right to be released but who cannot be discharged because they are indispensable.

This bill, H. R. 3258, entitled "A bill providing for additional pay to military and naval personnel, and for other purposes," has been referred to the Committee on Military Affairs, where I hope it will be given early consideration and reported to this House for passage.

With VE-day the War Department announced its partial demobilization plan for the Army, which soon will have released and returned to their loved ones more than a million men who, by their long service and other considerations, have earned the right to return to civilian pursuits, now that some reduction in the armed forces is possible.

It is a good plan, evolved after many months of study, and, I believe, about as fair in most respects as it is possible to devise.

In one sense, however, the plan is inadequate. That is not the fault of the men who drew it up, for it falls short in a matter for which only the Congress holds the correction.

Under the plan not all men who have earned their release will receive discharges. Some, because of their high technical knowledge or skills, will be declared indispensable. For almost all of these men were engaged in combat and exposed to its dangers. Many bear honorable wounds suffered in the service of their country. Many others proudly wear decorations for heroism, earned in the struggle with our Nazi and Jap enemies.

Unfortunate though it be, the Army cannot spare these men and must keep them in service until adequate replacements for pressing the fight against Japan can be obtained.

Because the Army cannot, on its own, make some concrete recognition of the invaluable service of these indispensables, I am asking that the Congress do so.

H. R. 3258 will increase the pay of men who, with sufficient points for discharge under the Army's plan, either are required to remain in service or who elect to do so until the war is won.

The idea, the suggestion, comes from Mr. George Connery, able special writer of the Washington Post. Writing in the May 17 issue of his newspaper, he said:

The Army has one group of dependables who merit more consideration, and right away.

They are those privates and noncoms the Army cannot get along without, the little men who are doing their own particular jobs so well that even high-point scores won't get them out of service.

You cannot buy sacrifices like this. But is it practicable and reasonable to give them something on pay day to show they're not forgotten?

I will answer that question. It is practicable, and it is reasonable to do this.

Let the Members of this body imagine themselves in the position of one of these indispensables, yearning to return to his home and loved ones, knowing he has earned the right to do so, and being denied that opportunity only because he is just too good in his job to be spared. Would any extra compensation on pay day seem adequate reward for months more of the restrictions all soldiers experience—willingly in time of war but not so willingly when they know thousands of men with less service, less reason than they for discharge, are going home?

Besides the indispensables there are other adventurous spirits of high patriotic purpose in the service who do not want to leave until the job is finished. These, if they have the privilege of release under the point system but still are willing to take the rigors of Pacific combat, with all the dangers entailed, also are deserving of extra pay in recognition of such willingness. For every one who so elects to stay in service another can be released.

The Navy, Marines, and Coast Guard do not yet have a partial demobilization plan, because it is not yet feasible to release large numbers of the men in these services now vitally needed in the Pacific war. But, if they had a point system like the Army's, thousands of these sailors and marines, too, would be eligible for discharge. They are indispensables too, because the Nation must have them where they are. It would not be fair, therefore, not to recognize these men just as the men of the Army would be recognized under the bill I have introduced. It is no fault of theirs that there is not yet a point system to cover their cases.

Therefore, Mr. Speaker, men of the Navy, Marines, and Coast Guard who would be eligible for discharge if the same plan as that used in the Army were applied to their cases, are included in the bill.

There is merit in the bill in addition to just recognition of our most deserving men. If there should be a tendency on the part of the services to delay or procrastinate in the discharge of men who have earned it, the extra-pay provisions undoubtedly would spur officialdom of the services to speed their releases, en masse or as individuals.

If there is fear that the extra cost to the Nation of this extra pay, which I am sure will be approved by a grateful people, will prove a burden on the Budget, it should be pointed out that the amount involved will be slight in comparison to the total pay roll, plus dependency benefits, for all our armed forces. It would be, I might say, virtually infinitesimal on a monthly pay roll and dependency benefits over-all that tops the $1,000,000,000 mark.

There also may be fear that the extra pay would encourage many eligible for discharge to remain in the service. This, I am sure, is a groundless fear. Except for those few who have a natural attraction for the military life, as enlisted men, virtually no monetary consideration would keep them in the service once they are offered release.

Neither will this bill mean a permanent raise in pay for members of the regular service, the career men who plan to stay in the service when the war is over. The extra-pay provision expires 6 months after the President shall have declared the termination of the war.

Patternmakers' League Denounces Bill To Continue the So-called Reciprocal Trade Agreement Program

EXTENSION OF REMARKS

OF

HON. BERTRAND W. GEARHART

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 24, 1945

Mr. GEARHART. Mr. Speaker, it is my privilege to add to the long list of official communications from industrial organizations which have heretofore been inserted in the CONGRESSIONAL RECORD in protest against the renewal of the so-called reciprocal trade agreement program, a statement which has just reached my hands from the Patternmakers' League of North America, an affiliate of the American Federation of Labor, a statement in which a case is made out which will have a most convincing appeal to all of those whose minds have not become confused by the juggling of figures and the contorting of facts which have become the stock in trade of the proponents of this unhappy measure.

The statement of the Patternmakers' League to which I have just referred, Mr. Speaker, is the following:

STATEMENT OF THE PATTERNMAKERS' LEAGUE OF NORTH AMERICA (AFFILIATED TO THE AMERICAN FEDERATION OF LABOR) ON EXTENSION OF RECIPROCAL TRADE AGREEMENTS (H. R. 3240) MAY 23, 1945

The Reciprocal Trade Agreements Act of 1934 (Public No. 316, 73d Cong.) gave the President the power to cut tariff rates on imports as provided in the Hawley-Smoot Act of 1930 by any amount up to 50 percent.

H. R. 3240 now being debated in the House of Representatives enlarges the power presently conferred on the President by authorizing him to cut all tariff rates effective January 1, 1945, by an additional 50 percent, if he deems such action expedient.

In the early days of this Republic, the Nation was devoted primarily to production of raw materials and foodstuffs, but the wise policy which was later adopted, and which was in effect until 1934 when the Reciprocal Trade Agreements Act above-mentioned was enacted, brought about a change so that the United States became the greatest industrial Nation in the world and made it possible for it to produce the munitions of war which resulted in the winning of the war recently with Germany. It is our belief that had the policy of the Reciprocal Trade Agreements Act been in effect for a considerable period of time that we would have been absolutely helpless when the European war began.

We are bitterly opposed to the enactment of any law which permits the reduction of tariffs on molders' patterns which our membership produces. While molders' patterns are made of plaster, wax, metal, and wood, the great majority of patterns produced are of wood.

Under the 1922 tariff law molders' patterns were not even mentioned, and patterns made of wood were admitted under paragraph 410 under the same classification as clothes pins which are automatically manufactured and which carry a duty of 33⅓ percent. The wood used in constructing molders' patterns is an infinitesimal portion of the cost of a pattern, for on some of the intricate work as much as 350 hours of labor will be put upon a pattern requiring less than a dollar's worth of white pine.

In 1929 when the Hawley-Smoot Act was under consideration, our organization pointed out to the Ways and Means Committee of the House and the Finance Committee of the Senate these facts. (See House hearings, p. 9960; and Senate hearings, p. 1154). Our statement set forth the wage rates paid pattern makers in Canada, London, England, and the United States, which were as follows:

	Per hour
Canada	$0.87
London	.41
United States	1.04

The rates set forth above were the average pattern makers' rate of pay in Canada and the United States, but for the European countries the highest rate of pay in any locality was taken, which was 41 cents per hour in London, England.

Large corporations had been in the habit of sending their blueprints out of this country to England and Canada for the purpose of having their patterns made by men in those countries receiving much less money than is received by our members in the United States, and thereby saving enormous sums of money. The Hoe Co., of Boston, which manufactures printing machinery, was one of these offenders, and our organization carried the question through the highest court but lost the case because of a misplaced punctuation mark.

Patterns are not sold on the open market but are manufactured for the sole purpose of producing castings needed by a particular manufacturer, and they are of no value to any other firm. It is simply a case in this instance of permitting patternmakers' work to be transferred from the United States to a foreign country in order to cut labor costs, and naturally we strenuously object to such procedure, as in normal times about 6 percent of all patternmakers in the United States are unemployed.

As a result of our presentation to the congressional committees in 1929, the law was changed and the tariff on molders' patterns for use in the manufacture of castings was increased to 50 percent ad valorem. The patternmakers of the United States have the skill, the ability, and there are more than enough of them, to produce all of the molders' patterns required in this country. We object, therefore, to the importation of any patterns for reasons set forth above.

Our trade requires the highest skill, knowledge, and general understanding of all the metal trades. Our wage rates, as a result, are higher than those of other metal trades. At the present time we are advised that the highest skilled trades in London receive two shillings—equivalent of approximately 40 cents—per hour. The average rate for first-class patternmakers in Canada in $1.18½ per hour, and the average rate for the first-class men in the United States is $1.77 per hour. Under these wage rates if, under the Reciprocal Trade Agreements Act, tariff rates are lowered it means to us that much of the molders' pattern work will be done abroad and, in our opinion, none of it should be done outside of the United States.

If the Congress insists upon enacting the bill now under consideration, we feel that the tariff rate on molders' patterns should be increased to 100 percent, or an amendment enacted barring the entry of any patterns whatsoever into the United States.

Respectfully submitted.

GEORGE Q. LYNCH,
President.

WASHINGTON, D. C.

Insurance of Full Employment Is Essential to the Survival of Free Enterprise

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 24, 1945

Mr. PATMAN. Mr. Speaker, I ask unanimous consent to have inserted in the Appendix, following the list of 65 coauthors and cosponsors of H. R. 2202, the full employment bill of 1945, my remarks at an informal meeting of the coauthors and cosponsors, Tuesday May 22, in the House caucus room:

Responsible spokesmen for all parties and all nations are on record for postwar full employment. The full-employment bill of 1945 sets up machinery for implementing that purpose. Since its introduction, the need for practical steps to insure full production, full employment, and full consumption has become more apparent, not only to millions of war-workers facing lay-offs and shifts to peacetime jobs, but also to returning servicemen, far-sighted businessmen, and industrialists.

Critics and opponents of the bill have not yet offered practical alternatives, except a return to conditions which produced the crash of 1929 and, even in 1939, left us with more than 9,000,000 unemployed. We have had some scare propaganda to the effect that we cannot have both full employment and free enterprise.

As the war draws toward final military victory, we again face the final challenge of the industrial revolution—how to consume under normal peacetime conditions the

abundant production which our farms and factories are at all times capable of producing. The basic assumption in the full-employment bill of 1945 is that American democracy can insure full employment, full production, and full consumption without abridging genuine free enterprise, that, on the contrary, insurance of full employment is essential to the survival of free enterprise, the further flowering of our democratic freedoms and a just and enduring peace. Monopoly, cartels, totalitarianism, and war thrive on unemployment and want in the midst of plenty.

The bill denies the contention made by some that democracy cannot provide full employment and live; that democracy to survive must have fewer jobs than workers, more farm and manufactured products than consumers. The bill sets up a thoroughly democratic method and machinery whereby a democratic people, acting through their elected representatives in the Congress, can bring about a transition to a postwar economy of abundance and full employment plus our individual liberties that will strengthen and buttress those liberties and that will compare favorably with the best that Britain, Russia, France, or any other nation can achieve.

After the war, American democracy cannot stand the comparison of large scale chronic mass unemployment here with full employment plus German workers in other countries. Such a comparison is unnecessary. But, unless steps such as are proposed in the full-employment bill are taken, and soon, such a comparison is all too likely. We cannot afford such a return to the scandalous and tragic spectacle of idle machines, idle land, idle money, and idle men, want in the midst of plenty, want caused by the very "threat" of plenty. The full tide of production we have attained to win the war can and must be maintained and surpassed to win the peace on any lasting basis. Democracy, which grew stronger by exercise of its muscles to win the war, cannot afford to let those muscles grow flabby through mass idleness in peace. The full-employment bill provides the means for more effective exercise of those muscles, year by year and month by month, both in productive work and in seeing to it that the President and the Congress, the elected servants and agents of the people, accept and discharge the final responsibility for insuring job opportunities and business opportunities for all.

Reciprocal Trade Agreements

EXTENSION OF REMARKS

OF

HON. FRANCK R. HAVENNER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 24, 1945

Mr. HAVENNER. Mr. Speaker, the board of directors of the San Francisco Chamber of Commerce, which represents practically all of the business and industrial interests of the city and county of San Francisco, has unanimously endorsed the Doughton bill, H. R. 2652, providing for the extension of the Reciprocal Trade Agreements Act.

The following is a letter which I have received from Dr. Henry F. Grady, president of the San Francisco Chamber of Commerce:

On February 4, 1932, the San Francisco Chamber of Commerce enunciated a tariff policy calling for machinery for reciprocal concessions for tariff rates in the interest of the revival and the upbuilding of our foreign commerce. In 1934 Congress provided the requested machinery in the form of the Trade Agreements Act, which has been renewed from time to time with the endorsement of the San Francisco Chamber of Commerce.

On May 3 the board of directors of the San Francisco Chamber of Commerce, upon the recommendation of the foreign trade committee and the foreign trade association of the chamber, unanimously endorsed a resolution calling for the prompt enactment of the Doughton bill, H. R. 2652, calling for the extension of the authority of the President under section 350 of the Tariff Act of 1930, as amended, and for other purposes.

In the postwar period the United States must be properly equipped to negotiate with other nations for reciprocal trade advantages. This chamber believes that during the past decade under the Reciprocal Trade Agreements Act we have had an effective instrument for the reciprocal modification of trade and tariff barriers. United States industry and agriculture have been provided with adequate safeguards through the provision of prior announcement of intention to negotiate a trade agreement and through subsequent public hearings. Though some 1,200 rates of duties have been modified under the trade agreements program, to the best knowledge and belief of the members of this chamber no American industry affected has suffered any real injury.

San Francisco as the host city to the United Nations Conference on International Organization is proud of its long and consistent record in support of the trade agreements program. The house currently being built by the United Nations at San Francisco will be a frail structure, lacking firm foundations, unless business and government build with care the essential framework on which postwar prosperity and international economic collaboration will depend.

Prayer of Thanksgiving on National Prayer Day by Archbishop Francis J. Spellman

EXTENSION OF REMARKS

OF

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, May 24, 1945

Mr. WAGNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a copy of the prayer of thanksgiving offered by Archbishop Francis J. Spellman at St. Patrick's Cathedral, New York, on May 13, 1945—the day proclaimed by President Truman as National Prayer Day in memory of our complete victory in Europe.

There being no objection, the prayer was ordered to be printed in the RECORD, as follows:

PRAYER OF THANKSGIVING AFTER VICTORY

O God of Destiny!
Our Nation, still bleeding from the wounds of war,
Thanks Thee for the Victory of this hour,
Won by our valiant dead,
Our soldiers' blood,
Our country's tears.
We were not alone when we groped through the night of war,
When we drank the cup of grief,
Thou, Lord God of Hosts, wert with us.
For we were with Thee.

O God of Mercy!
Thou didst become our shield and sword,
When lawless nations rose against us.
Thou didst save us,
By Thy power that works in justice,
By Thy compassion upon our passion.

O God of Nations!
Thou hast builded this Nation in a vast wilderness,
Quickening it with the blood of many peoples,
Thou hast nurtured us in a chosen land
Potent with the riches of the earth.
Thou hast made us into a mighty Nation
Loving peace, yet terrible in war.

O God of Law!
Thy laws are force, ruling planet and plant,
Disposing all things mightily and gently.
Thy laws are light, guiding men's hearts and minds.
By the measure of Thy laws nations and men wax and wane,
For what they sow, they also reap.
Thou wilt not be mocked, O God of Law.
Make us to know and to obey Thy will.

O God of Justice!
Repent not making of us an instrument of right,
Spending our blood, spilling it freely, curbing mad nations.
But grant that in victory we not offend Thy justice
By revenge, sinning against mercy,
By hate, destroying also ourselves,
Turning upon ourselves the wrath of Thy judgment.

O God of Peace!
We thank Thee that the clouds of war are lifting,
We pray Thee that the peace that comes be Thy peace,
Thy peace, which alone is our good,
A peace in obedience to Thy laws.
Thou callest us
To feed the hungry,
To clothe the naked,
To defend man's rights,
And God's rights,
And in that service,
To win back men's hearts to Thee,
And make man worthy of Thy trust in him
By man's trust in Thee.

—*Francis J. Spellman,*
Archbishop of New York.

Steering Committee for Passage of Full Employment Bill

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 24, 1945

Mr. PATMAN. Mr. Speaker, at this time, when our Nation and the world face the great problems and the great opportunities of the change-over from war to peace production as final military victory approaches, I want to place in the RECORD the names of 65 Members of the House who have so far elected to become coauthors and cosponsors of H. R. 2202, the full-employment bill of 1945, which provides policies and machinery for insuring full production employment, and consumption after the war.

Under the rules of the House, a bill may carry the name of but one sponsor. In times past when more than one Member wished to sponsor a bill, it has sometimes happened that identical bills would

be introduced, printed, referred, and recorded by a number of Members, at considerable expense in paper, printing, and clerical time. In the interest of conserving scarce paper, and general economy, I propose, with the consent and agreement of the colleagues who wish, or who may hereafter wish, to be recorded as coauthors and cosponsors of H. R. 2202 simply to enter the facts in the RECORD. Thus, in time to come, when the bill shall have become law—or if, unhappily, such action is not taken in time to prevent a return of chronic mass unemployment and depression—there will be easily available the roll of those who favored early action on this bill.

Following the initial list of coauthors and cosponsors, appearing immediately below, I should like to have inserted the text of my remarks at an informal meeting of these cosponsors held Tuesday, May 24 in the House caucus room.

The 65 Members who have so far elected to become coauthors and cosponsors are:

WILLIAM A. BARRETT, of Pennsylvania; ANDREW J. BIEMILLER, of Wisconsin; WALTER E. BREHM, of Ohio; WILLIAM T. BYRNE, of New York; EMANUEL CELLER, of New York; JOHN M. COFFEE, of Washington; HUGH D. DE LACY, of Washington; JAMES J. DELANEY, of New York; SAMUEL DICKSTEIN, of New York; EMILY TAFT DOUGLAS, of Illinois; HELEN GAHAGAN DOUGLAS, of California; CLYDE DOYLE, of California; JOHN E. FOGARTY, of Rhode Island; AIME J. FORAND, of Rhode Island; WILLIAM J. GALLAGHER, of Minnesota; JAMES P. GEELAN, of Connecticut; THOMAS S. GORDON, of Illinois; WILLIAM T. GRANAHAN, of Pennsylvania; W. K. GRANGER, of Utah; E. J. HART, of New Jersey; FRANCK R. HAVENNER, of California; NED R. HEALY, of California; CHET HOLIFIELD, of California; FRANK E. HOOK, of Michigan; ED. V. IZAC, of California; HENRY M. JACKSON, of Washington; ESTES KEFAUVER, of Tennessee; MICHAEL J. KIRWAN, of Ohio; H. P. KOPPLEMANN, of Connecticut; THOMAS J. LANE, of Massachusetts; JOHN LESINSKI, of Michigan; W. W. LINK, of Illinois; R. J. MADDEN, of Indiana; VITO MARCANTONIO, of New York; G. P. MILLER, of California; M. M. NEELY, of West Virginia; MARY T. NORTON, of New Jersey; GEORGE D. O'BRIEN, of Michigan; THOMAS J. O'BRIEN, of Illinois; ALVIN E. O'KONSKI, of Wisconsin; GEORGE E. OUTLAND, of California; WRIGHT PATMAN, of Texas; LUTHER PATRICK, of Alabama; E. E. PATTERSON, of California; JOSEPH L. PFEIFER, of New York; ADAM C. POWELL, Jr., of New York; MELVIN PRICE, of Illinois; LOUIS C. RABAUT, of Michigan; HOMER RAMEY, of Ohio; A. J. RESA, of Illinois; G. F. ROGERS, of New York; W. A. ROWAN, of Illinois; JOSEPH F. RYTER, of Connecticut; A. J. SABATH, of Illinois; G. G. SADOWSKI, of Michigan; CHARLES R. SAVAGE, of Washington; HARRY R. SHEPPARD, of California; FRANK T. STARKEY, of Minnesota; JOHN H. TOLAN, of California; J. H. TORRENS, of New York; PHILIP A. TRAYNOR, of Delaware; JERRY VOORHIS, of California; SAMUEL A. WEISS, of Pennsylvania; VICTOR WICKERSHAM, of Oklahoma; C. G. WOODHOUSE, of Connecticut.

Racial Discriminations and Governmental Policy in Foreign Countries

EXTENSION OF REMARKS

OF

HON. ELBERT D. THOMAS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Thursday, May 24, 1945

Mr. THOMAS of Utah. Mr. President, some months ago, when I was still chairman of the Senate Committee on Education and Labor, I requested the Legislative Reference Service to prepare for the committee a study on racial discriminations and governmental policy in foreign countries. It seemed to me that the interest in the subject in our own Nation made it desirable that we explore the experience of other nations which face similar problems.

The full report is on file in the office of the Senate Committee on Education and Labor and may be consulted there by any Member interested.

So that Members may know something of its content, I ask unanimous consent to have printed in the Appendix of the RECORD the outline of the contents and an abstract of the report.

There being no objection, the outline of contents and abstract were ordered to be printed in the RECORD, as follows:

OUTLINE OF CONTENTS

1. Introductory statement.
2. Discriminated peoples.
3. Russia.
4. South Africa.
5. India.
6. Hawaii.
7. New Zealand.
8. Australia.
9. Some miscellaneous cases (Japan, Brazil and Arabia).

References.

ABSTRACT OF THE REPORT

In many countries racial distinctions have been synonymous with special privileges or invidious discriminations. Groups which have been discriminated against, herein called "discriminated peoples," are found especially in India, Japan, and other Oriental countries but are not unknown in Europe and elsewhere. They are often associated with disliked occupations as well as different racial traits. Discriminations have been somewhat ameliorated in the last century due to revolutions and to the voluntary action of governments.

In imperial Russia there were many different groups who were discriminated against in the interest of the russification policy of the czars. Under the Soviet regime a different policy has been adopted toward minority groups and this has led to the maintenance of those cultural differences of minorities which did not conflict with Communist ideology.

In South Africa the trend of events has been toward the strict residential segregation of the colored races and toward their restriction to particular occupational pursuits and very limited political activity. The discriminations here are maintained by a minority, the whites, against a majority, the colored peoples.

In India the chief divisions are the accepted Hindus who constitute a majority and the two very large minorities of Moslems and untouchables. Discriminations within the Hindu group proper have been largely removed by the Caste Disabilities Removal Act but the larger problem of customary discriminations against untouchables remains. The chief of these are residential segregation, occupational restrictions and all barring from use of public conveniences and facilities. Many of these restraints have been abolished in recent years.

Discriminations against minority races are not marked under the legal rights of citizenship in Hawaii. In New Zealand the Maori minority were granted rights of education and health instruction which have led to a rehabilitation of self respect and progress on the part of that race. In Australia the native policy of the different States has been directed to the preservation of the aborigines while giving them the advantages of European culture. The policy has been criticized as inadequate and marked by decline of full bloods and the rise of maladjusted half-castes. In Japan the Eta minority have been discriminated against for centuries in schools, the army, temples, and in everyday community life, being forced to live in segregated quarters. Some attempt to improve their condition has been made in recent years. In Brazil the abolition of slavery removed the last legal handicaps on the Negroes of that country. Since the emancipation they have made progress but are still in an inferior position. In Arabia discriminations have been maintained against Negroes as in the United States and Brazil but on a different basis.

Censorship of News Published in Germany

EXTENSION OF REMARKS

OF

HON. RAYMOND E. WILLIS

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Thursday, May 24, 1945

Mr. WILLIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by John W. Hillman, published in the Indianapolis Times, relating to censorship of the news in Germany.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

REFLECTIONS—QUESTIONS

(By John W. Hillman)

The occupation of Germany, admittedly, is a grave problem. It will call for stern measures. There can be no soft peace for a nation ingrained with Nazi ideologies and warped by a generation of Nazi training. The evil growth must be rooted out and, until it is, strict controls will be necessary.

Granting all this, however, the details of American occupation plans announced this week by Philip C. Hamblet, head of the European Branch of the Office of War Information, are startling and alarming. The thoughtful citizen, breed in the tradition of American liberalism, may well wonder if the Allied Government is not to be nazism in reverse.

Particularly is this true of the censorship policy which has been worked out by the OWI, in cooperation with the Army's Psychological Warfare Division and the British Foreign Office.

ONLY OWI PUBLICATIONS PERMITTED

Under the plan as outlined by Mr. Hamblet, the only newspapers and magazines to be permitted in the territory administered by the American forces will be those published by the

OWI. These, he says, will feed "objective news" to the Germans, reminding them of their crimes and playing up Jap defeats.

American magazines, such as Time and Newsweek and the Reader's Digest—all of which publish foreign-language editions—will be barred. The reason given for this arbitrary prohibition is the shortage of paper and shipping space. But, if past performance is any criterion, OWI will not stint the paper nor the space for its own publications—and informed sources say that the real reason is that inspired propagandists fear that the freedom of expression permitted in American publications, including criticism of the Government, might not give the Germans the picture of democracy which is desired for them.

Is democracy so vulnerable, then, that we must color and censor the news about our country? If such magazines as Time and Newsweek, such newspapers as the New York Times, do not present objective news—who, in heaven's name does?

IS IT DEMOCRACY OR TOTALITARIANISM?

There are those in this country who believe that the truth is the best argument for democracy; who believe that freedom of the press is one of the cardinal principles of democracy, whether on a world or on a national scale; who believe that the greatest service we can give to the future welfare of Germany and the peace of the world is to teach the Germans to think for themselves and not to accept without question the ready-made doctrines handed them, whether by their rulers or by their conquerors.

And what is this announced policy but another version of the goose-step? Is it democracy, or is it totalitarianism?

Will it work? Not if we can read the precedents of history. What people ever trusted or believed a controlled press? What subject nation ever failed to reach out for truth through underground newspapers and clandestine radios? If we take this course, failing to heed the warning of others' folly and failure, we shall be sowing the wind, and in some not far-distant day we shall reap the whirlwind. No mental strait-jacket is so tight that an unwilling people will not wriggle free.

And how can we criticize such regimes as the one in Argentina which in recent years banned American magazines if we ourselves forbid them to the people who have the most to learn of the advantages of our freedom?

SUCH CENSORSHIP IS DANGEROUS

Such censorship, under the guise of military necessity, is dangerous. From it, there is but one step to similar controls over the news that reaches the people at home—again under the justification that "it is for their own good," that they are being educated by force-feeding of "objective news." Meaning, of course, news that agrees with and serves the viewpoint of those in power.

And who are the mature master minds who, at the point of American bayonets, are to tell the Germans how they are to think and what they are to read? Mr. Hamblet, according to a dispatch by Charles Stevenson of the Washington staff of the Scripps-Howard Newspaper Alliance, is the 36-year-old head of the European Branch of the Office of War Information. And the dispatch has a significant postscript: "Mr. Hamblet has been in Government work for 8 years." There's food for thought there.

But that is beside the point. The real issue is clear: Are we afraid of news, accurate and uncolored, as reported by able men with years of training in their profession?

And for what did we fight this war: Freedom of expression or official indoctrination? The Atlantic Charter or Mein Kampf? Propaganda or truth?

Industrial Situation in Michigan

EXTENSION OF REMARKS
OF
HON. JOHN LESINSKI
OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 24, 1945

Mr. LESINSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following joint statement of the Democratic members of the Michigan delegation relative to our views as to the present industrial situation in Michigan in its relation to the war and reconversion. The statement is as follows:

HOUSE OF REPRESENTATIVES,
Washington, D. C., May 24, 1945.

We, the undersigned Members of the Michigan Democratic delegation in the House of Representatives, join in the following statement expressing our views as to the present industrial situation in Michigan and its relation to the war and reconversion:

The war in Europe has ended, and all of us rejoice in our victory. We have shown that freemen can outproduce, outgeneral, and outfight the forces of tyranny and dictatorship.

The war with Japan is now our primary objective and there are certain problems which must be dealt with in order to succeed in this objective. The greatest war arsenal in America—Detroit—faces a grave crisis. Unemployment is already widespread. Overtime has been eliminated at Ford's, the Murray Corp., and other plants. There is no definite program evident in the handling of cut-backs. There are numerous threats of long delay in reconversion. We have reason to believe consternation and fear are growing among Detroit's war workers. The rest of Michigan is affected by the conditions existing in the metropolitan area.

We recommend immediate relaxation of War Manpower controls in Detroit to meet the actual manpower picture so that referral to jobs at lower wage scales will not be used to deny unemployment compensation. Unless labor and industry join together in the spirit of the recent management-labor charter, the outlook for our war effort and for the postwar period is not promising. For the cut-backs and lay-offs now taking place, we recommend emergency unemployment compensation—expanded benefits and expanded coverage. We also believe that transportation allowances should be paid to those who must return from war jobs to their homes or shift from one war job to another. We recommend immediate revision upward of the basic wage scales in order to offset the reduction of wages caused by the elimination of overtime. To take up the slack in purchasing power there must be no loss in take-home pay.

We recommend most careful planning of cut-backs and reconversion to minimize the hardships and confusion already apparent. Executive Order No. 9240 has served its purpose and should be rescinded.

Mr. J. A. Krug of the War Production Board is quoted as saying that 300,000 war workers would have to leave Detroit after VJ-day. We do not pretend to know what will happen after VJ-day, but we believe that with industrial peace, and the great need for cars and other commodities in America and abroad, a great many of the war workers now in Detroit willing and able to work can and should be employed in civilian production.

Our workers have made a magnificent contribution to our war effort. We cannot afford to announce in advance that they will be unemployed after the war is over.

As Members of Congress, we shall do all in our power to see that Congress, in cooperation with labor and industry, will act to maintain full employment and full production. To us, "the right to useful and remunerative job," which the late President Roosevelt expressed in the economic bill of rights, is basic for the survival of democracy. It is an elementary duty we owe to our servicemen and veterans, to our war workers, and to our communities.

JOHN D. DINGELL.
FRANK E. HOOK.
JOHN LESINSKI.
GEORGE D. O'BRIEN.
LOUIS C. RABAUT.
GEORGE G. SADOWSKI.

Mexico and the Intracoastal Canal

EXTENSION OF REMARKS
OF
HON. JOSEPH J. MANSFIELD
OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 24, 1945

Mr. MANSFIELD of Texas. Mr. Speaker, among the various agencies of transportation, all of which have done and are doing a magnificent job in the winning of the war, none, I am sure, is rendering more valuable service than our inland waterways. For security reasons definite figures may not be revealed, but when they are made public they will furnish convincing proof of that fact.

Among all of our splendid inland waterways, I am quite sure that none is making a more valuable contribution to the assurance of final victory than the Intracoastal Waterway of Louisiana and Texas. This great transportation facility skirts the fertile coastal area "from the Mississippi to the Rio Grande," a territory in which vast stores of essential raw materials abound in prodigal abundance.

For instance, Louisiana and Texas together produce 60 percent of the Nation's supply of oil, gasoline, and other petroleum products. Together they contribute practically all of the sulfur produced in the United States. These and similar commodities lend themselves perfectly to transport by water. As a result of their existence in that area, with practically unlimited quantities of natural gas, great industries have been and are being built in many localities in both States contiguous to the canal. The canal has provided an impulse to industrial growth and development which, in the years to come, is certain to make the great Southwest an industrial empire of almost limitless proportions.

About 3 years ago I introduced a bill to increase the dimensions of the Intracoastal Canal from a depth of 9 feet and a bottom width of 100 feet to a depth of 12 feet and a bottom width of 125 feet. This bill, which became law July

23, 1942, also authorized similar dimensions for the intracoastal waterway east from the Mississippi to Apalachee Bay, Fla., and also authorized construction of a barge canal across Florida with like dimensions to connect with the Atlantic intracoastal waterway already completed and in operation with a 12-foot depth from Jacksonville, Fla., to Trenton, N. J. The measure also authorized the extension and completion of the intracoastal canal from Corpus Christi to the Mexican border at Brownsville.

For many years, indeed ever since the Intracoastal Canal Association of Louisiana and Texas was organized nearly 40 years ago, there has been much interest in our sister Republic of Mexico in the extension of this great waterway south along the coast to Tampico and Vera Cruz. In this connection, the following exchange of letters between Hon. R. B. Creager of Brownsville, Tex., a leading citizen of Texas and Republican National Committeeman from that State, and Mr. Roy Miller, acting president of the Intracoastal Canal Association of Louisiana and Texas, is of special interest:

BROWNSVILLE, TEX., *May 18, 1945.*

Hon. ROY MILLER,
The Mayflower Hotel,
Washington, D. C.

DEAR ROY: From a News Letter being published in Mexico City I quote the following:

"Intracoastal Canal: Mexico City newspapers said this week that the Mexican Government is now drawing plans for an Intracoastal canal that will connect the cities of Tuxpan, State of Veracruz, Tampico, and Matamoros, in the State of Tamaulipas. The latter city is located across the Rio Grande River from Brownsville, Tex., and is 6 miles from that city's deep water port.

"Should this construction be completed it would connect with the Intracoastal Canal of Texas and Louisiana, giving southwestern Mexico water rates on barge lines for their oil, lumber, coffee, etc., and direct connections with the American ports of Corpus Christi, Houston, and New Orleans.

"It is understood that the Higgins Co. of New Orleans is the engineering contracting company that will construct the canal."

It is interesting to note that at least some character of serious consideration is being given by Mexico to the extension of the Intracoastal Canal.

I know this is part of the dream you dreamed a good many years ago. The extension from Brownsville to Tampico would be simple and inexpensive inasmuch as there are land-locked bays most of the way.

* * * * *

The best to you, as always.
Cordially,

R. B. CREAGER.

WASHINGTON, D. C., *May 23, 1945.*

Hon. R. B. CREAGER,
Brownsville, Tex.

DEAR RENNIE: I am exceedingly grateful for your letter of the 18th in which you quote from a news letter published in Mexico City having reference to plans for an extension of the Intracoastal Canal from Matamoros south along the coast of our sister republic.

While I was not present at the first two meetings of our Canal Association, it is my understanding that at either the first or second meeting two representatives of the Republic of Mexico were present, being interested at that time in the possible construction of a similar project along the Mexican coast. If I remember correctly, the representatives were appointed by the late President Diaz.

I would like, if possible, to get some more information. Indeed, if you could give me a suggestion as to the proper official to address, I would like very much to communicate with him in behalf of our Canal Association and assure him of our interest and desire to cooperate. I presume such a letter would not trespass the proprieties. Maybe you can make a suggestion along that line.

The history of our Canal Association and the development of its plans present a fascinating picture, illustrative of the old adage that "great oaks from little acorns grow." The original idea which influenced our late friend, Clarence Holland, to call the meeting which was held in Victoria, August 1906, was merely an inland waterway "from the Mississippi to the Rio Grande." It was based upon a survey made by Government engineers in 1875 and only had in mind the connecting of the shallow bays and lakes along the coasts of Louisiana and Texas.

The initial effort resulted in the construction of isolated and disconnected sections of a canal 5 feet deep with a bottom width of 40 feet. In due course, a canal of those dimensions was completed from the Mississippi River to the Sabine River on the Texas border. A canal of like dimensions was constructed between Galveston and Corpus Christi, comparatively little dredging being necessary since the canal followed the waters of the open bay. This project, however, proved inadequate because of its small dimensions.

Just before Congress adjourned March 3, 1923, a joint resolution, sponsored by the late Senator Morris Shepard in the Senate, and the late Representative Garland Dupre, of Louisiana, in the House, was adopted providing for a survey for a through connected waterway "from the Mississippi to the Rio Grande." The report upon this survey recommended a canal 9 feet deep and 100 feet wide "from the Mississippi River at or near New Orleans to Corpus Christi" at an estimated cost of $16,000,000. You will recall that such a project was authorized and finally completed to Corpus Christi about 3 years ago.

On July 23, 1942, the Mansfield bill was approved by the President. This bill not only authorized the enlargement of the canal to a depth of 12 feet and a bottom width of 125 feet but also its extension to the Rio Grande Valley on the basis of the same dimensions. It also provided for the enlargement to the same dimensions of the Intracoastal Waterway from the Mississippi River east to Apalachee Bay, Fla., and the construction of a canal of the same dimensions across Florida to connect with the Atlantic Intracoastal Waterway, leading from Jacksonville, Fla., to Trenton, N. J., which already had a depth of 12 feet.

Thus, we now have an authorized project for an intracoastal waterway 12 feet deep and 125 feet wide all the way from Brownsville, Tex., to Trenton, N. J., a distance of approximately 2,400 miles.

Pending before the Congress is a proposal to construct a barge canal across the State of New Jersey, which will connect this through waterway with New York and through Long Island Sound and the Cape Cod Canal with Boston, Mass. Every section of the waterway from Mexico to Boston is now authorized with the exception of the connecting link across the State of New Jersey.

While no actual construction work has yet been undertaken on the stretch of the canal from Corpus Christi to the Rio Grande Valley, an appropriation of $1,600,000 to start it was made by the Congress something more than a year ago. An effort is now being made to obtain approval of the Bureau of the Budget in order that actual construction work can be commenced. The connecting barge canal across Florida is in a somewhat similar situation, although no funds have yet been appropriated for it. Plans and specifications are being prepared and no doubt construction work will be started as soon as war conditions permit.

Thus it will be observed that we have come a long way since the meeting in Victoria, Tex., a little more than 38 years ago. I wonder if any of those valiant pioneers of Louisiana and Texas who were present at that meeting had any idea of what the ultimate culmination of their efforts might be. Texas, of course, has grown tremendously since that time and great industries have been established along our coast, supplying commodities for transportation on the canal amounting to millions of tons annually.

Indeed, the canal itself has been the major factor in promoting that development. While definite figures may not be publicized for security reasons, it can be said that the Intracoastal Canal has rendered a more valuable service to the war effort than any other waterway project in the United States. It can at least be said that the tonnage it handled last year was six times greater than the maximum estimate of the United States Army engineers when they recommended its construction 20 years ago.

That the canal would supply the same impulse for progress and development along the coast of Mexico south of the Rio Grande goes without saying. It would provide the cheapest form of transportation for the products of that area which might seek export into the United States. It would also open up a new and virgin market for the products of the United States.

We are, of course, entering upon a new era in our relations with the Republic of Mexico. I can think of nothing that will be more helpful to both of our countries than the extension of this great waterway project down and along the coast of our sister republic. It would multiply its utility and services manyfold.

* * * * *

With warmest good wishes,
Sincerely your friend,

ROY MILLER.

Ernie Pyle

EXTENSION OF REMARKS
OF
HON. RAYMOND E. WILLIS
OF INDIANA

IN THE SENATE OF THE UNITED STATES

Thursday, May 24, 1945

Mr. WILLIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by William E. Keleher at a memorial service held in honor of the late Ernie Pyle, at Albuquerque, N. Mex., on Sunday, May 13, 1945.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Words, however chosen, are inadequate to express here today the depth of the regret of Albuquerque and New Mexico because of the passing of Ernest Taylor Pyle. Any eulogy that might be offered would fall far short of the desired goal. One of the outstanding personalities to emerge from the millions of men participating in World War II, Ernie Pyle's place is secure in any history

of that war. Countless Americans in the military service, everywhere, mourn his passing. Millions of civilians in every part of America join in that mourning, and this too, at a time when death has laid a heavy tribute on the nation, touched the lives of so many of our people.

Those who knew Ernie Pyle best, and something of his homespun philosophy of life, are well aware that he would not wish here today any undue display of emotion, any unseemly dramatization of his going. He would wish for no parade of bright, shining swords. Ernie Pyle was a brave man, and a courageous one, but modesty was the outstanding trait of his character. No man achieved more in his field of endeavor with greater humility than Ernie Pyle. No man brushed aside with greater modesty and looked away more quickly from the tendered glory and acclaim of fellow citizens. Ernie Pyle loved the simple things of life. He was a specialist concerning the thoughts lodged in the mind and heart of the common man. That gift made possible his professional greatness. Fame came to Ernie Pyle unsought. His preference would have been that the fame be bestowed on some other correspondent. With patience and appreciation, he thrust aside the honors and rewards that were offered to him.

Ernie Pyle liked Albuquerque and its people. Here he had many friends whose companionship he enjoyed.

Albuquerque was proud that Ernie Pyle had selected this town as his place of residence. He was intensely proud in turn of his little white house in the hills in the eastern part of our town. When here, back from the trips that called him to all parts of the earth, he never tired of looking east toward the Sandia mountains in the early morning. When he left Albuquerque each time on his assignments, he carried with him unforgettable memories of views from his front porch, of the beauties of our western skies at sunset, of the Rio Grande, as it meandered south toward the Mexican border, of the extinct volcanoes, as he saw them from his own front porch.

Here in the Rio Grande Valley, with an ancient cultural background, in New Mexico, his home by inclination and adoption, Ernie Pyle's personality was in harmony with its surroundings. Here he found happiness and contentment. Here he found true friendship. Thousands of people here and elsewhere, who never saw Ernie Pyle in person, felt that they were well acquainted with him and liked him instinctively. They felt they knew "Jerry," his beloved wife, companion of so many journeys up and down America, participant in so many of his adventures in far off lands, to whom constant reference was made as "that girl," in his writings. They felt that they knew his father, and his Aunt Mary, back in Indiana, his native State, which gave us James Whitcomb Riley, Eugene Field, and so many other literary people. They could visualize the white picket fence around the Pyle home here in Albuquerque.

A brave man, a courageous man, a modest man, with the whole world as his assignment, Ernie Pyle looked out on the field of light and life with eyes that were kind and charitable and understanding. He was generous and tolerant toward his fellow man. He had a great and generous heart, a mind that was quick and all-embracing. He hated sham and hypocrisy. As a war correspondent, Ernie Pyle could have written his articles, in all good conscience, behind the lines, and from safety zones at the war front. Spurning safety, he preferred to risk his life, as the fighting men risked their lives, and to write about the things he had seen at first hand pertaining to the ordinary soldier. He abandoned the customary routine of reporting a war. He walked and talked with the men at the front. He traveled with them, lived with them, shared in their dangers and hardships. In his column reports, Ernie Pyle gave the names of men who otherwise would not be mentioned in dispatches from a war front. He not only gave their names, but the names of their outfits, and a broad hint now and then for the comfort and assurance of the folks back home as to where their men were fighting and how they were faring. He made the war understandable to millions of people in America. Without any effort to do so, Ernie Pyle joined the ranks of immortals as a war correspondent, became an unforgettable character, an irreplaceable man. Conceding that his talent was a gift and an achievement beyond their reach, fellow correspondents did not resent his success, or become jealous of him because of it. They were proud to have a fellow craftsman receive the highest praise from grateful countrymen. Quick to detect insincerity in any man, the correspondents recognized in Ernie Pyle a true patriot, remembering that our heroes are our patriots, that patriotism is that other and higher form of love for which men die.

Ernie Pyle not only lived up to the highest and best traditions of his profession but he created and established new horizons and new frontiers in journalism. These will serve as guideposts in the years to come for those who will come after him and undertake service in a field calling for the highest integrity, the greatest loyalty, the most exacting devotion to causes and to principles. Ernest Taylor Pyle, in his many months at the battlefields, had ample oportunity to search the hearts of men, to learn their fears, their hopes, their ambitions, to know the cruelties, the avarice, the selfishness of those responsible for the plight of the world. He had observed at close range the Gethsemane of humanity. He had seen the aftermath of the crucifixion of everything that humanity loved and revered and held sacred. And yet he did not lose faith in humanity. He did not become cynical. He believed that in God's good time the last shot of the war would be fired, that some day the soil would no longer be scarred by the blood of American youth, that justice and liberty would again prevail, that man himself would be rehabilitated, that battlefields would revert to their highest and best use and again yield the fruits of the earth for man's sustenance.

It has been said that the dead take with them clutched tightly in their hands only the things they have given away. If that be true, and I am sure that it is, Ernie Pyle took much with him in death, because he had given much in life. Ernie Pyle gave freely for the benefit of the people of America, of his talent and his time, and the best that was in him every day of his adult life. America, all of America, is richer far because of Ernie Pyle's splendid contributions to American literature. America will always remember the integrity and steadfastness of his character, his interest in and compassion for the common man. In death Ernie Pyle took with him to that other land the deep and abiding love of the people of America, the gratitude and appreciation of a great nation. Ernie Pyle is gone, but he leaves behind him in Albuquerque, in all of New Mexico, in the hearts of the people of America, and in the hearts of the fighting men in Europe and in the far-off Pacific, a name and a memory that will never fade or tarnish. The love that he gave to men and the devotion that he displayed for his country, all without stint or selfishness, will bless his memory a hundredfold in the days to come. To paraphrase the words of Lawrence Binyon in his beautiful poem, Ode for the Fallen, may I say: "He shall not grow old, as we that are left shall grow old. Age shall not weary him, nor the years condemn. At the going down of the sun and in the morning we will remember him."

Trouble With Tito—We Asked for It

EXTENSION OF REMARKS

OF

HON. ALVIN E. O'KONSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 24, 1945

Mr. O'KONSKI. Mr. Speaker, one of the most interesting delegations at the United Nations Conference in San Francisco is that of Yugoslavia. Its novelty lies in the fact that it represents one of eastern Europe's new Russian-sponsored, Communist-led dictatorships. The only other Balkan state represented at San Francisco is Greece, which has an old line, British-imposed government. The fact that Yugoslavia is by far the largest, strongest, and most dynamic United Nation in southeast Europe and the only one under Russian control gives it unusual significance and provokes a question as to Yugoslavia's basic stability.

Facts beyond dispute are that Marshal Josip Broz-Tito's revolutionary regime will control the whole armed force of the country; that the main opposition leaders have been, or soon will be, killed or exiled; that the opposition will be completely exhausted; that the administration will be as firmly in Tito's hands as the army; that the only positive statewide political force is Tito's Communist-led Partisan movement; and that it enjoys Russia's unreserved and aggressive backing.

Nowhere in Europe does more complete or enthusiastic international accord exist than that between Marshal Tito and Marshal Stalin. All these factors point to stability for the time being. It seems beyond question that Tito's Yugoslavia will, for a time, exercise unrivaled hegemony over the Balkans, outshining and outshouting every other state south of Poland. It will even exert much influence on Greece, making Great Britain's self-imposed task there increasingly difficult.

Nothing succeeds—for a while—like success, and since the Yugoslavs like playing important roles, many of them will feel Tito's lure. Slovenia will gain wide strips of territory; Croatia may annex certain areas, and Macedonia will serve as an octopus, stretching its tentacles toward northern Greece. Such expansion, power, and glory will tend to please most Yugoslavs. In addition, mighty Slav Mother Russia will aid the enlarged state in all its efforts to play a vital European role. If Yugoslavia serves as the pilot of southeast Europe and makes itself felt in international conferences, that will be only to the advantage of Soviet Russia. And if through Moscow's intervention, Yugoslavia succeeds in establishing a close federative alliance with Bulgaria which will make Belgrade the head and center of the 20,000,000 Balkan Slavs, that will enhance Tito's regime still more.

It seems certain, therefore, that for a time Tito will be master of Yugoslavia

and that Nation will lord it over the lower Danube. However, this does not mean that the regime is basically secure or that Yugoslavia itself is fundamentally stable. The fact is that Yugoslavia, as at present set up, carries within its bosom an irrepressible conflict that may eventually tear it to pieces. That conflict springs from the furious and abiding enmity caused by Tito's attempt to suppress the nationalist Serbs.

Tito's regime in all provinces, except possibly Montenegro, is supported only by a minority and opposed by the majority of Yugoslavs. This in itself is of no immediate importance, inasmuch as Lenin, Mussolini, and Hitler have abundantly shown that a dynamic, ruthless, armed minority, holding power, can maintain itself indefinitely in defiance of popular desires. In fact it can mold popular desires to fit its bayonets. Furthermore, most Yugoslavs have borne oppressive yokes during most of their history, and ordinary peasants who for centuries endured the Hapsburgs and the Sultans might be expected indefinitely to suffer Tito, who is a very clever autocrat and could "divide and conquer" as well as Franz Joseph or Suleiman. However, the Croatian base is too small to impose subjugation long, and the Serbs are too dynamic and vigorous to endure it. And when they throw off the hegemony of Croatians and Communist Serbs, it may shatter Yugoslavia.

The Serbs are the most nationalistic, dynamic, and indomitable of the Balkan peoples. It was they who first rose against the Turks, fought longest and hardest, and accomplished most with least outside help. They alone of all the eastern Europeans created their own native dynasty by putting a fellow peasant on the throne. They like strong leadership, when it serves them, and are devoted to faithful kings, as symbols and champions of Serbia. When kings become unfaithful, Serbs assassinate them. This is the way they "vote" on royalty.

They are very democratic in a patriarchal way; seldom bow the head, bend the knee, or kiss the hand. They have a marvelous collection of folk songs, most of which are epic and revolutionary. Their religion is nationalistic, their literature is nationalistic, their costumes are nationalistic, and they naively believe God speaks Serbian.

In many respects they resemble Texans. They are samples of Europe's Wild East. I am not saying they are pleasant people; indeed, they are often disagreeable and dominating. They are quite illogical, fighting tyrants at certain times and acting as tyrants at others. They frequently swagger like Yankee carpetbaggers and strut about like Lone Star Rangers with an Alamo on each shoulder and a San Jacinto in each hand. And, like Texans, they are tall and strong. They resent being dominated by Croats as much as Texans would by Jay Hawkers. Many Serbian priests resemble Kansas' John Brown, with beards two inches shorter. There are about 7,000,000 Serbs—largest Slav group in the Balkans. All are members of the Eastern Church.

Now, what has happened to these people since 1940? On March 27, 1941, they pulled off a revolution and overthrew a Yugoslav Government that had just made a pact with Hitler. This was the most heroic popular act in the history of this war. Hitler at that moment was master of the Continent and Russia was with him. The Nazi army was at the peak of its power and free to act. England stood utterly alone. At such a moment the Serbian people by a revolutionary act set up an anti-Hitler government and stoned Nazis on the street. They simply invited destruction. No people among the 45 United Nations has a more heroic initial record than that. Only two can match it.

In contrast with this, the Croats, who formed an integral part of Yugoslavia, welcomed the invading Nazis into their capital, Zagreb, with drums, flags, flowers, and songs. Thus contrast stands, writ large, in the eternal annals of human events. And in every Serbian heart. The Serbs recall that the Russian Stalin and the British Chamberlain made pacts with Hitler as their people cheered, and they also recall that when a Belgrade government trafficked with Hitler the Serb people threw it in jail.

The record of many Serbs in opposing the Nazis, even before March 1941, is excellent. While Tito, his comrades, and his master were helping Germans and denouncing both Churchill and Roosevelt as capitalist imperialists, the Serbs were beating Nazis in bund camps and killing them in ambush.

After the Croatian Quisling, Ante Pavelich, had imposed a bloody Nazi-Fascist regime in Croatia, he and his fellows massacred in cold blood at least a third of a million Serbs, perhaps half a million. This was one of the most horrible acts of modern times. Nothing the Turk, Abdul Hamid, did to the Armenians equaled it. Pavelich's Croats swept through western Yugoslavia as a wild conflagration, devouring Serbs. They laid whole provinces waste. This fact is disputed by no one. The only question is how many hundreds of thousands were massacred.

The Germans and Hungarians also took terrible reprisals in Serbia, and killed scores of thousands of Serbs, shooting men and boys en masse and stringing scores to electric-light pillars. The Serbian Nation alone has had greater losses than the whole British Empire.

The present Tito regime has capped the climax by trying to exterminate Serb nationalism. It is to be recalled that Eden made Ivan Subasich, a Croatian, head of the Yugoslav government in exile, last June. Under British sponsorship the new Premier went to Italy and the island of Vis to see Tito. Together they conspired to finish off Serbian anti-Communist resistance. They made the following appraisal of the situation: At least 150,000 Serbs were in Germany as prisoners of war. We Americans now know under what terrible conditions they lived. Germany was exterminating these young Serbs in their prison camps because they had dared fight against Hitler and were still against Hitler. They had been seized at a time when Tito, his comrades and his chief were helping Hitler. In addition, another 100,000 Serbs were doing forced labor. This meant much of the fighting power of Serbia was neutralized. Also the Serbs were largely disarmed. The Croatians, Subasich, Tito, and Ivan Ribar, felt it was a very propitious moment to give the Serbs a knockout blow. So they decided to strike with all their might.

As Hitler was annihilating Serbs in foul prisons, the Croatian partisan chiefs and Serb Communist comrades decided to liquidate those still resisting in Serbia. Tito directed practically all his military efforts, not against the Germans, but against the Serbs. In the carrying out of this plot, Tito won the support of Britain and to a certain extent of America. Every day and night the British radio urged the Serbs to join Tito. For Tito, American airmen twice bombed Belgrade, killing a few Germans and thousands of Serbs. We even outdid the Nazis in killing Serb civilians—for Tito. Also, for him we bombed other Serb towns, killing almost exclusively Serb civilians, and the British radio exultantly announced that we were doing it for Tito. We publicly revelled in killing Serbs for Tito.

The British and Americans collected food, clothes, and weapons for Tito's men. They even went in as missionaries to urge the simple Serb peasants to join Tito. And to top it all they got the Serbian King to order his Serbian Nation to join Tito.

It is well for us to recall the dramatic situation, as that plot to crush Serbia was being carried out by Croatians, Serb Communists, and the great Allies. Every few hours Moscow and London urged the Serbs to give way. As 150,000 Serb soldiers languished in German prison hells for having dared fight on the side of England, the British Broadcasting Corp. denounced as traitors their fathers and brothers who dared oppose Communist revolutionists. American weapons were being sent in to kill Serbs. Tito's men engaged in killing Serbs were wearing British battle dress—made in America. Britishers were personally on the spot trying to decoy Serbs. It is a literal fact that Nazis, Communists, and the great Allies were united in trying to destroy the Serbs.

But still the Serbs did not give way. Tito and Subasich and all the Croat partisans and all the Serb Communists, aided by British-Russian propaganda and American supplies, could not take Serbia. The Red army took it, with the acquiescence of the Serb nationalists, and handed it over to the Communist-led partisans. No Serbs opposed mother Russia's soldiers. It was the Red army that made Tito and the Serb Communists masters of Serbia. And the new masters proceeded to execute anti-Communist Serb leaders.

In 1389 the Moslem Turks crushed the Serbs at the battle of Kossovo, but the Serbs never ceased to sing of liberty and first of all the Balkan peoples rose in revolution against their masters from Asia. That was in 1804 and for 120 years they kept up that fight to free and unite the Serbs. They played a leading role in the destruction of the Sultanic and Hapsburg Empires.

They made their whole national life for half a millennium center about the rectification of the Kossovo catastrophe. Now

the Serbs say that in 1944 they went through another Kossovo, inflicted not by hostile invaders only, but also by their allies, their Croat fellow citizens and Serb Communists. And in their hearts the Serbs add that this blow was deliberately inflicted, as 150,000 of their soldiers were held in Nazi dungeons.

If the Serbs did not forget the old Kossovo, will they forget the new? Did the Jews in Babylon forget Jerusalem? Would a Texan forget such a plot? Or any man who cherished loyalty to his nation? The Croatians, Bulgarians, Macedonians, and Serb Communists may continue their unified action for some time and keep the Serbs down. But those men and women of the Shumadian Mountains will sing of that 1944 plot in a thousand new folk songs. They will tell stories of it in a thousand dingy inns. Priests will tell worshippers of it in all the village churches. Mothers will consecrate their boy babies at baptism to the restoration of "Serb honor" as mothers did for 400 years after the death of Tsar Lazar at Kossovo.

I am not saying this will be nice. I am not praising Serb nationalism. Greater Serbism was an evil. Great Serbs aroused as much justified resentment among Croatians as Yankee "carpetbaggers" in Mississippi. I am not extolling; I am just reporting. As I might report the emotions centering about Harpers Ferry. Maybe the Virginians had a reason to execute Old John Brown, but his soul went marching on, as men sang and fought to sweep away a regime. A million Serbian souls will be marching on. Four million Serbian voices will be singing. The memory of an allied plot against a helpless nation will burn as the deep flames in Mount Vesuvius. And some day it will explode.

Another War in 25 Years—Unless

EXTENSION OF REMARKS

OF

HON. ED. V. IZAC

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 24, 1945

Mr. IZAC. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an address given at Carnegie Hall, New York City, May 22, at a memorial meeting of the Society for the Prevention of World War III:

Who said war doesn't pay?

In thousands of hamlets, towns, and cities on the continent of Europe tonight there are legions of friends and kinfolk gathered together expectantly, hopefully, awaiting the return of loved ones. Of those who marched in the organized ranks, most will surely come back. A brief imprisonment for six or seven million German soldiers and even they will then be reunited with their families. And of course some day the armies of occupation will return to their native soils to resume the pursuits of peacetime.

But there are millions who will never return. No one wants to be the first to drive that spark of hope from the hearts of countless men, women, and children who, themselves now liberated, saw their countries engulfed by the German hordes and their loved ones carried away. But I know, and my colleagues know, that these millions will never return. We have looked on their places of torture, on the very implements of torture. We have seen thousands upon thousands of their poor emaciated bodies lying cold in death, strewn indiscriminately about the German countryside, in railroad cars, and in concentration camps, all bearing the unmistakable signs of brutality and torture.

And, as at Dachau, on the outskirts of that center of culture that was Munich, we viewed the thousands of naked bodies piled high in the warehouse, next to the gas chamber, awaiting disposal in the furnaces a few yards away.

But these are only a fraction of those who will never return. The fate of millions can be read in the ashes from the crematoria used in each concentration camp for the disposal of the dead—yes, and perhaps of some not quite dead. It is literally true that the ashes of the starved and tortured captives from all parts of Europe fertilized the fields of Germany. That's what it means to have a "master race" in the world.

But who are these millions who will not return? They are Russians, Poles, Czechs, French, Belgians, Dutch, Jews, and practically every nationality in Europe. They are the sons and daughters of the old folks gathered in these hamlets tonight. They are husbands torn from their wives' embrace. They are mothers and wives and sweethearts abducted and forced to do their captors' bidding. They are whole families impressed to do the work of the Reich.

As my colleagues tell you, we all saw the same sights, we talked with the same people, and we traveled together throughout Germany in our investigation of the atrocities committed by the Germans in their hundred-odd concentration camps for political prisoners. Our findings and conclusions as contained in our report to Congress were unanimous. However, there still remains to be said a word about the real significance of this ghastly thing. The design is not hard to interpret.

The general scheme of the German leaders appears to have been both immediate and long range. Having destroyed all military resistance and gathered what remained of the armed forces of the conquered nation into prison and concentration camps, they first tried by means of intimidation, of force, and of terrorism to reduce the opposition of the civilian population and thus render more simple and less costly the saddling of the German yoke on the "inferior" race who would be expected to provide the slave labor necessary to help feed the German armies and furnish some of the manpower and womanpower for the German war industries.

Then later, having gained an impregnable position militarily among the nations, the permanence of this position would be guaranteed by a studied policy of interference with the human reproductivity of neighboring populations. This latter was the reason for much of the biological experimentation that went on continuously in prison camps throughout Germany.

It is common knowledge that the intelligencia in overrun countries were approached and urged to spread the Nazi doctrine, and when they refused or failed they soon found themselves in one of these prison camps. In one camp there were seven generals of the French Army, numerous doctors, lawyers, professors, and churchmen of many nationalities. All these apparently were unwilling to do the German bidding and so were compelled to suffer indescribable hardships and torture. According to General de Gaulle, about 600,000 French Army personnel and perhaps a like number of French civilians made the supreme sacrifice, most of the latter having been compelled by the German Government, working in conjunction with the French Vichy Government, to leave their homes and become slave laborers in Germany.

The food ration for the slave laborers was so inadequate that slow starvation was inevitably their fate. At the same time that Germany was abducting from twelve to twenty millions of human beings from the other countries of Europe, she took at least half the food supplies and half the livestock from each occupied country. This resulted in wholesale hunger and reduced vitality for whole populations—and practical starvation for countless men, women, and children remaining in those countries. In addition to this designed effort to reduce millions to impotence, there is evidence that French and perhaps other prisoners of war held in Germany were subjected to treatments calculated to render them sterile. All of this goes to make up a pattern, not alone of brutal and inhuman treatment, but also a deliberate plan of extermination of neighboring populations, all aimed at making impregnable the German nation of tomorrow.

The conclusion reached by the congressional delegation after seeing and reviewing all the facts was, and I quote: "The policies herein described constituted a calculated and diabolical program of planned torture and extermination on the part of those who were in control of the German Government."

Hence for 5 years while neighboring peoples were subjected to a studied program of starvation and terrorism and extermination, the German people reveled in abundance and luxury. The loot of conquered Europe was theirs. Millions of slave laborers were there to wait upon their masters and do their most menial tasks. From works of art to machinery and raw materials, everything desirable found its way into Germany. The store shelves bulged with stolen food and Hitler could well repeat his early assurance that the German people would be the best fed in Europe.

Even today the only leather shoes to be seen on the Continent of Europe are on German feet. As we drove through towns and cities and countryside, German men, women, and children, fat, well clothed, and prosperous looking, presented a startling contrast to the thousands of emaciated victims of their cruelty. For the evidence of planned starvation can be seen wherever a naked corpse or a salvaged prisoner is encountered. In life or in death it is the same—the tightly drawn almost transparent skin encases the bones with scarcely a pound of flesh between.

On the other side of the ledger, much has been said and written about the destruction wrought by the air forces, both the British and our own. Since most of the larger war industries of Germany were in or near the great cities in order to be close to the source of labor, the bombing of these factories entailed the destruction of the cities as well. Cities like Essen, Ludwigshaven, Frankfurt are almost totally destroyed although some walls still stand and many of the former inhabitants live in the basements.

Until very recent months the damage to these war plants was quickly repaired after each bombing raid so new and repeated raids were necessary. This finally brought about the destruction of most of the houses and other buildings, cut production of fuel and supplies to a minimum, and thus hastened the end of the war. So while it is true that some suffering has been experienced by some of the German people due to being bombed out of their homes, it is not so extensive as one might think. Besides this has obtained for only a relatively short time. It is interesting to note that in the successive bombings of one of the greatest war plants of the Ruhr, continuing over a period of 3 years, only 70 persons lost their lives in the plant. Over 50,000 workers were continuously employed in that factory which is today in a state of complete ruin. But in Allied territory I saw one spot in Antwerp where, less than 3 months ago, an exploding V-2 bomb launched by the Germans killed nearly 1,000

innocent Belgian men, women, and children whose only fault was that they were within range of German weapons. In the case of the world's largest synthetic oil plant, the German managers informed us that although it was considered completely ruined, they would require only 3 weeks to get a portion of the plant in operation and in 10 months they would be in full production.

Our artillery caused considerable damage to some cities near the Rhine, but after the break-through, our spearheads of armor traveled so fast and so far that in only a few places did the Germans make a stand, and therefore no damage to towns and cities is to be found elsewhere. In flying from the Rhine eastward to Weimar to visit the concentration camp at Buchenwald, we passed over the heart of Germany for 200 miles. Flying only a few hundred feet above the ground, we could observe every detail of the country. I noticed as we passed over villages and towns, that not one tile of any roof was damaged or disturbed. I saw not even a bomb crater alongside the highways. And I counted the cattle in the fields over which we flew. From 6 to 30 head of cattle grazed in each pasture; the farmers were in the fields plowing with oxen, some with horses, and the fruit trees were in full bloom for it was April. Altogether a peaceful scene. War had not seared the heart of the Reich.

We traveled in a jeep with Patch's army for 100 miles surrounded by tanks, ducks, artillery, and supply trucks of all kinds. True, there was some damage to Ulm and Augsburg and Munich, but the people were still living in the undamaged portions of the cities and in the basements of damaged houses. Even in much bombed and battered Munich, where many of the beautiful architectural gems were damaged almost beyond repair, the massive memorials Hitler erected to his fallen beer-putsch comrades remain untouched as if prophetic of his dreams of permanence.

On the highway struggling against this onrushing wave of armor came the thousands of displaced persons—men, women, and children. Singly, by twos and threes, and sometimes in groups, these civilians of every nationality clung to a narrow strip of highway as they trudged onward, ever onward. Some were released prisoners of war, some slave laborers; some were German families bombed from their homes. A few rode bicycles; some pushed carts filled with bundles. One hayrack filled with French civilians and soldiers was pulled by an old steam engine, advancing about 2 miles per hour as it roared down the highway.

I marveled that these returning slaves did not stop long enough to wreak their vengeance on the perpetrators of this fiendish kind of life to which they had been subjected for so long. But I supposed some were restrained by the military, some were too weak, and some just wanted to get out of this cursed land even though there might be no home to return to.

So, of course, a few will return miraculously as from the grave. There are some who have known the starvation diet too short a time—they may live. The American medical men at Buchenwald have reduced the death totals from 50 per day to 25 almost overnight—and American care, American genius, and American food is today keeping alive that spark of hope that shines from the eyes of those kinfolk in the little hamlets of war-ravaged Europe who await the return of a loved one from the hell that is Germany.

This has a lesson for us. Remember the ogre or the bad giant in the fair stories? Because he is bigger and stronger he works his will on others. And so it is in true life—the strong and unprincipled can bend his neighbor to his will, and proceeds to do so.

There can be no doubt that Hitler and his people are exponents of and believers in the philosophy of force. They practiced the art and they have become more proficient than any other modern nation. In every country overrun by the German armies in this war, we have the same pattern of seizure of the men for slave labor, rape of the women, excesses both on and off the battlefield; the burning of churches filled with women and children; the massacre of surrendered soldiers; the strafing of refugees; the indiscriminate bombing with no military object in view; the inhuman treatment of other humans born in the same image and likeness.

But it is all a part of the German character and the German way of life; and if the rest of the world doesn't recognize it as such and take steps to eliminate it once and for all time, there will be no peace in our time nor in our children's. Since the era of Frederick the Great, Germans have glorified war and given to the profession of arms the highest adulation. In the last 100 years the German nation has been the aggressor in 6 different wars. The people of Germany must understand the difference for they have had full opportunity to choose between the moral teachings of such men as Pastor Niemoller and the Catholic bishops of Germany on the one hand, and the German General Staff on the other. Invariably they follow the General Staff. Tradition and pagan concepts of superiority and grandeur overcome the gentle teachings of religion.

So for 5 years the people of Germany have basked in the favor of their pagan Teutonic gods and only now for a few short months have they tasted the bitter dregs of partial defeat. Who wouldn't trade a few months of hardship and failure for 5 years of comfort and success? Hence, I insist that the members of the terroristic and fanatical Scheutzstaffel and Gestapo organizations, as well as the members of the General Staff, must be eliminated. And the rank and file of the German people must also be made to suffer, at least from some of the shortages and through some of the same kind of restrictions as were the lot of their so-called inferior neighbors. Stern justice demands that much; the preservation of world peace requires it.

Therefore, unless a punishment commensurate with the crimes committed is meted out, I warn that again before 25 years have elapsed, this same people will plunge the world into a holocaust infinitely greater than the one we are now passing through. A perfect vehicle will always be available—once it was the Kaiser—this time it was Hitler—and next time it will be someone else. And if no one else can furnish a name or a symbol, depend on the German General Staff to supply one.

War does pay—for the aggressors!

Reconversion Wage Policy

EXTENSION OF REMARKS

OF

HON. JOHN LESINSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 24, 1945

Mr. LESINSKI. Mr. Speaker, under leave to extend my remarks in the RECORD I include an article entitled "WLB Reconversion Wage Policy" which appeared in the May edition of the Research Report, which is published by the International Research Department, United Automobile, Aircraft and Agricultural Implement Workers of America—UAW-CIO—with offices at 411 West Milwaukee Street, Detroit 2, Mich. This is a very informative article and was forwarded to me by Mr. Irving Richter, national legislative representative of the United Auto Workers—UAW-CIO—whose office is at 1729 F Street NW., Washington 6, D. C.

The article is as follows:

WLB RECONVERSION WAGE POLICY

Despite labor's repeated warnings for a new wage policy to gear into the 60,000,000-job program, the WLB still has not developed any over-all reconversion program.

Recently, however, it has given some indication of what its position may be on the issue of wage cuts to prewar levels during reconversion.

WAGE CUTS

In the *Cuneo Press Inc., case* (22 WLR No. 3, p. XXII) the employer proposed to cut wages of plant guards to 1942 levels—though job content had not changed—after war contracts had been completed. The Board unanimously denied the request because the decreases "were not necessary either to correct gross inequities or to aid in the effective prosecution of the war." The Board overruled a recommendation of its review committee to allow the employer to reduce rates to the bracket maximum.

The *Dunbar Furniture Mfg. Co.* (22 WLR No. 3, p. XXII) converted from furniture to wooden plane parts manufacture in 1942, when it secured wage increases to bring its rates in line with those of other plants in the area. Upon completing war work, the company asked to retain the higher rates in furniture manufacturing. The Board unanimously approved the request, because job content remained substantially the same after reconversion.

On the basis of these decisions, it appears that the WLB will not approve rate reductions upon reconversion where job content remains the same, even when existing rates are higher than the maximum of the bracket.

In only one case, however, has the Board approached the question from an over-all point of view.

In a case between the Richmond Radiator Co. and UAW-CIO Local 66 (23 WLR 120, and No. 3, p. VII) the third RWLB denied the company's application to reduce rates to 1942 levels after reconversion. The Board, with industry dissenting, ordered adjustments to maintain earnings at wartime levels. The chairman stated:

"Such a policy (reduction of rates to prewar levels) if pursued by the War Labor Board and other stabilization agencies undoubtedly would produce a substantial deflationary pressure on the national economy. Real doubt exists as to whether such a pressure would be consistent with the national interests. * * * There is much to suggest that when the economy is in process of being fully reconverted an industry-wide wage-stabilization approach will be desirable."

A genuine reconversion policy must:

Allow no wage reductions.

Authorize rate increases to compensate for loss of overtime and premium pay.

Abandon wage brackets for industry-wide stabilization.

Raise substandard wages to 65 cents.

Remove limitations on advancement imposed by GO 31.

Release controls on fringe issues.

Cabinet Changes

EXTENSION OF REMARKS

OF

HON. CARL A. HATCH

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Thursday, May 24, 1945

Mr. HATCH. Mr. President, I have been quite interested, as everyone else

has, in the recent changes in the President's Cabinet. I ask unanimous consent to have printed in the Appendix of the RECORD editorials from the Washington News, the Washington Star, the Washington Post, and the Baltimore Sun.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Washington (D. C.) News]

THE CABINET SHAKE-UP

President Truman took three good steps yesterday toward making his Cabinet what a Cabinet ought to be.

Each change he announced is a distinct improvement. Together, they will strengthen the Cabinet greatly.

We see in his selections no evidence that he is steering "left" or "right," but only evidence that he intends to go forward, conducting his own administration, putting strong secretaries over Federal departments, and requiring them to be department heads in fact as well as name.

Tom C. Clark, of Texas, chosen for Attorney General, is an able lawyer of long experience in the Justice Department. His record encourages belief that he will enforce the antitrust and other laws vigorously and fairly.

Representative CLINTON ANDERSON, of New Mexico, now serving his third term in Congress, is a practical rancher and grain grower. As chairman of the House investigation of wartime food problems he has made himself an authority in that field. This is fortunate, because as Secretary of Agriculture he will be responsible for the War Food Administration if Mr. Truman goes through with his plan to put WFA under the Agriculture Department.

Louis B. Schwellenbach, of Washington State, who will leave the Federal bench to become Secretary of Labor, was one of Mr. Truman's closest friends when both were Senators. He was a consistent, effective supporter of New Deal measures. Whether he, or anyone, can please the leaders of both big factions of organized labor is a question. But if he does what we think the President intends—that is, if he gathers and coordinates in the Labor Department all the scattered agencies now stumbling over each other as they try to administer conflicting labor policies, and if he helps to develop a single, coherent Federal labor policy—he will serve the workers and the country well.

A Cabinet with half of its 10 members from beyond the Mississippi—the other two westerners being Commerce Secretary Wallace, of Iowa, and the new Postmaster General, Mr. Hannegan, of Missouri—will be unique. But we like this western breeze.

We hope Mr. Truman has in mind other changes.

[From the Washington (D. C.) Star]

THE CABINET SHIFTS

Some changes in the Cabinet have been accepted as a foregone conclusion ever since President Truman took office. The choice of members of a President's "official family" is a peculiarly personal prerogative of the Chief Executive with which the legislative branch seldom interferes, and there is general recognition of the personal as well as political considerations which naturally dictate the selection of those upon whom the President so heavily leans in carrying out administration policies.

The shifts just announced are in each case supported by a background of developments which make them highly logical. Secretary Perkins had made known an earnest desire to leave the Department of Labor, after a long public service dating from the beginning of the New Deal. The Attorney General, more so perhaps than any other member of the Roosevelt Cabinet, was regarded as a willing instrument for his former chieftain rather than as one who brought any marked distinction to the administration of the Department of Justice. Secretary Wickard had been bypassed in the handling of affairs which properly belonged to the Department of Agriculture, and the resulting organization has been the subject of increasing criticism, to meet which required something more than a mere reshift of administrative agencies.

The new appointments have already brought expressions of approval from Capitol Hill and will sit well with the country generally. The appointees are good men, neither leftists nor rightists, with records of achievement behind them. Judge Lewis B. Schwellenbach belongs in a category of men which has become small because of the jealousies and conflicts between the country's great labor organizations—being one of the few in public life acceptable to all of them as Secretary of Labor. His former Senate colleagues, of whom the President was one, regarded him highly. Representative CLINTON P. ANDERSON, to be Secretary of Agriculture, will find himself in the sometimes unenviable position of being made responsible for matters which have been, in the recent past, a target of his own effective criticism as chairman of a special investigating committee of the House. But behind this more recent activity on his part is a record for public service which impressed those who knew him before he ever came to Congress. The Attorney General-designate, Thomas C. Clark, enjoys the respect of those with whom he has worked as an Assistant Attorney General since 1937 in charge, first, of the Antitrust and later of the Criminal Division. He is young, likable, and regarded as fair.

While the President's disclaimer of any intent to appoint new Secretaries of State and of the Treasury was interesting, in view of past conjecture, it is still more significant that the question of any changes in the agencies conducting the military aspects of war was not even raised. There is comforting evidence that, as far as the war goes, there will be no change until it is won.

[From the Washington (D. C.) Post]

NEW BLOOD IN CABINET

President Truman moved vigorously yesterday to reorganize his Cabinet for the immense responsibilities that will fall upon it in the remaining months of war and the postwar period. In a single day he announced the appointment of new chiefs for the Departments of Justice, Agriculture, and Labor. These shifts, together with the change already announced for the Post Office Department, go a long way toward reconstitution of his Cabinet.

The mere fact that such changes are being made is a hopeful sign. Being shifted unexpectedly into the great responsibility of the Presidency, Mr. Truman was naturally reluctant to effect immediate changes. As his grip on the reins of authority tightens, however, he is moving resolutely to put the Government's own house in order. That is not surprising, for, as the Post has repeatedly pointed out, the Cabinet has long been in need of reorganization. It has had no shake-up comparable to that of yesterday since 1933.

There may be a number of reasons why President Truman eased Francis Biddle out of the Attorney Generalship, some of them personal reasons. What is most important is that Mr. Biddle's chief service often seemed to lie in providing legal justification for whatever action the Chief Executive wished to take, even though he sometimes admitted that he had very little to go on. In safeguarding civil liberties Mr. Biddle has earned widespread commendation. His record in discouraging war hysteria and in judicious prosecution of wartime offenses does not, however, offset his blunder in asking Congress for criminal penalties for newspapermen or others found guilty of divulging information which Government officials wish to keep secret. Hearty support of civil liberties is not the sole measure of an Attorney General's services. We hope that Tom C. Clark, the new Attorney General, who is promoted from within the department, will attain a higher degree of statesmanship in providing the Administration with legal guidance.

Secretary Frances Perkins' resignation had long been foreshadowed. Indeed, she wanted to retire months ago, and only the difficulty of selecting an able successor who would be acceptable to both the A. F. of L. and CIO prevented her resignation from being accepted. Undoubtedly the appointment of Judge Lewis B. Schwellenbach to succeed her will mean a reorganization of the Labor Department. As chairman of the Senate's committee investigating the war effort, Mr. Truman was sharply critical of loose organization and inefficiency in the executive branch. He pointed to "conflicting authority over and responsibility for" various war programs as one of the chief causes of failures and shortcomings. The scattering of governmental agencies dealing with labor is one of the most notorious examples of such conflicting authority.

In the Department of Agriculture the appointment of Representative CLINTON ANDERSON effects a large measure of reorganization. He will succeed both Secretary of Agriculture Wickard and War Food Administrator Marvin Jones. During most of the war years the Department has been split between these two officials. That impossible patchwork could not stand for any length of time. Apparently it was tolerated only because the late President Roosevelt could not find a satisfactory assignment outside of the Department for Mr. Wickard and could not bring himself to the point of dismissing a faithful subordinate.

Representative ANDERSON brings to his assignment a wide experience in investigating our war food controls. His reports, as President Truman noted yesterday, have been rich sources of information and constructive in approach. Now the critic and adviser will become the executive of the war food program. Much will be expected of him, and we hope that his executive operations will be as effective as his investigations have been.

In each case the new Cabinet members will be tested by their performance. Each will have numerous responsibilities, for President Truman's technique in administration, as we understand it, is to choose able men to head governmental departments, to group the great majority of governmental agencies under them, and to give the department heads a large measure of responsibility in their respective spheres. That method truly calls for new blood in the Cabinet, and we are glad to see that the President is acting resolutely to provide it.

[From the Baltimore Sun]

THE NEW CABINET

There is no escaping the fact that Mr. Roosevelt's Cabinet was a left-over. A Cabinet is peculiarly the creation and the instrument of a President. And, though Mr. Truman inherited the going administration of Mr. Roosevelt, his differences in temperament and outlook made it inevitable that he would presently begin to surround himself with men of his own choosing. Now he has done so after a seemly interval. Let us see how the new Cabinet shapes up.

First, Mr. Stettinius remains as Secretary of State. That will surprise no one. In its general outline, our foreign policy is now fairly well shaped up. Mr. Stettinius, though he may not be the greatest Secretary of State

in the country's history, is a capable administrator and executant. It would be foolish to change him now.

Mr. Morgenthau likewise stays on as Secretary of the Treasury. To many, this will be surprising, since Mr. Morgenthau's long tenure has been felt to be a consequence of his close personal relationship with Mr. Roosevelt. But again, the Treasury is at present deeply involved in what might be called the economic half of our foreign policy—that is, the shaping up of the program developed at Bretton Woods.

Mr. Truman appointed no new Secretary of the Interior, and said nothing about Mr. Ickes. Possibly that door is still ajar. Nor did he mention Mr. Wallace, Secretary of Commerce. Considering the staggering political obligation which Mr. Truman owes to Mr. Wallace, we may be quite certain that Mr. Wallace will remain. Likewise there are no changes in the service posts.

Now for the changes.

Mr. Wickard is succeeded as Secretary of Agriculture by Representative CLINTON ANDERSON, of New Mexico. Mr. ANDERSON has been emerging in the House as a particularly well-informed and trenchant critic of the administration's food policies. He has been head of the House Food Committee which recently made an exhaustive report on the meat situation, its recommendations having been adopted almost entirely as the new meat program of the OPA, and an equally able report on the sugar situation. Mr. ANDERSON may be expected to do some vigorous work as head of the Department of Agriculture; and he likewise becomes War Food Administrator, a post until now held by Mr. Marvin Jones, who has resigned. A bringing together of these two jobs is in line with good sense and efficient administration.

Secretary Wickard in stepping out of the Cabinet becomes administrator of the Rural Electrification Administration—in itself a significant appointment. The REA is one of those agencies which occupies the touchy border line between private enterprise and public enterprise. To a very substantial degree its administrator, whether zealot or moderate, can influence its policies. Mr. Wickard is a moderate.

As Secretary of Labor, Mr. Lewis B. Schwellenbach, formerly a Senator from the State of Washington and at present a Federal judge, will succeed Secretary Perkins. Mr. Schwellenbach is known as an ardent friend of labor in the New Deal sense. It has been conjectured that he received his present Federal judicial appointment largely on the strength of his vigor in behalf of labor. His appointment now to the secretaryship is not unexpected; and it is reasonable to suppose that his assignment will be to draw together into a coherent pattern the almost endless and widely distributed Federal labor activities. From an administrative point of view, this makes good sense.

Finally, Attorney General Biddle has resigned and will be succeeded by Mr. Tom Clark, Texan. Mr. Clark's background is that of a career lawyer in the Federal service rather than a politician. He was for 6 years in the Antitrust Division of the Attorney General's office under that truculent antitrust crusader, Mr. Thurman Arnold. When Mr. Arnold was appointed to the bench, Mr. Clark succeeded him as chief of the Antitrust Division. He is an ardent antimonopolist, and under him we may expect a vigorous enforcement of the antitrust laws.

There are the changes. What do they add up to? It is a bit too early to try to pass a blanket judgment. But certain characteristics of the new Cabinet seem fairly clear. First, Mr. Truman expects his Cabinet members to be competent administrators, and in general the new Cabinet gives promise of providing a more tightly knit administration. Second, as evidenced by the appointment of Mr. Anderson, Mr. Truman is not afraid of critics of administration policies. Third, Mr. Truman evidently takes seriously his pledge to carry on the broad policies of Mr. Roosevelt. The appointment of Messrs. Schwellenbach and Clark, and the continuance in their posts of Messrs. Stettinius and Morgenthau, are clear evidence of this. If Mr. Truman is moving to the right, he is not moving very far.

Poland

EXTENSION OF REMARKS

OF

HON. JOHN LESINSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 24, 1945

Mr. LESINSKI. Mr. Speaker, under permission granted me to extend my remarks in the RECORD, I include the following very informative article entitled "Poland," which was written by a former Member of the House, the Honorable Sam B. Pettengill, of Indiana. It is in my opinion one of the most concise and fair articles I have read on the Polish-Russian situation. The writer has approached the subject from a different angle than generally viewed by columnists and it should be read by all students of this important subject. It has been printed in more than 60 newspapers in this country under the caption, "Pettengill—the gentleman from Indiana—inside your Congress."

The matter referred to follows:

POLAND

The following facts throw light on Russia's claim that she must have the east half of Poland for her own security. The figures given are prewar.

Russia has a land area of 8,173,550 square miles; Poland has 150,470 square miles. Russia is 54 times the size of Poland. The State of Texas would contain Poland with enough left over to accommodate all of New York, New Jersey, Pennsylvania, Massachusetts, and Connecticut.

From east to west Russia is 6,500 miles long—a distance as great as from San Francisco to Berlin.

Russia is twice the size of all the rest of Europe. It has one-sixth of the land area of the globe. Poland has one-third of 1 percent. Russia is almost three times as large as continental United States.

The population of Russia is 170,467,000; that of Poland 35,000,000.

Russia has 21 people to the square mile; Poland has 230. Poland's population pressure per square mile is 11 times that of Russia.

Since the war started Russia has seized from Finland 16,000 square miles, or approximately one-half of Kentucky. She has completely absorbed Latvia with 20,056 square miles, or roughly the other half of Kentucky. She has taken over Lithuania, 22,959 square miles, the size of West Virginia. She has taken over Estonia, 18,353 square miles, and from Rumania has taken 19,300 square miles—the two nearly equalling the size of Ohio.

Omitting Poland for the moment, Russia has therefore added to her area land equal to Ohio, Kentucky, and West Virginia.

By agreement with Hitler in September 1939 (which has now been substantially confirmed by Messrs. Churchill and Roosevelt) Russia has taken over from Poland 77,703 square miles—the equivalent of Nebraska.

The population taken from Poland is 12,775,000, which is about that of the State of New York.

The area of Czechoslovakia is 54,244 square miles—the size of Arkansas. Bulgaria has 39,825 square miles—the size of Virginia. Hungary has 35,875 square miles—the size of Indiana. Yugoslavia has 95,576 square miles—the size of Wyoming.

These latter four, by the agreements at Yalta or Tehran, are apparently assigned to Russia's sphere of influence if not eventual incorporation into the Soviet empire.

Russia's direct and indirect conquests of territory, so far, as the result of the war, therefore equal the land area of Nebraska, Indiana, Ohio, Kentucky, West Virginia, Arkansas, Virginia, and Wyoming.

All this added to a country three times the size of continental United States.

It is now wondered in Washington, as the next secret to be brought to light, if Russia has not also been promised a free hand in Korea with 85,246 square miles—the size of Utah, and in Manchuria, with 503,013 square miles—which is twice the size of Texas, or twice the size of France plus Italy.

Reams of pages have been written about the Curzon line in Poland. Regardless of all other considerations of justice and fair dealing, the Curzon line is not a mountain range or a broad river; it is not a natural military barrier. The claim that it is necessary to Russia's military security seems nothing but an excuse for Stalin's expanding real-estate operations.

But justice to Poland cannot be disregarded in building a "just and enduring peace." On that point, I quote the Polish-American priests of Detroit: "It is inconceivable to punish an ally for its contributions to victory. History never recorded such a case."

St. Lawrence Seaway and Power Development

EXTENSION OF REMARKS

OF

HON. GEORGE D. AIKEN

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Thursday, May 24, 1945

Mr. AIKEN. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD the resolution adopted by the Philadelphia Industrial Union Council asking Philip Murray, president of the CIO, to instruct all CIO councils of the Nation to throw their full weight into the fight to have the St. Lawrence seaway project undertaken in the interest of the entire Nation.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UNION COUNCIL BACKING SEAWAY—PHILADELPHIA, PA., LABOR GROUP ASKS CIO MAKE FIGHT FOR PROJECT DEVELOPMENT

PHILADELPHIA, PA., May 11.—The Philadelphia Industrial Union Council recently approved a resolution asking Philip Murray, president of the CIO to instruct all CIO councils in the Nation to throw their full weight into the fight to have the St. Lawrence seaway and power development started.

The council said that the project is in the best interest of the Nation and the realization for the program for 60,000,000 jobs after the war.

The resolution follows.

"Whereas the CIO went on record in its 1944 national convention for full support of a legislative program that will make possible 60,000,000 jobs in a postwar period; and

"Whereas this program of prosperity and full employment cannot be realized unless

the Nation undertakes vast projects which are beyond the capacity of private industry for the full utilization of our great natural resources; and

"Whereas the St. Lawrence seaway and power project is the greatest undeveloped natural resource on the North American Continent; and

"Whereas a few selfish interests continue to think in terms of a static economy, an economy of scarcity and not the life of useful employment and abundance that should be available to all our people because of our great natural resources, our highly skilled millions of workers, and the inventive genius and enterprise that has made unique the history of our Nation; and

"Whereas the realization of the promise of Dumbarton Oaks for greatly expanded world trade and free access to the markets of the world would be greatly strengthened by the opening up of a fourth seacoast in the industrial heart of our country; and

"Whereas progressive and forward-looking industrialists, farmers, workers, and consumers are uniting in an effort to secure favorable legislative action on this great project, which will aid our country in the immediate postwar period and contribute to our future well-being and prosperity in the years to come: Now, therefore, be it

"*Resolved*, That we call upon Philip Murray to instruct all CIO councils in all the States of the Union to throw their full weight into this fight which is in the interests of the whole Nation and the realization of the program for 60,000,000 jobs."

The President Should Stay Home

EXTENSION OF REMARKS

OF

HON. BEN F. JENSEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 24, 1945

Mr. JENSEN. Mr. Speaker, under leave to extend by own remarks in the Appendix of the RECORD, I include an editorial by Mr. A. M. Piper, editor of the Council Bluffs Nonpareil, Council Bluffs, Iowa:

THE PRESIDENT SHOULD STAY HOME

President Truman has been in office only a little more than a month. He hasn't had oportunity to familarize himself with more than a small fraction of the duties and responsibilities of the Presidency. Scores of tough problems are crying for solution. It will be a long time before he can give most of them adequate consideration.

Yet he is being urged to rush off to a Big Three meeting right away. The Polish question, the Austrian situation, the ruckus at Trieste, conditions in Rumania and Yugoslavia and international affairs in general are threatening to make trouble. Only the President can compose the difficulties and get things running smoothly again, we are told.

Then there is the matter of thousands of American prisoners liberated by the Russian army. They aren't being released. So Truman must hurry right over and see Stalin about it.

We wonder if the editors and columnists who urge the President to make such a trip realize what they are doing.

They are saying in effect that whenever trouble develops anywhere in the world the President of the United States must deal with it personally.

Conditions are going to be very unsettled during the next few years. If the president endeavors to settle all the difficulties that arise he will be traveling a good part of the time. No man can possibly discharge the heavy duties of President of the United States and also act as roving ambassador extraordinary.

But that is not the most serious objection to the President going overseas to settle disputes. Every time he goes to meet Stalin, or the head of any other government who refuses to come to the United States, he places himself and the United States at a disadvantage.

Stalin knows perfectly well that if Truman comes to Russia he will be much more likely to make concessions than if he remains in Washington. That happened at Yalta and presumably at other conferences Roosevelt attended.

The United States will never be able to negotiate on an even basis with Russia if our President chases over to see Stalin every time he kicks up.

There is still another reason why Truman shouldn't make a practice of leaving the country for such conferences.

No Government head should imperil his health trying to do the work of several men. Churchill contracted pneumonia and very nearly died on one of his trips. And it is now admitted that President Roosevelt never recovered from the illness which followed his Tehran trip. The journey to Yalta practically finished him.

Let the President of the United States maintain the dignity of the United States and conserve his strength by negotiating with the heads of other governments through duly accredited representatives.

If the world is in such a parlous state that it can only be saved through periodical meetings of heads of states, it probably can't be saved anyway.

Postwar Economic Planning—Full Employment

EXTENSION OF REMARKS

OF

HON. ELBERT D. THOMAS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Thursday, May 24, 1945

Mr. THOMAS of Utah. Mr. President, victory in Europe has thrown postwar economic planning into sharp focus. Suddenly the problems which we have so long anticipated are upon us.

There has been much discussion in this country on ways and means of assuring high levels of economic activity and full job opportunity after the war. The first, and so far the only, concrete step toward action is represented by the full-employment bill sponsored in the Senate by the Senator from Montana [Mr. MURRAY], the Senator from New York [Mr. WAGNER], the Senator from Wyoming [Mr. O'MAHONEY], and myself, and in the House by Representative PATMAN. This measure is intended to "establish a national policy and program for assuring continuing full employment in a free competitive economy, through the concerted efforts of industry, agriculture, labor, State and local governments, and the Federal Government." Public hearings are being planned by the Banking and Currency Committee, before whom the measure is pending.

Other nations, like England, Australia, and Canada, have already made considerable progress in working out a government policy for assuring postwar jobs, and enacting specific legislation to that end. This gives us a unique opportunity to profit by an analysis of what they have done.

In this connection, I should like to call attention to recent developments across the border in Canada. In April of this year a white paper on employment was presented to the Parliament by the Minister of Reconstruction. This paper clearly indicates the extent of the postwar responsibility assumed by the Government. I quote the following paragraph from it:

> The Government has stated unequivocally its adoption of a high and stable level of employment and income. The effort to achieve it must pervade all Government economic policy. It must be wholeheartedly accepted by all economic groups and other organizations as a great national objective transcending in importance all sectional and group interests.

It is interesting to note that, paralleling the full-employment bill, the recommendation of the Canadian Government stresses that reconstruction measures should "provide opportunities for useful employment for all who are willing and able to work."

I ask unanimous consent to have inserted in the RECORD a memorandum prepared in our Department of Commerce on the developments in Canada with respect to postwar full employment.

There being no objection, the memorandum was ordered to be printed in the RECORD, as follows:

DEVELOPMENTS IN CANADA WITH RESPECT TO POSTWAR FULL EMPLOYMENT

Next to the actual prosecution of the war, the problem of insuring full employment (or, as some Canadians prefer to call it, high employment) during the postwar years has been uppermost in the minds of most Canadians. The broad outlines of a postwar reconstruction policy has been laid down by a special cabinet advisory committee on reconstruction, which was headed by Dr. F. Cyril James, principal and vice chancellor of McGill University, Montreal. The committee emphasized the fact that the success of Canada's reconstruction policy will be realistically measured in terms of the number of jobs that it offers to men and women who are seeking them. The report of this committee was tabled in the House of Commons and printed by the King's printer. The recommendations contained in the report are discussed in the attached article, Canada's Postwar Reconstruction Aims, which appeared in the April 15, 1944 issue of Foreign Commerce Weekly, official publication of the Department of Commerce. These recommendations have apparently served as guide posts to the Government's reconstruction policy.

The program of the current (Liberal) Government[1] was outlined at the opening of Parliament in January 1944. At that time it was said: "Postwar planning falls naturally into three broad fields—preparation for the demobilization, rehabilitation, and reestablishment in civil life of the men and women in the Armed Forces; the reconversion of the economic life of the nation from a wartime to a peacetime basis and its reconstruction in a manner which will provide opportunities for useful employment for all who are willing and able to work; and the provision of

[1] A general election has been called in Canada for June 11, 1945.

insurance against major economic and social hazards."

Several specific measures, all of which had either a direct or an indirect bearing on the postwar situation, have since been passed by Parliament and as a result of them it may be said that the postwar rehabilitation program has begun to take shape. On April 13, 1945 the Dominion's broad aims and general policy were further outlined to the public in the form of a white paper on employment and income presented to Parliament by the Minister of Reconstruction.

The white paper stated that, "The government has adopted the maintenance of a high and stable level of employment and income as a major aim of government policy. Its program inaugurates policies which break new ground." The paper stated further that the employment of about 900,000 over the 3,700,000 working in 1939 would provide a high postwar level of employment on the basis of the June 1944 population. The paper also estimated that this figure will be increased by about 60,000 annually through the natural increase of population.

With Canadian employment and income dependent on export markets the Minister of Reconstruction in the paper also set a goal of $1,750,000,000—Canadian—worth of exports annually during the postwar period as being essential to high employment. This, the report declares, is about one-half of current wartime exports in dollar value, but only about 15 percent higher than the prewar volume in the amount of goods exported. The white paper also advocates reduction of taxation, encouragement of private investment, maintenance of low interest rates, and government investment in public works adjusted to fluctuations of private enterprise.

The reconstruction program of the Canadian Government, as it now stands, was discussed in a number of public speeches made by government leaders shortly before the presentation of the aforementioned white paper. Specifically these plans or programs were summarized by Mr. Brooke Claxton, Minister of National Health and Welfare, under three general headings of; aids to production, the provision of purchasing power, and the housing and public works development. Additional statements were made by Mr. C. D. Howe, Minister of Reconstruction, in a press interview on March 5. (Mr. Howe is also Minister of Munitions and Supply.)

The following outline has been drawn up under Mr. Claxton's three general headings on the basis of the information given in the various public statements referred to above. It should be emphasized, however, that the summary includes projects of a temporary nature aimed to tide Canada over the immediate postwar rough spots, as well as those of a permanent nature. In some of these measures the dividing line between these two classifications may prove to be quite thin with temporary measures conceivably becoming a permanent part of the set-up.

A. AIDS TO PRODUCTION—CONVERSION AND DEVELOPMENT OF INDUSTRY AND CONSERVATION AND DEVELOPMENT OF NATURAL RESOURCES

1. The development of new industries to assist in the conversion of war industries and the encouragement of further technical improvements in assisting industries. Under this general heading Mr. Howe stated in his press interview on March 5 that in the sale of war plants encouragement would be given to industries which manufactured goods not previously made in Canada.

2. The elimination of restrictions upon output by government, business, or labor.

3. Assistance in the development of small business, primarily through the Industrial Development Bank which was established by an act of Parliament in 1944 and which began operations on a small scale in November 1944.

4. To encourage and promote the Canadian export trade and international trade generally by continuing to press other nations to adopt measures to promote flow of trade by general or reciprocal removal of trade barriers and by stabilization of currency.

5. The promotion of international trade by specific measures, such as the Export Insurance Act passed by the last Parliament and now in operation.

6. The encouragement and promotion of industrial research on a very much larger scale.

B. MAINTENANCE AND INCREASE OF PURCHASING POWER

1. The maintenance of price stability by continuing controls to the extent, and only to the extent, they are needed.

2. The maintenance of wages at the highest possible level by every means open to the Federal Government. Labor to share directly in production increases.

3. The maintenance of farm and fisheries prices by providing markets and establishing price floors. Mr. Claxton is quoted as having stated that legislation to this effect has been introduced and will be implemented.

4. Substantial reductions in personal and corporation taxes. (See attached special article, Canada Liberalizes Its Tax Structure, from Foreign Commerce Weekly, issue of August 26, 1944.)

5. A broad system of social security. Mr. Claxton (as no doubt is to be expected since he is the head of the Department of National Health and Welfare) has laid particular stress on the importance of the social-security program as a part of the postwar full-employment program, through the medium of maintaining and increasing purchasing power. Payments under the Family Allowances Act, passed in 1944, are expected to begin in July 1945, and at the rate of approximately $200,000,000 annually. Other measures referred to by Mr. Claxton in this general category are war-service gratuities and reestablishment credits for veterans, old-age pensions and health insurance, all being provided or to be provided by the Federal Government in addition to social-security measures provided by the Provinces.

C. HOUSING AND PUBLIC WORKS DEVELOPMENT

1. In his March 5 press interview Mr. Howe stated that house construction is expected to be the major activity of the construction industry after the war. He expressed the view that in the first period after the end of the war in Europe there would be no need for public projects to provide employment, as the great demand for consumer goods would provide employment for veterans and for labor released from production of war goods.

Public projects to provide employment are being surveyed by the provinces and municipalities, according to Mr. Howe, and these projects would be coordinated by the Federal Department of Reconstruction which would give advice as to their urgency and responsibility.

Regional committees are being set up to develop plans so that public projects will be ready if needed in any particular area. Establishment of a system of regional councils to assist the Department of Reconstruction in handling the conversion of the Canadian economy to a peace basis was also announced by Mr. Howe.

D. OTHER MEASURES

1. Assistance in the rehabilitation and reestablishment of veterans, specifically by the establishment of a Department of Veterans Affairs which was set up in 1944.

2. The extension of cooperation between government, business, and labor.

3. Cooperation between the federal and provincial governments on postwar problems. In one of his recent speeches Mr. Claxton stated that a conference for this purpose would be held as soon as it could be after the next general election.

The objectives of full employment aimed at in these various pieces of rehabilitation legislation are, in principle, accepted by members of all political parties, exception being taken however to the degree of Government participation considered necessary. This is exemplified in the following full-employment platform of the Progressive-Conservative Party presented by John Bracken, its leader.

"Every person able and willing to work must be assured of gainful occupation with sufficient means to maintain a home and family. The objective is full employment at fair wages under progressively improving standards. We oppose relief as a substitute of work.

"For the achievement of that objective—full employment at fair wages under progressively improving standards—and for the welfare and development of society, we strongly advocate the strengthening of the basic Canadian tradition of individual initiative and individual enterprise and opportunity, and the freeing of economic activities from bureaucratic controls. Government authority, however, should be maintained and exercised wherever necessary to protect primary producers, workers, and consumers from exploitation through such abuses as price-fixing combines, monopolies, and patent cartels. To those ends we believe that government should seek to create conditions under which the maximum volume of employment and the maximum national income may be assured through the initiative and enterprise of the people themselves."

The large expenditures to which the Government has apparently committed itself for the postwar period has met with some criticism. Specifically, R. B. Hanson, Progressive-Conservative Party veteran, complained in the House of Commons that Canada has been committed to expenditures "over and above those which are the ordinary inheritance of Parliament to the amount of $1,000,000,000." This criticism of government expenditures is in line with the Progressive-Conservative Party's aim of limiting government controls and participation in business to a minimum.

By contrast with the Progressive-Conservative Party's stand, M. J. Coldwell, spokesman of Canada's Socialist Cooperative Commonwealth Federation Party (popularly known as the C. C. F.) rose in the House of Commons, expressed dissatisfaction over the extent of the Government's efforts, and advocated Government expenditures of $5,000,000,000 in the 2 years following the war. In line with the Socialist viewpoint of the C. C. F., Mr. Coldwell stated that "private enterprise, by itself, has not the remotest chance of meeting this total. Even the optimistic forecasts of its propagandists fall far short of it. What is needed is a new freedom to organize production in the public interest. We must bid good-by to the restrictive practices of orthodox finance and orthodox industry whose only care has been the making of private profit."

The Liberal Party has contended right along that it is pursuing a middle course between the C. C. F. demands for complete socialization of business and the Progressive-Conservative platform of freeing economic activities from bureaucratic controls.

In this connection it is pertinent to note that while the previously referred to report of the Advisory Committee on Reconstruction went to great pains to emphasize the importance of the Government in the postwar period it did not neglect placing due emphasis on the role of private enterprise in creating full employment. It declared that every business enterprise must accept the clear responsibility for planning its operations in a manner that will provide continuous employment at steady wages for appropriate numbers of workers. A record high turn-over of labor in normal times must be universally recognized as business inefficiency. The committee urged management to assume the responsibility for the maintenance of a level of earnings for all its workers that is as high as possible in the light of prospective market prices, current costs of materials, and a rea-

sonable return on the capital invested in the business.

In approaching this ideal the committee stated that the annual income of the worker, rather than the hourly rate or the weekly wage, should be the figure on which attention is concentrated, and it must be remembered that comprehensive plans involving profit sharing, regular holidays with pay, or company pension plans to provide retirement allowances for all employees may constitute an important part of this total annual income.

Other important steps taken by the Government toward solving the problem of postwar employment in Canada include a Postwar Employment Survey begun in the summer of 1944 by the Research and Statistics Branch of the Dominion Department of Labor to determine such matters as plans which private industry has already laid for postwar conversion, the facilities available for postwar occupational training, the return of members of the Armed Forces to their former employment, estimated decreases in staff on the termination of war contracts and plans for the development of new products or services in the postwar era. The only establishments surveyed are those with 200 or more employees and the key question asks how many workers will be employed when the war is over and peacetime production is reestablished.

As part of this general survey the Department of Labor also began in March 1945, a sample survey to determine where Canadian workers intend to live and work 1 year after the surrender of Germany. Sixty thousand workers across the Dominion are now being asked this question. Labor Department officials state that the survey will help in gaging the extent of the probable postwar migration of workers back to their home areas.

The results of these surveys have not yet been made public. However, a similar investigation of employment possibilities, but on a smaller scale, was completed by the Toronto Financial Post, one of Canada's leading financial journals. This survey covered industries providing 12½ percent of all employment in Canada (or 22½ percent of all employment in manufacturing industries and services). Replies to the journal's question, "How many do you expect to employ 1 year after hostilities cease?" indicate that Canadian firms expect to employ 25 percent more workers than they did in 1939. Manufacturers were also asked to break down their working force between men and women today and their expectation for 1 year after victory. Replies from manufacturers indicated that they like women workers. Their indicated plans for 1 year after victory called for employing 17 percent fewer women than in 1943 but for the employment of 58 percent more women than in 1939.

In this connection it is interesting to note that a Gallup poll survey for the Toronto Reconstruction Council conducted in the spring of 1944 found that one-half of the married women now working want to go on working and that three-quarters of all women now working want to go on working.

Stop Goading the Soviet Union

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 24, 1945

Mr. COFFEE. Mr. Speaker, the St. Louis Post-Dispatch is, unquestionably, one of the great newspapers of America. Its editorial page is replete with gripping, challenging, and courageous discussions of the issues of the day.

One of the dangers now lurking upon the international horizon is friction between the United States and Soviet Union. Powerful and subtle forces are behind the scenes pulling strings. The future peace of the world is menaced by frantic efforts of reactionaries to foment hostility between the two most powerful members of the United Nations.

Let no intelligent American delude himself into thinking that UNCIO will succeed if we alienate Russia. Now is the time to mitigate exacerbations growing out of relatively minor issues. Let us work together for the common good. Let us give some reassurance to the parents of America that the sacrifices made by their sons and daughters in this war will not be in vain.

The only reasonably definite hope we can give to the peoples of the world that there will be no recurrence of war within the measurable future is by welding a powerful coalition between the United States and the Soviet Union, as the two major powers, coupled with France, Great Britain, and China and the other nonaggressor nations of the world. If Russia is alienated, the world will continue as an armed camp White civilization will face destruction. The material resources of civilized humanity will probably be wiped out. The world today is standing at the very threshold.

The State Department has it within its power to thwart all these dangerous attitudes and programs, the effect of which cumulatively and inevitably will be to offend the USSR and drive it from the San Francisco Conference.

It is imperative that Stettinius call a halt to the sniping at our Russian ally. The St. Louis Post-Dispatch published an editorial on April 24 entitled "Our Link With Russia," in which it refers feelingly to Russia's part in this war and to her record of historic friendship for the United States through the years.

This is the editorial:

OUR LINK WITH RUSSIA

When Alexis de Tocqueville, in 1835, published the first volume of his monumental study, Democracy in America, he ended the book with the following amazingly prophetic words:

"There are at the present time two great nations in the world, which started from different points, but seem to tend toward the same end. I allude to the Russians and the Americans.

"All other nations seem to have nearly reached their natural limits, and they have only to maintain their power, but these are still in the act of growth. All the others have stopped or continue to advance with extreme difficulty; these alone are proceeding with ease and celerity along a path to which no limit can be perceived. * * *

"Their starting point is different and their courses are not the same, yet each of them seems marked out by the will of heaven to sway the destinies of half the globe."

This must have seemed a wild statement at that time and for many years thereafter. When the French political scientist wrote, America was a youthful Republic; its President the frontiersman and fighter, Andrew Jackson. Russia was ruled by Czar Nicholas I, an absolute monarch who gave his people few, if any, liberties.

Today the prophecy of 110 years ago is being brilliantly fulfilled. The two great nations have proved not only to "tend toward the same end" but to be well on the way to achieving it. Their progress toward that end—the smashing of Nazi power and the creation of enduring peace—has been recorded in the headlines for months past. Momentarily the tangible symbol of that epochal cooperation is expected in the joining of their military forces in the heart of Hitler's empire.

The two great military forces have indeed "started from different points," as Tocqueville put it—points some 7,800 miles apart—separated by vast expanses of land and sea ruled by the high-riding Nazi enemy.

The Russians started their victorious march from far behind their own goal line at a point not far from the Caspian Sea. The Americans started on the far side of the Atlantic—at that time a sea of peril where U-boats took a continuing toll of ships and men and cargoes. They advanced to north Africa, to Sicily, to Italy, then to Normandy, and into the Reich, while the Russians, staging the greatest military comeback of all time, were steadily recovering their own territories, liberating Poland, and at last smashing their way into Berlin.

Shortly, the two forces will join. The bond between the two great nations will be ratified by the hearty handshakes and embraces of fighting men on the field of battle. Each side will have tributes to pay the other on military prowess and skill in strategy. G. I. Joe admires Ivan as a first-class fighting man. The Russian is grateful to the American for the outpouring of arms and equipment through lend-lease. The weary foot soldiers of both sides understand each other, better than do their home fronts.

This is a time for the handful of distrustful Americans to banish their enmity toward our Russian ally. Let them consider the sacrifices the Soviet armies and people have made to make possible the coming juncture, prelude to victory in Europe. Let them consider that alliance with Russia does not bind America to adopt Communist doctrines, any more than alliance with Britain obliges us to set up a monarchy.

It is a time, too, for Russian diplomacy to implement the impending symbol of the battlefield. Soviet acceptance of a fair compromise on the thorny issue of Poland's Government and representation at San Francisco would greatly gratify American opinion. We can see the justice of Russia's demand for a friendly Poland on her border, but we cannot understand the Russian insistence, despite the Yalta pledge, on seating the Warsaw group without change. A broadening of that Government, as agreed, would not harm Russia. It would start off the world conference with a sense of tension released, and higher hopes for achievement of lasting peace.

The juncture of armies will be a military triumph of highest importance. May the buoyant fraternalism of the battlefield carry over now to the conference table in San Francisco. And may each of the two nations fulfill the high responsibilities of its power "to sway the destinies of half the globe."

The Late Most Reverend J. R. Crimont, Catholic Bishop of Alaska

EXTENSION OF REMARKS

OF

HON. E. L. BARTLETT

DELEGATE FROM ALASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 24, 1945

Mr. BARTLETT. Mr. Speaker, there is being laid to eternal rest today in

Alaska one of that Territory's great citizens. I refer to the Most Reverend J. R. Crimont, Catholic bishop of Alaska. By proclamation of Governor Ernest Gruening flags are at half-mast throughout Alaska today in mourning for this prelate, who by reason of outstanding qualities had won for himself a sure place in the affection and esteem of all Alaskans of whatever creed or race.

Bishop Crimont was 87 years old at the time of his death. He had carried on the good work in Alaska for 51 years, having arrived there in 1894. Although old as we count years, Bishop Crimont was always, and up to the very end, mentally youthful and enthusiastic and filled with the same passion for service which had actuated him during his residence of more than a half century in Alaska. He was the oldest active American bishop and the first Catholic bishop of Alaska. His was the largest ecclesiastical jurisdiction in this country.

Of him it could truly be said he was a great man and a saint on this earth.

Much as Bishop Crimont will be mourned and missed there is some consolation at least in the thought that his work, so solidily founded, will go on forever in Alaska.

Address of Prime Minister DeValera

EXTENSION OF REMARKS

OF

HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 24, 1945

Mr. FEIGHAN. Mr. Speaker, so many requests have been received by me from people unable to hear the radio broadcast, or to read the text of the speech delivered on May 16 by Prime Minister DeValera, of Eire, that I have obtained a copy as received by the Federal Communications Commission, and, under unanimous consent, I insert it in the CONGRESSIONAL RECORD, so that those who are interested may have an opportunity to read it:

The long, fearful war which has devastated Europe has at last. mercifully come to an end. My first object in speaking to you tonight must be to try to express the gratitude to Almighty God with which all our hearts are full.

I am sure that we should be able to arrange for a day of national thanksgiving in which we may publicly express our due gratitude to God for his great mercy in our time.

To the peoples of all nations who have been directly involved in the war our thoughts go out in sympathy in their deliverance from the daily terrors in which they lived and in the sorrow that they must still endure—inevitable sufferings of the aftermath.

We have been spared what so many nations have had to undergo and there lies upon us, accordingly, the duty within our limited power to assist in succoring those who have been less fortunate than we have been.

I see here before me penciled notes from which I broadcast to you on September 3, 1939. I had so many other things to do on that day that I could not find time to (three words unheard—editor) and go to make a speech.

From these notes I see that I said, "noting that march of events your Government has decided its policy and announced its decision to the world." Eireann policy, I said, will be to keep our people out of war. I reminded you of what I had said in the dail that in our circumstances, with our history and our experience after the last war we would have (few inaudible—editor) I did not have to go into any details then as to what precisely were the circumstances to which I referred. Nor had I to go into detail as to what were our experiences after the last war. Nor had I to point out what a vital factor in our situation was the position of our country. I had merely to refer to them and I felt sure you would understand. Similarly, I do not think it necessary to dwell on them tonight. I pointed out then that the policy adopted had the support of practically the entire dail and entire community, irrespective of any personal views which persons held on the merits of the cause which occasioned the conflict.

That national policy then announced was thus supported by a unity rare to find amongst democratic peoples—a unity tested through three general elections in 1943 and 1944, a unity which happily survived with us to the end. All political parties and all sections are entitled to their share of credit of what that unity has achieved. It has been a triumph of national understanding and good sense.

There were times when we stood in gravest danger, but we have been preserved from the calamity of invasion, and such privations as we have suffered in our economic life have been by comparison very slight indeed. Dire economic consequences which might have been anticipated were prevented by the united efforts of our people, by the cooperation of public representatives of all parties, by hard work, by careful organization and by being enabled to obtain supplies from other countries. particularly Britain, the United States and Canada.

I know you all feel with me the deep debt of gratitude we owe to all those who at heavy personal sacrifice joined the army, including the marine service and various auxiliary defense organizations who helped guard us against the most serious of all dangers that threatened. Officers, noncommissioned officers and men of the regular army already in service at the beginning of the war formed, with the reserve and volunteer force, a well-trained nucleus around which it was possible in an incredibly short time to build up an efficient fighting force. Many tens of thousands of young men responded to appeals of the Government and of leaders of all political parties in the defense conference to join the army.

We have survived a heavy ordeal and I am sure you all realize that the end of the war in Europe does not mean the immediate or even early ending of the state of emergency. The world is still in a most unsettled state, and what may still happen no one can prophesy. Many difficulties concerning supplies and essential goods which the war created will still continue, and there can be no relaxation of the regulations relating to the distribution or use of commodities which have had to be kept under control.

We believe it probable that for a time the supplies of some important goods will be scarcer than ever. A great war is still in progress in the Far East the requirements of which will be at first demand on the productive resources and shipping of countries from which in time of peace we were accustomed to import great quantities of goods. There is, moreover, a grave shortage of food in European countries and the danger of famine in many parts of the continent. * * * We cannot therefore safely * * * to other countries to make good the deficiencies of our own production.

Not merely will international transport difficulties remain acute, but other peoples (have?) prior call on such supplies as may be available. Rationing and other forms of control of distribution and use of goods will have to be maintained so long as scarcity continues.

It is of the utmost importance, therefore, that there should be no relaxation whatever in efforts to produce all the food possible from our own soil. There is every indication the world food situation will be very serious, not only this year but for a considerable time to come, and that within the next few years we shall have to rely on our own efforts to produce the bulk of the food required to maintain the life and health of our people. We must indeed not only reduce to a minimum our dependence on imported foodstuffs but by increasing production endeavor to make substantial quantities available also to the peoples who have been less fortunate than ourselves.

So far as this year is concerned, the intention to provide food from our own resources to help in warding off starvation in European countries can be put into effect only by reducing the supplies available for our own consumption. This means not merely a reduction for a time of the present rations of some commodities but also the extension of rationing to other commodities not now subject to control. As to the future, there is no likelihood of any material change in requirements in regard to compulsory tillage in the year 1946 as compared with those in operation in 1945.

The difficulties which we have experienced in past years with regard to fuel will also remain. There are no prospects whatever of any early resumption of coal imports on anything approaching a normal scale, and our domestic fuel needs and the requirements of industry must in the coming winter be met by the turf.

The Government desires to restore normal trading conditions as early as possible and no control or regulations will be kept in force for 1 day longer than is strictly necessary. The controls established by the Government to prevent inflation must also be maintained for the time being. It will be remembered that it was after the end of hostilities in 1918 and because of a too early removal of wartime checks on expenditure that inflationary forces got out of control. The economic disorganization which caused so much hardship and distress in later years had its origin at that time. I know these restrictions are irksome, but in the national interest it is necessary for me to ask you to accept and bear them patiently until the danger is past. The Government will remove them as soon as it is found safe to do so.

Certain newspapers have been very persistent in looking for my answer to Mr. Churchill's recent broadcast. I know the kind of answer I am expected to make. I know the answer that first springs to the lips of every man of Irish blood who heard or read that speech no matter in what circumstances or in what part of the world he found himself. I know the reply I would have given a quarter of a century ago. But I have deliberately decided that that is not the reply I shall make tonight. I shall strive not to be guilty of adding any fuel to the flames of hatred and passion, which, if continued to be fed, promise to burn up whatever is left by the war of decent human feelings in Europe. Allowances can be made for Mr. Churchill's statement, however unworthy, in the first flush of his victory. No such excuse could be found for me in this quieter atmosphere. There are, however, some things which it is my duty to say, some things which it is essential to say. I shall try to say them as dispassionately as I can. Mr. Churchill makes it clear that in certain circumstances he would have violated our neutrality and that he would just-

ify his action by Britain's necessity. It seems strange to me that Mr. Churchill does not see that this, if accepted, would mean that Britain's necessity would become the moral code and that when this necessity was sufficiently great other peoples' rights were not to count. It is quite true that other great powers believe in this same code in their own regard and have behaved in accordance with it. That is precisely why we have the disastrous successions of wars; World War I and World War II, and shall it be World War III? Surely Mr. Churchill must see that if his contention be admitted in our regard, a like justification can be framed for similar acts of aggression elsewhere and no small nation adjoining a great power could ever hope to be permitted to go its own way in peace. It is indeed fortunate that Britain's necessity did not reach the point when Mr. Churchill would have acted. All credit to him that he successfully resisted the temptation which, I have no doubt, many times assailed him in his difficulties and to which I freely admit many leaders might have easily succumbed. It is indeed hard for the strong to be just to the weak; but acting justly always has its rewards. By resisting his temptation in this instance, Mr. Churchill, instead of adding another sordid chapter to the already bloodstained record of the relations between England and this country, has advanced the cause of international morality an important step; one of the most important indeed that can be taken on the road to the establishment of any sure basis for peace. As far as the peoples of these two islands are concerned, it may perhaps mark a fresh beginning toward the realization of that mutual comprehension to which Mr. Churchill has referred and for which he has prayed and for which I hope he will not merely pray but work also, as did his predecessor who will yet, I believe, find the honored place in British history which is due to him; certainly he will find it in any fair record of the relations between Britain and ourselves. That Mr. Churchill should be irritated when our neutrality stood in the way of what he thought he vitally needed, I understand, but that he or any thinking person in Britain or elsewhere, should fail to see the reason for our neutrality I find it hard to conceive. I would like to put a hypothetical question; it is a question I have put to many Englishmen since the last war. Suppose Germany had won the war, had invaded and occupied England, and that after a long lapse of time and many bitter struggles she was finally brought to acquiesce in admitting England's right to freedom and let England go, but not the whole of England, all but, let us say, the six southern counties.

Those six southern counties, those commanding the entrance to the narrow seas, Germany, however, singled out and insisted on holding herself with a view to weakening England as a whole and maintaining the security of her own communications through the Straits of Dover. Let us suppose further that after all this had happened Germany was engaged in a great war in which she could show that she was on the side of the freedom of a number of small nations, would Mr. Churchill, as an Englishman who believed that his own nation had as good a right to freedom as any other, not freedom for a part merely but freedom for the whole; would he, whilst Germany still maintained the partition of his country and occupied six counties of it; would he lead this partitioned England to join with Germany in a crusade? I do not think Mr. Churchill would. Would he think the people of partitioned England an object of shame if they stood neutral in such circumstances? I do not think Mr. Churchill would. Mr. Churchill is proud of Britain's stand alone after France had fallen and before America entered the war. Could he not find in his heart the generosity to acknowledge that there is a small nation that stood alone not for 1 year or 2, but for several hundred years against aggression; that endured spoliations, famines, massacres in endless succession; that was clubbed many times into insensibility, but that each time on returning consciousness, took up the fight anew; a small nation that could never be got to accept defeat and has never surrendered her soul. Mr. Churchill is justly proud of his nation's perseverance against heavy odds. But we in this island are still prouder of our people's perseverance for freedom through all the centuries. We of our time have played our part in that perseverance, and we have pledged ourselves to the dead generations who have preserved intact for us this glorious heritage that we, too, will strive to be faithful to the end and pass on this tradition unblemished. Many a time in the past there appeared little hope except that hope to which Mr. Churchill referred, that by standing fast, the time would come when, to quote his words, "the tyrant would make some ghastly mistake which would alter the whole balance of the struggle." I sincerely trust, however, that it is not thus our ultimate unity and freedom will be achieved, though as a younger man, I confess I prayed even for that and, indeed, at times saw no other. In later years I have had a vision of a much nobler and better ending; better for both our peoples and for the future of mankind. For that I have now been long working. I regret that it is not to this nobler purpose that Mr. Churchill is lending his hand rather than by the abuse of a people who have done him no wrong, trying to find in a crisis like the present an excuse for continuing the injustice of the mutilation of our country. I sincerely hope that Mr. Churchill has not deliberately chosen the latter course, but if he has, however regretfully we may say it, we can only say "Be it so." Meanwhile, even as a partitioned small nation we shall go on and strive to play our part in the world, continuing unswervingly to work for the cause of true freedom and for peace and understanding between all nations. As a community which has been mercifully spared from all the major sufferings as well as from the blinding hates and rancors engendered by the present war, we shall endeavor to render thanks to God by playing a Christian part in helping, so far as a small nation can, to bind up some of the gaping wounds of suffering humanity.

Franklin Delano Roosevelt

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 24, 1945

Mr. McCORMACK. Mr. Speaker, I take this opportunity to set forth in the RECORD a paragraph from a letter written by Señor Ricardo Valdés-Flores, one of the official reporters of debates of the House of Representatives of Cuba, to one of the members of our own corps of Official Reporters. It is a very beautiful tribute to our late beloved President, and reads as follows:

In my name, representing the feeling of the whole staff of the office of official reporters of debates of the House of Representatives of Cuba, and in the name also of all the Cuban reporters, I want to express to you and all the good friends of your staff our sentiment of condolence for the loss of your beloved President, Mr. Franklin Delano Roosevelt. We realize perfectly well what it means to you, to the United States, to democracy, and also to the world, because he belonged not only to you but also to everyone who loves freedom.

What Economic Policies Will Insure the Peace?

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 24, 1945

Mr. COFFEE. Mr. Speaker, under leave to extend my own remarks in the Appendix of the CONGRESSIONAL RECORD, I include herein a radio address delivered by me on the regular Tuesday night national broadcast of the Columbia Broadcasting System over some 140 radio stations on May 22, 1945.

This is a sustaining program of that broadcasting system which appears each Tuesday night under the name of "Congress Speaks."

My speech was sponsored by the People's Lobby, Washington, D. C. The address is as follows:

Abraham Lincoln was walking down the street of his native Springfield one day accompanied by his two sons. Both lads were bawling out loud.

"Why are your boys crying?" Lincoln was asked. "What's the matter with them?"

"Just what's the matter with the whole world," sighed Honest Abe. "I've got three walnuts and each of the boys wants two."

In his simple, homespun idiom, Lincoln was putting his finger on a problem that has been plaguing the earth for centuries. Nations, like children, have cried for more—whether it was for more breathing space, raw materials, or markets. They have lived by the creed of "Loot thy neighbor," and, failing to gratify their desires, have taken up arms against each other.

This time, if we really mean to have a lasting peace, the world must learn to stop living with its economic fists clenched. We must live by sounder economic policies. Otherwise, before long, any dove of peace will soon become a shrill mocking bird. Peace and economic warfare will not mix. There must be none of the bitterness which followed the last war. For it was this bitterness—and our own blindness—which gave wings to the dictators, to the sawdust Caesars, and the fulminating Fuehrers.

In Washington these days I occasionally hear some cynics wisecrack, "Peace, it will be horrible!" I don't believe our returning servicemen will consider that very funny. They have paid too dearly in this war to look forward to graduating from the battlefield to the breadline, from front-line action to backstreet apple selling.

If this war has taught us anything, it is that the world is merely one big neighborhood. And if our neighbor's house is on fire, we can scarcely live in peace ourselves by snuggling off to sleep—as we did a generation ago. This time, we must put our own economic house in order and ask our neighbor to do likewise. We can hardly close the door on him without expecting it to be slammed right back in our own face.

A peaceful world is a world in which all people live in freedom from the fear of unprovoked violence by their neighbors. It is

a world of freedom from the gnawing fear of want. Should a neighbor's individual frustrations multiply, aggression is inevitable and peace will not remain where starvation lingers. The hungry nation and hungry neighbor can break the peace. So can the idle, insecure neighbor without a useful, creative job. Only full employment will keep the peace. And security from war can only stem from economic security.

If we truly mean to live in harmony with our neighbors, we must be fair and above board in dealing with them. We must wipe out, gradually, artificial trade restrictions and unnatural tariff barriers. There must be no hindrances to our trade. We need our neighbors' business as much as they need our merchandise. And the higher their living standards the better customers they make for us. We must use our enormous productive capacity to export to the utmost and take our payments in imports.

On the domestic side, high tariffs are bullets aimed at our pocketbooks. For years some isolationist businessmen have hidden behind a high tariff smokescreen to conceal their true monopolistic practices. They have been more concerned with dividing up their own lucrative markets than in expanding our international trade.

It is only common sense that we produce the things we make best and let our neighbors do likewise. The channels of free commerce must be opened up rather than choked off with economic pressures and prohibitions. Those who are scheming to make trade a one-way street are leading us down the dead-end road to war. For nations, like small boys, retaliate when repressed. They answer boycotts with boycotts, economic nationalism with more economic nationalism. And, before long, the guns are again roaring.

That is the chief reason why the Reciprocal Trade Agreement Act, which the House of Representatives began debating today, must be passed overwhelmingly in line with President Truman's recommendation. Congress should not only extend this Reciprocal Trade Agreement legislation but bring it up to date.

Nevertheless, the administration's tariff reduction program is being bitterly opposed. And by whom? By a die-hard element which still seeks special privilege under the old high-tariff policy of the dizzy twenties. These bitter-enders are not even being subtle in their shabby efforts to protect the artificially high prices of certain American industries from the wholesome competition of other nations. They would rather we scorned our neighbors and embarked upon a reckless spree of economic nationalism. But they are being short-sighted. I believe they would be doing a disservice to any honest attempt at world peace. Their way out has been—and could become again—the road to war.

We see these economic isolationists and cultural imperialists bobbing up in many places, even though their ostrich heads are still buried deep in the sands of reaction. We see them opposing the Bretton Woods proposal for a world bank, which is a basic requirement in any lasting peace. Led by conservative big business bankers, they are sniping at the Bretton Woods plan, simply because they yearn for the good old days of uncontrolled currency manipulation, unregulated lending and speculative profits for the few. They prefer risking a recurrence of the financial chaos of the twenties and early thirties, rather than establish the machinery for settling our currency questions, with our 44 neighbor nations through an international monetary fund and world bank. Can our memories be so short that we already have forgotten that the Nazis used blocked marks and other pecuniary piracy to carry out their blood baths? The Bretton Woods plan would enable ravaged nations such as France, China and Russia to buy food, grain, clothing, machine tools—things they need to reconstruct their economies more desperately than our pity or charity.

You can see, then, how terribly urgent it is that Congress immediately approve the reciprocal trade agreements and the Bretton Woods plan. It would give the San Francisco delegates concrete proof that we are really serious about international cooperation. We must take the lead in this if only because we are the only unravished nation in this war.

But something more than lower tariffs, international banks and world food organizations are needed to insure the peace. Something more even than full employment and higher living standards for people everywhere. What I am thinking of is vigilance. Eternal vigilance is the price we must pay for eternal peace. For example, we must never again permit the cartel curse to plague us. Cartels put economic handcuffs upon the plain people of the world. A cartel is global monopoly, an international black market, an economic big, bad wolf.

We must never again permit those in our midst, whose conception of democracy is so cheap and cynical to resume prewar cartel deals. Once and for all, the power of cartels must be broken and free opportunity made possible in all democratic nations. Cartels are the exact opposite of free enterprise. Never again must we allow deals affecting the pocketbooks, health, and even lives of millions of people be secretly decided by cartelers, not subject to any public accounting for their deeds. We must not permit these imperialistic freebooters to plot against the peace and sow the seeds of another war.

But no peace will ever prevail without a fully employed people. I, for one, do not believe that depressions and poverty are inevitable.

Some business interests are now speaking of satisfactory employment for postwar America. The only kind of employment that will be satisfactory to our returning servicemen and displaced war workers is full employment, which means a steady job at good wages for every American, regardless of race, creed, or sex. This is not only practical idealism on our part but enlightened self-interest.

Without a genuine full employment and social-security program, we can never live in peace with our neghbors. We must plan for full employment. The Federal Government must accept the responsibility and not leave it to chance and private industry. Full employment is not only our number one domestic postwar problem, but also the citadel upon which we must build a sound international policy.

Regionalism, too, can be helpful in providing full employment and shaping a lasting peace. As an example, my own Pacific Northwest region for some time has been held in a kind of colonial economic bondage by certain eastern monopolists. During this war, however, we have developed a magnificent light metals production program, which can furnish thousands of jobs for our boys now coming home from the front. But there are sinister forces toiling overtime to strangle this lusty infant enterprise. I promise the small businessmen, the workers, the farmers, and the plain people of my region that I shall do everything within my power to see that this does not happen.

America's job of reconstruction is far easier than that of the European nations devastated by this war. We have rich resources in the United States and we must use them wisely. We have abundance within our grasp and must not forget it. Yet we must always bear in mind that the world is one economic family with one future and that democracy will work for the free peoples of the world only if they have a solid stake in it. We must not use our position as a creditor nation to exact special privileges from our neighbors as some myopic Americans are now urging us.

Of course, there are the faint-hearted in our midst, who are spreading the seeds of doubt and distrust. Selfish men will always seek to promote disunity in peace as they have in war. But I say to you tonight that we can live at peace with all the peoples of the world if we pay more heed to economic cooperation and less to power politics. We must show the world that we mean to have full employment and full production for the greatest good of the greatest number.

The United States is the leading member of the world economic family. We must not fail to put our own economic house in order and set an example for others. For it is only by doing our full duty as a family member that we can ever stop war.

I don't think very much can be added to the poignant words of Franklin Delano Roosevelt in his message to Congress exactly one month before he lay down to his final sleep. I quote:

"The point in history at which we stand is full of promise and of danger. The world will either move toward unity and widely shared prosperity or it will move apart into necessarily competing economic blocks. We have a chance, we citizens of the United States, to use our influece in favor of a more united and cooperating world. Whether we do so will determine, as far as it is in our power, the kind of lives our grandchildren can live."

Security for Western Hemisphere

EXTENSION OF REMARKS

OF

HON. ALVIN F. WEICHEL

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 24, 1945

Mr. WEICHEL. Mr. Speaker, under leave to extend my remarks in the RECORD, with reference to security for the Western Hemisphere, I include an editorial of Spencer A. Canary, editor of the Daily Sentinel Tribune, Bowling Green, Ohio:

PRESERVE ACT OF CHAPULTEPEC

There seems to be fear that the republics of this hemisphere will wreck a world peace charter, if they insist upon preserving the Act of Chapultepec on which they agreed at Mexico City last March.

But, if there be sincerity on the part of other powers, the preservation of that pact should prove no stumbling block. It provides that, if any of these republics is attacked by another nation, the rest of the republics shall rush to its assistance to preserve its territorial sovereignty.

Our Secretary of State Stettinius has made a suggestion which these republics are now considering. It is that the authority of the proposed security council shall be accepted to order international use of force against an aggressor but that, if any such member of a mutual defense system like the Act of Chapultepec should be attacked, it could immediately call on other members for help at once.

It will be well for the nations of this hemisphere to insist upon this privilege of mutual assistance. Although some of them are not as liberal in their form of government as the Republic of the United States, still they are republics in name and constitutional authority. They are already trained in what a representative form of government is meant to mean. Many other nations of the world are not so trained by experience.

We know that real peace of the world must ultimately depend upon the citizens of each country having a real voice in their govern-

ment through such representative form. We cannot afford to risk scrapping representative form of government by tying ourselves up with countries that do not have it.

We know that what the United States pledges to do, it will carry out regardless of what party is in power. So we do not want to pledge our word to something which we would later regret.

United States Delegates' Work at Conference Hailed

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 24, 1945

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by David Lawrence from the Washington Star of May 22, 1945:

UNITED STATES DELEGATES' WORK AT CONFERENCE HAILED—STETTINIUS AND DULLES HAVE DONE OUTSTANDING JOB, SAYS OBSERVER

(By David Lawrence)

Almost the first question heard here on returning from San Francisco is "What kind of a delegation is representing the United States at the United Nations Conference?"

The answer is that in no world conference, in my own recollection, has the United States been represented as well. This is due to a variety of reasons, but primarily to President Truman's good sense in placing the responsibility squarely on the American delegation to advise him on concrete matters up for final decision, instead of trying himself to formulate the policies at long range.

It is also due to the good sense of the Secretary of State, Edward Stettinius, who does not approach the work of the delegation with preconceived notions about personal publicity or explotation. If anything, the Secretary might be criticized for being overmodest and overcautious in seeking the detailed views of every one of his colleagues before arriving at a conclusion. This takes time, but no one can say we have had a one-man show in San Francisco or a rubber stamp for someone in Washington to utilize.

Obviously, the strength of the delegation is in the ability and keenness of Senator VANDENBERG, of Michigan, and former Gov. Harold Stassen, of Minnesota, coupled with the commen sense and wise counsel of Senator CONNALLY, of Texas. This is not to say the other members of the delegation do not play a useful and helpful part, for they do, but the brunt of the work has fallen upon those named.

DULLES' WORK OUTSTANDING

Outstanding behind the delegation, however, is one figure who doesn't appear in the head lines, but to him more than any one man goes the credit for steering the American delegation through many difficult situations. He is John Foster Dulles, perhaps the best trained and experienced man in international law and world affairs in the entire group of 49 delegations. It was a master stroke of Mr. Stettinius to persuade Mr. Dulles to accept the inconspicuous post of adviser, and it would be about the best thing that could possibly happen to the evolution of American foreign policy in the critical years ahead if the President could find some way to preserve the team of Stettinius and Dulles.

The members of the delegation say privately that Mr. Stettinius has proved himself an extraordinarily capable manager and that his organizing genius is something that the Department of State should not lose. Yet it has been predicted by nearly all the correspondents that some change in the secretaryship of State might be made when the Conference is concluded. When, however, an effort is made to mention someone who has the organizing ability of Stettinius, so vitally needed in an expanding State Department, and also the diplomatic background which Mr. Stettinius lacks, the solution is not readily found.

The name most often mentioned for Secretary of States is that of James F. Byrnes. He, however, is advanced in years and is said not to be in the best of health. Perhaps the best thing Mr. Truman could do would be to keep Secretary Stettinius on the job and put in either Mr. Dulles or someone of his training in European affairs alongside as Under Secretary of State. The experience of Mr. Grew, the present Under Secretary, will be needed in the delicate Far Eastern problems that lie ahead, and he ought to be permitted to concentrate on that field without being burdened with all the difficult European situations that the Department of State must also face in the future.

PITFALLS AHEAD

It would be a good thing, too, when President Truman goes abroad to meet Messrs. Stalin and Churchill, if he took along Senators CONNALLY and VANDENBERG and Mr. Dulles, for it will be hard to keep out of the pitfalls that must inevitably be encountered unless Mr. Truman has at his elbow the men who have learned first-hand at San Francisco something about the conflicting currents of world affairs in these critical times. It would be fine if he could keep Commodore Stassen, too, though he is reported to be anxious to get back with Admiral Halsey's fleet for the decisive operations of the war with Japan.

The San Francisco Conference has brought out clearly the main outlines of American policy that will be guiding us in the many strained situations that are likely to develop soon. The most significant achievement, of course, is our close relations with the Latin-American countries, and in that field the skill and magnetic personality of Nelson Rockefeller, Assistant Secretary of State, has been an invaluable factor in keeping high the prestige of the United States at the San Francisco Conference. It is in the realm of European affairs that the Department of State needs more personnel and more trained diplomats.

Bretton Woods Agreements

EXTENSION OF REMARKS

OF

HON. WILLIAM S. HILL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 24, 1945

Mr. HILL. Mr. Speaker, in a few days this House will consider one of the most vital issues affecting the future of our economic welfare, in fact, if mistakes and misunderstandings come as a result of our embracing this new and untried program of a world-wide currency manipulation and management it could easily lead to complete chaos in the world, as well as disastrous break-down of our own national economy.

Over the NBC network on May 19, 1945, I delivered the following address entitled "A Look at Bretton Woods":

There have been presented to the Congress numerous schemes for putting into effect that spirit of world cooperation which now seems to be demanded by our people. It is our task to examine these projects and to judge whether they are the best means of integrating our own efforts with those of other nations in the various international bodies and suborganizations.

There is now pending before the Congress a bill called the Bretton Woods Agreements Act. Proposals in this act provide for an international fund of $8,000,000,000 to stabilize the currencies of the world and an international bank with a capital of 10 billions to finance the recovery of those countries which have been ravaged by the war.

The stabilizing of currency is a laudable aim. The proposal to rehabilitate ruined lands is equally praiseworthy. But what we are concerned about is, do these proposals of Bretton Woods accomplish the purpose?

While we are filled with a sincere desire to do whatever we can, for international concord, we should not allow ourselves to be carried away in our zeal, toward making a false step. A false step could mean that we would not be cooperating in the restoration of world economy nor would we be doing anything for the good of ourselves.

It is claimed that this project will help the flow of international commerce. Resumption of world trade will give sincere satisfaction to us all. No one will disagree with the desire to establish an economic balance that will mean not alone the prosperity of the United States but also the prosperity of all the countries in the world. Everyone of us would certainly be favorable to such an effort. But, do we find these aims fulfilled in these proposals?

What we must consider is whether this conference of Bretton Woods really gives us what we are looking for in this endeavor to restore trade to lift the world up from its shattered economy and from the wreckage which the ferocity of war has caused.

I am fully aware of the dark and chaotic confusion which struck Europe as a plague after the last war. I realize the painful effects of the postwar difficulties, the great wave of unemployment and industrial stagnation which swept the whole of the continent immediately after the arms were laid down and which continued for two decades until war broke out again.

We have been assured by those who are seeking the passage of the Bretton Woods proposals, that this is a method which will precent these human calamities from recurring in the coming postwar period. We are assured that Europe will be able to find its own way, will be able to get on its feet by the establishment of this international fund and by the organization of an international bank. No one is more willing that I am, to give my full and hearty approval to this great aim.

But do I find that it is in the Bretton Woods proposals that the key to world prosperity is found? I do not. Instead, I am filled with anxiety and misgivings lest we be led into a contract which binds us to all and returns to us nothing. As the greatest creditor nation, we pledge a great deal. As the greatest humanitarian nation, we can expect nothing—not even the good will of those of whom we become the benefactors—for thus is is written in the bond we sign.

To restore a normal economic balance, we must face the question of Europe's industrial and commericial chaos with bold and level-headed realism. To approach the problem otherwise is to delude ourselves. We have got to be assured of strict political integrity by the leaders of the countries of Europe. We have to know that stern measures are taken to restore economy through honest trade and industry rather than the easy way of manipulating credit and tampering with printed money, which despite Bretton Woods, they will always be able to do, if they are so minded and malintentioned.

These past 20 years have seen the currencies of all countries rise and fall, so that it sometimes happened, what was once a great standard of value all over the world, had time and again, fallen to be worth barely more than the paper on which it was printed. It is now known as one of the great errors of the time between the wars that currencies were allowed to run headlong toward an inflationary and bottomless pit in their value. The effects of this on world trade were catastrophic. We were among the first to realize that with such ruinous inflation, trade was at a standstill.

Through inflation, the Germans were able to undersell every country in the world. This crippled all competitors. Then they paid for their raw materials and other necessary imports in their worthless specie. This crippled their creditors.

Not alone did this practice become the rule in the ordinary channels of finance and trade, but also in the payment of the Government debt itself. The German Government paid its huge internal debts by simply printing money. What it had set up as the standard of value was an idle symbol. We know of the millions of American dollars which were poured into Germany and which were never paid back because of the deliberate policy of the German Government in making its money worthless.

The manipulation of currency and credit is one of the tricks of international economic strategy. It was not Germany alone who paid her debt this way. A large part of the debt of France, of Italy, the Balkan countries, and many others was paid in worthless paper. By debasing their currencies, all of their internal and much of their external obligations were wiped clean from the creditor's slate.

We have based our money on gold and have kept it sound. Germany had little gold when Hitler came to power. And yet, without gold, Hitler built up a strong industrial state. How did he do it? Craftily, he manipulated the money of Germany. He established artificial price levels. He tried to corner some markets—especially those of essential war materials—and flood others, to destroy his competitors. He made bilateral trade agreements to give temporary advantage to some nations at the expense of others. All in all, with his dictatorial power, he tried to jockey all world trade to the profit of Germany and to the detriment of the rest of the world.

In regard to currency, in his book The Gentlemen Talk of Peace, William Ziff says:

"The Reich used a deliberately depreciated currency as a whip whenever she found it desirable. The Nazi government instituted a large number of currencies whose monthly range fluctuated widely. These included more than 20 kinds of marks, each with its separate purchasing power. Utilizing the bewildering complexities of this system of devaluated money, the Reich would export on the basis of one type of mark and invoice her sales on that of still another.

Now this is the kind of international deception that is possible with credit, exchange and currency. How can we ever be expected to join with an international authority where we can be subjected to such trickery and fraud by any future predatory power?

The evidence of willful manipulation is right before our eyes. And in that connection, we can at least take note that with his artificial credit and tinkered exchange, Hitler built up that powerful army, navy and air force—five or six million men, with some twelve thousand airplanes, 6,000 tanks, 300 submarines and a big German high seas fleet.

Hitler mustered this gigantic army and navy without even the knowledge of the states which were his nearest neighbors. If a powerful army, navy, and air force could be mobilized by a conniving leader in secret, how infinitely easier to print treasury notes by the thousands—even of the highest denominations—without anyone having the slightest knowledge of where they came from.

There is the danger. The danger lies in the selfish ambitions and the unworthy moral code of nations which will enhance themselves at the expense of others, of nations who want wealth and empires on the cheap.

The get-rich-quick theory exists in states as well as amongst individuals. The formula of how it can be done by currency and credit has already been given them. All they have to do is to carry it out and it will again topple the whole wide-world financial structure into chaos.

We should remember that up until now the progress of the world has proceeded along economic and geographic paths which had almost become stratified. The fact—of relatively recent date—that the center of gravity in the financial world has been transferred from London to New York is an evidence of a change in this once-stratified course. It is an evidence of a change because economic power has changed. The world itself is developing along other lines than those which have remained the prescribed channels of the past. We have replaced England as the banker of the world and also as the world's greatest factory.

And as we view that great heaving mass of geographic and economic change which is solely but surely taking place in the world, we must pause to take stock. Where will the United States stand in this inevitable process of reallocation of global economy? The fall of Germany and her subjugation to allied policy eliminates her from the markets of the world for generations to come. But where Germany collapses as an industrial competitor, Russia rises to seek her place in the world economy of tomorrow. The great resources of China and India are waiting for exploitation. In the new set-up of the world's economic forces, the United States must be ready to hold her own and to defend her share in the commerce of the globe.

Above all, we have got to remain anchored and firmly anchored to gold as the basis of our currency. On this we have prospered and in this way we expect to prosper in the future.

Until we are assured that our own economy is not to be impaired by the slighest intrusion into our own economic system, until we are satisfied that this plan offers a straight road to international cooperation rather than be strewn with obstacles and pitfalls, until we are certain in our own knowledge that we have safeguarded and protected the well-being and prosperity of our own hardworking population—until then we should withhold approval of any measure which puts in jeopardy the firm position we hold at home and the powerful place we have won amongst the nations of the world.

Our America

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 24, 1945

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to include the following excellent editorial which appeared in the May 17, 1945, issue of the Lawrence (Mass.) Evening Tribune:

OUR AMERICA

I Am an American Day will be observed in this community on Sunday next simultaneously with programs throughout the Nation.

A day has been set aside each year by Presidential proclamation upon which all new citizens, either by becoming of age or by naturalization, are welcomed to the status of full-fledged American citizenship. The local observance will consist of a radio program Sunday morning and special impressive exercises Sunday evening in Oliver School hall.

The purpose of the day as originally intended was to impress upon those recently admitted to American citizenship through the process of naturalization and those who arrived at the age of full rights of citizenship the greatness of that citizenship. It was intended to help them to arrive at a full appreciation of the privileges coincident with that status and to instruct them along lines that would help them to intelligently exercise those great privileges.

No people on earth have rights and privileges comparable with those that are accorded American citizens. The right to vote and to participate in political campaigns, the right to aspire to and hold public office, the right of self determination and many others are what make America the horizon to which all oppressed people of the world look with hope. America has always been sympathetic toward those who suffered from tyranny and despotism. She has championed the causes of those who suffered and gave asylum to many through the years.

Never was there more reason to be proud of American citizenship than now and never did America stand for more than she does right now. The might of America was never greater, nor was she ever more respected by the other nations and peoples of the world. Every American today has right to be proud of the Armed Forces of this country which have during the past 2½ years dealt such a crushing blow to the greatest and most fanatical armies that Europe has ever seen, and today they are continuing to crush other great fighting forces mustered by the Japs in the carefully and long-planned program of conquest.

America, with her great privileges and freedoms, her expansive religious and educational programs, and deep love of peace, was struck a foul blow from a foul enemy in December of 1941. Unprepared for war, almost overnight her great resources were molded and welded into programs for the development of Army, Navy, and Air Force organizations that became the most feared in all history. That great war machine wrought unconditional surrender from a maddened and fanatical foe. It is repeating the same program with the pagan forces of Japan.

Those are some of the reasons why we should be proud to be Americans and why on Sunday next we should at least in spirit join in the welcome to our new citizens and renew our own pledges of loyalty to our flag and country.

I Am an American Day might give rise to inspirations within us to dedicate ourselves to at all times foster and propagate the fine principles of life and Government as expounded in the Constitution of the United States.

Cotton on the Cross

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 24, 1945

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement of Tom Linder, commissioner of agri-

culture of Georgia, before the subcommittee, House Agriculture Committee, May 14, 1945:

COTTON ON THE CROSS

DID YOU KNOW THAT?

1. From 1931 to 1941 imports of cotton and cotton substitutes into the United States amounted to the equivalent of 33,000,000 bales.

2. If these imports had been 50 percent less we would have been short of our needs of cotton on August 1, 1941, 4,000,000 bales.

3. Under reciprocal trade agreements four principal industrial exports increased 384 percent—four principal agricultural crops exports decreased 50 percent.

4. Proof of these statements is contained in the attached document. Proof taken from the office records of the governmental departments.

WHAT IS THE REMEDY?

1. Abandon reciprocal trade agreements.

2. Regulate all tariffs by congressional act as required by the Constitution.

3. Debar imports of cotton and cotton substitutes.

4. Construct cotton mills to process cotton for consumption.

5. Maintain domestic farm price in line with domestic industrial prices.

The story of cotton from 1933 to 1941 is without parallel in all the history of economic warfare.

Cotton has been in the hands of its enemies. Apparently it has had no friends.

The story of cotton as told by the official figures of the United States governmental agencies is beyond belief.

When reading the story of cotton in these official figures it is impossible to escape a conclusion that powerful influences have deliberately set about to destroy our cotton industry. They have almost succeeded.

In 1933 Congress passed the Agricultural Adjustment Act. Under this act America's production of cotton has been sharply curtailed.

In 1934 Congress passed the Reciprocal Trade Agreements Act.

The Reciprocal Trade Agreements Act has been administered by two or three powerful corporate interests. Our State Department has been used to bring about a tremendous increase in business for these two or three corporate interests. The American cotton grower and other farmers have been crucified in the interest of internationalism.

Do these statements seem strong? Then listen to the evidence on which these statements are based. The following table A, shows the exports of the four principal industrial commodities for the years 1931 to 1941, inclusive.

TABLE A.—*The 4 main industrial export commodities*

[In thousands of dollars]

	1931-35 average	1936	1937	1938	1939	1940	1941
Automobiles and other vehicles	167,292	279,514	409,930	362,493	393,946	641,313	1,139,552
Industrial machinery	94,702	158,493	240,471	269,908	289,896	450,718	475,757
Iron and steel semimanufactures	37,961	79,845	232,149	132,471	169,123	371,185	327,354
Steel mill manufactures products	24,970	32,014	67,937	51,771	66,552	144,810	173,746
Total exports of 4 above commodities	324,925	549,866	950,487	816,643	919,517	1,608,026	2,096,409
Total exports, all industrial commodities	1,008,956	1,424,223	2,139,961	1,938,285	2,133,536	3,002,114	3,842,226
Total exports of domestic merchandise	1,988,914	2,418,896	3,298,929	3,057,169	3,123,343	3,934,181	5,019,877

Chart 582, pp. 514 and 515, Statistical Abstract of the United States, 1943.

In the last line of the above chart the total exports from 1931 to 1935 averaged $1,988,914,000 per year.

You will note a rapid increase of these exports. In 1941 total exports reached $5,019,877,000.

This was an increase in total exports of $3,030,963,000.

We are told that the reciprocal trade agreements are responsible for this increase of foreign trade.

Maybe reciprocal trade agreements are responsible for this increase in trade. Who, then, was benefited by these trade agreements?

During the period of 1931–35, industrial exports averaged annually $1,008,956,000.

In 1941 total exports of industrial products rose to $3,842,226,000.

This was an increase in industrial products annually of $2,833,270,000.

Total exports of agricultural products increased only $197,694,000 while exports of industrial products increased $2,833,270,000.

Exports of industrial products increased 384 percent. During the same period exports of agricultural products increased only 20 percent.

I made the statement that two or three large corporate interests had controlled the State Department and had received all the benefits from this increase in foreign trade.

Let us see if these governmental figures justify that statement.

From 1931 to 1941, total industrial exports increased $2,833,270,000. During the same period the four items of automobiles, industrial machinery, iron and steel semimanufactures and steel mill products increased $1,771,484,000.

These four commodities received 62 percent of all the increase in industrial exports. All other industrial commodities combined enjoyed only 38 percent of the increase in industrial exports.

Let us see how the farmers fared under the administration of these trade treaties by great corporate interests.

The following table will show us how the farmer has been crucified:

TABLE B.—*Four main agricultural export commodities*

[In thousands of dollars]

	1931-35 average	1936	1937	1938	1939	1940	1941
Cotton, unmanufactured	366,540	361,028	368,660	228,647	242,965	213,400	82,562
Tobacco and manufactures	111,601	147,898	147,772	170,028	93,341	57,456	82,393
Fruits and nuts	84,798	80,607	82,164	99,061	83,216	35,508	52,399
Grain and preparations	55,392	29,556	94,143	223,499	99,550	76,360	81,299
Total main 4 agricultural items	618,331	619,089	690,739	721,235	519,072	382,724	298,653
Total agricultural exports	979,957	994,746	1,158,968	1,118,884	989,805	932,067	1,177,651
Total exports of all domestic merchandise	1,988,914	2,418,896	3,298,929	3,057,169	3,123,343	3,934,181	5,019,877

Chart No. 582, pp. 514 and 515, Statistical Abstract of the United States, 1943.

The last line of the above table shows that total exports increased from $1,988,914,000 to $5,019,877,000.

Total exports increased 252 percent.

The last line of the above table shows that total exports of agricultural products increased from $979,957,000 to $1,177,651,000.

This was an increase in agricultural exports of $197,694,000 or 20 pencent.

Exports of industrial commodities increased 384 percent while exports of agricultural products increased only 20 percent.

Exports of industrial products increased 19 times as fast as exports of agricultural products.

I wonder if there is a reasonable man who would say that the officials of the State Department have not been influenced and controlled by a few large corporate interests in their every act in connection with these reciprocal trade agreements.

I say to you that these facts are so plain that "He who runs may read." I say to you that these facts are so convincing that "A wayfaring man, though a fool, need not err therein."

We have shown that exports of industrial products increased 19 times as fast as products of agriculture.

This, however, is not all the story. It is only half.

Take the basic farm crops.

Take those crops which the AAA was supposed to stabilize.

Take those crops which represent the sweat and toil of men, women, and children in the fields and see how these crops fared while 2 or 3 great corporate interests controlled our State Department. Let us see what happened to the men, women, and children on the farms while they were being deliberately sold down the river by a few great corporate interests and a few selfish politicians who had gained access to the State Department.

Let us see how the laws written by you men of Congress have been used to oppress the very people whom you were trying to help.

Refer back to table B, the last table above in the first line, unmanufactured cotton.

During the period 1931 to 1935 our exports of raw cotton averaged $366,540,000 per year. In 1941 this export, notwithstanding increased prices of cotton, had gone down to $82,562,000.

In the second line of table B take tobacco manufacturers. From 1931 to 1935 our average yearly exports amounted to $111,601,000. In 1941 in spite of increased prices these exports had shrunk to $82,393,000.

On the third line of table B we find fruits and nuts. During the period 1931 to 1935 our annual exports averaged $84,798,000. In 1941 this had shrunk to $52,399,000.

On line 4 of table B we find grains and preparations. During the period 1931 to 1935 our exports of grains and grain preparations averaged annually $55,392,000. In 1941 this had increased to $81,299,000.

Now let us take these four principal export items of agriculture and total them and compare with the total of the four major industrial export items.

Line 5 of table B shows that during the period 1931–35 our total exports of these four main agricultural items totaled $618,331,000. In 1941 the total of these four main agricultural groups had dropped to $298,653,000.

Exports of these main farm crops had actually fallen off $319,678,000. Our exports of these main crops had actually fallen more than 50 percent.

Remember that exports of the four main industrial items increased 384 percent.

Remember that exports of the farmers' main crops declined more than 50 percent.

Can any sane man doubt that the men who control iron, steel, and automobiles in this country also controlled our State Department in making these trade agreements?

In view of these figures, should sane patriots consider giving more authority to such men as Stettinius of J. P. Morgan & Co., to such men as Will Clayton of Anderson-Clayton Cotton Co., to such men as Rockefeller? It is inconceivable that men elected by the people of the United States to represent them in Congress and the United States Senate should think for one moment of doing this.

The greatest enemies on earth to this Nation could not plan or scheme anything more destructive to our civilization and our democracy than the things which have been going on right here in Washington in this Nation's Capital.

The following table C shows that in the period 1931–35 our exports were almost equally divided between industry and agriculture. Industry and agriculture were about 50–50.

Under the operation of the trade agreements this picture has rapidly changed and in 1941 agricultural exports had fallen from 50 to 24 percent while industrial exports had risen from 50 to 76 percent.

TABLE C.—*Total exports, 1931–41, with division in agricultural and nonagricultural exports*

[In thousands of dollars]

Year	Percent agriculture	Agricultural	Nonagricultural	Percent industry	Total of all exports
1931–35	50	979,957	$1,008,956	50	1,988,913
1936	42	994,746	1,424,223	58	2,418,969
1937	37	1,158,968	1,139,961	63	3,298,929
1938	37	1,118,884	1,938,285	63	3,057,169
1939	33	989,805	2,133,536	67	3,123,341
1940	23	932,067	3,002,114	77	3,934,181
1941	24	1,177,651	3,842,226	76	5,019,877
Total	------	11,271,906	19,525,125	------	30,797,031

Chart 582, pp. 514 and 515, Statistical Abstract of the United States, 1943.

It is generally conceded that exports must be balanced largely with imports. Let us now look at the picture of imports, see what has happened to imports from 1931 to 1941.

The following table D demonstrates that the same influences controlling our exports are also taking care of their own interests when it comes to imports. These great corporate interests working through their hirelings and partners in the State Department are not traveling a one-way street. They are working both ends against the middle. The farmer and his wife and children are paying the freight. Industrial workers, white-collar people, and the general public will be made the victims of this same practice if our Senators and Congressmen do not call a halt to their deadly scheme.

TABLE D.—*Total imports, 1931–41, with divisions into agricultural and nonagricultural imports*

[In thousands of dollars]

Year	Agricultural	Nonagricultural	Total of all imports
1931–35	1,314,348	389,919	1,704,266
1936	1,899,933	524,044	2,423,977
1937	2,346,641	663,209	3,009,852
1938	1,494,502	455,121	1,949,624
1939	1,726,260	549,839	2,276,099
1940	1,896,208	644,449	2,540,656
1941	2,372,180	849,775	3,221,954
Total, 1931–41	18,307,464	5,636,032	23,943,492

Table 584, pages 518–519, Statistical abstract of United States, 1943.

In the last line of the above table D, you will see that total imports from 1931 to 1941 reached the sum of $23,943,492,000.

Of this $23,943,492,000 imports, $18,307,464,000 were agricultural imports.

Total imports of agriculture was $18,307,464,000, while total imports of industry was only $5,636,032,000.

More than 75 percent of total imports was agricultural. Less than 25 percent of total imports was industrial.

We have seen how the farmer has been made the goat as to exports and as to imports.

We have seen how the AAA cut the farmers' production in the United States for the purpose of creating a market here for agricultural products from foreign lands.

We have seen how the Reciprocal Trade Agreements Act has been used to flood this country with foreign agricultural products. We have seen how the Reciprocal Trade Agreements Act has been used to destroy the American farmers' foreign market in order to create a foreign market for favored industrial products.

The farmers' crops were cut. The farmers' foreign market was destroyed. The State Department was used as the tool of a few great corporate interests to drink the blood from the open wounds of a prostrate agriculture.

These leeches like all leeches are no longer satisfied with the amount of blood they are getting. They are now asking that prostrate agriculture be bled anew so there will be more blood on which these leeches may feed.

We have seen how agriculture as a whole has fared as to imports. Let us now take a look and see how cotton has fared as to imports. How much cotton and cotton substitutes has been brought into the United States under the operation of the reciprocal trade agreements.

I refer to a statement entitled "Imports of Merchandise by Commodities, Groups, and Articles, 1931 to 1940" (general imports 1931 and 1932; imports for consumption thereafter). This table 619 is on pages 634 to 669 of Statistical Abstract of the United States for 1942.

Table 619 is very long and includes numerous items so that it is impossible within the limits of this discussion to undertake to go into the entire table.

For your specific information I have prepared some tables by selecting a number of specific items of imports of cotton, cotton manufactures and cotton substitutes from said table 619.

The following table E shows eight items of imports of cotton and cotton substitutes. I invite your careful study and consideration:

TABLE E.—*Selected groups of imports of cotton, cotton manufactures, and cotton substitutes, 1931–40*

[In thousands of pounds]

	1931–35 (average)	1936	1937	1938	1939	1940	Total
Cotton, unmanufactured	64,660	105,688	134,121	106,382	103,578	131,780	904,849
Cotton waste	38,629	99,109	71,204	11,384	17,002	28,885	420,729
Cotton cloth (estimated 2 ounces to square yard)	5,237	14,274	18,415	7,285	13,728	10,543	90,430
Cotton rugs and floor coverings (estimated 8 ounces to square yard)	5,320	7,945	8,571	4,509	6,229	3,872	57,726
Cotton belting and rags	17,618	25,635	30,408	18,693	8,348	1,695	172,869
Jute and manufactures	618,667	813,385	1,045,127	704,209	581,930	668,983	6,903,969
Flax and hemp	20,426	26,868	29,254	6,908	28,017	19,971	213,148
Manufacture of flax, hemp, and ramie	43,272	53,430	52,445	31,932	37,404	17,246	408,817
Total pounds	813,829	1,146,334	1,389,545	891,302	796,236	882,975	9,175,537
Equivalent to thousands of 478-pound bales of cotton	1,702	2,398	2,398	1,864	1,665	1,847	------

From table 619, pages 631 to 669, Statistical Abstract of United States, 1942.

Explanation: The figures in column headed "1931–1935 average" represent imports averages over a period of 5 years. In arriving at figures headed "Totals" in the last column to the right, it is necessary to multiply all figures in column 1931–35 average by 5. The figures in column 1931–35 average, when multiplied by 5, are added to the figures of the individual years of 1936 to 1940, giving the total figures in the last right-hand column.

Line 1 of table E shows that from 1931 to 1940 we imported a total of 904,849,000 pounds of raw cotton. This is the equivalent of 1,892,880 bales.

According to line 2 we imported a total of 420,729,000 pounds of cotton waste. This cotton waste in weight is equivalent to 880,186 bales.

Line 6 shows that we imported a total of 6,906,969,000 pounds of jute and jute manufactures.

The amount of jute imported from 1931 to 1940 is the equivalent in 478-pound bales of cotton to 14,449,726 bales.

The eight items covered in table E aggregate 9,175,537,000 pounds. This is the equivalent in 478-pound bales of cotton to 19,195,000 bales.

TABLE F.—*Imports*

[Thousands of pounds]

	1931-35 (average)	1936	1937	1938	1939	1940
Yarns and warps mainly bleached, dyed, combed, or plied	1,644	2,126	2,019	1,054	1,616	0,811
Blankets	.076	.029	.068	.031	.009	.006
Tablecloths		883	1,916	1,479	2,479	3,438
Velvet and velveteens	148	1,303	998	258	434	594
Bedspreads and quilts	1,074	1,587	2,796	2,228	2,611	1,807
Gloves and mittens	2,467	1,942	2,237	1,286	804	563
Hosiery	554	2,313	1,649	713	1,061	1,345
Mufflers and handkerchiefs	1,830	5,165	3,247	1,866	2,737	2,544
Mufflers and handkerchiefs, embroidery and lace	.034	.005	.009	.036	.035	.038
Manufacturings flax hemp, handkerchiefs	1,254	1,354	1,649	1,540	1,465	1,727
Towels, napkins, and bedclothes	3,234	3,100	3,441	1,997	1,690	1,064
Other vegetable fibers, unmanufactured	405,758	458,626	478,582	245,642	440,437	521,457
Binding twine, cordage, and other	47,145	80,146	68,158	67,446	66,576	41,367
Wool, mohair, etc., unmanufactured	135,824	257,725	326,035	104,274	245,971	360,637
Hair of angora and cashmere and carbonized wool	1,045	3,738	3,784	1,554	2,903	2,943
Wool, semimanufacturings	4,868	21,330	15,463	4,770	19,762	15,596
Wool manufactures	5,401	10,624	12,333	7,683	13,934	11,148
Total weight	572,351	851,996	924,384	443,907	804,524	967,065
Equivalent bales of cotton, 478 pounds	1,197	1,782	1,933	928	1,683	2,203
Equivalent bales of cotton from table E	1,702	2,398	2,907	1,864	1,665	1,847
Total equivalent to 478-pound bales of cotton, table E plus table F	2,899	4,180	4,840	2,792	3,348	4,050

From table 619, pp. 631-669, Statistical Abstract of United States, 1942.

Explanation: The figures in column headed "1931-35 average" represent import averages over a period of 5 years. In arriving at figures headed "Totals" in the last column to the right, it is necessary to multiply all figures in column "1931-35 average" by 5. The figures in column "1931-35 average," when multiplied by 5, are added to the figures of the individual years of 1936 to 1940, giving the total figures in the last right-hand column.

Table F shows 17 items of import.

We imported the equivalent of 14,514,000 bales of cotton of these 17 items from 1931 to 1940, inclusive.

When we add the 14,514,000 bales equivalent shown in table F to the 19,195,573 bales equivalent as shown in table E, we find that we imported of the 25 items shown in tables E and F enough poundage of cotton and cotton substitutes to be the equivalent of 33,709,573 bales of cotton.

Remember that only 25 selected items of imports were equal to 33,000,000 bales.

Remember there are a great number of other items of imports of cotton and cotton substitutes which are not incorporated in these figures.

It is, of course, possible that some cotton manufactures included in these figures were produced from raw cotton grown in the United States.

I do not know whether this is true or not.

Should it be true, however, that some of these imports were produced from American cotton, these will be fully offset by the hundreds of other items of imports which are not in any way included in this estimate.

Total production of American cotton for the 10 years of 1931 to 1940 was 132,546,000 bales.

On August 1, 1941, the carry-over of American cotton was 12,166,000 bales.

I have shown you where we have used cotton and cotton substitutes during the same period to the equivalent of over 33,000,000 bales.

Had we used American cotton in place of only 50 percent of these imports instead of carrying over 12,000,000 bales of cotton, on August 1, 1941, we would have been 4,000,000 bales short.

It is crystal clear from the above figures that all cotton's troubles are imported. It is equally clear that all of agriculture's problems are imported. We can almost see with equal certainty that all our troubles are imported.

What should this committee and Congress do for cotton?

1. Repeal Reciprocal Trade Agreements Act. Stop importing cotton and cotton substitutes.

2. Increase cotton-processing plants. People cannot wear bales of cotton; they cannot sleep on bales of cotton. Build cotton mills to make cotton bagging for cotton bales. Build cotton mills to make sacks for fertilizer, corn, and wheat. Build cotton mills to make every grade of cloth from the coarsest to the finest. Put our cotton in merchantable form and the people of the United States will use it and the world will cry for it.

3. Give the farmer a price for his cotton. We know from experience and from Government figures that high prices mean high consumption and low prices mean low consumption. We know from Government figures that every dollar the cotton farmer receives turns into $14 in national income.

4. Keep protective tariff high on manufactured cotton goods. It is impossible for the American manufacturer to pay American wages and then sell his product at world prices in competition with foreign pauper labor.

5. Quit trying to control the farmer. Discontinue the imports of things that destroy the farmer.

A Newspaper Editor Appraises President Truman

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 24, 1945

Mr. COFFEE. Mr. Speaker, the Seattle Star, of Seattle, Wash., is a dynamic and enterprising daily newspaper of the progressive and providence-favored Pacific Northwest. Its publisher is Howard W. Parrish, well known in the journalistic fraternity and for many years an operator of newspapers in Florida for the Parry interests. He has now returned to his erstwhile bailiwick of Seattle.

Just a few years ago Howard Parrish and his associates purchased the Seattle Star from its former owners. The Star, at that time, had run down and was skirting the dangerous cliffs of bankruptcy, but under the brilliant, energetic, and skillful management of Howard Parrish the newspaper has prospered.

When newsprint again becomes available in unlimited quantities, I predict for the Star transcendent success and enormously increased circulation.

Cliff Harrison, the managing editor of the Star, is a genial and capable journalist, who enjoys the respect of all his colleagues.

Four days after the death of President Roosevelt, there appeared an editorial in the Star which struck me as a most fitting tribute to our new President. Especially was I impressed by its reference to Harry Truman's inspiring humility. Here is the editorial:

HARRY TRUMAN, THE MAN, HAS FRIENDS AT HAND

The President is dead—but government lives on in Washington.

We thought of that one, even though we can't remember its author, when the sad news came and even more forcibly when we read President Truman's speech to the Congress this morning; a speech, which, following his precedent-breaking call on congressional leaders Friday, and the warmth of their greeting both then and today, called for a unity of purpose that seemingly cannot be denied.

His reiteration of the "unconditional surrender" theme, his statement that those who have fought for the peace must have the responsibility of making the peace," his promise of justice to the smaller nations, of an honest attempt to improve world conditions, all had a solid ring.

Here is part answer to the many in this country and abroad who know little about Harry Truman. He has a mind of his own, but he works well with people. Those who know him best, Senators with whom he has worked for 10 years, are those who rate him highest.

One of Mr. Truman's characteristics is frankness. May we emulate that virtue by citing the chief criticism of the past from some who did not know him? He was elected Senator from Missouri with the aid of the Pendergast machine.

In the past century history does not record a single President who has climbed to that high office without the aid of political bosses of some kind. What matters is whether an official is under control of such a machine.

Mr. Truman has not been. That was proved by his Senate votes and by his investigation of Missouri Pacific Railroad financing over machine protest. Yet, when the broken and powerless Pendergast died, Mr. Truman had the courage to defy political expediency, leaving a public engagement and going across the country to attend his funeral. The balance there is on the credit side.

It would be hard to name any man who has entered the White House with so little

criticism against him. If Harry Truman has an enemy in Washington, nobody knows it. That, of course, is the main reason for his political rise. He was nominated for the Vice Presidency by the badly split Democratic convention because he was the only available man acceptable to all factions.

After a quarter of a century in politics he is rich in friends and poor in purse. That tells a lot.

But, aside from his character, what of his policy and of his ability for the hardest job on earth?

On the record his policy in general is the same as that of his predecessor. He has the same determination to make military victory complete.

His belief in American leadership for world peace, through a democratic international organization for security and justice, is deep.

His concern for building an ever better America for the future, where men may work and live in freedom and fellowship, is dominant.

He made that emphatic today.

Whether he is a New Dealer depends on your definition. He is not a zealot, not a radical, not an extremist in temperament or dogma. He is an old-fashioned liberal. Civil liberties matter greatly to him. He does not believe in authority that kicks people around. As one of humble birth, and still without wealth, he does not have to put himself in the place of the people—he is one of them. His voting record generally has been prolabor, profarmer, proveteran, propublic.

But he is an independent. Often he has voted against the New Deal administration, against the dictates of party machines, against the pressures of this lobby and that. He has proved, without parade, the courage of his convictions.

He has intimate knowledge of American affairs, though less of the details of foreign policy. Next to the late President and to the former assistant president in charge of the home front, Mr. Byrnes, Chairman Truman of the Senate investigating committee gained more information on this subject than any other official.

If the ability he showed in that investigation is indicative, he will make an able President. He ran it with little administration encouragement and with much opposition from interested parties. His were the brains and the will, but he worked quietly and gave others the limelight. He used the best technical assistance he could find. He hit hard but fairly. His emphasis was constructive. He ended up with reform of the war effort, and with a unanimous committee regardless of party or group. There was no minority report, a miracle of unity in such a situation. That is the way he operates.

His humility is not to be mistaken for timidity. He has the great potential power of a President without personal ambition or political debts. He did not seek the Vice Presidency and is indebted for his office to no living man. He has no personal commitments to any American group or foreign government. Few Presidents ever have started with such complete freedom to serve the Nation according to his conscience. Let those who would disparage his humility remember that he was chosen for this high office by the one who knew it best—Franklin Delano Roosevelt.

The White House breaks and makes reputations, and the test ahead is greater than ever. But we believe he will provide a leadership of integrity, of liberalism, and of national unity. The outcome will depend not only on him but also on his fellow citizens.

God grant our President wisdom and strength, and the patriotic loyalty of all Americans.

Three Outstanding Appointments by President Truman

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 24, 1945

Mr. MANSFIELD of Montana. Mr. Speaker, I am delighted with President Truman's appointments of three western men to Cabinet positions. The designation of Tom Clark, of Texas, as Attorney General; of Judge Lewis Schwellenbach, of Washington, as Secretary of Labor; and our own respected colleague, Clinton P. Anderson, of New Mexico, as Secretary of Agriculture meets, I am sure, with widespread approval. We of the western United States feel distinctly honored in these appointments because we feel that signal recognition has been given to our area. It indicates a real interest on the part of President Truman in our part of the Nation, and we are deeply grateful to him for the consideration he has shown us. These appointments are in line with the sound policy which has marked our President's position since he has assumed office and, as such, gives an indication of how fair and considerate he is and will be. Again may I say we of the West are deeply grateful to President Truman for these outstanding appointments in his Cabinet.

Report From the Aleutian Islands

EXTENSION OF REMARKS

OF

HON. E. L. BARTLETT

DELEGATE FROM ALASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 24, 1945

Mr. BARTLETT. Mr. Speaker, much has been published in the way of poetry during the war, but most of that which has been written has been of only topical and fleeting interest.

This month, a poem appeared which I venture to predict will endure and will have a firm place in any anthology of war poetry.

I refer to Report from the Aleutian Islands, by Corp. Erwin Spitzer. It appeared in the May 12 issue of The Saturday Evening Post, and is copyrighted by the Curtis Publishing Co. The poem is reproduced below by special permission of the Post.

In 38 lines Corporal Spitzer has told better than could be told in a volume of uninspired words what every man who has served in the Aleutians feels. He has done so with remarkable economy of language and with magnificent expression.

Mr. Speaker, the weather in the Aleutians is not the world's worst. It can be borne. The lack of action is depressing but can be borne likewise. The terrible monotony, the inability to get away even for a brief hour from service life, is depressing but bearable. But combine all these things—weather, and inaction, and monotony—and after a time no man can fail to react.

They are, indeed, these men of the Aleutians, waiting for an enemy who will never come. It is 2 years ago this month since the Japanese garrison on Attu was defeated and annihilated in the first major land action against the Pacific foe. Shortly thereafter the Jap garrison was evacuated from Kiska, and since then the invader has never returned to this continent.

And he will not return because of the men of whom Corporal Spitzer writes. Theirs is a lonely duty and an especially lonely duty for young men to whom there is no greater enemy than monotony, day after day, week after week, and month after month.

"We whose rifles are ready but never called, have you forgotten us?" asks the author of the poem. I hope I may be privileged to answer for all the people of the United States, "We have not forgotten you and we never shall. You may wear no battle decorations but you have served as valiantly and as well as any American soldiers anywhere. We of Alaska owe to you a debt freely acknowledged, and that debt extends through the land. You have fought a winning fight against a foe more difficult to conquer than the one who is faced on the battle line, and history will have a sure place for you."

The poem follows:

REPORT FROM THE ALEUTIAN ISLANDS

(By Corp. Erwin Spitzer)

We fight phantoms here.
Bayonet and rifle are useless.
Shells gather dew under tarpaulin hoods.

Would you use a grenade
Against loneliness?
How large a cannon is necessary
To demolish monotony?
Where is the bombing plane
That can destroy a land already barren?
How many rifles, tanks, battleships
To conquer the people
Of these unpeopled islands?
How can we keep our memories from dying
When time and place murder them every day?

We fight no thundering battles,
Suffer no pity-inspiring wounds,
Are never found in the boisterous headlines
Or even the minor, modest print.
Only unnatural Nature
To snipe at our sanity.
Only the deceitful muck
Setting its traps for our feet.
Only the strangler fog
Creeping down the hills
To blind our eyes and minds,
Only the deliberate madness of the williwaw,
Shrieking, striking at each of us
With its million-pointed spears.

We whose rifles are ready but never called,
Have you forgotten us?
We who only dig and build and mend
And wait;
We whose fate is not to attack,
But to hold, hold.
Say you remember us!
Say you remember the men
Who, fighting only phantoms,
Still fight for you.

VE-Day Address by Ernest L. Wilkinson

EXTENSION OF REMARKS

OF

HON. J. W. ROBINSON

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 24, 1945

Mr. ROBINSON of Utah. Mr. Speaker, under leave to extend my remarks, I include an address delivered at the Washington Chapel on VE-day, May 8, 1945 by Ernest L. Wilkinson, prominent Washington attorney and member of the Washington Stake Presidency of the Church of Jesus Christ of Latter-day Saints.

On the last day of January 1917 the German Ambassador handed President Woodrow Wilson a note from his Government announcing its determination to declare a submarine blockade about England, France, and Italy and warning this and all other nations to respect the blockade on penalty of having their ships and their citizens sunk without notice. Up to that time Wilson, in spite of the sinking of the *Lusitania* and other offenses made against mankind by the Imperial German Government, had tried his best to keep this country out of war. He had even stated that lasting peace could only be secured by a "peace without victory." But this breach of international warfare was too much for our peace-loving President. Without a moment's hesitation he dismissed the German Ambassador and requested Congress to declare a state of armed neutrality. Later on April 6, 1917, at his request Congress declared war and we entered the first world conflict for the avowed purpose of making "the world safe for democracy."

From that time on Woodrow Wilson was looked upon as the world leader of unselfish war aims. Until the end of the war his career is in great part world history; he swayed the world as no other statesman then, or probably since, ever swayed it. An English liberal has said that "it was like the voice of God talking over our heads to the continent and to the nations of the world."

His world idealism and leadership was summarized in his superb address of January 8, 1918, in which he outlined in 14 salient points the ideals for which this Nation was fighting, and the basis upon which it would conclude peace. These 14 points included an insistence upon open covenants of peace openly arrived at between nations, absolute navigation upon the seas alike in peace and war, the adjustment of colonial claims in which the interest of the population concerned should have equal weight with the equitable claims of the government whose title is to be determined, the evacuation of all Russian, Belgium, French Romania, Serbia, Austria-Hungary, and Montenegro territory, including the righting of the wrong done to France by Prussia in 1871 in the matter of Alsace-Lorraine, the establishment of an independent Polish state, and finally a general association of nations under specific covenants for the purpose of affording mutual guaranties of political independence and territorial integrity to great and small states alike.

His eloquent summarization of the ideals of democracy was accepted in public statements by European leaders and it is no overstatement to say that uncounted millions carried on the war in the belief that it was "a war to end wars."

I start at this point to remind us, in this hour of triumphant celebration, that it is much easier in this selfish world to agree upon lofty and unselfish principles of peace while in the agony of war than it is to adhere to those principles when once the shackles of war are removed and the specter of peace appears, and to direct our minds to some of the tragic mistakes made after the last war which permitted the struggle now partly ended.

For even before World War I had ended Wilson, not unaware of human nature, had remarked to a friend that he almost dreaded to think of the end of the war, for then every nation of Europe and every group of interests in the United States would begin to think of selfish ends. His intuition unfortunately proved true. For after the opening of the peace conference in Europe in January of 1919 the European leaders for 1 full month endeavored to arrange the preliminaries of peace without accepting the principles which in their hour of despair they had professedly accepted. In February, however, the whole conference met and accepted the idea of a League of Nations as a part of the treaty.

Wilson then returned to America. On returning to Paris 1 month later he found the conference had abandoned the League of Nations idea and with national interests paramount had informally agreed upon a peace of indemnities, annexations and reprisals. By vigorous protests Wilson was able to rescue the League and have it incorporated as a part of the treaty, but many of his 14 points were abandoned.

On returning again to this country we experienced the world tragedy of neither the President nor the Congress being willing or able to collaborate with each other. The result was that while our own President more than any other man was responsible for the creation of the League, his own country by refusing to become a member, rejected that opportunity for world leadership in international peace. Many of us recall that President Grant and other leaders of religious and political thought pleaded with the Senate to accept the League of Nations as written. But, right or wrong, because we did not, the League, from the outset, was deprived of the motivating force of its creation.

And the peace concluded was not the peace for which millions had borne arms.

The history of the world since the Treaty of Versailles has been a history of national selfishness on the part of many and of supine indifference on the part of other nations to unrighteous events leading up to the catastrophe which followed.

The only real bright spot in that history was the treaty signed in Washington in 1922 by nine great powers guaranteeing the territorial integrity of China and agreeing upon a limitation of armaments.

Other major events had evil forebodings.

MANCHURIAN CRISIS

Thus, while a financial panic was engulfing the Bank of England and sweeping upon New York, on September 18, 1931, the Japanese Army suddenly seized certain cities in Manchuria on a pretext of protecting against Chinese banditry. China immediately appealed to the League of Nations. Henry Stimson, then Secretary of State, sent a strong note to Tokyo reminding the Japanese of the Nine-Power Pact and authorized our observer at the League of Nations to sit with the League in consultation. The British representative at the League, Lord Cecil, favored marking time. The Japanese member assured the League that the troops would be withdrawn at the earliest opportunity and the Council of the League adjourned for 2 weeks.

On October 9 the Japanese bombed Chinchow, temporary capital of Manchuria, and 4 days later the League voted to call upon Japan to withdraw the troops. The call was ignored and by January 1932 all Manchuria had been occupied. On January 7, Secretary Stimson sent an ominous note to Japan stating that the United States would not recognize any situation brought about by force. He urged the British Foreign Office to send a similar note, but England was indifferent and declined to act. On January 29, 1933, the Japanese bombed the Chinese section of Shanghai at the very moment that a new disarmament conference was assembled in Geneva. Again Stimson urged Britain to take joint action with this country, but Britain declined to act. The League did nothing effective. Japan went ahead and declared the independence of Manchuria.

Finally, in 1933, the League adopted a report condemning Japan and recommending that all states refuse to recognize Manchuria. But Japan thereupon withdrew from the League, thus giving encouragement to one Adolf Hitler, who had just become Chancelor of the Third Reich.

1933: HITLER BECOMES CHANCELOR OF GERMANY

As a young man, Hitler, the son of an Austrian customs official, as later revealed in Mein Kampf, had already acquired an intense hatred for the "motley collection of Czechs, Poles, Hungarians, Ruthenians, Serbs, Croats" within Vienna, and, above all, "for that ever-present fungoid growth—Jews and again Jews." From being a feeble world citizen, he had become a fanatical anti-Semitic.

In 1920 he designed the swastika flag as the party emblem and organized the Storm Troops to prevent interference with his meetings. His Nazi party gained ground so fast that on November 8, 1923, they attempted to gain control of the government in the "Beer Hall Putsch." Hitler was arrested and sentenced to 5 years in prison. There he wrote Mein Kampf. He was released 8 months later. But he was smarting with resentment and thereafter followed consistently an adroit political strategy. This was it—

Never use force against those with superior force unless you are certain they will not use their weapons against you;

Terrorize the weak and timid among your foes by unrelenting pressure;

Hypnotize the multitude with promises and pageantry;

Promise everything and keep each promise only so long as it is expedient to do so;

Insist upon military discipline and unquestioning obedience from your followers;

Never lose sight of the ultimate objective—the destruction of the enemy.

The depression was seized upon by Hitler to apply his doctrines. His oratorical powers enabled him to play on the emotions of the masses by promising them a return to order and security. Within 3 years the Reichstag membership of the Nazi Party had increased from 12 to 230. In January 1933, Hitler was appointed chancelor by President von Hindenburg.

GERMANY WITHDRAWS FROM LEAGUE OF NATIONS

After World War I the dreams of Woodrow Wilson as symbolized in the League of Nations had caught the imagination of German liberalism. The German Republic under Stressemann's leadership had joined the League at Geneva in 1926. But the ambitions of Hitler were not consistent with the League's idealism. So in October of 1933, some 8 months after Hitler become chancelor, and just a few months after the withdrawal of Japan, the Third Reich also resigned from the League of Nations. In retrospect we can now see this was ominous.

ITALY ATTACKS ETHIOPIA

During these same years Il Duce was warning his subjects that the half decade between 1935 and 1940 would be an epic of conflict, and that 1935 in particular would be Italy's year of destiny.

Mussolini's objective finally became known. It was Ethiopia—the only native kingdom of Africa which still retained its independence. Italy had attempted the conquest of

Ethiopia in 1896 but was so badly beaten that the venture had been abandoned. In the Treaty of Peace that followed Italy recognized the "absolute and unreserved independence of the empire of Ethiopia as a sovereign and independent state."

In eight subsequent treaties Italy pledged herself to safeguard Ethiopia's integrity and independence or to submit disputes with Ethiopia to conciliation or arbitration. Seven of the nine treaties forbidding aggression against Ethiopia had been negotiated, signed, and ratified by the regime of Mussolini. But Il Duce was a disciple of the philosophy of Machiavelli that "a prudent prince cannot and ought not to keep his word, except when he can do it without injury to himself or when the circumstances under which he contracted the engagement still exist."

He had therefore no remorse of conscience in seizing upon a border dispute to have his army attack the Ethiopian troops in the African desert in December 1934. The primitive weapons of the Ethiopians were no match for Italian tanks and planes. Ethiopia proposed arbitration but Mussolini refused. Ethiopia then appealed to the League of Nations for protection. Great Britain, more sensitive to this aggression which was near at home, than it had been to the rape of China, moved a large part of its Atlantic Fleet into the Mediterranean and brought pressure on the League to threaten Italy with penalties for resorting to war in defiance of the League.

But Mussolini had witnessed the Manchurian debacle. So in the face of the bluff of the British Navy, for it was subsequently revealed that Great Britain had no substantial amount of ammunition to fire from the guns on its battleships, Italian troops continued to pour into Ethiopia.

In spite of impassioned and tragic pleas for help by Haile Selassie, neither the League nor other nations offered any resistance. On May 9, 1935, Mussolini announced to a howling, frenzied Italian throng that Ethiopia had fallen, that at last Italy had her empire.

GERMANY REMILITARIZED THE RHINE

Encouraged by Mussolini's success, Hitler watched and waited for an opportunity to further his purposes. He had designs on Austria, Czechoslovakia, and Poland but he knew that before he could make a move eastward he would have to protect his rear from attack by France. This meant he would have to seize and fortify the Rhine Valley in violation of the Versailles Treaty, and the Pact of Lacarno of October 16, 1925. He would have to find some way of circumventing the treaty obligations of Britain, Italy, Belgium, and Soviet Russia to come to France's aid in the event Germany armed this demilitarized zone.

Feeling his way cautiously, Hitler began sounding out the other nations with respect to whether they intended to perform their treaty obligations, and concluded that they would not.

Consequently, he invited the British, French, Belgium, and Italian envoys to call at Wilhelmstrasse on the morning of March 7, 1936. On arrival they were informed that German troops had marched across the Rhine at dawn.

That afternoon Hitler delivered a long and self-righteous address to the Reichstag indicting the Treaty of Versailles. Then he declared the Reichstag dissolved, and asked the German people to support him in a new election. Ninety-eight and seventy-nine one-hundredths percent of the voters did as they were told.

The French Cabinet then made the most disastrous decision in modern times by announcing to the press that France would do nothing in the Rhineland but would appeal to the League. It is now known that had France decided to occupy the Rhineland, German troops were under orders to retreat. Britain indirectly approved Germany's action by saying it involved no threat of hostilities. The League took no effective action. King Leopold of Belgium announced that his country rejected its alliance with France and would champion isolation and neutrality. France lost her closest ally. Hitler had won his gamble. He could now proceed with his European conquests

MARCH 1938—GERMANY'S ABSORPTION OF AUSTRIA

In January of 1938 on the fifth anniversary of his appointment as Chancellor, Hitler began his intrigue to annex Austria. He first organized a group of Austrian Nazis whose object was revolution. But the plot was discovered and exposed by Austrian police and the leaders arrested.

On February 8, 1938, Kurt Schuschnigg, the last Chancellor of Austria (who some 7 years later has now been liberated by Allied troops), was summoned by Hitler to come to Berchtesgaden. At first he hesitated but was urged to accept by the Austrian Foreign Secretary. When he did go, he was armed with the documents of the recent German plot to destroy the Austrian Government which he hoped to use for bargaining purposes. There Hitler charged Schuschnigg with failing to live up to his duties as a German. Schuschnigg grew nervous, but presented his documents in protest. Hitler was furious. He raged and shrieked insults. Schuschnigg threatened to leave. The storm ceased long enough for them to have luncheon to which a number of military guests had been invited. Then Hitler presented his demands: Amnesty for all imprisoned Nazis; appointment of Nazi sympathizers as Ministers of Justice and Interior; full political freedom for the Austrian Nazis. If Schuschnigg refused, Germany was ready to march. He would have 2 days to decide. He left the villa an exhausted and beaten man.

The Austrian president objected to the demands but when an ultimatum from Berlin came 2 days later, "Submit at once or face invasion," Schuschnigg capitulated.

Still the British and French press minimized the importance of these developments.

The new Nazi minister of Interior, appointed on Hitler's demand, then began visiting the various provinces laying the foundation for the organization of Nazi movements throughout Austria. He hinted at a plebiscite. This challenge was accepted by Schuschnigg who started to rally the people to Austrian independence. But it was never held. For at noon on March 11 came another ultimatum: Call off the plebiscite or face invasion. At 4 o'clock came another: Resign by 7:30 or face invasion. Schuschnigg was at wits end. He tried in vain to reach Mussolini, London, and Paris for help. No help came. Deserted and alone he surrendered.

German troops crossed the Austrian border at 5:40 a. m. the next day. Hitler himself crossed the bridge where his father once collected customs. The inhabitants of the little village strewed his path with flowers, and scooped up handfuls of sacred earth behind his car. Two days later he marched triumphantly into Vienna. Austria was annexed.

SEPTEMBER 1938, MUNICH SETTLEMENT—GERMANY'S ANNEXATION OF SUDETEN AREAS OF CZECHOSLOVAKIA

His next victim was Czechoslovakia. In this sinister purpose he used Konrad Henlein, a Sudeten German who had organized a United German Party after an attempt to organize a Nazi Party in Czechoslovakia had been outlawed.

The first military threat came in May 1938 when Hitler decided on a lightning attack and began mobilizing troops on the frontier. Prague, however, which knew that the price of liberty was eternal vigilance and was willing to pay the price, sent 400,000 troops and 80,000 reserves to defend the border. Moreover, France which Hitler had expected would desert Czechoslovakia, this time came to her support. London, the appeaser, which was caught off guard had no option but to support Paris. In the face of this French-Czech and Anglo-French solidarity Hitler decided upon peace. In humiliation the German troops were withdrawn.

From the outside it looked as though the crisis had been averted. The following summer months, however, were filled with political negotiation and diplomatic intrigue. On September 1, 1938, Hitler violently demanded that the opposition of 3,500,000 Sudeten Germans in Czechoslovakia, which was not a fact, shall cease and be replaced by the free right of self-determination. He declared that if these tortured creatures cannot obtain rights and assistance by themselves, they can obtain both from us.

Prime Minister Chamberlain then speeded up his appeasement program. On September 15 he flew to Berchtesgaden only to be convinced that a peaceful solution of the Sudetan problem would be on Hitler's terms. The next few days were used by him to persuade the Czechs to agree to transfer to Germany all areas in which more than half the people spoke German. Prague agreed to this under the threat that if it did not, and war resulted, it would get no aid from France or Britain. With this offer in hand, Chamberlain went back to Hitler and found the Führer had new demands to make. To these Chamberlain refused to agree.

Again war threatened. The Czech forces were mobilized once more. The British fleet was put in readiness. France and Russia also agreed to act. With this united military front against him, Hitler decided again to substitute intrigue for force. He invited Chamberlain, Daladier, and Mussolini to Munich for a conference. No representatives of Czechoslovakia were present. At this conference on the solemn promise by Hitler that "This is the last territorial claim which I have to make in Europe," Chamberlain, Daladier, and Mussolini, in what has become derisively known as "the peace of Munich" decided to turn over the Sudeten area demanded by Hitler.

But an appetite grows by what it feeds on. Shortly thereafter, the Nazis extended their encroachment. Two small areas were added to Poland and the whole narrow eastern end of Czechoslovakia was turned over to Hungary. Germany assumed direct or indirect control over all the rest. In short, the result of the Munich Pact, the attempt to purchase peace, was to turn over to Hitler the powerful Czech Army with all its powerful equipment—possibly a superior fighting force to that maintained on the British Isles. Czechoslovakia as an independent nation ceased to exist.

The following spring, in March of 1938, Hitler demanded of Lithuania that it cede Memel to Germany. Simultaneously therewith the Germans swept in from East Prussia and took the small province with little opposition. Again the other nations of the world made little or no protest.

GERMANY ATTACKS POLAND

Less than a month after the annexation of Memel German newspapers began to print stories urging that Danzig and the Danzig area be returned to Germany and that a broad pathway across the Polish Corridor be granted to Germany.

Concerned over this threat of further German expansion, in violation of categorical pledges, England began negotiations with France and Russia for a treaty designed to stop Hitler from expanding eastward. If Russia would agree to join this alliance, aid, in the event of an attack, could be given to Poland. Germany, sensitive to these negotiations, felt it could not attack Poland until, contrary to the plan of England and France,

it had, by subterfuge or otherwise, neutralized Russia.

The negotiations between France, Great Britain, and Russia began to drag. Russia was distrustful of the western democracies—they in turn were distrustful of Communist Russia. Poland was fearful that if Russian armies ever came to occupy any part of its land, even in its defense, they would never leave it again.

This distrust gave Hitler his opportunity. And he made the most of it. For on August 21, 1939, the world was shocked with the announcement from Moscow that Germany and Russia had agreed on a nonaggression pact.

With that agreement a reality, Hitler was now ready to proceed against Poland. The prior newspaper suggestions were converted into formal demands, which Poland refused. On September 1, only 10 days after the signing of the German-Russian Pact, Poland was invaded by German armies, and the Polish leaders decided to fight.

Whatever may have been the mental processes of her leaders in deciding whether France and Great Britain would make good on their promises of help, as they had not with her neighbors, here at last was a country willing to fight for its existence.

This time also, at long last, Britain ended its policy of appeasement, stood by its obligation, and 2 days later, September 3, took its stand beside Poland. The ultimatum which it sent Germany gave that country only 2 hours in which to cease further attacks on Poland and to start withdrawing its troops. Failing this, Great Britain would be at war with Germany. When the 2 hours expired, Great Britain and Germany were at war.

A few hours later France respected its pledge to Poland and also declared war. But what actually happened was that when Germany was overrunnning Poland from the west, Russian troops moved in from the east. Although it was expected by informed observers that the Polish Army and "General Mud" would be able to hold off the Germans for a substantial period of time—until the British and French could effectively attack on the western front, the conquest of Poland was completed within 1 month. A boundary line separating the part of Poland claimed by Germany from the part claimed by Russia was agreed upon. One more country was conquered.

PHONEY WAR, WINTER 1939–40

After the conquest of Poland and during the entire winter of 1939–40, the Western front became relatively inactive. It was some more psychological warfare on Hitler's part. Many people began once more to think that probably with Poland he was at last satisfied. Many were hoping England and France could now find a way out of the war.

APRIL 1940. SEIZURE OF DENMARK AND NORWAY

Hitler assisted in lulling the appeasers into a sense of security by making pretensions about the territorial integrity of Belgium and the Netherlands.

Then suddenly at 5 o'clock on the morning of Tuesday, April 9, 1940, German land forces crossed the international boundary and within a few hours there were more than 45,000 German soldiers in Denmark. When this became known, the Danish Government decided to make no resistance. The only opposition seems to have been made by the Palace Guard which lost three men.

NORWAY

At 11 p. m. on April 8 some 6 hours before the Germans crossed the Danish borderline, a German armada of 125 German troopships and warships, accompanied by airplanes, was first noted steaming northward along the Danish Coast toward Norway, running without lights.

To be successful in their invasion of Denmark and Norway secrecy and simultaneous landing at various ports was necessary. Their success in keeping their plans secret was astonishing, the more so because they made intensive use of "fifth columnists" within Norway.

In the matter of timing the arrival of their troopships the Germans were almost as successful. On the morning of April 9 between 5 and 6 a. m. German troop transports reached seven Norwegian ports—Oslo, Arendal, Kristiansand, Egersund, Stavanger, Bergen, and Trondheim, and Copenhagen and other points in Denmark, and in a few days Norway was captured.

MAY 1940: NETHERLANDS—BELGIUM AND LUXEMBOURG OVERRUN BY GERMANY—THE NETHERLANDS AND BELGIUM ATTACKED

On May 10, 1940, 1 month after the invasion of Denmark and Norway, at 5:30 a. m., without warning, German forces invaded the Netherlands, Belgium, and Luxembourg by land, sea, and air.

As soon as possible after the invasion began, but not until then, the troops of the Netherlands and Belgium were mobilized and offered such resistance as they could. But 4 days later the commander in chief of the Netherlands armies directed his troops to lay down their arms. Two weeks after the surrender of the Dutch armies the King of the Belgians announced the surrender of the Belgian Army to the Germans.

THE CHURCHILL CABINET AND ITS POLICY

On May 11, 1940, the day after the invasion of Holland, Belgium, and Luxemburg, Neville Chamberlain, whose policy of appeasement had so completely failed, resigned. He was succeeded by Winston Churchill. On May 14, the very day that the Netherlands armies were ordered to lay down their arms, Churchill was given a vote of confidence motion in the House of Commons by a vote of 381 to 0. It was at this time that he uttered his now famous saying: "I have nothing to offer you but blood, toil, tears, and sweat. We have before us an ordeal of the most grievous kind. We have before us many, many months of struggle and suffering. You ask, what is our policy? I say it is to wage war by land, sea, and air. War with all our might and with all the strength God has given us, and to wage war against a monstrous tyranny never surpassed in the dark and lamentable catalog of human crime. That is our war policy."

JUNE 10: ITALY TAKEN INTO WAR BY MUSSOLINI

Within 12 days after the fall of Belgium and when the encirclement of the Maginot line was in rapid progress and the spoils of victory appeared certain, Mussolini, by declaring war on June 10, gave France what he thought would be a fatal stab in the back.

FRANCE SURRENDERS

After the conquest of Holland and Belgium the Germans continued into France, by-passing the Maginot line. On June 17, only 1 month and 1 week after the attack on Holland began, Marshal Petain asked for an armistice, which was signed in Italy on June 24, only 14 days after the entry of Italy into the war.

With the surrender of the Belgians and the French, the Germans believed the whole of the British force would be wiped out or forced to surrender. But a large part of that force, with some French and Belgians, succeeded in retreating to the shore of the English Channel. There, on the beach near Dunkerque, they made a last heroic stand in an inferno of shells and bombs. In anything which would float—rowboats, ferryboats, troop ships, destroyers, cruisers, and even collapsible boats of various kinds—some 200,000, without their equipment, escaped across the channel to England. This heroic rescue was the only bright spot on the Allied side in the summer of 1940.

It was during this valiant retreat that Winston Churchill rallied the British Nation with his declaration: "We shall defend our island whatever the cost may be; we shall fight on beaches, landing grounds, in fields, in streets, and on the hills. We shall never surrender, and even if, which I do not for the moment believe, this island or a large part of it were subjugated and starving, then our Empire beyond the seas, armed and guarded by the British Fleet, will carry on the struggle until in God's good time the New World, with all its power and might, sets forth to the liberation and rescue of the Old."

THE HEROIC STAND OF BRITAIN

After the retreat at Dunkerque, Hitler took a month to regroup his armies and assemble them on the shores of France for a crossing of the Channel. In July the German Air Force started occasional raids with a view to terrorizing the English into submission. In August it began a series of systematic attacks to knock out British industrial plants. By this time, however, a new invention, the radar, had given the British a means of knowing when planes were approaching, so that the small British Air Force could rest between attacks and still be on the alert at all times. Late in August the Germans made an all-out attack, losing over 600 planes in 1 week and 286 in 1 day—a record which still stands for actual battle in air. If Hitler had known in June that the British had only a few dozen field guns, 12 tanks, and enough rifles for only half a million men, he probably could have crossed the Channel. By September our Army had sent 1,500,000 rifles and thousands of old, though still usable, field guns, and Britain was too strong for invasion from the sea.

APRIL 1941: GERMANY ATTACKS YUGOSLAVIA AND GREECE—HITLER AND THE BALKAN TIME TABLE

At the same time that heroic England was withstanding the German bombing the English Navy was outfighting the Italian Navy. Hitler, therefore, determined to reach the Mediterranean by way of the Balkans. His success in this regard is revealed by the following time table:

1. On November 20, 1940, Hungary yielded to German pressure and came into the Axis sphere of influence.
2. Rumania did so 3 days later.
3. On the next day, Slovakia capitulated.
4. But it was not until February 22, 1941, that Bulgaria allowed German troops to enter the country, and it did so unwillingly.
5. On March 29 Germany announced that the Prince Regent of Yugoslavia, through representatives of his appointment, had signed a pact with Germany.

But at this point the peaceful penetration of the Balkans ceased. The people of Yugoslavia objected to the pact signed by their Prince Regent and overthrew his government. The Prince Regent and his advisers fled the country, and young King Peter was called to the throne.

On April 16, 1941, however, the powerful German force struck the Balkans, crushed Yugoslavia within a month, crashed on into Greece, forcing the British to withdraw, and capturing many of them. The island of Crete was taken by an air-borne German division—first large-scale air-borne operation in history. Thus by May of 1941 the Germans had opened a way from the Danube Valley to the Black Sea and to the eastern Mediterranean, and had control over all Europe as far east as Russia.

ATTACK ON RUSSIA

Flushed with success, Hitler then made possibly his greatest mistake, for on June 22, 1941, despite the nonaggression pact which he had signed with Russia less than 2 years previously (August 1939), he declared war on that country, and without warning launched an attack on a 2,000-mile front.

His only excuse was that he had never trusted Stalin, that he had signed the nonaggression pact with a heavy heart and with

misgivings, and that it was necessary to crush communism before it engulfed the continent. At first Russian resistance was weak and the Germans drove 300 miles within a few days. However, when they reached the Stalin line, they found a new type of army, one which could receive heavy blows without being knocked out or broken through. Nevertheless, by November of 1941, the Germans had advanced 1,000 miles to within 40 miles of Moscow and except for an outlet to the sea, had entirely surrounded the great city of Leningrad.

But Stalin's scorched earth policy was a new experience for the Germans and for the first time they failed to replenish their stocks of clothing, food, and weapons at the expense of the enemy. The coldest winter in almost 100 years set in with such devastating effect that the German drive broke down and on December 8, 1941, the day after Pearl Harbor, Hitler announced that they would not be able to take Moscow that year. At that time, the great Russian, General Timoshenko, started his winter campaign which brought Hitler his first taste of defeat and drove the Germans back about 200 miles amid snowstorms.

PEARL HARBOR

The day before Hitler realized that he could not take Moscow until the following year, the other great mistake of the Axis Powers was made—the Japanese attack on Pearl Harbor. By November of 1941 our Government had cut off the flow of steel and gasoline to Japan and was actively aiding the Chinese by sending supplies up the Burma Road. On November 26 Secretary Hull handed the Japanese emissary a note setting forth in detail the changes in policy toward Japan. This message was never replied to, although Japanese emissaries were at the White House supposedly to deliver the Japanese reply at the time of the Pearl Harbor attack.

Suddenly at 7:55 a. m., on Sunday, December 7, the Japanese, without warning or any formal declaration of war, struck at Pearl Harbor.

On the night of December 9, 1941, President Roosevelt addressed the country: "The sudden criminal attacks perpetrated by the Japanese in the Pacific provide the climax for a decade of international immorality. * * * The course that Japan had followed in the past 10 years in Asia has paralleled the course of Hitler and Mussolini in Europe and Africa. Today it has become far more than a parallel. It is collaboration, so well calculated that all the continents of the world and all the oceans are now considered by the Axis strategists as one gigantic battlefield. We are now in this war. Every single man, woman, and child is a partner in the most tremendous undertaking of our American history. We must share together the bad news, the good news, the defeats, and the victories—the changing fortunes of war."

The first hero of the war to be decorated with the Congressional Medal of Honor was our Capt. Mervyn S. Bennion, formerly of Chevy Chase bishopric, who died commanding our then largest warship, the *West Virginia,* at Pearl Harbor.

Since this is in commemoration of our victory in Europe, time will not permit an exposition of the changing fortunes of war in the Pacific—our initial defeats at Wake Island, Guam, and the Philippines—then our victories in the Coral Sea, the Battle of Midway, Guadalcanal, and lately our reconquest of the Philippines and the bloody victories at Iwo Jima and Okinawa.

AFRICAN CAMPAIGN

In the spring of 1942 the Germans continued their land victories, and by the summer of 1942 had driven within 60 miles of Cairo and the great British naval base of Alexandria. But with the aid of American supplies shipped around the Cape of Good Hope, General Montgomery, in August, surprised the Germans and sent them reeling back toward the west. Week after week he drove them from one position to another, and on November 7, when the great American armada arrived and General Eisenhower opened up our African front, the Germans found themselves between two fires. By the spring of 1943 they were finally crushed.

The invasion of Sicily followed in June, and Italy was invaded a month later.

Meanwhile, in June of 1942, the Germans had renewed their campaign in Russia, driving to capture the great Russian oil fields at Baku on the Caspian Sea. They struck probably the greatest defense ever fought at Stalingrad, being held without a gain for 2 months, despite all the power they could muster. In November the Russians suddenly struck out with a counteroffensive which trapped 22 German divisions and reversed the position of both armies. By the spring of 1943 half the Russian territory, formerly occupied, was cleared of Germans.

At this time the Russians began to demand a synchronized attack from the west. But our armies were not ready to strike with the force required to break into France. Instead, our air force began to strike at the great industrial centers to weaken the German industries and reduce their capacity for providing munitions of war. According to Marshal Von Runstedt, captured a few days ago, this air power was the turning point of the war—at least on the western front.

During the same time our armies proceeded methodically to drive up through Italy, driving Mussolini from control and liberating more than half of that country.

Finally, on June 6, 1944, Eisenhower's armies struck France with the greatest landing force in world history. It is said that the Germans who were captured gazed with open mouths when they saw the vast armada which brought the invasion force to France. The great drive of General Patton's army in August which resulted in clearing practically all France from the Germans is too well remembered to require further comment.

In December 1944 the Germans marshalled what forces they could spare for a final all-out effort to break through our armies and capture our principal port and base of supplies at Antwerp. They were nearly successful, and probably would have done so except for the great stand of General McAuliffe and his forces at Bastogne. Another of our boys, Don Ipson, one of McAuliffe's captains, was there and was seriously injured by an 88-millimeter shell which exploded almost between his feet. He is now recovering in a hospital and expects to be completely well again.

The last 5 months of events are so recent in our memories, I need not go into any detail. The greatest air destruction in history was visited on Germany. By destroying industrial, munitions, and rail centers and systems, this continuous air attack almost completely paralyzed Germany. One by one our troops bridged the rivers of Germany and took possession of the Third Reich. With this progressive occupation of the enemy's territory came our capture of concentration camps and the most shocking scenes of brutality and sadistic practices ever known to a so-called civilized world. Human bodies piled in long rows or in freight cars became a daily scene. The world came to realize that the stories of German brutality were true.

Then the end came suddenly. As if the wrath of God was brought forth, Mussolini was executed by his own countrymen. his body strung up in a public square for his disillusioned townspeople to desecrate. Like Judas Iscariot, he was then buried in a potter's grave.

Within 48 hours thereafter came the word that Hitler and Goebbels were also dead. The world of "might makes right", which they had created, may have consumed them also. Marshal Petain reentered France to stand trial for his life. Kurt Schuschnigg, Premiers Daladier, Blum and others, General Gamelin and others were liberated. We have witnessed the spectacle of a million men surrendering within 1 day. One company of American soldiers is reported to have taken 50,000 men as prisoners within 24 hours. Eleven months almost to the day from the time we landed on D-day the Allies have recaptured France, Luxembourg, Belgium, Czechoslovakia, Poland, Austria, Rumania, Yugoslavia, and others. Denmark, Holland, and Norway had been liberated. Germany had unconditionally surrendered.

Never before in our history has there been such a demonstration of the truism that he who lives by the sword shall perish by the sword.

But the cost has been without parallel in world history. Disregarding the exaggerated claims of both sides, it has been estimated that over 12,000,000 men have been killed; that Poland alone suffered fatalities of over 3,000,000 men; Germany probably about the same number; and Russia, around 4,000,000. This country with deaths now around 200,000 has, by comparison, escaped easily, although our total casualties aggregate nearly a million. There have, of course, been many more wounded than killed and it has been estimated that over 10,000,000 men have been taken prisoners. Those killed, wounded and taken prisoners may well total around 40,000,000 men.

It has been estimated that over $1,000,000,000,000 has been expended in the prosecution of the war. This country will emerge with a national indebtedness of over $300,000,000,000. It was less than 10 years ago when President Roosevelt said he had been informed by bankers that this Nation could stand a national indebtedness of seventy-five billion. We now have an indebtedness of four times that amount. This means a national indebtedness of nearly $2,500 for every man, woman, and child in this country. Assuming an average family to be composed of five persons, this would be enough to build and pay for a $12,500 home for every family in this land—something which most families never own.

This is a day for prayer and thanksgiving for the end of this terrible war—for the opportunities for loved ones to come home and be able to sleep away from the blood of battle. We pay homage at this time to those who have borne the battle and express our gratitude to our Heavenly Father for the safe deliverance of those who return.

But it is not a day for purposeless celebration. Rather, it is a day for world repentance for ever permitting this great consuming war to come upon us. It is a day of great consecration to the solution of problems that will soon confront us, the like of which have not faced any other generation.

We must dedicate ourselves first to the winning of the war with Japan and the organization of a concert of free nations dedicated to justice—not "my Nation, right or wrong," but my Nation only if it is right. And this concert of free nations must realize that if it has to choose between peace and righteousness, it will make a second mistake of Munich if it does not choose righteousness.

We must never forget we are our brother's keeper, although in the application of this we must always remember that the best way to help our brother is to so guide him that he will help himself. We can never expect to exert leadership that is worth a continental through seducing other nations with our wealth.

We must dedicate ourselves also to bringing economic order out of world chaos if we are not to see world starvation. At the

best we can expect that millions and millions of people will go hungry this next winter—there may be as much suffering as in this last year of war.

If economic order is to be restored in this country and in the world, we must learn, in the spirit of the Master, to be tolerant and fair with each other and work as brothers for the common good of all. This country and the world needs a renaissance of good will, and an end to political demagoguery by extremists on both sides.

Classifying people as liberals and conservatives or otherwise is always dangerous. Some people who parade as great liberals are liberals only in the sense that they are liberal with other people's money—under the guise of governmental forms they profligately spend money earned by sweat and saved by privation. Others, who in the jargon of the day are sometimes improperly characterized as reactionaries, are those who would preserve for this country some of the most enduring liberal principles upon which this country is founded—the right through industry and hard work to get ahead in the world; the right through the exercise of our talents and property to acquire new talents and property; the right to order our own lives free from unnecessary interference of government; the right to live under a government of laws which apply alike to all men, rather than under a government of men who in the exercise of the powers conferred upon them can favor their friends and punish their enemies. In the exercise of governmental functions, the rich have no right to take advantage of the poor, but neither have the poor the right to confiscate the property of the rich.

No greater disservice can be done to our country by any man than to array class against class. There is no more room for a labor government in this country than there is for a government representing vested wealth. Representatives in Congress should represent all of their constituents, not merely those who voted for them.

There can be no greater menace to our country than the doctrine preached by some in high places—that our country owes us a living. If that doctrine be accepted by the majority of our people, we are in great danger as a Nation. While the Government should work for the people, that does not mean it should support the people, for to the extent it does, the other people in turn become the slaves of the Government. The postulate of Jefferson that that government governs best which governs least is still entitled to some place in our political affairs.

In the days ahead, there will be great pressure, as in the days of the 1920's, to seriously reduce the taxes of all, and there will be many demagogues who will want to return to the method whereby only a small percentage of our people will be obliged to pay taxes. While I realize that some adjustment in taxes must be made, speaking for myself, I prefer to have this Nation pay off its debts by a continuance of high taxes rather than to have our children inherit a bankrupt Nation and I have a deep feeling that this country will be better morally, spiritually, and financially if we pattern our tax system after the Lord's law of tithing, and have even the widow contribute her mite to the expenses of the Government. If we all helped to support our Government rather than planned to live off it, the right thinking that would result would at once eliminate much of the reckless expenditure of public funds.

Finally, and this is the most important thought for our country at this time, there should be a realization that peace will come to the world only to the extent that individuals as a whole worship the Lord and keep His commandments.

In the words of the immortal Lincoln: "It is the duty of nations as well as of men to own their dependence upon the ever-ruling power of God, to confess their sins and transgressions in humble sorrow * * * and to recognize the sublime truth that those nations only are blessed where God is the Lord."

On another occasion he said: "We have been the recipients of the choicest bounties of heaven. We have been preserved these many years in peace and in prosperity. We have grown in numbers, wealth, and power as no other nation has ever grown; but we have forgotten God. We have forgotten the gracious hand that preserved us in peace, and multiplied and enriched and strengthened us; and we have vainly imagined, in the deceitfulness of our hearts, that all these blessings were produced by some superior wisdom and virtue of our own. Intoxicated with unbroken success we have become too self-sufficient to feel the necessity of redeeming and preserving grace, too proud to pray to God that made us. It behooves us then to humble ourselves before the offended power, to confess our national sins, and to pray for clemency and forgiveness."

On two historic occasions the inhabitants of this hemisphere were promised—once to the Jaredites and once to the Nephites—that they would be free from despotic power if they but worshiped their Lord. On both occasions they failed. The promise is still open to this people.

May we so resist evil that we or our descendants will be ready for the coming of the Messiah—when "They shall bend their swords into plough shares, and their spears into pruning hooks," when "nation shall not lift up sword against nation, neither shall they learn war any more."

The Task Ahead of Us

EXTENSION OF REMARKS

OF

HON. BROOKS HAYS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 24, 1945

Mr. HAYS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Mr. Chester Bowles at a meeting of the Board of Trade in New York City on Thursday, May 10:

Today, with victory in Europe won at last, we face one of the most difficult and dangerous periods in our history—a period which will demand the best of all of us. Each one of us carries a very heavy responsibility—from President Truman, loaded with all the problems of the White House, down to the most humble citizen.

During the months that lie ahead of us, the war must be fought with the utmost vigor on all remaining fronts. This is our first and most important job, for everything else depends upon our winning the final victory.

During the months ahead, we must also lay the foundation for a lasting peace. The peace for which mankind has prayed so long. The peace for which we are paying and will continue to pay so great and so bitter a price.

During the months ahead, we must rededicate ourselves to the undramatic but vitally important job of preventing the inflationary blow-up which has characterized every war in the past. As of today, it can be said that all of us working together have kept the American economy on a sound foundation in spite of enormous strains and pressures. Having with so much pain managed to keep our economy on an even keel so far, we must redouble our efforts to maintain its balance until the pressures of war and the turbulence of transition are past.

Finally, during the coming months, we must develop plans and policies and adapt these plans and policies as rapidly as circumstances require to the task of attaining full production and full employment when the war is over. A prosperous postwar economy, with good steady jobs at high wages for our workers, with high income for our farmers and good profits for our businessmen is quite properly the dream of every American citizen. It is a dream which must be realized.

Each of these four tasks is great in itself. Taken together, they constitute the greatest challenge to our vision and courage and good sense that we have ever faced.

And they must be taken together, for each task is closely related to the others. If we fall down on any one of them, we shall be less likely to succeed with the others.

The war will not be truly won unless we succeed in establishing the political foundations for an enduring peace. If we fail on this front as we did a generation ago the end of war will not mean peace. It will mean merely a state of nonbelligerence while the forces are gathering for a conflict which will shatter everything that has any value in our civilization.

Peace, in turn, is not simply a matter of political arrangements. Back of these political arrangements, there must be well-being, productive employment, and high standards of living for all the people of the world. World peace requires good neighbors. Nations whose economies have broken down, whose peoples go hungry, cannot be good neighbors.

After the last war, we failed to build a durable basis for world prosperity. After a few hectic years of fake prosperity, the world was engulfed in the great depression. Out of that depression came the forces which, in 1939, plunged the world into war.

It is a commonplace to say that the Nazis drew their strength from the destruction of the middle classes during the run-away inflation in Germany in 1921–23, and the impoverishment of the entire nation in the run-away deflation of 1930–32.

If we fail this time to build a solid basis for world-wide prosperity and security, if we permit another cycle of explosive inflation, followed by paralyzing deflation, the political arrangements, the world organization—which I am confident will come out of San Francisco—will be powerless to prevent the rise of new tensions, new hates, and new dictatorships. In such circumstances there can be but one outcome—World War III. This time we simply dare not fail.

It is only fair to say that many expert foreign observers are not too optimistic about our ability to solve the stupendous economic problems which lie ahead. In my position as Price Administrator, I have had an opportunity to talk to some of the leading economists and statesmen from Australia, Canada, England, France, and other nations. Without exception, they are fearful of our ability to cooperate with the other nations of the world in building world trade and commerce, in assuming the responsibilities of a creditor nation.

Indeed, they go even further. They doubt our ability to take the measures which are necessary to sustain a high level of production and national income here in this country. They even doubt our capacity to resist the forces of inflation in the months ahead of us, despite the excellence of our record to date.

Gunnar Myrdal, a leading Swedish economist who spent some 3 years in America as a close observer of our people and our institutions, has stated that America, the land

of such tremendous wartime production and such capacity for prosperity, lacks the political and economic experience to make the economy function efficiently under peacetime conditions.

I emphatically disagree with these pessimistic experts from overseas. I am positive that America does possess the political and economic wisdom to see us through the difficult years that lie ahead of us.

But I would be less than frank if I did not say once more that these years will test our courage and our vision and our wisdom as they have never been tested before. To come through with a whole skin will call for the best there is in all of us. More than that, it will call for an honest facing of our difficulties.

My own responsibility lies on the inflation control front. On this subject of inflation control I believe that plain talk and blunt words are called for.

Wartime price control in America has been successful beyond our greatest hopes. During the period when Government expenditures, first for defense and then for war, have grown from practically nothing to a level of almost $100,000,000,000 per annum, we have succeeded in holding the increase in the cost of living since 1940 to something between 25 and 30 percent. With regard to industrial prices, the record since 1940 has been even better.

Even more important is the price control record of the last 2 years—the period in which our present price and rent-control program has been in effect. Since May 1943 when the President issued the hold-the-line order, 2 years ago, the Department of Labor states the retail prices of those items which go into the cost of living of the average low- or middle-income family has risen only 1.5 percent. Industrial prices—the prices of the basic items going into the total cost of the war—have risen only 2 percent.

It is perfectly true that some prices have risen sharply. It is equally true that many commodities are in extremely short supply and are very hard to get. But the fact is that in spite of the most tremendous inflationary pressures to which any country at any time has ever been subjected, the price level has been held to a very modest increase and for 2 solid years have been held to almost no rise whatsoever.

During this same period of effective price control industrial and farm production have been at all time peak levels. Business has had its greatest period of prosperity, with business profits (even after taxes) more than double their prewar levels.

A large part of the world has not been so fortunate. In France, Belgium, and Holland, in Italy, the Balkans, and China, in Mexico and in most of South America people are struggling today with runaway prices. Today, in Paris, a meal may cost $100. A pair of shoes $300. In China prices have risen 1,300 percent—250 percent in the last 60 days.

We might have had a 100 percent rise in prices here with purchasing power, savings, and investment 50 percent. But, thanks to the good sense of the American people, thanks to the support which the OPA has received throughout the length and breadth of the land and from every class of citizen, it hasn't happened here.

Nonetheless, I must confess that I am deeply disturbed by the recent attacks which have been made on price control. It is not the attacks as such which disturb me. The OPA has taken plenty of punishment before this and has weathered it.

What worries me is that the present attacks come at a very dangerous time. It was just at this stage of the last war that we lost the fight against inflation. And the fear that is in my mind is that we may make the same tragic mistake again.

The danger is not that the selfish few in many industries are using every trick in the lobbyist bag to feather their own nests at the Nation's expense. The danger is not in the black market and the black marketeer.

No, the real danger lies in the general feeling that the war is about over and that the threat of inflation is about past. Unless the American people can be brought to see that the threat of inflation did not end when the shooting stopped in Europe, we are in for some mighty rough weather.

Let me review for you what happened on the inflationary front after the armistice in 1918. The first impact of the cut-backs in the war program was a softening of prices, all prices, both at wholesale and retail. People at once jumped to the conclusion that the wartime scarcity was over and that wartime inflation was a thing of the past. In the frantic effort to get back to normalcy, price and production controls were stripped off fast and the wartime agencies folded up.

What happened then? Prices, which sagged for a few months during the winter of 1919, spurted up again. There was a mad scramble to build up inventories. In that scramble prices were built up higher and higher, and faster and faster, while wages struggled to keep pace. Before we knew it, dangerous inflation had set in.

By the middle of 1920, wholesale prices stood at 148 percent above their prewar levels, and the cost of living for the average citizen nearly as high. Sugar was selling for 28 cents a pound. Almost one-half of the total inflation of that period—and mark that well—almost one-half of the total inflation of that World War I period took place after the armistice, after the fighting had stopped and after we took off the few price controls which had been in effect.

The pay-off came in the spring of 1920. We went up fast in 1919. After the first few months of 1920, we came down hard. Wholesale prices dropped over 40 percent, factory pay rolls shrank 44 percent, and unemployment jumped by five and a half millions. In the devastating deflation of 1920–21, corporation profits were completely wiped out. Business incurred inventory losses of no less than $11,000,000, wiping out all the reserves accumulated during the war and more. More than 105,000 businesses closed their doors in the 5 years after the collapse.

What happened on the labor front and business front were matched, indeed exceeded, by developments on the farm front. Farm prices were out by more than half, farm income by two-thirds. Nearly one-half million farmers lost their farms by foreclosure during the next 5 years.

That's the tragic story of 25 years ago. It is the story of the complete bungling of a critically important job in a period during which the inflationary pressures were relatively mild compared to those which face us today.

In 1918 we were spending roughly $17,000,000,000 on war. During the next 12 months we will spend at the rate of $71,000,000,000.

In 1918, accumulated savings and war bonds totaled $45,000,000,000. Today they total $150,000,000,000.

In 1918 outstanding currency totaled $5,000,000,000. Today it totals more than $25,000,000,000.

In 1918 checking accounts totaled $15,000,000,000. Today they total well over $60,000,000,000.

In 1919 the gap between income and goods available totaled about $10,000,000. It totals more than $35,000,000,000 today.

I do not mean to stuff you full of statistics, but I believe it is important for us all to remember the results of our miserable failure in 1919 and 1920. We must appreciate that the dangers which came close to blowing our economy sky-high in those days are puny indeed compared with the pressures which face us today. These pressures can only be controlled by all of us working together, the OPA, the Congress, all of the hundreds of industries which have such a huge stake in our future, and, finally, the American people.

We in the OPA carry a particularly heavy responsibility in the months that lie ahead. Let me list for you some of the problems to which a solution must be found:

Our first concern is the meat supplies. This subject of meat has been one of the most misunderstood and some ways most misrepresented problems which has faced us in many months.

While beef production is at an all-time high, hog production is off 35 percent. If we are to even out the distribution of our reduced supplies we must see that a greater proportion of live animals are sent to Federally inspected plants for slaughter only. This Federally inspected meat can then be shipped into interstate commerce to our city areas which are now short.

The new program of slaughter control, for which OPA was finally delegated authority early in April, will go into effect Monday. This new program will not increase the total supply of meat—that can only come over a period of several months. But I am confident that it will prove a long step forward in maintaining fair distribution of supplies, particularly in the city areas of the East, where the shortages have been most acute.

Our second problem is that of the meat black market. Our staff of investigators has been ridiculously small in comparison to the enforcement problems which we have faced. On the average, we have had only one investigator for every county in the United States. With this small staff, we have, however, gone a long way during the last year toward breaking dangerous black markets in gasoline, fresh fruits and vegetables, and a dozen other products. Now we are out to lick the black market in meat.

The new slaughter-control program will give us for the first time the authority to control meat tightly at the starting point—the slaughterhouses. Together with the increased enforcement staff recently granted us by Congress, we can, I believe, make real progress in breaking the meat black market during the next 60 to 90 days. But I might as well warn you now that from coast to coast you will hear cries from black marketeers that honest businessmen are being persecuted. Only through a drastic program can these chiselers and profiteers be eliminated.

Our third problem is the pricing of the thousands of peacetime products which will result from the reconversion of many of our war plants. This is a problem on which we have been working hard for nearly 10 months—consulting with dozens of industry groups, getting cost figures and other essential information.

During the reconversion period we must do everything possible to encourage full production and full employment. Businessmen must be assured of good profits, based on high production. Individual adjustments must be made for small high-cost firms. Encouragement must be given to new manufacturers anxious, in the typical American way, to make a start in their own business.

We must make certain that our prices on reconverted products are not so low that they will in any way restrict or hamper production. At the same time, we must make certain that they are not so high as to throw our entire price level out of balance and start us on the inflationary spiral which we have fought so hard to avoid.

Tomorrow in Washington I expect to announce the full details of the reconversion pricing policy which we will follow during the next few months. I would like to emphasize

now that this program is a flexible program, and that it will change to meet changing conditions.

The fourth major problem which we face is that of clothing supplies and clothing prices. The Department of Labor tells us that food prices during the last 2 years have dropped some 4 percent at retail, while clothing prices for lower- and middle-income families have risen 12 percent. This rise in clothing prices has endangered our whole balance of prices and wages. It has jeopardized our over-all ability to control the forces of inflation.

The clothing program which has been announced will stabilize apparel prices for middle- and lower-income groups at slightly below their present levels. It should pull the over-all cost of clothing down. Again, it is a difficult program and one which is certain to cause problems in many areas. I can assure you we will do all in our power to eliminate hardships wherever they result.

The fifth problem which lies ahead is the continued stabilization of the cost of living, including rents, food, and other products which have been under price control during the entire war period. During the first 2 months of the year the cost-of-living index showed a very slight rise. During the last 2 months, I am glad to report that it has shown a slight drop. I am hopeful that we can maintain it at a stable level during the coming year.

The sixth problem is the selection of the right time at which to begin to drop our controls. We are well aware that the American businessmen are fed up with regulations and red tape. In general, I believe they will put up with any necessary inconvenience, but they will be the first to resent controls which are left in effect any longer than they are actually needed. I can assure you that I am in emphatic agreement with them on this point. Perhaps it is unnecessary for me to add that there is no group in the United States more anxious to get rid of unnecessary controls and regulations than the people in OPA, who have been faced with the difficult and often unpleasant task of administering these controls during the period of war.

These six problems must be met and solved during the next 12 months. They are stupendous problems, but, if we fail to solve them, the catastrophe which can overcome us will be far reaching.

The coming year will be made doubly difficult by our own natural weariness with war and the regulations that go with war. There are danger signs of this all around us. It expresses itself in the willingness of some normally honest citizens to justify their own participation in the black market. It expresses itself in blind, bitter editorial attacks on the bureaucrats and bunglers. It expresses itself in statements by ordinarily responsible people that, regardless of all consequences, price controls and rationing should be abandoned.

OPA organization today has the trained personnel and necessary experience to continue to keep the prices of inflation in check during the explosive months that lie ahead. Whether we can successfully carry out our responsibilities will depend to a major degree on American business, our Congress, and the people themselves.

Do we, as a people, have the good sense, the patience, and the courage to finish what we have begun? Will we continue to put up with the nagging irritations, the occasional hardship, the bother and nuisance of wartime regulations and red tape which are an inevitable byproduct of the controls necessary to lick inflation?

I have been working for the Government for 3½ years. During this period I have developed a supreme faith in the basic good sense of the American people. Once they are given the facts and an opportunity to understand them, they invariably come through with the proper answers.

Our people from one end of this land to the other have their hearts set firmly on a new America. In the postwar world the will insist upon a free America with individual right guaranteed to everyone. They will also insist on a prosperous America with full production and full employment for every citizen who is able and willing to work.

During the next year and the years that stretch beyond, the whole world will be watching to see what we do—and what we fail to do. Probably no people on earth have ever carried the responsibility which we Americans will carry. I have confidence, a firm, deep-seated confidence, that we as a people will come through with flying colors.

Opposition to Trade-Agreements Program

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 24, 1945

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks, I am inserting the following statement on behalf of the manufacturers of vitrified china at the hearing on the Doughton bill, H. R. 2652, made by James K. Love, vice president and secretary of the Shenango Pottery Co., of New Castle, Pa., and a member of the foreign trade committee of the Vitrified China Association, Inc., in opposition to the extension of the reciprocal trade agreements:

I am James K. Love, vice president and secretary of the Shenango Pottery Co., of New Castle, Pa., and a member of the foreign trade committee of the Vitrified China Association, Inc. I am speaking in behalf of the entire vitrified china industry. Other statements have been or will be made on behalf of this industry and I will try to avoid unnecessary repetition.

The principal factories manufacturing vitrified chinaware are located in these States: California, Georgia, New Jersey, New York, Ohio, Pennsylvania, West Virginia.

The States producing the raw materials for the production of vitrified chinaware are: Alabama, Arizona, California, Colorado, Connecticut, Florida, Georgia, Illinois, Kentucky, Maine, Maryland, Missouri, Nevada, New Hampshire, New Jersey, North Carolina, Pennsylvania, South Carolina, South Dakota, Tennessee, Utah, Vermont Virginia, Wyoming.

Any reduction in tariff, therefore, on chinaware or pottery would have an adverse effect on the labor and business in communities not only in the States in which the product is produced but in the other States mentioned above which supply the raw materials for the product.

We know, of course, that this is not a hearing with reference to a particular tariff rate. We fully realize that H. R. 2652 is designed only to continue in the State Department power that it has had for 11 years to negotiate reciprocal trade treaties. The bill, however, greatly increases the latitude within which the negotiators may work.

In the light of past performance we are not reassured by the oft-repeated statement made in this hearing that all that is wanted is the authority to operate under this increased latitude, and that this authority may not be used. Our opposition to this bill is based on the belief that the authority once given will be used, and to explain this opposition we naturally use our own industry as a background.

One thing which concerns us deeply is the fact that these treaties with respect to any commodity were intended to be made with the country which is the principal supplier of that commodity. In 1939 a reciprocal agreement was made reducing the rate on china containing 25 percent of calcined bone by approximately one-third and certain items of earthenware by approximately 40 percent. Notwithstanding the fact that at that time and for years before, by far the largest importations of household china both in number of units and in value had come from Japan, this trade treaty was not made with Japan, but with the United Kingdom.

Under our most-favored-nation policy the rate extended to one country is automatically extended to all countries manufacturing the same commodity unless they discriminate against us. It must be obvious that a rate extended to the United Kingdom to even inadequately protect the American potter against an average wage rate of 26 cents per hour in the United Kingdom was utterly useless as a protection against the Japanese average wage of 7 cents per hour.

Now, the attack on Pearl Harbor in December 1941 might be loosely interpreted as a discrimination against the United States, and thus, of course, prevent Japan from taking any further advantage of this treaty. It is interesting to note, however, that even in 1941, 79.1 percent in quantity and 41.9 percent in value of importation of household china came from Japan. This was more than eight times in quantity and only a little over 15 percent less in value than the imports of the same commodity from the United Kingdom. (Table, p. 34, U. S. Tariff Commission, No. 7, pottery tableware, 1944.)

Japan and the United Kingdom have been used as examples as they represent the bottom and top wages in foreign china tableware production. A similar comparison exists in varying degrees between these two extremes as to France, Germany, Czechoslovakia, Sweden, and many foreign china-producing countries. It may be contended that for a long time after the war Japan and Germany will not be factors to reckon with. It is our considered opinion that with respect to our industry the exact reverse is true.

According to plans given wide newspaper publicity, these countries are in the future to be excluded from the manufacture of any heavy products which might conceivably be used in making war. In this case their very existence depends upon their making the best use of what art and facilities they are permitted to employ.

As to manufactured products, this will mean peacetime articles, and what is more natural than that they concentrate on those industries such as pottery, in which their low labor cost gives them such a wide advantage.

Undoubtedly, at least two new competitors to this industry appear in the field also, Russia and China. Under the lend-lease program American machinery which we are sending abroad can produce a mechanization equal to that of the industry in the United States. The combination of machines and low wages will present a vastly greater threat to American living standards.

There has arisen in some quarters in this country a disturbing philosophy illustrated by a definition given the other day in this hearing. An inefficient industry was defined as one which could not compete in world markets. While I do not recall whether or not it was exactly stated, the inference was plain that an inefficient industry was one which could not compete in world markets without the aid of tariff protection. The inference was also plain that such an industry should be abandoned in this country, and

the product which it manufactures be purchased from those countries which by reason of their low labor rates, could manufacture the product much more cheaply than it could be manufactured in the United States.

The vitrified china industry gives employment to eight or nine thousand workers directly, and indirectly to many more. By far the greater proportion are skilled workers in their own craft, but not in any other craft. Years have been spent in learning their jobs and many have done nothing else for as many as 50 years. They are paid an average hourly wage of almost 3½ times the highest average wage of any foreign potter, which American wage is 60 to 65 percent of the selling price of the china.

If this philosophy which we have mentioned above is carried to its logical conclusion, it can mean only one of two things. Ether the standard of living and wages of the American potter must be reduced to such a point as to retain the American business, or the industry must be abandoned, which is the implication of the philosophy expressed above.

We contend that the standard of living of the American worker should be still further raised. We hope that it will be possible to further increase wages. We are entirely opposed to the philosophy expressed in the foregoing, but our opposition may be challenged as representing a selfish viewpoint.

It is gratifying, therefore, to find support in this opposition from a source which should carry a great deal of weight with most citizens of this country. With your permission, I would like to quote from an article in the New York Times of April 5, 1945, as follows:

"We have got to de-industrialize Germany and Japan—at least for a generation—so they won't go to war again. Also, we have got to see that those subsidized slave-labor countries do not again flood the world with their cheap products, lowering the standards of living of the United Nations."

This statement was not made by Mr. Herbert Hoover or Senator ROBERT TAFT, or anyone else who might be accused of a continuing bias toward protective tariff. Those are the words of Mr. Bernard M. Baruch. Now, Mr. Baruch, as all of you know, is a logical and forthright man. The most casual reading of the above quotation would indicate that he does not favor the philosophy which would lead to the purchase of products wherever in the world they can be obtained at the cheapest price. Also that he does favor the protection of the wages and living standards of the American workman.

We think it a fair statement also that if Mr. Baruch thought that the simple replacement of an American earning power with a foreign earning power many times less would produce an increased world trade and result in a world peace, he would have said so.

It is easy to say that any certain industry should be abandoned, but it is not so easy when the results are contemplated. We have been speaking only of the vitrified china industry which represents only approximately one-third the number of workers of the entire pottery tableware industry. There are a number of other smaller industries, such as some major branches of the glass, textile, and watch industries, etc., which have been included in the category of inefficient industries because they require a tariff to protect the living standards of their workers.

If these industries are to be abandoned it would mean taking thousands of workers from the jobs with which they are familiar and which they have performed for years, to jobs entirely new to them. This is assuming that such transfer is realistically possible. It will mean the practical desertion of many small communities and the serious crippling of others.

With the announced goal of 60,000,000 jobs, and the recognized difficulty of producing them, the destruction of thousands of jobs does not seem the efficient way to start the program.

When we think of war we are inclined to think of guns, ammunition, tanks, planes, ships, and other heavy equipment. Armies must be fed and clothed, and otherwise outfitted. The vitrified china industry met, and met quickly, the sudden essential requirements of the Army and Navy for tableware for our armed forces. How they would have been equipped if the whole or principal source of china had been Europe or Asia is not a pleasant subject to contemplate. Also, if it were not for the protection of the potter's art and production facilities in the United States, we should not have had a powerful new war weapon fighting on our side: a nondetectable ceramic land mine developed by this industry and supplied in hundreds of thousands to our armed forces. Nor would we have had the skills and know-how to produce a new ceramic product to previously unheard of tolerances, steatite parts essential to the proper functioning of radar.

In a debate which involved tariff, and which enjoyed a very wide hearing in the United States, an opponent of protective tariff whether intentionally or unintentionally greatly exaggerated the actual amount of this tariff. In the case of decorated vitrified china on which the ad valorem rate is 70 percent and an additional 10 cents per dozen pieces it was represented to be 77 percent. The impression was also left that a foreign article which would sell in the United States at $1 if admitted free, would sell for $1.77 with the present tariff rate. This is far from true as will be seen from the illustration inserted below:

The price of a vitrified china (not bone china) service plate, made abroad, and selling to the American consumer at $30 per dozen is made up of the following factors:

American selling price per dozen	$30.00
Present retailer's ceiling mark-up, 75 percent	12.86
Price charged retailer by importer	17.14
Importer's mark-up, 25 percent	3.43
Landed cost to importer	13.71
Foreign transportation, ocean transportation, consular and other fees	2.25
Cost after tariff	11.46
Per dozen rate	.10
	11.36
70 percent ad valorem	4.68
Selling price f. o. b. foreign factory	6.68

Total tariff $4.78 per dozen or 15.9 percent of price to consumer.

Total tariff plus 25 percent importer's mark-up plus 75 percent retailer's mark-up $10.45 per dozen or 34.8 percent of price to consumer.

NOTE.—We are informed that the importer's mark-up and, cost of transportation, etc., are most conservative.

Retailer's ceiling on mark-up has just been set by the OPA at 75 percent. It may be assured that it has been higher.

The ad valorem rate is of course assessed on the foreign, not the American value. It will be noted that the actual duty on the service plate which is used as an example in the illustration is $4.78 per dozen, which is less than 16 percent of the price to the American consumer.

Referring now to the provision in H. R. 2652 providing that rates may be cut 50 percent below the rates existing on January 1, 1945, a statement has been made in this hearing that under the present bill 42 percent of importations in value have already been cut 50 percent. It has been further stated that the greatest advantage to the United States and the greatest trading benefit will be gained from further cuts on those items which have already been cut 50 percent. It has also been stated that no industry has been seriously injured by the cuts which have already been made.

We are not familiar with the situation as to all other industries. We will agree that the vitrified china industry has not been seriously injured as yet, but for a very obvious reason. The trade agreement providing the reduction in the rate on bone china was effected in 1939. All of Europe was either at war or preparing for war. Japan was at war with China. Early in 1940 the United States started preparations for war on a large scale. The vitrified china industry was called upon for immense quantities of china tableware for the Army and Navy, and the civilian requirements for this product were also vastly increased. Production in all industries was largely stepped up. Some of the vitrified china factories found their existing equipment insufficient to take care of the sharply increased demand for chinaware and found it necessary to greatly enlarge their plants. It is not difficult to understand that in such a situation there should be no serious injury to the vitrified china industry. The reason of course was the war, and the war alone.

However, it is rather naive to assume that because no serious injury was caused under war conditions an additional cut of 50 percent will cause no injury under peacetime conditions. It does not seem to us the part of good business to give authority to make further cuts in th tariff when the conditions have been such that we have been absolutely unable to learn what the effect of the present cuts would be in normal peacetimes.

Reverting for a moment to the philosophy as to inefficient industries as defined, and their possible abandonment in this country under this theory, we are confronted with the plight of our returning veterans. From the information at hand it would appear that the vitrified-china industry has furnished approximately 2,000 men to the Armed Services. They have been promised their old jobs when they return, and, of course, this means their old jobs at wages not less than when they went away. If serious cuts are made in the tariff rates, the industry will not be able to furnish those jobs at the wages in existence when the men went away, if at all.

We are also impressed with the problem which arises in the State of North Carolina. Right now its department of conservation and development is making strenuous efforts to build up a pottery industry in that State. Faced with the prospects of cheap labor competition from first English, then continental European, and then Oriental wage scales, there is no likelihood of this part of this State's economic gains being achieved unless their labor standards are adequately protected against 26-cent British, 12-cent Czechoslovakian and German, and 7-cent Oriental competition. The figures mentioned are, of course, average hourly rates in pottery industries of the countries mentioned, and compare with an average hourly rate of 85 cents per hour in the American pottery industry, this being the rate reported by the United States Tariff Commission in its 1944 report, page 39.

The opinion has been voiced at this hearing that practically all protective tariff advocates desire exclusion of competing products. While we do not know all protective tariff advocates, yet we have failed to see any widespread confirmation of this statement. The creed of this industry is comparatively simple in this respect. The profits never were large nor can they ever be large. All we want is a tariff to cover the difference in the labor costs so that the workers in this industry in

the United States may maintain and enhance their standards of living.

If foreign goods are landed at a cost no less than it costs to produce similar American goods, then if the American manufacturers cannot secure a sufficient proportion of the business to keep them operating at a profit they deserve to go down.

For reasons which must be obvious the argument for the reciprocal trade agreements as instruments of peace leaves this industry rather unimpressed. The past record is of course unconvincing and we would inquire with whom these agreements would be effective as instruments of peace.

It is inconceivable that any of our allies would go to war with us because we would not continually and progressively reduce our tariffs and thus lower the American living standards toward the standards of European and Asiatic nations. There remain, then, Germany and Japan. Are we to tell them that in order to avoid another war 20 years hence we will purchase from them vastly increased quantities of manufactured goods, of the same type that we manufacture in this country, but manufactured in Germany and Japan at low wages, at the expense of the labor of Americans? Even if we did so, we believe that it will be agreed that we could not rely on their keeping their part of the bargain.

It is to be regretted that there is a tendency to give less consideration to small industries, simply because they are small. It is also to be regretted that the degree of mechanization in an industry is taken in too large an extent as a measure of its efficiency.

Some industries can never be completely mechanized, and the vitrified china industry is one of them. Machines are rapidly coming into use in this industry in operations which can be mechanized. There are, however, certain skills of handicraft, certain arts which can never be replaced by machinery. To reduce the opportuznity of these artists and craftsmen to use their art, or to deny it to them altogether, and to purchase such artistry and such craftsmanship abroad because it can be furnished much more cheaply abroad, would provide an insignificant volume of world trade. The suffering and unhappiness produced by the dislocation in part or in whole of such craftsmanship would not be justified.

In china dinnerware, the reciprocal trade agreements have thus far largely affected only English bone china imports. That this is the case is due to the war, but in spite of the war and its disruption to civilian goods production in Great Britain, British exports of bone china dinnerware to the United States have been about four times as great in units in the years 1941–43 as the British exports of the same commodity to the United States in 1935–36 prior to the existence of the reciprocal-trade agreements with Great Britain.

That English bone china exports to the United States could increase so greatly despite the obstacles in civilian goods production which have existed during the war in England suggests that present tariff rates on bone china can be expected in a more normal peacetime period to produce a vastly greater increase in British exports here than the increase thus far experienced. This would seem to be certain under the present tariff rates not to mention any different or lower rates.

The preferential treatment of bone china has been based upon two misconceptions, and the need for its elimination seems clear. The first one is that bone china is noncompetitive because it contains bone. It is a very far-fetched conclusion that the competitive or noncompetitive character of an article can be determined by its raw material composition. The whole economy is filled with the most directly and keenly competitive articles and commodities of entirely different composition in the fields of both raw material and manufactured goods. Of course, the question of the competitive or noncompetitive character of an article is not determined by its raw material composition, but rather by whom, how, and for what purpose it is used as well as how it is distributed, bought, and sold, and the personal preferences of the buyer.

An examination of bone china as to price range, as to channels of distribution, as to types of consumers, and as to ultimate use all indicate the highly competitive character of bone china in the United States market.

The second misconception upon which the preferential treatment for bone china was based was that the use of bone as a raw material in china was uniquely characteristic of British production and that bone was not used in the production of china elsewhere.

While this has been largely true in the past or in an historical sense, there is little reason to believe it can remain true. On the contrary, known facts indicate the opposite.

There is no mystery about the use of bone in producing china. Bone china has been produced in Japan, France, Germany, and the United States in addition to Great Britain. Its technique is relatively simple and is universally known throughout the pottery industry in all china-producing countries.

Over a period of time preferential treatment for china containing bone will serve less in providing a preferential position for British china manufacturers than it will to bring about a widespread production of china containing bone in all countries desiring to export to the United States rather than other and, incidentally, superior types of china.

Therefore, if the preferential treatment accorded bone china in the present tariff is intended to provide a preferential status for the British, it will plainly not serve this purpose over any considerable period of time and will merely have the effect of altering the raw material compostion in china produced in other countries in order to take advantage of the substantially lower rates for china which merely happens to contain bone in its composition.

We contend that there is no justification for the reduced rate on bone china and urge the restoration of the rates on certain items of earthenware and bone china, existing before the trade agreement which was concluded with the United Kingdom.

We also urge that the present most-favored-nation policy be made ineffective in the operation of reciprocal trade agreements.

Our present position on H. R. 2652 is as follows:

We respectfully suggest the following amendments:

A. Limit the authority to change rates to the degree now existing instead of the increased degree expressed in the bill.

B. Provide for congressional approval of all reciprocal trade agreements.

C. Limit the operation of the act to 1 year. The problems in post-war will admittedly be vastly different from those which have heretofore been encountered during the operation of the act. It would seem highly advisable for Congress to retain a high degree of control over the operation of the act, so that it could quickly make such changes in the act as might be justified by changing circumstances.

With these amendments included we would not oppose H. R. 2652. Without them, or others which would produce substantially the same effect, we do oppose the bill.

Respectfully submitted,

JAMES K. LOVE,
Member of Foreign Trade Committee,
Vitrified China Industry.

Effect of Tariff Reductions on American Labor

EXTENSION OF REMARKS
OF
HON. CHARLES R. ROBERTSON
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 24, 1945

Mr. ROBERTSON of North Dakota. Mr. Speaker, as this House further considers the very important question of lowering the tariff on goods from foreign shores, we must not overlook its effect upon the men who labor in America. This Congress by its own acts ha. passed laws that have placed labor in a position in the complex social structure of our American life that gives it many advantages it heretofore did not enjoy.

I should not want to be construed as disapproving what the Congress has done in this respect, but I am deeply concerned with what the Congress does with the tariff today, because what we do today with he tariff is closely interrelated with what the Congress has done with labor.

There are many throughout the land who hold to the principle that only by large turn-over of business between the countries can we maintain the standard of living in America. Let us not be misled with that principle or theory. To me this would seem a perfectly logical situation if all the countries to whom we sold goods or from whom we bought goods had a living standard comparable with ours.

We are all familiar with the fact that no other country in the world enjoys the position we enjoy. All other countries will be inspired in the postwar period to batter at the gates of America with their products on their backs, hoping to gain entrance to the greatest market in the world, and if they make this approach they will have due regard for the fact that price will be a consideration.

Their products will come from the hands of laborers whose wages are vastly lower than America's wages; and if by our acts in the Congress we make it possible for these men with their packs to enter our doors, there can be but one answer to the question—the lowering of the wages of the American worker. And by this process we challenge the traditions that have made this the great Nation that it is.

Truly, the combination of our labor plus the ingenuity of our industrialists, the enormous proportions of our plants and their high efficiency, was a very important factor in the winning of the war. Let us not be neglectful of the fact that we must move with caution in this direction. These great forces must not be destroyed by international minds who hope and think, perhaps honestly, in terms of establishing a better international relationship in the world. I, for one, hope for that day to come. But I am not willing that that day shall come if with its arrival comes a program which automatically reduces the living standards we have produced, both by law and by practice, in our own country to our laboring men.

In this connection, Mr. Speaker, under unanimous consent, I include an editorial taken from the paper called Labor, issued under date of Saturday, May 19, 1945:

ANTILABOR JOKES COME HOME TO ROOST—RETURNING FIGHTERS DISCOVER PROPAGANDISTS LIED ABOUT WAGES PAID MEN AND WOMEN ON HOME FRONT

"Where are those big-salaried jobs we have heard so much about at the battle front?"

That's one of the difficult questions propounded by returning veterans, says J. R. Kinder, war manpower commissioner for Nebraska, in an interview printed in Lincoln newspapers.

These fighting men, according to Mr. Kinder, or at least many of them, believe that $100 a week has been the prevailing wage in this country, and that no particular skill is required to earn it.

Naturally, they would like to have some of those jobs and they are disappointed when they find that they are not available and that the workers who did the big job on the home front did not receive such compensation.

Actually, at this time, Government employment offices are finding it hard to place veterans in new jobs at 55 cents per hour and up.

"Their hopes built up high, due to circulation of harmful rumors and misstatements regarding wages paid at home, the returning servicemen are at first unwilling to accept the fact that wages are not fantastic, and they cannot realize that, in addition, the take-home pay is still further reduced by tax deductions of more than 20 percent," Mr. Kinder discloses.

The jokes of the past are now providing a problem that must be tackled and solved at once by the people at home.

Similar reports are coming from New York and other large centers.

Who circulated those costly jokes and why did they indulge in such dastardly propaganda? Of course, readers of Labor know the answer. The newspapers, the radio, and hard-boiled antiunion employers all over the land are responsible. They hoped to inflame the soldiers against the workers.

Fortunately, the returning soldiers are beginning to discover the truth. For once, the propagandists may become the victims of their own lies.

Office of War Information

EXTENSION OF REMARKS

OF

HON. LEON H. GAVIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 24, 1945

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial and article from the Washington Daily News of May 22, 1945:

ABOLISH THE OWI

Congress should abolish the Office of War Information.

This agency had about $58,000,000 to spend in the current fiscal year. It was budgeted to spend fifty-four million in the year beginning July 1. President Truman asked Congress to cut that to forty-two million, saying that victory in Europe had ended the need for psychological warfare there. Congress should give OWI just enough money to liquidate itself in a hurry.

On May 1 OWI had 9,385 people on its pay roll—in this country, 4,023; elsewhere throughout the world, 1,661 sent from the United States and 3,701 hired abroad. Since then it has been recruiting.

Some OWI employees are able and well meaning. Many are crackpots, professional do-gooders, and persons making the most of a chance to spread, at public expense, strange propaganda which would surprise and displease the American people if they know all that goes on.

What OWI does in this country is mostly made work. It assembles and passes on to the press information from Government departments and bureaus, most of which are overstocked with press agents of their own. Having power to select the substance and shape the form of the information it transmits, the OWI is under constant temptation to be a censor.

It's unlikely that anyone outside OWI knows all its plans for operating abroad, but much that is known is bad. For instance, it wants to publish German-language newspapers and magazines in Germany. It wants to operate radio stations in occupied countries. Until President Truman and General Eisenhower called a halt, it even joined in a scheme to bar privately published American and British newspapers from occupied Germany.

The American people don't want Government owned and operated newspapers and radio stations in this country. They would distrust the information and opinion thus transmitted, justifiably suspecting it as propaganda. The Germans and Japs would recognize the OWI output as propaganda. They would conclude that our democracy plays the same game as their tyrannies. Much better let people in the occupied countries publish such newspapers and operate such radios as they can afford, at their own expense, under strict Allied military censorship and control.

At home or abroad, there is no good reason for continuing the OWI. Its usefulness, if any, has ended. Abolish it.

HOW OWI SPENDS IS COMING TO LIGHT

(By Daniel M. Kidney)

Some of the things for which the Office of War Information is expending its current appropriation of $58,625,367 will be brought to light soon with the publication of House Appropriations Committee hearings on the war agencies bill.

Personnel is the big item with OWI. On April 30 they were employing 9,385. Of this number 4,023 were with OWI in the United States and 5,362 overseas. This "overseas" force consisted of 1,661 Americans and 3,701 foreigners, which OWI designates as "locals."

What this army of employees has done was a matter of considerable criticism before the Appropriations Committee. For OWI Director Elmer Davis is asking for $42,000,000 to keep the outfit going for another fiscal year.

HOW TO SAVE

Both Democrat and Republican Congressmen have been outspoken in favor of its abolition. Some have said that they know of no easier way to save $42,000,000 than to end OWI.

Representative ALBERT GORE (Democrat, Tennessee) and others who spent considerable time at the front (Mr. GORE as a soldier on special assignment) said they were unfamiliar with just what it was OWI was doing over in Europe.

One Congressman said that he had heard a good deal about OWI in London, but it mostly was trivial, about how some of its personnel were spending their time in cocktail lounges.

A sample of what he called "the lack of alertness" of OWI was related by Representative ROBERT GRANT (Republican, Indiana), who flew to Australia as a member of the House Naval Affairs Committee.

"We were in Sydney 2 days," Mr. GRANT said. "We had been greeted by the American consul, and our pictures with stories about our inspection trip had been in all of the Sydney papers. At last an OWI man showed up and began questioning us—first he had heard of it.

"I saw where Elmer Davis said that OWI must spoon feed the Germans with its plan for newspapers and magazines to be printed and distributed in United States occupied territory. In fact, he was quoted as saying, 'Germany is a sick man.' That is true. But OWI also is sick, and it isn't worth $42,000,000 to restore it to health. It never can recover.

STORY OF WASTE

"The whole history of the OWI has been a sad story of wasted funds. It is time to put a stop to it."

On the domestic front OWI's function is to funnel handouts from the myriad other Government agencies, making most of the original writers mad because of the poor rewrite job. They also function as a barrier between the press and public departments.

Jefferson Day Address of Hon. John W. McCormack, of Massachusetts

EXTENSION OF REMARKS

OF

HON. PHILIP A. TRAYNOR

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 24, 1945

Mr. TRAYNOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech by Hon. JOHN W. MCCORMACK, of Massachusetts, delivered in Wilmington, Del., May 21, 1945:

Mr. Toastmaster, my colleague and valued friend, Congressman TRAYNOR, distinguished and invited guests, ladies, and gentlemen, in a speech that I made several years ago I stated: "This generation of Americans has a rendezvous with destiny." The events of the past 13 years, and particularly the last 5 years, clearly establish that fact.

An economic depression that threatened to stagnate and paralyze our future, thereafter the danger that threatened us from abroad, and afterward our forced entry into this war all have happened during this period of time. What a place the events of this period will occupy in history. This period, and particularly the last several years, constitutes the most important, historic, and tragic period in the known history of man.

During this time we have seen the peoples of some countries, in their despair and defeatism, in their loss of faith and conscience, responding to the appeals of the demagogue and the false prophet, turn to the dictator and accept the totalitarian form of government.

In their despair they gave up every noble and uplifting principle and thing they possessed and which decent mankind believes in for what they were promised—economic security. And they received slavery through the establishment of the state supreme, with the resultant destruction of personal liberty and human dignity. We have seen them indoctrinated and molded individually and in mass fashion into nations of hate, determined upon the conquest of their smaller and weaker neighbors, and after that the conquest of the world.

Here, in America, with our democratic institutions of government, we also had serious problems confronting us which had

to be met and solved in the national interest. But, unlike Germany and other countries, in the dark days of our depression the faith and sound judgment of the American people remained undaunted, and our people, through the use and the power of the ballot, turned to leadership that had vision, that was constructive, that was noble and courageous. We turned to leadership that defeated the depression, that saw years ahead of others the danger approaching us from abroad, and prepared our country for defense. Yes; we turned to the leadership that saved our country and preserved democracy throughout the world.

That leadership was Franklin Delano Roosevelt and the Democrat Party.

In 1933, the people of Germany abdicated everything that decent people hold near and dear and give their very life to preserve, and they turned to Hitler, the cruel dictator, the destroyer, the mass murderer.

In the same year, the people of the United States turned to Franklin D. Roosevelt, the great humanitarian, the builder, the preserver of a decent way of life, the man of destiny.

During our lifetime we have seen these two men clash. Franklin D. Roosevelt standing for love of neighbor, for decency, for constructive progress. The other standing for hate, for persecution and death, for world conquest and destruction. And, thank God, under the leadership of Franklin Delano Roosevelt the forces of decency and progress have won.

Franklin D. Roosevelt is America's contribution of this era to the great men of all time.

It was through the Democratic Party, supported by independent Republicans and independent voters, that Franklin D. Roosevelt became our President to give to our people and to the world the sound, positive, constructive, humane, dynamic leadership that even long before his death gave him his place in history as one of the outstanding figures of all time.

In 1789, the immortal George Washington was inaugurated for his first term as President of the United States. His leadership and his contributions properly place him for all time as the Father of Our Country.

In 1861, 72 years later, the immortal Abraham Lincoln was inaugurated for his first term as the President of the United States. His leadership and his contributions properly place him for all time as the savior of our country.

In 1933, 72 years after Lincoln, Franklin D. Roosevelt was inaugurated for his first term as the President of the United States. His leadership and his contributions will properly place him in history as the preserver of democracy throughout the world.

During his 12 years as President, Franklin D. Roosevelt, in his fight for the people, received and met bitter and uncompromising opposition. But his love of the common man, his vision, his constructive service, his courage, never became dimmed. He did not know the meaning or the feeling of fear in his fight for the cause of the people.

His love for the common people, the average American, for mankind in general, was intense. And the people knew it. The common man and woman of America, the backbone of our country, in turn loved Franklin D. Roosevelt, and it was they, in the main, that gave him the support which elected him for four consecutive times, and enabled our late President to give to us and to the world the noble character of service that is now a part of the heritage of America.

We can always point with pride that he and the Democratic Party gave our people the positive leadership that was needed from 1933 on, and which was denied them from 1929 to March of 1933, the kind of leadership necessary to meet the trying problems of the past 12 years.

Franklin D. Roosevelt used the powers and the machinery of our democratic institutions to bring about the passage of legislation necessary for the common welfare of our people, supported by the Democratic Party in the Congress, and he did this in the democratic way. In 1933, when he assumed his great office, our people were in despair; business and industry were stagnated, want and suffering existed throughout the land. Fear existed in all sections of our country. He inherited that state of American society and Government from his Republican predecessor. Upon his death, he left us virile, strong, confident, victorious in defeating the vicious depression, and victorious in defeating the cruel and powerful enemies of this war.

The internal improvements he brought about, his fight for the economic freedom of our people, his great progressive and reform measures, all of a stimulating and strengthening nature to our people and to our country, will always remain.

No future President or political party would dare attempt to repeal the beneficial laws brought about by the Democratic Party under the leadership of Franklin D. Roosevelt. No such President or political party would dare attempt this and expect to be successful at the polls for many succeeding national elections. A future President or political party might try to strengthen the laws he recommended, or to adjust them to future conditions as experience may require, but no President or political party placed in control of our Government would dare try to repeal any of his great measures which were necessary to preserve our basic political rights by bringing economic freedom and security to our people.

Yes, under the leadership of Franklin D. Roosevelt the depression was defeated. Under Franklin D. Roosevelt our institutions o Government were strengthened, faith and confidence restored. Under Franklin D. Roosevelt, and against great odds and bitter opposition, our country was prepared. Under Franklin D. Roosevelt, the plans were laid and carried out that defeated Hitler and Nazi Germany, and it will be under those same plans, the plans of Franklin D. Roosevelt, that the defeat and unconditional surrender of cruel and imperialistic Japan will be brought about.

But, that is not all.

While giving to us the leadership necessary to win the war * * * Franklin D. Roosevelt was also giving us the leadership to win the peace.

God in His infinite wisdom has acted, but the spirit of Franklin D. Roosevelt is with us today. It will always live as long as human beings exist. His name and memory is and will always be enshrined for all time in the hearts and minds of decent men and women everywhere.

It was my pleasure and honor as majority leader of the National House of Representatives to be in close touch with the late President for the past 5 years. I can see him now, his indomitable will and courage, in the dark days of the year and more following the dastardly Jap attack on Pearl Harbor. Even shortly after our forced entry into this war, with the first task of winning the war confronting him, I can see him now as he was then looking ahead, confident of ultimate victory, and laying the plans for an enduring peace.

When the sudden attack came that took him from us, with the knowledge that Nazi Germany was defeated, and that meant that Japan alone could not win the war, he was giving primary consideration to planning an enduring peace. On a number of occasions I have heard him say "that man was created by God for peace—not war. It is the greed and selfishness of human beings and nations that produce wars. It is regrettable, but it is a fact, that we must also fight to bring about peace."

How often in our talks did he mention the efforts of another great democrat and American—Woodrow Wilson—to bring about world peace 25 years ago. How often did he mention and show his determination (as well as his prayers and hopes) that this would be the last war, that based upon the national interest of each nation, large or small, they should recognize that the world could not withstand another global conflict 25 or 30 or more years from now, and that the national interest of each and all nations (as well as the best interests of each individual) calls for peace and not war.

He recognized also the difficulties of the task, but he also recognized the necessity of its accomplishment. At the time of his death he was devoting all of his efforts to bring about an enduring peace.

He recognized that a sound and lasting peace had to be based on equity and justice among nations, and that the origin of such a peace was to be found in the moral law, the law of God.

Yes; he recognized to obtain this great goal that reasoning and decent mankind have dreamed of and strived for for countless generations, that in order to control the lust, and hate, and other baser and selfish influences that produce wars, that we had to be realistic in our approach, that all nations had to cooperate in this effort with the willingness to make such proper contributions to this end, and that our country should take its place as a leader among the nations of the world in a cooperative effort or movement to bring about an enduring peace by the outlawing of war.

He knew, based upon the experiences of the past, and particularly of the last war, and this war, that mankind was traveling the road of war and the only way to travel the road of peace was to take the necessary measures to prevent future wars. He knew that unless something was done that another global war more destructive than this one was just a matter of time. The world now remembers that it is only 25 years ago that Woodrow Wilson foresaw and predicted this war unless some steps were taken then to establish international order for peace.

If there is one thing we should learn from this and the last war, it is that if we let things go on after this war as they have been, that a war between two nations even in some remote spot of the earth means that the whole world—all nations—would eventually become drawn into war.

President Roosevelt knew that a challenge to liberty and human freedom anywhere was a challenge to liberty and human freedom everywhere, and that positive action had to be taken to prevent another conflict far more destructive than this one, from occurring again.

It was that great goal he was fighting for at the time of his death—enduring peace for mankind.

While he is not with us in person; while his great leadership is denied us, the influence of Franklin D. Roosevelt exists and leads us in our determination for ultimate victory over our remaining foe, and in our efforts for an enduring peace.

Yes; his spirit is present at the San Francisco Conference; it will always be present as a potent influence for good. It is our duty, it is to our interest, to carry on his work to a successful conclusion. We must and will do our part, but all other nations, large and small, must also do their part.

God having willed as He did on April 12, in accordance with our Constitution, shortly after the death of President Roosevelt, the then Vice President, Harry S. Truman, took

the oath and the office of the President of the United States.

In the tact and judgment that President Truman has shown we can all take a strong sense of faith and pride in democratic institutions as they exist in the United States. This is the first time that our country has experienced a change in the Presidency during a war, and with grave problems of such weight and scope as have ever been transferred by one man to another so suddenly and in such a critical time.

President Truman assumed his office and responsibilities with inspiring courage and confidence. Realizing his trying position of suddenly and unexpectedly becoming President after the death of the immortal Franklin D. Roosevelt, the people of the country have closed in their ranks behind him. President Truman will give to our people the best type of leadership possible in the trying days ahead. He will fearlessly carry on the effort that Franklin D. Roosevelt finally gave up his life to achieve, future permanent peace.

While this dinner is political in character, being a postponed victory dinner, it is fitting that it should become a memorial occasion to honor the memory of our great leader.

In 1932, the people turned to Franklin D. Roosevelt and the Democratic Party for the leadership they needed at that time. Again, in 1936, in 1940 and in 1944, they did the same thing. In the most important and tragic period of the known history of man, when if our country did not have the right kind of leadership we would not only lose a war but lose our country. The Democratic Party under the leadership of Franklin D. Roosevelt have kept the faith with the American people.

With our record of achievements we can approach future national elections confident of victory.

As Democrats, we can feel proud, and as Americans, we can thank God, that in this trying period of our country's history we had as our President and our Commander-in-chief, he, who only a few weeks ago was with us, but who has now taken his place in history as one of the greatest of the constructive figures of all time, Franklin Delano Roosevelt.

Return to Standard Time

EXTENSION OF REMARKS

OF

HON. JOHN W. GWYNNE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 24, 1945

Mr. GWYNNE of Iowa. Mr. Speaker, I have today introduced a House concurrent resolution for the purpose of returning the country to standard time.

The so-called war time was adopted by the act of January 20, 1942—United States Code, 1940, supplement IV, title 15, section 261. Section 2 of this act provides as follows:

> This act shall cease to be in effect 6 months after the termination of the present war or at such earlier date as the Congress shall by concurrent resolution designate.

This concurrent resolution would fix such earlier date as the date on which this resolution shall be adopted by the House and Senate. This proposed legislation is identical with a Senate concurrent resolution introduced by Senators WILSON and HICKENLOOPER of Iowa. The House resolution is introduced at the direction of all the Members from Iowa: BEN F. JENSEN, KARL M. LECOMPTE, THOMAS E. MARTIN, HENRY O. TALLE, PAUL CUNNINGHAM, CHARLES B. HOEVEN, and JAMES I. DOLLIVER.

The winning of the war against Germany has been followed by modifications of certain wartime controls. For instance, the curfew regulations, the ban against horse racing, and the brownout have been eliminated. It has been decided that the reasons for these regulations no longer exist. With equal propriety it can be said that the reason for war time no longer exists.

It is now evident that one of the great problems still unsolved relates to the production of food. Every encouragement should be given the farmers of the country to enable them to produce the necessary food which we shall so badly need. It is generally conceded that artificial time rather than sun time is a great detriment in the agricultural sections of the country.

It is my hope that immediate consideration be given to this resolution.

The Rise of the Goober

EXTENSION OF REMARKS

OF

HON. ROBERT SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 24, 1945

Mr. SIKES. Mr. Speaker, I recommend for the careful reading of the House membership, an article by Art Brown in the Nation's Business for April 1945. It is entitled "The Rise of the Goober." The article is ably written and it gives not only a picture of the importance of the peanut crop today, but it points out the danger of indiscriminate competition from foreign oils in the postwar period. This is a matter we cannot afford to overlook at a time when the Reciprocal Trade Agreements Act is under consideration.

THE RISE OF THE GOOBER

(By Art Brown)

Peanuts have come into their own. For many years, peanuts have been associated with the inconsequential. Even in the dictionary, one definition for the word "peanut" is "small, petty."

But the peanut has outgrown that category.

Peanuts today represent big money. The war has been largely responsible. After victory, the peanut industry—along with our other newly developed vegetable oil industries—may face a serious nose dive.

Curtailment of vegetable oil imports (coconut oil from the Philippines, palm oil from the Dutch East Indies, olive oil from the Mediterranean area) greatly expanded the market for peanut oil—as well as for soybean oil, corn oil, and cottonseed oil.

At the same time, shortages of certain foods and of certain ingredients used in candy and bakery goods created an unprecedented demand for peanuts and peanut products.

The peanut growers rose to the occasion, practically doubled their output, and more than quadrupled their income.

Goobers are now one of the South's major money crops.

Last year 2,177,670,000 pounds of peanuts were picked and threshed, according to the Department of Agriculture, as compared with 1,211,700,000 in 1939.

The 1944 harvest netted the growers $188,000,000 in cash as against $41,00,000 in 1939.

Add to the 1944 crop the value of the peanuts raised for seed, for home use and for hog feed—and the farmers' return was well over $220,000,000.

NEW USES

The peanut possesses wide possibilities. Its oil can be used to make soap, shaving cream, cosmetics—also such food products as mayonnaise, salad dressing, and margarine (though margarine's principal raw materials are soybean and cottonseed oil). The peanut is richer in vitamin B-complex than liver.

From the peanut can be made plastics, adhesives, dyes, and a new silklike fiber which can be used with wool or woven into cloth by itself.

Peanut flour is finding new uses, particularly in the confectionery field. Peanut butter is becoming increasingly popular (nearly a third of the 1943 crop went into peanut butter).

In recent experiments, the Hillman Clinic of Birmingham, found that persons suffering from undernourishment diseases respond favorably when peanut butter mixed with 25 percent yeast is added to their diet. Appetites improve, weight and strength increase.

Yeast-peanut butter, the clinic points out, contains more protein than steak, as much carbohydrate as potatoes, and half as much fat as butter.

Peanut meal is becoming more and more important as a high protein content feed for livestock.

Even the shells have value. Peanut shells serve as a linoleum base and as a substitute for cork in bottle-top liners. Peanut shells are used to clean carbon from aircraft engines, for making paperboard, floor sweeping compounds, insulating materials, and as a base for commercial fertilizers.

POSTWAR OUTLOOK

What will the peanut industry be up against when peace comes? In some respects, the outlook is none too bright:

1. Demand for peanuts for war uses will end.

2. Other foods, for which peanuts have been pinch-hitting, will again be plentiful.

3. Imported vegetable oils will again be available, and at least some of the manufacturers, who have been using peanut oil as a substitute, want to switch back to coconut oil. "Coconut oil is an ideal sudsmaker," some of the soapmakers say, "and cheaper."

Some of the baking companies and salters now using peanut oil as an alternative material want to return to coconut oil.

"For making fillers for cookies and icings for cakes, coconut oil is satisfactory—and is cheaper."

4. The peanut will doubtless have a new competitor after the war in the babassu palm nut.

About 13,000,000,000 babassu palms grow wild in Brazil. Each tree bears two to four bunches of 200 to 600 nuts twice a year.

The babassu nut is as large as a lemon, contains two to six kernels—and, by weight, the kernels are two-thirds oil. The oil has a pleasant taste, is a substitute for olive oil, lard, and coconut oil. It can be made into soap varnish, artificial silk, can be used as a lubricant, and can even serve as a fuel for internal combustion engines.

5. In addition to facing new and renewed competition from foreign oils after the war, the peanut industry will be up against domestic cottonseed, soybean, and corn oils, all

of which are similar enough chemically to be strong contenders for the same markets—and all of whose markets have expanded during the war, for the same reasons the peanut industry's markets have expanded.

But the peanut industry is not planning to crawl back into its shell. To hold its present gains, develop new and better products, and to win new markets, the National Peanut Council expects to raise and spend $300,000 a year for the next three years on research, advertising, and promotion.

FOREIGN COMPETITION

Biggest stumbling block, of course, will be foreign competition. Business men in general feel that, if the peanut industry is to be preserved at anywhere near its present size—if any of our newly developed vegetable oil industries are to be preserved, for that matter—adequate protection must be had against cheap oils from abroad.

The National Chamber of Commerce is on record as favoring reasonable tariff protection for any branch of agriculture which is of benefit to any considerable section of the country and which is subject to destructive foreign competition.

How worth while is it to try to keep the peanut industry from slumping after the war?

Compared with agriculture's total annual income (it was $22,700,000,000 in 1943, latest year for which complete figures are available) the millions of dollars which the South receives for its peanuts may not seem very important.

But the buying power which these millions represent is vitally important to the southern farmers who otherwise might have little or no cash. And it is important to the rest of the country.

If the peanut growers and distributors in Hugo, Okla., Thomasville, Ga., and Suffolk, Va., have millions to spend postwar, those millions will create jobs for the automobile worker in Detroit, the clothing maker in Rochester, the paint maker in Pittsburgh.

The southern farmers with money to spend will buy washing machines, refrigerators, bathtubs, and plumbing fixtures—all of which require steel to build. They will buy farm machinery, farm tools, and household furnishings—all of which require machine tools to manufacture.

All down the line and back again, the farmers' buying power will help build other buying power—all of which will help keep industrial America busy. The sheller, crusher, salter, candy maker, warehouseman, manufacturer of peanut products, distributor, retailer, each will earn his share of profit on the peanut crop, and each will buy more industrial goods. As a result, the industrial worker himself will have more employment and will, in turn, become a better customer for both industrial products and farm goods.

The time is past, of course, when America can afford to be isolationist. But while we are accepting our responsibilities overseas, we cannot afford to overlook our opportunities at home to bolster our own markets for our own products, to keep productive our farm acreage which otherwise might remain idle or be devoted to crops already in excess supply—and to step up our standards of living.

Within the 48 States, opportunities exist for a volume of trade among the different sections of America which most nations can equal only through international trade. The sole hitch is that the various sections of our country must be able to develop their resources so that they will have the wherewithal with which to buy.

The peanut industry—and our other recently developed vegetable oil industries—have brought new wealth and buying power to the southern farmer. If these industries can be prevented from taking a postwar nose dive, our whole economy will benefit.

Sgt. James P. Connor

EXTENSION OF REMARKS

OF

HON. PHILIP A. TRAYNOR

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 24, 1945

Mr. TRAYNOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution of the Legislature of the State of Delaware:

House Concurrent Resolution 6

Concurrent resolution commemorating the distinguished and courageous services of Sgt. James P. Connor rendered at Cape Cavalaire, southern France, on D-day, August 15 A. D. 1944, in World War II.

Whereas it appears by the announcement of the War Department released March 12, 1945, that Sgt. James P. Connor, of Wilmington, Del., made a forced landing on D-day, August 15 A. D. 1944, on Cape Cavalaire, southern France, with a battle patrol of 36 men selected from among the invasion-trained veterans of the Seventh Regiment of the Third Infantry Division; and

Whereas because of the mine-infested areas, machine-gun nests, artillery and mortar positions around Cape Cavalaire, rated high in its importance by the Germans for defensive purposes, the battle patrol of the American forces was soon cut to shreds and reduced by one-half of its men, including the platoon lieutenant, who was killed by a mine explosion while standing near Sergeant Connor who also sustained his first serious wound therefrom; and

Whereas Sergeant Connor, fully realizing the tremendous importance of the mission of his patrol, took over the leadership of the remnants thereof and through his indomitable fighting spirit and fearless disregard for his own life, though now having suffered his second serious injury by being shot through his left shoulder by a German sniper, continued to give orders and commands for attack, ever pressing forward, by striking down the continued resistance of an enemy overwhelmingly superior in number until Sergeant Connor was again shot in the knee by a German sniper, thereby sustaining another serious injury, this being his third wound; and

Whereas though seriously wounded and advised by his comrades, who now counted about a dozen in number, to seek cover and await medical attention, Sergeant Connor nevertheless again gave orders for flanking attacks and, while shouting words of encouragement to his comrades, said, "They can hit me, but they can't stop me." His comrades, though now reduced to nine in number and thus imbued with the fighting inspiration of this fearless son of Delaware, went on to complete the successful mission of a most dangerous undertaking in total disregard of their own lives and bringing back with them 40 German prisoners; and

Whereas as the result of the successful completion of this very important mission, Sergeant Connor has been honored by his country and has been awarded the Congressional Medal of Honor, the highest award that can be bestowed upon an American fighting man and probably the second time that this award has been made to a Delaware soldier: Now, therefore, be it

Resolved by the House of Representatives of the State of Delaware (the Senate concurring therein):

SEC. 1. That public acknowledgment be made by the citizens of Delaware and grateful appreciation be expressed at some future time to be fixed and arranged by the commission hereinafter authorized commemorative of the distinguished and honorable services of a son of Delaware, whose heritage and fighting words, "They can hit me, but they can't stop me," flung at his enemy after having been wounded three times while on one mission, are an inspiration to this and future generations.

SEC. 2. That the Governor be, and he is hereby, authorized and requested to appoint a commission to be known as the Sergeant James P. Connor Commission, composed of three members and of which the Governor shall be a member ex officio, to commemorate in a fitting way the memorable services which Sgt. James P. Connor rendered to his country and his country's allies at Cape Cavalaire, southern France, August 15 A. D. 1944 in World War II.

What Our Church Teaches About Christian Marriage

EXTENSION OF REMARKS

OF

HON. GEORGE W. ANDREWS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 24, 1945

Mr. ANDREWS of Alabama. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to include a letter from the Honorable William B. Oliver, former Congressman from Alabama and one-time chairman of the House Appropriations Committee. The letter:

WASHINGTON, D. C., *May 21, 1945.*

Hon. GEORGE W. ANDREWS,
House of Representatives,
Washington, D. C.

DEAR GEORGE: On Mother's Day I had the good fortune to hear a very timely sermon, delivered by the Reverend Robert E. Sherrill, pastor of the Washington Heights Presbyterian Church, Washington, D. C., on the subject, What Our Church Teaches About Christian Marriage.

I am enclosing a typewritten copy of this sermon, which I requested of the pastor, with a view of asking some Member from our State to insert it in the CONGRESSIONAL RECORD. It is a sermon full of deep thoughts, well stated, and I am sure will be appreciated by the citizens of our State as well as other States, who recognize how important the family life, such as our forefathers, always practiced and recommended to others, has meant to America. If after reading the sermon you feel that my evaluation of it is not overstated, I hope you will request permission to insert it in the RECORD.

May I say in this connection that a copy of it will be sent by me to the pastor of every church in Alabama, and a copy will also be sent to every member of the United States Supreme Court.

I feel that it may yet be the basis of an appeal to the members of the Supreme Court and lead to a reversal of the opinion rendered in the case of *Williams* v. *North Carolina*, reported in volume 317, United States Supreme Court Reports, page 287, and in which opinion Associate Justice Black from Alabama concurred, overruling the case of *Haddock* v. *Haddock*, which overruled case, in my opinion, stated the law correctly.

Remembering that many of the dissenting opinions of Justice Holmes have since become majority opinions of the Supreme Court, I am led to hope that the two dissenting opinions in the case of *Williams* v. *North Carolina* by Associate Justices Jackson and Murphy

will, in the near future, become the majority opinion of the Supreme Court. Certainly the two dissenting opinions, in the opinion of many members of the bar as well as many citizens, acquainted with what has made America great, should be the unanimous decision of our highest Court.

This letter is hastily written, since I am on my way to catch the train for home, and I will appreciate your writing me what action you have taken on this request.

With warm personal regards and best wishes,

Sincerely your friend,

WILLIAM B. OLIVER.

(Enclosure)

WHAT OUR CHURCH TEACHES ABOUT CHRISTIAN MARRIAGE

During this past week we have witnessed the official proclamation of victory in Europe. As our President so aptly phrased it, "By God's guidance and help" we have been able to overcome the demonic forces set loose by the ruthless dictators of that land. We are humbly but justly proud of the splendid courage and supreme sacrifice revealed by those in the armed forces of our Nation.

Yet I wonder if we on the home front have ever had the wisdom and the courage to face the fact that there is a white flag flying in our midst—the flag of a shameful surrender. It is the emblem of our misfortunate marriages and broken homes. This flag has been moving forward to a perilous position at the front of our civilization with each passing year. We do not have to speculate on the matter—the records tell us the facts. There were some 31,000 divorces in America during the year 1889 and over 246,000 in 1940. Even this is a prewar record and the total is much higher today. The 1944 record of a neighboring city and county shows 9,981 marriages and 3,637 applications for divorce—over one-third as many applications for divorces as there were marriages. This is not the record of Reno, it is the ordinary city of Pittsburgh and Allegheny County.

Perhaps instead of taking this one day to pay sentimental lip service to our mothers—for we owe them more devotion than we could pay in a lifetime—perhaps it would be better to try to regain our bearings on this all-important matter of stable Christian homes—for after all, isn't that the thing to which they gave their lives? Where did they learn the standards that kept them true? They gained them from the Christian church, whatever the denomination, for that was the accepted social custom of their day. To relearn the principles by which they lived, we must ask again, What does our church teach about Christian marriage?

For one thing, our church teaches that marriage is based on the sacred and not the secular. Certainly it is no secret that for the public in general, marriage has been reduced to that which is secular and that which is legal. This change has been brought about chiefly by our new sources of education. Education was formerly in the hands of the church and the public schools, but no longer. The church today makes scarcely any impression at all, and the public still demands that the schools shall limit their curriculum to the accepted academic studies. The result being that young people and most adults receive their real education from three other sources—the movies, the radio, and the press. All of these may be used for good or ill, but in the matter of training for marriage, the total results have been definitely detrimental.

Most of the movies have placed the marital standard at what the young people call "SA"—sex appeal. It is not revealed as one of the minor qualities along with others of equal importance but is played up as the major motive for all human affection. And do not think for one moment that young people can't comprehend the suggestive conversation that pretends to hide the trash—they get it, without a miss. The record along this line is quite amazing. Out of 133 pictures analyzed some time ago by a Catholic minister, there were found 107 major violations of sex morality and decency. One hundred and seven out of 133—quite a high percentage, isn't it? Thanks to this minister, Dr. Daniel S. Lord, the Catholic code of decency was adopted and has made vast improvements over a number of years. Needless to say, there is still a long way to go.

Nor is the general press and radio standard much higher. What are marital goals that glare out at us on nearly every page? Isn't it something like this—"She's lovely, she's engaged, she uses Pond's" (I must ask my wife if it was Pond's that got me). In other words, complexion is the goal for a happy marriage.

Then a beautiful symphony program will be interrupted with the amazing words: "Are you losing your man? Maybe your breath is blowing him away. Let us lead you to the rescue."

Humorous it may seem but that is just about the secular standard of our day. And the legal standard is not a great deal better. The major requirements are just a certain age limit and the price of the license. Some few States are at last beginning to consider the matter of health and physical fitness—but that is all.

In direct contrast to this, our church teaches that marriage is based on the sacred and not the secular. Do you recall the introduction to the marriage ceremony? "Dearly beloved, we are assembled here in the presence of God, to join this man and this woman in holy marriage; which is instituted of God, regulated by His commandments, blessed by our Lord Jesus Christ, and to be held in honor among all men."

Look at those words: Instituted of God. Marriage was begun and established by God. It is blessed with divine origin, filled with divine purpose, given to man as a divine heritage. It is nothing he created for himself, nothing for which he gambled to gain, nothing for which he has a right to use or misuse as he pleases. This is something holy, sacred, ordained of God—that is, if we accept these standards of the Christian church. I wonder if we have ever put it on its right level? A few have done so and their lives have shown the results. One of my friends was telling me some time ago of the event that took place on the night before his wedding. He and his bride to be went into the quietness of their home church, and there with their minister, partook of the sacrament of Holy Communion and rededicated their lives unto Him by whose providence they had been brought together. I would wager my life that their marriage will never be one of the three that goes on the rocks.

Instituted of God—and regulated by his commandments—our task is not finished after the vows have been made—it is only begun. Here is another great Christian commencement of which we spoke last week. It is our privilege and duty to know how God would have us order our lives. We are not on our own, we are under Him. Here are included our family devotions and personal prayers that keep us at our moral and spiritual best. With this we shall know that it is blessed by Christ and to be held in honor among all men. That which is Holy and sacred is always held in honor. Marriage is based on the sacred and not the secular.

Our church teaches also that marriage is maintained by self-sacrifice and not by self-satisfaction. We have been fed with such a heavy diet of self-expression and self-satisfaction in our day that we have become sick without knowing what ails us. It has been carried over into the concept of marriage as well. We must have that which satisfies our physical desires, our financial requirements, our social prestige, our pleasure concept. If any of these be frustrated in the least, we are ready to throw up our hands and use that very modern word that covers all—incompatible.

Well, marriage was never ordained to be merely a source of self-satisfaction. If we are so infatuated with ourselves, we should learn to "live alone and like it" (by the way, the woman who wrote that book betrayed her principles and got married). Hear a line from the constitution of our church which is the basis of this series of study: "Marriage was ordained for the mutual help of husband and wife." How can there be mutual help unless there is mutual understanding and sacrifice, one toward another?

We do not have to theorize on the matter, we need only look at some lives to see the truth. One recalls the beautiful biography of Eve Curie, depicting the loving, sacrificial life of her parents in their long and arduous scientific search for the source of radium. Here was a blending of two lives in mutual helpfulness, dedicated to a high purpose. Their marriage was worthy the name. Nor do we have to search for it in the professional realms. Thousands of devoted couples throughout America, in the country, town, and city are dedicating themselves to the most worthy profession in life—the creation of a Christian home. But at the best, we still need some help in making the most of marriage.

We try to impress upon the young people of our day two important facts as they reach the age of serious friendships. One is not to proceed under the illusion that any one person will have all the qualities that we might desire—and certainly they will not have all the wisdom and experience that the long years have brought to our parents. It reminds us of the young married couple who were not quite adjusted to their new situation and while eating one night, the husband said very sourly, "You certainly can't make bread like my mother"—to which the young wife replied tartly, "Is that so? Well, neither can you make dough like my dad."

We say, select those with whose total personality you are most likely to agree and take the little differences in your stride. Your differing qualities may well complement each other and give a far better balance to the atmosphere of a home than your own personality would give alone.

The second fact we stress is the knowledge that though scientific progress has given us many conveniences that make life easier, the very specialization of our modern age has often made marital relations far more difficult. In the days of our grandparents and before, much of the daily activity was shared in common by husband and wife. They both pushed back the frontier and shared in the perils and rewards alike. They both labored on the farms and shared in the making of the home. They both spent long hours with their children and created a unified family group. There was mutual help and sacrifice and understanding.

Today the husband is likely to have a highly specialized business in which the wife cannot hope to share—and which makes the problems of both the home and the office more difficult for the other to understand. We have even moved to the place of having our separate social and recreational activities—and even worse, we have shoved our children into a little world of their own and expected them to grow up as they will. Yes, we are proud of our modern achievements, but the present day world is a perilous place for marital happiness. We shall have to put forth all the more effort (not less) toward developing a spirit of mutual help and understanding and sacrifice. Marriage was ordained for the mutual help of husband and wife.

Finally, our church teaches that marriage contains the element of that which is eternal and not merely that which is temporal. "This ring I give thee, in token and pledge,

of our constant faith and abiding love." What could be more permanent than that? A husband and wife who have lived together for long golden years do not begin to count the time and figure if they have given enough in faithfulness and love. They know that with the passing years there has developed a trust and love that no price could ever pay and that no peril could ever threaten.

This past week we viewed another one of those heart-rending pictures from the barbarism of Europe. It showed a large box filled with wedding rings that had been torn from the hands of the helpless victims of the concentration camps of Germany. There were none left to tell the story, but we can well imagine that even when the Gestapo had done its worst and had written the final page in death (which it always did)—even in the midst of this turmoil and terror, those beautiful words gave courage and consolation in the last hour—"In token and pledge of our constant faith and abiding love."

Our faith and our love begins with one another, and from there it moves to the family and the community, and from there to the State and Nation, and from there to its small but vital influence in the world. And our Christian faith does not stop there, for the deeds of lives become a part of His Kingdom—and "His Kingdom is an everlasting Kingdom, and His dominion endureth throughout all generations."

That's what our church teaches: Marriage is ordained of God, for the mutual help of husband and wife, that by our constant faith and abiding love we may be builders and creators of His Kingdom here on earth and throughout all of eternity.

Action on Trade Pacts

EXTENSION OF REMARKS
OF
HON. THAD F. WASIELEWSKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 24, 1945

Mr. WASIELEWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial appearing in the Milwaukee Journal, May 17:

ACTION ON TRADE PACTS

It is unfortunate that some Republican Congressmen are trying to make a party issue of our trade pacts. Historically, of course, the tariff was long a party issue. But there are many leading men in the Nation's business circles who realize the disaster the tariff acts of 1922 and 1930 brought. They now support the reciprocal trade arrangements.

Charles P. Taft of the State Department, a brother of Republican Senator TAFT, testified recently before the House Ways and Means Committee in support of the proposed 3-year extension of reciprocal trade agreements. The department wants increased bargaining power, that is, authority to reduce rates as much as 50 percent.

Mr. Taft pointed out that delay is making other countries uneasy about postwar trade. In Britain and France there are suggestions of putting all foreign trade under Government control. Such action would make it more difficult to trade with these countries and would result in pressure to put our own foreign commerce in the hands of Government.

Obviously this would be a movement away from private enterprise. Yet the danger of this development comes from those who object to granting larger bargain powers, although they are among those who would like to strengthen private enterprise.

It will be bad business if schemes for fancied party advantage lead the Republicans to demand a return to the old political trading, boodle tariffs. The reciprocal trade pacts are no final solution, but they have worked to our advantage. Trade has increased with those countries with which we have agreements. And the balance has been in our favor. Moreover, as Mr. Taft reminded the Congressmen who heckled him, he has always been a Republican, and reciprocity in foreign trade has been Republican doctrine.

OPA Subsidies Versus the Servicemen

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 24, 1945

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

JOHNSTON MANUFACTURING CO.,
Minneapolis, Minn., May 21, 1945.

Hon. WALTER H. JUDD,
House Office Building, Washington, D. C.

DEAR SIR: May I present a few figures?

Men in armed services, 11,300,000.

Probable total through service, including replacements, at least, 15,000,000.

These men are mostly young and in 5 to 15 years their families should consist of father, mother, and three children, total five.

Servicemen and their dependents will be more than half the population, 75,000,000.

If it takes 25 years to pay the Federal debt, now approaching $300,000,000,000, for each food subsidy dollar, the interest will be $1.09 or $2.09, and the servicemen will have to pay for each dollar of subsidy, one-half of this, or, $1.05.

Or, if it takes 50 years to pay the Federal debt, for each food subsidy dollar, the interest will be $3.30 or $4.38, and the servicemen, for each dollar of subsidy, will have to pay one-half of this, or $2.19.

These servicemen whose lives have been in danger and who have given of their best years in the service of their country should not have to pay also for the food consumed by persons now living at home comfortably and safely during the war.

Food costs must include subsidies and interest. Food subsidies are therefore a scheme by which OPA is trying to get unmerited credit for holding prices while actually injuring everybody and building the Federal debt still further toward national bankruptcy. We should pay now for what we use and eat now.

Yours very truly,
JOHNSTON MANUFACTURING CO.,
W. E. JOHNSTON, *President.*

The Great Lakes-St. Lawrence Waterway

EXTENSION OF REMARKS
OF
HON. JOHN W. BYRNES
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 24, 1945

Mr. BYRNES of Wisconsin. Mr. Speaker, under leave to extend my remarks, I wish to call the House's attention to the following resolution adopted by the Common Council of the city of Manitowoc, Wis.:

Whereas the Wisconsin Legislature has adopted a resolution memorializing the President and the Congress of the United States to take such steps as are necessary to develop the Great Lakes-St. Lawrence waterway immediately upon termination of the war; and

Whereas the city of Manitowoc, having the finest harbor on the Great Lakes, is vitally interested in having the St. Lawrence waterway completed as soon as possible so that our city will receive all the benefits of increased shipping from our harbor: Now, therefore, be it

Resolved by the mayor and common council of the city of Manitowoc, That we urge our Representatives in Congress to do all within their power to expedite the passage of necessary legislation to complete the St. Lawrence waterway between the Great Lakes and the Atlantic Ocean; be it further

Resolved, That copies of this resolution be sent to our Congressman from this district and to our United States Senators from the State of Wisconsin.

EMIL BENISHEK.
Introduced May 21, 1945.
Adopted May 21, 1945.
Approved May 22, 1945.
MARTIN GEORGENSON, *Mayor.*

Reciprocal Trade Agreements

EXTENSION OF REMARKS
OF
HON. ROSS RIZLEY
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 24, 1945

Mr. RIZLEY. Mr. Speaker, under unanimous-consent privilege extended to me, I am happy to extend in the Appendix of the RECORD a letter from Mr. M. E. Siebert, master of the Oklahoma State Grange, directed to certain members of the Oklahoma delegation in Congress, in respect to the bill now being considered for the extension of reciprocal trade agreements.

CHICKASHA, OKLA., *May 21, 1945.*

Hon. JED JOHNSON.
Hon. GEORGE SCHWABE.
Hon. LYLE H. BOREN.
Hon. A. S. MIKE MONRONEY.
Hon. VICTOR WICKERSHAM.
Hon. ROSS RIZLEY.

DEAR CONGRESSMEN: The Oklahoma State Grange is opposed to extending the Trade Agreements Act for a longer period than 1 year. We also oppose empowering the President to reduce rates to the extent of 50 percent. The rates have already been slashed 50 percent in the past.

I understand the Doughton bill (H. R. 2652) is about to be voted upon. We hope you will vote against the passing of this bill.

We see great danger ahead in postwar agricultural policies, in competitive products shipped to the United States from foreign countries.

Let's take a stand to protect America first.

Yours truly,
M. E. SIEBERT,
Master, Oklahoma State Grange.

Address of Walter Hoving at the American Design Awards Luncheon

EXTENSION OF REMARKS

OF

HON. LEONARD W. HALL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, May 25, 1945

Mr. LEONARD W. HALL. Mr. Speaker, under leave granted me, it is a real privilege for me to include in the RECORD the address of Mr. Walter Hoving on the occasion of the American design awards luncheon held at the Waldorf-Astoria Hotel on April 19, 1945, and part of the proceedings, as follows:

ADDRESS OF WALTER HOVING

Ladies and gentlemen, we are glad to welcome you here today for the eighth annual American design awards. When the awards were inaugurated in 1937, their purpose was to stimulate American creative genius, and to encourage an ever-rising standard of civilian living. As you may recall, the first awards went to designers of clothes and textiles, household appliances, and similar consumer products which touch our daily lives.

When America went to war, our creative thinkers turned their hearts toward the achievement of victory. It was only fitting that the American design awards should pay tribute to them for their great work. What more significant creative work, after all, than that which keeps America secure.

As our forces move into Berlin and approach ever closer to Tokyo, such names as Eisenhower, Nimitz, and MacArthur are on everyone's lips. These men and the armies under their leadership are making and shaping world history.

But there are other armies not in uniform fighting battles as great as those at the front. These armies are the thousands of men of science who have focused the searchlight of research on every phase of the war effort. From industries, from universities, from laboratories in every section of the United States, these men were mobilized for the gigantic task of research required by global war.

In times of peace it takes years for a new scientific discovery to reach the public. After the Jap attack on Pearl Harbor, we could not wait that long. The very survival of our Nation depended upon speeding up the work of our laboratories. Good weapons were not enough. We needed weapons better than those of the enemy. And we needed them fast.

What took 15 years of preparation by the Germans, our scientists accomplished almost overnight. How they did it, no one will ever know; but what they did is evident wherever men are fighting. The doughboys in the foxholes, the wounded in the hospitals, the marines at their beachheads—they may not know the names of their silent partners, but they know their work. Ten million of them are relying every moment on the test tubes and microscopes of research. Our scientists have not let them down.

Mobilizing the scientific brains of a great Nation was as tremendous a task as assembling an army. An administrative body had to be established to coordinate the products of the laboratory with the needs of the Army and the Navy. This vital job was assigned by the President to the Office of Scientific Research and Development which serves as the general staff of our research scientists. The armies it marshaled included every kind of scientist—chemists, doctors, physicists, metallurgists, engineers. One great army fought the foe of illness and disease. Another devised weapons and counterweapons of war. A third tackled the development of wartime metals, foods, and clothing; a fourth gave us the best fighting airplanes in the world.

Today the American design awards are paying tribute to the leaders of these vast armies of scientists. These men wear no uniforms; they have no insignia; but they merit a salute from the whole world. When this Nation emerges from the ravages of war, it will have been our research men who implemented the hands of your sons; it is their knowledge, their foresight, their unselfish devotion which made American liberty secure. Their victories will go down in history. The Nation owes them a debt it can never repay. They will live forever among the immortals of science.

During the past few years, military secrecy has shrouded the laboratories of the Nation. This was imperative. Our enemies would have welcomed any crumbs from the American table of science. Even today, the safety of our own fighting men requires that we keep silent about our certain weapons. But there is much that can be told. It will be told, told over and over again like the stories of the early settlers, or the pioneers who forged new frontiers. These are stories we can only marvel at, stories that will take their place in the legends of America.

One might be called the saga of the wind tunnel. It would tell of a group of scientists who devised mammoth tunnels and filled them with air so that our planes might be tested within them. This spared our test pilots from risking their lives. We have demanded fantastic requirements from our airplanes. We needed planes capable of unbelievable speed, able to fly thousands of miles without refueling, at heights well in the stratosphere. For these new conditions of war, new planes and new plane parts had to be designed. Once designed, they had to be tested.

At the three laboratory centers of the National Advisory Committee for Aeronautics, wind tunnels seem to grow from the ground. The information they provided the armed forces and the aircraft industries vastly improved the Liberators bombing Ploesti, the B–29's over Japan, the far-ranging Mustangs. Every one of our new fighters and bombers was hatched in a wind tunnel.

The first wind tunnel was only 5 feet in diameter. The biggest one now covers 8 acres at Moffett Field in California. It contains 24,000,000 cubic feet of air. In the high-altitude tunnels winds hurtle through at 500 miles an hour.

In its wind tunnels the committee is presently investigating jet-propelled planes which will fly up to 2,000 miles an hour. Just think, in such a plane you could leave New York at lunch time, have lunch in San Francisco, and be back in New York for an early-afternoon appointment.

Sounds like a tall story, but it's true. And so are the other stories. The one about penicillin, for example. Now everyone has heard of penicillin. Signs on all drug-store windows tell us we can buy all the penicillin we want, yet only a short time ago there was not enough penicillin to treat one single patient. Even before America entered the war, the Committee for Medical Research recognized the value of this little-known substance for saving the lives of our fighting men. They helped to organize penicillin production in America. This was no easy task. The extreme difficulties of producing it on a commercial basis at a low cost and in great quantities seemed an impossible task.

The impossible was accomplished by the committee in collaboration with the War Production Board and commercial firms. Laboratory research was intensified. New methods of production were explored. Today there is enough penicillin for our armed forces, for our allies, and for total civilian needs, besides. Thousands of soldiers and sailors are alive and well who would otherwise have been dead of wounds, infections, pneumonia, and gangrene. This is but one more instance of scientific research at war one more vivid illustration of science reaching to the heart of every American family.

The story of DDT follows the same pattern. From an obscure chemical, it became a necessity for waging war. If you're not sure what it is, ask the soldier in your family. He'll tell you that in the last war epidemics of typhus raged wherever lice-breeding conditions existed. He'll also tell you that none of his buddies have had typhus in this war. Why? Because tons and tons of DDT have been produced by laboratory-devised methods, and DDT kills lice. It also kills the flies, mosquitoes, and other insects which infest many of the regions where our men are fighting. It was discovered that one impregnation of this chemical keeps clothing free from insects for several months; that it can be sprayed by airplane over huge areas; that it was easy to handle in powder form. Typhus epidemics in north Africa and Naples were completely stamped out by spraying every man, woman, and child with DDT. Science again defeated one of the great killers of mankind.

The Committee for Medical Research has also helped develop other vaccines and insecticides which prevent such deadly diseases as malaria, yellow fever, influenza, and cholera. One of the most recent is a cream which men in the Tropics smear on their faces to keep the malaria-bearing insects away. All of these came straight from the laboratory and went to every corner of the globe.

These have been stories of our men of medicine. There are other stories to be told of other scientists who have wrought seeming miracles. The very materials from which our ships and guns and tanks are made were first produced in our laboratories. When aluminum ores were scarce, but the need for more airplanes became greater, the Metallurgical Division of the National Research Council went to work testing until it succeeded in making aluminum from clay and plentiful ores. When our supplies of tungsten, nickel, and other alloys were shut off by the Japs, the Council spent endless hours working out substitutes for these critical materials. When the use of new metals required new types of welding, the Council met the demands with electronic welding which is faster and better than previous methods. The Japanese and Germans used to sneer at our statements that we could produce an airplane an hour or a Victory ship in 5 days. They did not realize that thousands and thousands of scientists were engaged in intensive and painstaking laboratory research to make the best materials in the world in the fastest way possible.

Certainly the enemy cannot sneer now. They know that their cities were not captured by exaggerated statements. Their captors were men—men with superior materials and weapons—men who detected the enemy hundreds of miles off by radar equipment from the physics laboratories—men who withstood mud and rain because their clothing had been waterproofed with synthetic resins from the chemistry laboratories—men who built bridges at a moment's notice by techniques developed in engineering laboratories.

When the war is over and all the stories have been written one of the most incredible will concern the bombing of Japan. Did you know that more damage has been done to Tokyo than to Berlin? The explanation for this is provided by our research scientists. They designed an incendiary bomb and constructed it solely for the type of building in Japan. It had its origin in the laboratory. This chemical went to war and from it emerged the jelly with which our incendiary bombs are now filled. A combination of soap suds and gasoline, this jelly spurts in a

vicious stream of flame when the bomb hits the target. Our March 10 raid alone caused as much damage in Japan as the earthquake which struck in 1933.

When Germany began sending its inhuman buzz bombs over England, we were desperate for a way to combat them. No one knew whether an ammunition depot or a children's school would be the next target. Our early efforts succeeded in shooting down only 20 percent. Then the National Defense Research Committee went to work. Its radar division joined forces with its fire-control experts. Together they devised an instrument combining both radar and fire control which works like magic. In a split second this machine computes automatically the exact location of the buzz bomb—so our guns can knock it from the heavens. Formerly this whole operation had been left to guesswork, for by the time the location could have been computed mentally, the bomb would have accomplished its destructive purpose. As soon as this instrument was put into operation, 74 percent of the buzz bombs were destroyed. This is an instance where American scientific research went to work for us and for our allies.

There are many more such examples. The duck equally at home on land or water; the plastic films which keep our guns dry even though the men carrying them are neck high in water; the propellers which permit unbelievable airplane speeds; the shoe soles which outlast prewar leather 8 to 10 times; the new methods of chest surgery and brain operations; the shrinkproofing of all Army and Navy woolens; the transfusion of whole blood and blood plasma; the life jackets stuffed with a light, noncombustible material; the torpedoes which have smashed the Jap Navy to bits; the smoke generator veiling our movements from enemy eyes; the chemical sterilization of water saving our men from dysentery and other enteric diseases; the flame thrower by which many a Jap on Iwo and Okinawa met death at the hands of a marine who carried his own flame-making chemicals on his back; the advances in aviation medicine; the de-icing equipment for planes; the pressure treatment of burns; the rockets shooting from planes, tanks, and landing craft to take every Jap island on the long sea route to Tokyo.

Yes, and that is why victory is in the air today. And that is why we are paying tribute today to the scientists who brought victory within our grasp—without whom the war could not have been waged. When peace reigns again, and we turn our energies to rebuilding our great land, the work of these men will be reflected in all of the Nation's endeavors. As we enter the aerial age about which men have dreamed, the wartime findings of the aeronautical researchers will keep America first in the air. Our new knowledge of food, of clothing, of metal will give us products we cannot now imagine. The miracles of medicine will save millions of world citizens from disease and from death.

It is with a sense of humility that I introduce to you the leaders of our armies of scientists. We salute first the man who coordinated the laboratories of the Nation with the fighting fronts of the globe, the Director of the Office of Scientific Research and Development, Dr. Vannevar Bush; the chairman of the National Defense Research Committee and the president of Harvard University who unfortunately is ill at Cambridge, Dr. James B. Conant; the chief of the field service of the National Defense Research Committee, Dr. Karl T. Compton; the chairman of the National Research Council, Dr. Ross G. Harrison; the chairman of the Committee for Medical Research, Dr. A. Newton Richards; the chairman of the National Advisory Committee for Aeronautics, Dr. Jerome C. Hunsaker.

And representing the scientists wearing the uniform of our country who are responsible for the steady and unbroken flow of those newly developed weapons and these products of civilian research to the fighting fronts, we are also glad to honor the Director of the Special Planning Division of the War Department and the Coordinator of Research and Development of the Navy Department—Maj. Gen. William F. Tompkins and Rear Adm. Julius A. Furer.

AWARD TO DR. FRANK B. JEWETT

In appreciation of the war work of the scientists of America, it is now my honor to present the American design award to their distinguished representative, Dr. Frank B. Jewett, president of the National Academy of Sciences.

In so doing we express the earnest prayer that after this war we will avoid the kind of normalcy that robbed our country in the past of its adequate preparedness and defense. It is, therefore, our hope that this award will be used to further and encourage the kind of scientific research which will keep our country strong and secure.

Dr. Jewett, it is with great pleasure I present through you to the National Academy of Sciences the American design award for 1945, and with it Lord & Taylor's check for $25,000.

AWARD TO UNDER SECRETARY OF WAR ROBERT P. PATTERSON

There has been no man in this war who has been closer and more helpful to the scientific world in carrying out these tremendous projects than the Under Secretary of War.

It is, therefore, extremely fitting that he be here on this occasion honoring the scientists of America. Ladies and gentlemen, the Under Secretary of War, the Honorable Robert P. Patterson.

Strange Tariff Arguments

EXTENSION OF REMARKS

OF

HON. J. PERCY PRIEST

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Friday, May 25, 945

Mr. PRIEST. Mr. Speaker, under leave granted to extend my remarks, I desire to include here a very excellent editorial from the New York Times on the subject of the reciprocal trade-agreements program.

The editorial follows:

STRANGE TARIFF ARGUMENTS

The majority and minority reports of the House Ways and Means Committee on the proposal to extend and expand the Trade Agreements Act are likely to represent the highest level that the congressional debate on the subject will take. These reports are prepared by the House group that has studied the subject longest and most carefully. That group has had the benefit of prolonged hearings and expert assistance, and in this written report the majority and minority representatives may be assumed to have made a fuller and abler statement of their case than is likely to come out of the rough and tumble of debate on the floor.

The majority report in this case is an admirable document, well reasoned, well documented, containing a lucid statement of principles and detailed answers to objections. The minority report, unfortunately, lacks even the merits of clarity and internal consistency. Thus it is not possible to make out from this report exactly what the minority is willing to agree to. It seems to declare at one point unreservedly "in favor of a short extension of the original Trade Agreements Act." But prior to that it has listed seven amendments offered by the minority. It is obvious to anyone who considers their implication that these seven amendments, if adopted, would among them reduce the Trade Agreements Act to a dead letter, under which practically no further concessions whatever in tariff schedules could be made.

Again, the Republican members who signed this report object to being called economic isolationists. Yet they can hardly bring themselves to talk of imports without expressing the fear that we are going to "give away the American market," "become a dumping ground for the surplus products of the world," open "the floodgates to the products of countries whose standards of living are considerably below those prevailing in the United States," and so on.

The Republican Members insist that they "have no quarrel with the principle of reciprocity" in tariff reduction. They even quote President McKinley's statement in 1901 that "We must not repose in fancied security that we can forever sell everything and buy little or nothing. * * * The period of exclusiveness has passed," etc. But the next moment they are saying: "There is no better way of promoting economic warfare than trying to dump our surpluses abroad and launching a campaign for a huge export trade in competition with other producing countries." They seem to forget that we should in any case be able to sell abroad only what the voluntary tariff reductions of other nations permitted us to sell abroad. But it is at least an advance of a sort when the minority Members recognize that to attack imports to this market logically obliges them also to attack American exports

Some of the arguments in the minority report will cause a few readers to hold their heads in incredulity—for example, the expressed fear that the proposed mutual reduction of tariffs and trade barriers will cause "the establishment of even greater and more powerful bureaucratic controls over the movement of men and goods."

Let us hope that the full Republican membership in Congress, when the extension and expansion of the Trade Agreements Act comes to a vote, will show more respect for logic and more practical wisdom than its representatives on the House Ways and Means Committee.

A Good Example for Government Bureaus To Follow

EXTENSION OF REMARKS

OF

HON. WILLIAM A. PITTENGER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 25, 1945

Mr. PITTENGER. Mr. Speaker, perhaps the most important item in today's newspapers, so far as the people of America are concerned, is a little story to the effect that President Truman will reduce the large number of attendants that have formerly been present at the White House. While he does not save the Government much money, only the salary of 20 unnecessary people, he does set a glorious example for the "Alice in Wonderland" boys who head the Government bureaus—some of them subhead them—and whose great aim in life is to enlarge their bureaus, hire people they don't need, make a big showing, and

charge it all up to the American taxpayer. That is the rule, and I have yet to find the exception in any Government bureau, department, independent agency (name the baby) in downtown Washington.

This is what the Times-Herald for today, May 25, 1945, has to say in part:

THRIFT IN THE WHITE HOUSE—TRUMANS TO DROP 20 SERVANTS AND LIVE IN SIMPLE MANNER—DO NOT REQUIRE MUCH HELP BECAUSE THEY ARE NOT USED TO IT AND CAN'T AFFORD IT

(By Ruth Montgomery)

In keeping with the Trumans' long habit of thrift—they did all their own housework until he became President—the First Family is paring down the White House staff of servants, it was learned yesteday.

Rumor has it that 20 servants, a number of whom have already departed, were "given notice."

The staff's salaries are paid by the Government, but the President must pay for their food from what he has left after income tax of his $75,000 yearly salary.

NOT MUCH SALARY

Reason for the economy move is easily explained by the fact that, after taxes, the President's salary is only $28,000 a year. From this, Roosevelt paid out $2,000 a month for food for his family and staff leaving a Presidential income of $4,000 a year for all other expenses.

It seems to me, Mr. Speaker, that the foregoing policy adopted by President Harry Truman is really significant. It might well be followed by some of the department heads who maintain a large retinue of employees, the most expensive limousines—this is plural—that they can buy, and otherwise conduct themselves like oriental potentates.

Rural Electrification

EXTENSION OF REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 17, 1945

Mr. RANKIN. Mr. Speaker, under permission granted me to extend my remarks in the RECORD, I am inserting an address delivered by Hon. Vincent D. Nicholson, Deputy Administrator and Associate Solicitor, Rural Electrification Administration, at the annual convention of National Rural Electric Cooperative Association, San Antonio, Texas, January 17, 1945.

The address referred to follows:

The total energies of our Nation are now devoted to a war in which we seek to preserve for ourselves and our posterity the American way of life. There is no need for me to attempt to define this way of life. Each of us feels it within the marrow of his bones. This great convention is concerned with a new Nation-wide enterprise that represents American tradition at its best. I believe this for four outstanding reasons which constitute the four cornerstones of your program:

First. This program of yours embodies the incentive of free private enterprise.

Second. It has the strength that comes with the organized cooperative effort of individuals and groups.

Third. It utilizes the assistance of your Government, articulated through democratic processes, for the promotion of the general welfare of the country as a whole.

Fourth. It is correlated closely with prevailing and general public opinion.

In this solemn hour of our Nation's history, when every activity must be measured by its relation to the conduct and the purposes of the war, we need to think clearly and deeply of those things which constitute the American way of life. Let me repeat these four significant aspects of the rural electrification program because I want you to analyze them with me for a few minutes.

This program, with its 800 electric cooperatives owned by a million rural consumers, financed by their Government, rests upon four foundation stones: (1) Free private enterprise; (2) organized cooperative effort; (3) assistance of the Government; (4) the support of public opinion.

Free private enterprise has built this country of ours. In that time-worn phrase the word "free" is more important than the word "private." It connotes freedom for all. There are countries in the world where a few individuals or a few powerful groups enjoy great freedom in promoting their private interest. But in these countries the great mass of the people have little freedom in the exercise of initiative and the solution of their economic problems. Throughout the whole of our American economy where can you find a more perfect embodiment of the spirit of free enterprise than a rural electric cooperative?

When a consumer-member of one of your cooperatives drives to town along the lines of the cooperative system he can say to himself, "I own a part of that line." When he pays his light and power bill at the cooperative office he is not dealing at arm's length with another business interest controlled from a distant city. He is paying a rate which he helped to determine and a part of his payment goes to increase the value of his ownership. His enterprise, worth several hundred thousand dollars, is a local enterprise. Its poles are sunk in the soil from which he earns his living; its wires, in a literal and also a symbolic sense, knit together a grassroots community which is interdependent in its social structure and its business economy.

Such communities are the foundation of our civilization, cities are merely the superstructure. The superstructure is important but the foundation must be strong if our democracy is to endure in a world that is tottering because of the evil ambitions of a few at the expense of the many. Cooperatives have become big business but they are the people's business.

You may search the whole of American history and all our institutions of 1945 and you will find nothing which better represents the American tradition at its best. I have no desire to idealize these electric cooperatives of yours. They share this American tradition with countless other expressions. They are far from perfect in their achievement of their basic ideals. Every once in a while I find that a cooperative board or a cooperative manager actually made a mistake. Once in a while I find even that they admit it. But your enterprise can stand proudly before public opinion in any forum of any State and claim that your private interest is peculiarly consistent with the public interest.

Let us look, now, at the second of these foundation stones—the strength of organized cooperative effort. Cooperation was the keynote of the early settlers as they established the footholds of civilization along the Atlantic coast. The Pilgrim Fathers, the Quakers who lived the first winter in caves dug into the banks of the Delaware, the Colonists at Jamestown and in the Carolinas, had to cooperate in order to survive. In the great trek to the Mississippi Valley and later to the broad reaches of the West and Southwest, community activity paralleled individual enterprise. Road building, barn raisings, spinning bees, harvesting of crops, scores of other activities required the organized efforts of all to conquer and tame raw nature and a physical wilderness. Then, for generations, the farmer lost step with growing national prosperity partly because of his individualism and his failure to keep step with the practice of organization. The biggest economic problem of the farmer has been the simple fact that when he took his products to market he had to take the price that was offered and when he wanted to buy he had to pay the price that was charged.

Cooperative enterprise alone cannot solve this basic and enormously complicated problem. But cooperation is a sound step in equalizing the position of the farmer within the whole national economy. I know of no single chapter in American agricultural history which records so vividly the power of organized effort as this rural electrification program. Ten years ago 90 percent of all farmers had lighting facilities that were almost medieval. Despite our machine age, much of the power on a farm was the back-breaking, heart-rending labor of human muscle. Here and there, close to town, a farmer with electricity, at the cost of a nickel, could pump a thousand gallons of water. Further along the road most of his neighbors and his neighbors' wives and children had to pump it by hand and then carry it to house and barn.

These farmers couldn't get anyone else to help them so they organized and arranged to help themselves. The Government assistance in this program is often overplayed. When we in REA did our first thinking and planning nearly 10 years ago we thought of cooperatives and talked with cooperative leaders. But we had no concept, even in our dreaming, of this cooperative enterprise of yours as it has developed. The initiative was yours. Indiana created an electric cooperative law before we were created. Even in 1935 we were bombarded with loan applications from existing or prospective cooperatives beyond our available funds. That situation continued and grew during each succeeding year.

Rural electrification is often called a Government program. It is much better to call it your program. The several million farm people now served (including men, women and children), the many more millions awaiting service, have voiced an increasingly insistent demand. The organization of this demand has been in large part the task of the persons gathered here in this room. The disparity between urban and rural electrification became a national problem and the Federal Government stepped in, not to own or dominate but merely to render you the assistance which you needed and which was available only from the Government.

The principle of organization and the strength that comes with organization is being developed further each year. Many of the problems are State-wide and to an increasing degree many are national in scope. So you have developed your State-wide organizations of one kind and another. Your national association, like all other developments in the program, has come along in due course, in response to matured and clearly outlined needs. I have attended many important gatherings but your convention in

St. Louis 2 years ago was, for me, a rare example of inspiring enthusiasm linked with the qualities of determined purpose and conscious responsibility. A year ago at Chicago you were experiencing certain inevitable growing pains and your meeting was a triumph of true democracy and cooperation. This year I want to thank you for the privilege of sharing again the inspiration of this great assembly.

Representing REA, and the Department of Agriculture, I want to say just a few things concerning the part of the Government on this program. You will remember that this was the third of my four cornerstones. I have said that this has been your program; the farmers' program. Essentially that is true. It often happens, however, in a democracy like ours, that Government action is necessary to give voice to a great public demand that has been largely inarticulate; necessary to crystallize a program that can translate this demand into accomplishment. This is what happened when the Rural Electrification Administration was created by Executive order under the Emergency Relief Act of 1935, then continued for a long time program by the act of 1936, and later given the important assistance of the Department of Agriculture.

The advancement of agriculture and the solution of many agricultural problems has always been considered as a function of the Federal Government. In George Washington's first annual address to Congress in 1790, he said:

"The advancement of agriculture, commerce, and manufactures by all proper means will not, I trust, need recommendation. The welfare of our country is the great object to which our cares and efforts ought to be directed and I shall derive great satisfaction from a cooperation with you in the pleasing though arduous task of insuring to our fellow-citizens the blessings which they have a right to expect from a free, efficient, and equal government."

Six years later in Washington's final message to Congress he said:

"It will not be doubted that with reference to individual or national welfare agriculture is of primary importance. In proportion as nations advance in population and other circumstances of maturity this truth becomes more apparent and renders the cultivation of the soil more and more an object of public patronage. Institutions for promoting it grew up, supported by the public purse; and to what object can it be dedicated with greater propriety?"

The well-being of agriculture has always been regarded as implicit in the general welfare of the country. Washington's words seem prophetic as we now contemplate this rural electrification program. He spoke of the function of Government in insuring the equal distribution of blessings. One of the greatest gaps of inequality in the blessings of our present civilization is the gap between kerosene lamps and electric light; between hard, hand labor and the electric motor. When Washington spoke of agriculture and the public purse and asked the question, "To what object can it be dedicated with greater propriety?" be voiced a time-honored policy which now finds significant fruition in these loans for rural electrification.

It should be noted that I say "loans" not "grants." And let no one assume that you and I mean anything other than loans when I speak for the Government and you speak for the borrowers. As a lawyer, in 25 years of active practice, I have had dealings with many creditors and many debtors. Most people want and expect to pay their debts but I have never known any group of debtors who take their obligations more seriously than the boards of directors of your cooperatives.

Recently I read a publication of a chamber of commerce in this great State to the effect that the operations of the Rural Electrification Administration showed a deficit to the United States Treasury of about $7,000,000. That figure was arrived at by a number of calculations but essentially it represents appropriations for the administrative expenses of REA. I do not want to be critical of the chamber of commerce because it quoted a Government publication, but any such statement needs a lot of analysis. This REA program, in reality, shows black ink rather than red ink, even when our administrative expenses are included. The spread between the interest rate which you have paid and the actual cost of money to the Government has been much more than the amount of our administrative expenses. That will undoubtedly continue to be true even under your new 2-percent rate which Congress fixed last year. This program has not cost the American taxpayer a dime.

Furthermore, and more important than mere figures, is the fact that the fiscal risks of this program constitute an investment in the prosperity and general welfare, not only of the farmer but of the country as a whole. No country can be considered prosperous when there are wide gaps of inequality in the standards of living of great groups. Agencies of Government—Federal, State, and local—under sound policies of promoting the general welfare, have given the farmer and his family good roads, good education, and rural mail delivery. REA is merely lending him the funds with which he is securing for himself the modern necessity of electric light and power.

My fourth cornerstone is the support of public opinion. Many private institutions and programs need to blaze new trails ahead of established public opinion. Much less frequently is this true of Government programs. An outstanding attribute of rural electrification is the fact that it is no longer a voice crying in the wilderness. It is no longer experimental. Most of the voices of skepticism and defeatism have become silent. Town people and city people; the public press by and large; most of the voices which articulate public opinion, regard the completion of the task of rural electrification as one of the musts of our generation.

Your local cooperatives, in their efficient management, are doing a grand job in justifying and maintaining this favorable public opinion. Let us guard this asset. Let us conduct our relations with each other at a high level of mutual respect and tolerance, forgiving our mistakes in a spirit of devotion to a common cause. Let us demonstrate before public opinion a highly successful partnership of private enterprise and Government assistance, each party to this great adventure playing its proper part.

As your lawyer, I am proud of my clients. For nearly 10 years I have tried to protect and guide this program according to the highest standards of the legal profession which I love. We have won most of our legal battles because justice and right were on our side. In your appearances before courts and regulatory bodies, in your many other contacts with public officials, in all of your public relations you need not walk with hesitant or apologetic tread. Some of your members may appear in overalls, with good American soil on their boots, as has happened in some of the cases I have tried. These farmers, however, in their demand for the right to solve their own problems by their own efforts, are building on the home front that democracy for which their sons are fighting and dying on the far-flung battle fronts of the world.

Address of Karl Taylor Compton at the Eighth Annual American Design Awards Luncheon

EXTENSION OF REMARKS

OF

HON. LEONARD W. HALL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, May 25, 1945

Mr. LEONARD W. HALL. Mr. Speaker, under leave granted me, it is a real privilege for me to include in the RECORD the address of Dr. Karl Taylor Compton, president of Massachusetts Institute of Technology, made on the occasion of the eighth annual American design awards luncheon held at the Waldorf-Astoria Hotel on April 19, 1945. Dr. Compton's address follows:

INTRODUCTION OF DR. KARL T. COMPTON

So that the organized effort of scientific research which has made victory possible will go forward in the years of peace, a new research board for national security has been established. Our last speaker has been appointed chairman of this board. His experience during this war fits him particularly well for this task. Ladies and gentlemen, the president of the Massachusetts Institute of Technology, Dr. Karl T. Compton.

ADDRESS BY DR. KARL T. COMPTON

Mr. Hoving, Judge Patterson, Dr. Jewett, ladies and gentlemen, to receive recognition for achievement is both gratifying and inspiring. It is doubly so when this achievement has been in a field of real concern to all good men and true, in the present instance to every citizen of our great country. We scientists, privileged to be present at today's ceremony, are only representatives of many thousands of scientists who have joined in the national effort to back up our splendid fighting forces in this total struggle to preserve the way of life we all hold dear.

Our scientists are serving in many places and capacities. Most of us are engaged in research and development to produce new and more potent weapons—devices which can reduce our battle casualties, protect from enemy action our cities or our ships, or which can multiply manyfold the striking power of our troops. Many of us have developed those new medicines and surgical methods which are saving the lives and restoring the effectiveness of tens of thousands of young men who would otherwise be lost through disease or battle casualty. Some of us have been concerned with better rations and more durable or comfortable clothing. Some hundreds of us are in the active theaters of war, assisting the armed forces to introduce the newest weapons. We serve, some as civilians and some in the armed forces. All of us are grateful for today's recognition of the contributions of scientists to America's success in this war.

But the really useful purpose of an award is not simply to please the recipient; it is to encourage him to even better efforts and to inspire others to do likewise. Hence, on an occasion like this, we should look forward, not back. What is the significance of science to our future national security, and what should we do about it? To high light the future against the past, let me remind you that this is Patriot's Day, commemorating the Battle of Lexington. Paul Revere rode 170 years ago last night.

"On the eighteenth of April in seventy-five,
Hardly a soul is now alive
Who remembers that famous day and year.

* * * * *

"You know the rest in the books you have read,
How the British regulars fired and fled,
How the farmers gave them ball for ball
From behind each fence and farmyard wall."

Those were days of primitive warfare. Now we have tanks, television, radar seeing, automatic fire control, smoke screens, flame throwers, battleships, amphibious vehicles, warfare under water and in the air, rocket missiles, and scores of other new weapons. The spirit today is the same as in 1775—patriotism, courage, determination, skill. But the techniques are very different: Advancing science makes more powerful devices possible, for war as well as for peace. If we are not to become an easy and inviting prey to the next well-prepared aggressor, we must be alert to be ourselves prepared to meet what may come. What this may be, who can tell? Pilotless aircraft? Automatically guided missiles? Disease germs? Super long-range bombardments with super explosives? Devices not now even envisaged? What can we do to keep such horrors from being unleashed, or to protect ourselves against them if they are?

In order that the United States may be safe, it must be just and cooperative in its international dealings, but it must also be strong internally. One aspect of this strength must be scientific preparedness so that we cannot be caught technically at a disadvantage. This is important as never before because no other nation would again attack us unless it were convinced that it could secure a speedy victory by superior technical methods. While scientific preparedness is only one aspect of national preparedness, it is an essential aspect. It could probably prevent future war; it could certainly save enormous loss if we should again be forced into war.

To this end the Secretaries of War and Navy have jointly brought about the formation of a Research Board for National Security, for the explicit purpose of insuring the future scientific preparedness of our country. It is a peacetime organization which starts out based on the effective partnership that has been established between the armed forces and the civilian scientists during this war. Its main body is composed of 20 high-ranking Army and Navy officers and 20 civilian scientists, engineers, and industrialists. It held its second meeting yesterday, and it is planning to go into full-scale operation when the emergency war organizations like OSRD disband. As its chairman, I solicit your interest and support, for it is a new approach to peacetime security and it will need interest and support if it is to succeed in the job which has been assigned to it.

America, with its material resources, its scientific skills, and its industrial productivity, should be able, with only reasonable attention and effort, to keep itself in a position too impregnable to give any encouragement to any would-be aggressor. By reasonable effort I mean an expenditure of time and money, which would be insignificant indeed in comparison with the cost of fighting another war. Nowhere that I can think of is it more true that "an ounce of prevention is worth a pound of cure."

Finally, a word about practical idealism. I hope that this program for scientific preparedness will not draw a charge that American scientists have become war-minded. They have become war-minded only to the extent of realizing what they should do to reduce the likelihood of again incurring needless waste and sacrifice in war.

There is no danger of America's becoming war-minded or seeking conquest. We are too fundamentally desirous of going about our independent peacetime pursuits without interruption. The strong pacifist sentiment of the 1920's and 1930's had basically fine objectives, to which we all still subscribe. The trouble was that the pacifist techniques for achieving these objectives were ill suited to the facts of life in this era. Ostrich-like, the pacifists ignored the Hitlers, Mussolinis, Hirohitos, and their followers. As a result, the Nazis, Fascists, and Japs were encouraged, not deterred, by the pledges of our youth never to bear arms, or by our refusal to strengthen the defenses of Guam, or to mount modern guns on Corregidor.

We have learned our lesson the hard and terrible way. We want peace more fervently than ever before. The scientists of America want to do their bit in safeguarding the peace which, thank God, we can now see ahead if we do not falter but press steadfastly ahead until victory is complete and this generation of international aggressors is so completely subdued as to remain forever an object lesson to any who might some time again be tempted to gain their ends by war.

The Benefits of Bretton Woods

EXTENSION OF REMARKS
OF

HON. ELLIS E. PATTERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 25, 1945

Mr. PATTERSON. Mr. Speaker, since I have been in Washington, I find that more and more people are thinking ahead to the hour when the war will be over. My friends ask me, "What do you think of the future? Are we going to have a depression or prosperity right after the surrender? And what about this talk of a Third World War? Will we have another in 25 years, or are we going to live in peace for a change?"

I think that these are about the most important questions we can ask today. What hath it availed us, O Lord, to fight through the long years of this war, to see so many of our California boys killed and wounded, if, after it all, we come back to a world of unemployment, depression, and World War III? Life is not worth living if we cannot have more hope for the future than that. Hope. Hope for full employment and a better standard of living for us here in the United States. Hope for the reconstruction of the devastated areas of the world, and hope for a condition of peaceful living that will stretch as far into the future as we can see.

I sincerely believe that we now have the possibility of realizing that hope. We had it once before when the League of Nations might have been made a going concern and we lost it. If we lose it now, I have no doubt whatsoever that the destruction which has laid waste so much of Europe and Asia this time will then be literally world-wide. It is the duty of every citizen to ponder over this fact, and to think as clearly as he can how we may break what to some seems an inevitable cycle turning every generation to slaughter.

Economic prosperity throughout the world is a fundamental requirement for world peace. When the wheels of our economy slow down look out for danger ahead. After this war, to avoid unemployment and depression, we must produce even more than now. We must have markets abroad that will absorb more than peacetime foreign markets have ever taken before.

This means that every possible barrier to trade between nations must be removed. We must have stable exchange rates so that a man who wants to buy or sell abroad today will know what his money will be worth tomorrow. We must be able to sell overseas without fear that a foreign government will arbitrarily refuse payment or make it difficult to obtain. Such practices had much to do with the drying up of trade in the years between wars.

To keep trade flowing and keep the people of the world employed we must have an international organization. We must keep the peace by force if necessary, but if we remove the causes of economic aggression we may not have to use force. That is why I see so much hope for the future in the meeting last summer of representatives of 44 nations at Bretton Woods, N. H. The whole purpose of their discussions was to smooth the way to expanding trade between nations.

I want you to consider for a few minutes what that can mean for a single California industry. The motion-picture industry which, directly or indirectly, affects virtually everyone in our State.

The Bretton Woods proposals provide for the formation of two organizations, the International Monetary Fund, and the International Bank for Reconstruction and Development. The fund is to deal with problems of current international exchange transactions; the bank is concerned with the long-run development of industry in the member nations and the improvement of their standards of living.

The bank will facilitate long-term international investment by guaranteeing loans made by private investors or itself making loans. Its purpose is to aid the expansion of production in the member countries. Increased production will mean increased income, and increased income will provide a greater market for American products. If the standard of living in foreign countries increases they will demand more American films. They will be able to pay more in royalties to the producers if the films can be shown to larger audiences. The bank will affect the motion-picture industry largely through its indirect effects upon the standard of living in foreign countries. The American motion-picture industry has made heavy investments abroad and it will continue probably to invest directly in foreign production and distribution facilities. It is important to the industry that the foreign countries in which investments have been made be prosperous.

The operation of the fund, on the other hand, will directly affect the prosperity of the moving-picture industry. From 1939 to 1943 the annual royalties and rentals of films in foreign countries produced an average of $73,400,000 for the American industry. For some of the film producers almost one-third of their rev-

enue from the rental of films came from foreign sources. About 57 percent of this royalty income was derived from Great Britain. Obviously the use of American films in English-speaking countries involved fewer difficulties than in countries using other languages. A further factor in the situation, however, is that in non-English-speaking countries there have been greater restrictions on the importation of American films, largely because of their adverse balance of payments' position with regard to the United States.

Contracts for the rental and royalties on films are made in foreign currencies; that is, the theaters using American films in England agree to pay pounds sterling. The American companies, to derive any benefit, must have this sterling transferred to the United States in the form of dollars. If the foreign country reduces its exchange rate on the United States, the amount which the American companies get is reduced proportionately. Thus, if the French franc is worth 6 cents, 100,000 French francs mean $6,000 income. If the franc is 2 cents, however, it will amount to only $2,000. Since royalties are paid generally on a percentage basis the amount of revenue which the American producer gets depends directly on the exchange rate. Consequently, it is important for the producer to know that this exchange rate will not be lowered. The proposed fund, by requiring countries to maintain their exchanges at par and not permitting reductions in exchange without consent of the fund, will mean that the American film producers will not be deprived of their expected earnings.

The moving-picture industry has also suffered seriously in the past from the blocking of exchange which it has earned. In the formulation of exchange policies most countries have been more liberal in permitting payment for goods or shipping services than they have for payments of royalties, rentals, or the earnings of investments. With the declaration of war the United Kingdom froze the balance of the American movie producers in England. In July 1942 the amount involved was about $50,000,000. These accumulated earnings could not be withdrawn and the stockholders of the American companies could not obtain the money earned on their investments. Earnings of the movie industry were regarded as a claim subordinate to those of the export trade. In addition, other profits of foreign subsidiaries could not be repatriated. As the industry well knows, this was a source of considerable friction.

In 1942 Britain agreed to unblock these balances and in the course of the next year they were repaid to the American holders. At the present time American movie producers still have about $5,000,000 in other assets which they cannot convert into dollars. The fund agreement will prevent this type of control in the future. While member countries are permitted to impose certain restrictions on capital movements, principally to prevent the flight of "hot money," they are prohibited by the agreement from imposing restrictions on the transfer of current earnings for payment for services. If the agreement is put into effect, the American motion picture industry will not find that it has frozen assets as a result of foreign countries' exchange policies and exchange difficulties.

The fund and the bank together will contribute to raising the standard of living in all of the member countries. Together they will enable the countries to maintain their trade and exchange relations on a more stable basis. Whatever contributes to raising the standard of living abroad will increase the market for the products of American industry. The motion picture industry has suffered in the past from restrictions which the proposed plan will eliminate. It is important to the industry that this program should come into operation as soon as possible.

I have used the motion picture industry only as an illustration of benefits which American industry in general can expect from adoption of the Bretton Woods proposals. Think what greatly increased trade will mean to our shipping industry and the many workers in it, to all the air lines, and to our tourist trade. On the basis of the international prosperity that is bound to follow from expanding world trade, we can look forward with hope to a world of peace.

How High Are United States Tariffs?

EXTENSION OF REMARKS

OF

HON. HAROLD KNUTSON

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 25, 1945

Mr. KNUTSON. Mr. Speaker, under leave granted, I desire to insert in the RECORD a reprint from the Cut Bank (Mont.) Pioneer Press, which speaks for itself:

HOW HIGH ARE UNITED STATES TARIFFS?

(By HAROLD KNUTSON, in his paper, the Wadena (Minn.) Pioneer Journal)

When America was young and undeveloped, the tariff was the big issue in American politics, the need was for industrial development. A series of tariff acts beginning with the Civil War, and fostered by the Republican Party gradually paved the way for such expansion to a point where we became the foremost manufacturing country in the world. Indeed, the industries fostered under the protective tariff system enabled the Allies to win World War I. American industries have played an equally important part in this war.

Following World War I, agricultural and industrial imports from the pauperized countries of Europe and Asia attained such volume that it was necessary for the Congress to repeal the Underwood Free Trade Act, then in force, and substitute for it the so-called emergency tariff law which gave a considerable degree of protection to the American farmer, workingman and industrialist in their fight to hold on to the American market.

We have frequently heard it charged that the Smoot-Hawley Tariff Act, enacted in 1930, was responsible for the depression. Nothing can be further from the truth. The depression began in Great Britain in 1926 and it was merely an incident that it reached America at about the time that the Smoot-Hawley Act went into effect.

People with long memories believe in tariff protection because they know from bitter experience that there must be some sort of differential tax imposed to equalize the great difference in labor costs here at home and abroad if we are to eat, but the younger generation know comparatively little about the subject, unfortunately. It has therefore been easy to sell them on the idea that protective import taxes are barriers to trade, and promote international discord. History does not bear out this charge. We were on a free-trade basis when World War I broke out and the depression of the late twenties and early thirties was a natural consequence of that war.

When the Democrats came into power in 1933, after having made the tariff the main issue in the campaign of the preceding year, the country naturally expected them to repeal the Smoot-Hawley Tariff Act, which they had denounced in most severe terms throughout the campaign. Strange to say, they did nothing of the sort. Instead, they passed the Reciprocal Trade Act as an amendment thereto, which permitted the State Department to negotiate trade treaties with other countries without reference to the Congress, which is contrary to the Constitution. We were then told that the new method of dealing with foreign imports would mean an end of wars. After having negotiated 29 treaties, one of which has since been abrogated, World War II burst out in a fury theretofore unknown, so it can be safely said that the tariff has little to do with peace and war.

The American Tariff League began a scientific study of tariffs some 5 years ago and their findings were recently made public. In a study of the tariffs of 19 countries, it is disclosed that the United States was seventh from the bottom of protected countries while the United Kingdom, popularly considered a free trade nation, was ninth from the bottom. Taking the American ad valorem tariff at 100 percent, Spain leads with an average of 465 percent; Germany 279 percent; Mexico 149 percent; United Kingdom 118.3 percent. Sweden ranks nineteenth with an average of 32.8 percent. In five groups studied, the United States ranks among the bottom six in foods, fuels, metals, building materials, and chemicals. In textiles and house furnishings, we rank tenth, and in only one group, farm products, are we second from the very top with a rating of 95.8 percent as against 119.8 percent.

In his Chicago speech last October, President Roosevelt promised to provide 60,000,000 jobs. That is a big order and can only be filled if we embark upon a program of comparative self-sufficiency. Whilst we must have commercial intercourse with other nations, we definitely feel that this commerce should be confined to the export of those things of which we have a surplus and those things that we need but do not ourselves produce.

As the struggle for the American market develops after the close of this war, the tariff will come more and more to the fore because of the keen competition that we will have to meet from the pauperized countries of Europe and Asia. When that time comes, as it surely will, the American people will have to decide whether they are going to look after themselves first. We believe that we should look after our own welfare before we engage in the thankless job of playing Santa Claus to the rest of the world.

All want to be friendly with other countries and we are going to help them as much as we possibly can in their titanic task of rehabilitation, but the "do-gooders" should not lose sight of the fact that the degree of help that we can give other nations will be in proportion to our well-being and prosperity at home.

Memorials of the California Legislature

EXTENSION OF REMARKS
OF
HON. ELLIS E. PATTERSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Friday, May 25, 1945

Mr. PATTERSON. Mr. Speaker, in accordance with my promise to the members of the California State Legislature, I would like to bring to the notice of the Congress of the United States certain memorializations they would like presented to this great body.

Having been a member of the Legislature of the State of California for 10 years, prior to my serving as a Member here, I realize the sincerity and earnestness behind each memorialization I have in my hand. They are, each one, carefully considered recommendations; and I would like to take this opportunity of calling the attention of the House of Representatives to them.

Senate Joint Resolution No. 3: Relative to cooperation among nations to curtail the production and traffic of opium.

Senate Joint Resolution No. 5: Relative to memorializing Congress to consider early return to this State of the administration and control assumed by the Federal Government as part of a Nation-wide employment problem.

Senate Joint Resolution No. 8: Relative to memorializing the Congress of the United States to provide financial assistance following the cessation of hostilities and during the period of reconversion to normal peacetime operation to those communities which have suffered deterioration of facilities owing to the impact of war industry and war-increased population.

Senate Joint Resolution No. 9: Relative to memorializing Congress to provide for the prompt removal of temporary war housing which violates local building regulations and relative to the timing and method of such removal and consultation with local legislative bodies to determine the need for retaining any such housing.

Senate Joint Resolution No. 10: Relative to memorializing Congress to appropriate additional and adequate funds annually for the maintenance and operation of the San Joaquin experimental range.

Senate Resolution No. 26 and House Resolution No. 36: Relative to memorializing Congress to enact stringent laws adequate to control the disposition of ship's garbage in the harbors and ports of the United States.

Senate Resolution No. 36 and House Resolution No. 87: Relative to memorializing Congress to enact a bill providing for universal military training for the youth of the country.

Senate Joint Resolution No. 12: Relating to the establishment of the seat of government of the Allied Nations of the world in the redwood empire of California.

Senate Joint Resolution No. 14: Relative to memorializing Congress to enact H. R. 2347, Seventy-ninth Congress, first session, relating to guayule rubber.

Senate Joint Resolution No. 16: Relative to memorializing the Congress in relation to prices for fresh fruits.

Senate Joint Resolution No. 6: Relative to making available to the Palo Verde Mesa lands certain waters of the Colorado River.

Senate Joint Resolution No. 15: Relating to claim of ownership of lands by the sovereign State of California.

Assembly Joint Resolution No. 7: Relative to memorializing Congress to enact a seamen's bill of rights.

Assembly Joint Resolution No. 30: Relative to memorializing Congress to provide educational opportunities for war widows.

Assembly Joint Resolution No. 32: Relative to memorializing Congress of the desire of the people of the State of California to provide such appropriate lands, utilities, and facilities as may be needed for the establishment within the territory of the State of the permanent site of activities of the world security organization.

Assembly Joint Resolution No. 31: Relative to memorializing the President and the Congress and the Federal Surplus Property Board to establish or designate a special agency with which municipalities and other public bodies may deal in the purchase of Federal surplus properties.

Assembly Joint Resolution No. 35: Relative to income and resources of recipients of aid to the aged and of aid to the blind.

Assembly Joint Resolution No. 36: Relative to making President Roosevelt's birthday, January 30, a legal holiday.

House Resolution No. 153: Relative to the enactment by Congress of legislation amending the revenue laws to validate depletion allowances affecting the oil industry.

House Resolution No. 208: Relative to memorializing Congress to study the need for postwar recreational facilities on Government-owned properties in California and to earmark an adequate portion of postwar construction funds for the purpose of providing such recreational facilities.

I think you will agree, Mr. Speaker, that the foregoing are all well-conceived recommendations. I hope that my fellow Members will give them their consideration, as being representative of the legislative thinking of the great State of California.

Assessment of Union Fees on Eastern Shore Truckers

EXTENSION OF REMARKS
OF
HON. DUDLEY G. ROE
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES

Friday, May 25, 1945

Mr. ROE of Maryland. Mr. Speaker, most everyone knows that the Eastern Shore of Maryland is the garden spot of the world, and that we produce the most delicious vegetables and fruits grown in the United States.

A very serious situation has just developed. In spite of the manpower shortage on the farms with which to grow food for the Nation, and in spite of the dire need in the city for the food which the country produces, labor agitators have forbidden the receipt of Eastern Shore produce in either the Philadelphia or New York markets, unless the farmers pay the union a hold-up fee of $56 for the drivers of their trucks. It is amazing that Americans would take such action in these serious times. How they can call themselves Americans, I cannot understand; but I think the people residing in the cities need food worse than the Eastern Shore farmers need to be paid for the crops they grow.

I attach two news items from the Salisbury Times of Salisbury, Md.:

AFL TEAMSTERS THREATEN TO HALT PRODUCE—DEALERS HOPE TO DIVERT TO OTHER MARKETS AFTER UNION'S ULTIMATUM

PHILADELPHIA, May 16.—Faced with an AFL teamsters union local threat to embargo produce deliveries today on trucks not manned by union members, many produce dealers said they planned to divert their products to other markets.

Representatives of 20 farm organizations with membership extending from Maine to Florida met in Philadelphia yesterday to discuss the situation and following the meeting spokesmen for the conference said a majority of the growers would divert their trucks to other markets if the union insists on carrying out its edict.

Abe Goldberg, president of Local 929, teamsters union, said that drivers of produce trucks coming into Philadelphia "can join any AFL teamsters local, but they must have a paid-up card or produce handlers for commission merchants and carlot receivers won't handle their merchandise." The union also demanded a 5-day week for produce handlers. Goldberg said last night the embargo would start today.

EDICT WOULDN'T APPLY

Carroll R. Miller, of Martinsburg, W. Va., chairman of the growers' group, said the union edict would not apply to bona fide farmers and their sons.

Following the meeting, called by the Northeast Vegetable and Potato Council, the following statement was issued:

"The 5-day week now in effect for the summer months at the Philadelphia produce terminals threatens heavy loss of highly perishable farm products * * * which must be harvested and in the hands of the consumer in the shortest possible time.

"When growers are unable to make deliveries of highly perishable fruits and vegetables on Saturdays, the produce may be ruined by Monday.

"We contend that free movement of perishable fruits and vegetables to the consumer, at lowest possible cost, is to the best interest of both the consumer and producers.

"Arbitrarily imposed costs for unnecessary services defeat this end and induce wastage of food * * *.

"This situation, together with the need for acquiring union membership for farm hands who drive farmers' trucks, puts growers in a tight spot."

UNION HALTS SHORE PRODUCE IN NEW YORK—TEAMSTERS CLAMP DOWN ON TRUCKERS, ASK $56 UNION FEE

New York teamsters clamped down on the Eastern Shore produce truck fleet, assessing

$56 in union fees for each truck unloaded at the market last night.

"They picked the worst night of the week for us," R. P. Richardson, of the Eastern Shore of Virginia Produce Exchange said. "We were blocked, we couldn't even unload for cold storage."

He explained that the trucks had to be unloaded last night or produce would be spoiled as the market would not be open on Saturday and produce would not stand a layover until Monday.

The $56 fee was for union membership for each truck driver, he said, and the drivers had to join the union before the trucks would be unloaded.

Many of the trucks entering the New York market had been diverted from Philadelphia, Richardson said. On Tuesday the AFL teamsters there had embargoed nonunion driven trucks.

UNLOADINGS LIGHT

Unloadings at Philadelphia of produce trucks were the lightest last night of any night in the last 12 months, he said. Eastern Shore drivers, and those operating in North Carolina, have flatly refused to drive to the Philadelphia market.

The Cooperative Fruit and Vegetable Growers Association is appealing to the Federal Government for relief and a committee of growers is arranging a meeting with the House Agricultural Committee in Washington.

The State of Pennsylvania, faced with what may possibly develop into a fruit and vegetable shortage in Philadelphia, is conducting its own investigation of the impasse between truckers and the union.

Tacoma's Municipally Owned Light and Power System Makes Fine Showing

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 24, 1945

Mr. COFFEE. Mr. Speaker, I am very proud of the record made by my home town of Tacoma, Wash., in its operation of its publicly owned light and power plant. Tacoma is the outstanding example of efficiency and effective operation of a publicly owned light system.

It sells light and power at the lowest over-all average rate per kilowatt of any publicly, or privately, operated power plant in America.

Recently, the Public Administration Clearing House of Chicago issued a report, which is illuminating and very encouraging and which is self-explanatory. Here it is:

CITY OWNED ELECTRIC UTILITIES MAKE LARGE REVENUE PAYMENTS IN LIEU OF TAXES

Municipally owned electric utilities contribute from one-sixth to one-fourth of their gross revenue to city operating funds in lieu of taxes, a report to the International City Manager's Association shows.

The amount of the gross revenue transferred to the general city government ranges from 1 percent in Seattle and Tacoma, to 45.5 percent in Jacksonville, Fla.

Contributions average a little more than 29 percent of the gross revenue of the utilities in 81 council-manager cities. Contributions were more than 50 percent of the gross revenue in eight cities—Bedford, Va., Belleville, Kans.; Brownsville, Tex.; Cushing, Okla.; Ellwood City, Pa.; Front Royal, Va.; Gastonia, N. C.; and Tallahassee, Fla.

A study of the 128 municipally owned electric utilities in Kansas shows that 118 cities contribute an average of 26.2 percent of their gross revenues to city operating funds.

A survey of the amounts contributed in 22 cities over 50,000 population having city-owned electric utilities shows that in one-half of the cities no contribution of any kind is made to city operating funds. The utilities in the other 11 cities contribute an average of slightly less than 17 percent of their gross revenue to the city.

The report compares the information about municipally owned electric utilities with information available on taxes paid by privately owned utilities. The president of the Edison Electric Institute recently estimated that 24 percent of the gross revenues of privately owned electric utilities is paid out in taxes. This estimate agrees substantially with a detailed analysis of 245 privately owned utilities made in 1943, showing they paid in taxes an average of 22.6 percent of their gross revenues.

Young America Speaks From the Philippines

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 24, 1945

Mr. COFFEE. Mr. Speaker, it has been my good fortune to have met a brilliant young American boy, who was raised and educated in Chicago public schools. He is, likewise, a graduate of the University of Chicago, from which he received his diploma at an unusually early age.

I like to think that this young man is typical of the generation now appearing upon the political, professional, and economic horizon of our country.

As I have observed this young man, both before his entry into the Army and subsequent thereto, I have been increasingly impressed with his adaptability, warm-heartedness, tender solicitude for the underprivileged, and penetrating grasp of the national and international problems besetting world statesmen.

Recently, he wrote me a letter from the Philippines, where he is now stationed. Because this letter is so well written and because it reveals how reflective is the author, as well as his philosophic and analytical appraisal of the Philippines and of the war and its implications, with the unanimous consent of my colleagues, I am inserting it hereinbelow in the RECORD.

The letter, which was written by A. Sheldon Newberger, is as follows:

SOMEWHERE IN THE PHILIPPINES,
Friday, March 30, 1945.

Hon. JOHN M. COFFEE,
House Office Building,
Washington, D. C.

DEAR JOHN: Received yours of February 3 and read with excitement and enthusiasm your speech delivered in Madison Square Garden last January. My only regret is that I couldn't have sat in the hall on that momentous occasion and lent my voice to those championing the cause of the people of Spain. I fear it would be an understatement if I told you your address was magnificent: Emphasizing not only what needs to be done, but also, how it can be done. It was a clarion call for action, and your crusade is a glorious undertaking.

Perhaps, being where I am today, I can sympathize even more with your position. For the Philippine Islands are a product of 3 years under fascism; and whether the brand be Hirohito, Hitler, or Franco—the results are always the same. The little man is inevitably on the outside looking in.

We had a quiet, uneventful voyage across the Pacific, crossing the Equator a couple of times, basking in the warm tropical sun, and taking a good look at the fabulous South Seas. And somewhere along the way I found myself shoved out of the Infantry and placed behind a typewriter, in the headquarters of the United States Armed Forces for the Far East (USAFFE).

What first strikes the new arrival in the Philippine Islands is the startling contrast between the old and the new. Side by side are the horse-drawn cartellas and the latest autos, candles and electric lights, thatch huts and modern buildings. The culture is a composite of native traditions mixed with the ways of the American, Chinese, and Spanish. The result is a country fascinating in numerous ways.

The western world has made its mark. Along the muddy roads of Tacloban, Leyte, every third store is a beauty parlor, each advertising the latest 1941 version of Hollywood style—and the remainder are taverns offering Tom Collins, specially prepared by American trained bartenders. Farther north inflation runs rampant with handkerchiefs selling for something like $15 and a dozen eggs for ten. In fact, John, the longer I stay in this portion of the world the more I become convinced that Henry Wallace was merely predicting the not to distant future, when he talked about a quart of milk a day—even for Hottentots.

The Filipinos are a proud, generous, friendly people. Their attitude during the Japanese occupation appears to have been that of continual resistance—passive in some places, active in others. And their welcome to American troops could hardly have been heartier. The youngsters line the streets, raising their fingers in the symbolic V sign and hollering their "Hello Joe's" from dawn until dark. And the remainder of the populace never seems to be able to do too much for their visitors.

But all is not rosy. There is widespread famine and around the Army mess halls hundreds of people gather—begging for whatever scraps they can find. You somehow gain a notion of what it means to be hungry when you look at the lean haggard faces of the children and the emaciated bodies of the women.

And when you see pictures of the prewar islands, as I did the other night, and compare them with what the war has left today, you realize fully something that has merely been a cliche to most Americans sitting comfortably in their homes in the States. Those who suffer most are the people—the common people who had absolutely nothing to do with the chaos they now find themselves in. And you can't help but wonder: Will man ever learn how to live peacefully and happily with his brother?

I think I learned the answer to that question yesterday. We attended a vaudeville show performed by an entire Filipino cast—and presented before a mixed audience of civilians and soldiers. There was a language barrier—a handicap which at first might seem difficult to overcome.

These people are talented. No one can dispute that. Graceful dancing and beautiful music inundated the stage, and out of a

common enjoyment sprang a unity within the crowd. We laughed at the same jokes, hummed the same tunes, demanded the same encores. And I understood then and there, John, that peoples of different lands, customs, environments, and traditions could find a meeting ground in culture. Art and music are universals that neither home-made barriers nor home-grown despots can destroy. There is a link between the peoples of this world—and it is that link that we must cultivate and strengthen and make so potent that neither guns nor bombs can ever again have any effect.

If I can extract any meaning out of the experiences that I have had—it is that our generation is at the crossroads of history. We have the opportunity to create a millenium of plenty; to use the great productive capacity of man in building a world where security and prosperity are a heritage of all the people; where want and poverty are outlawed, and where all men will be free to make their fullest contribution to society. Or we can have distrust and hypocrisy and ultimately World Wars III and IV—and 30 and 40. It is we who must make the choice.

That is why, John, I could appreciate your theme in the Garden speech: "Cry out in the night," make your voices so strong that even the mightiest will be forced to stop and take heed. We must awaken the people—we must educate them—we must show them that they will have to choose the path over which the human race will move. The roads must be clearly defined, and once the common man understands there can be no doubt about his decision.

For no matter how much we would like to blame Hitler and Hirohito for all that has happened, and no matter how much we would like to leave the planning up to Churchill, Roosevelt, and Stalin—the future rests with us, and us alone. We owe it to all the peoples who have suffered and slaved under the yoke of fascism, we owe it to the boys who fight in the front lines and dig out the enemy with their bayonets—above all, we owe it to ourselves and our children to make our voices sound forth bold and clear: announcing to all concerned that the little men in the world have resolved to unite in a brotherhood of justice and peace and are determined to make that resolution a reality. Then we can tell ourselves that the sacrifices made in this war, were not made in vain.

Yours,

SHEL.

Government Sponsored Medical Care

EXTENSION OF REMARKS

OF

HON. C. W. (RUNT) BISHOP

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, May 25, 1945

Mr. BISHOP. Mr. Speaker, several days ago the Carbondale Free Press, Carbondale, Ill., carried an editorial which deals with the question of Government-sponsored medical care. I would like to quote from that editorial:

On the question of Government-sponsored medical care, too much emphasis has been placed on the doctors versus the Government. In between are the people, and they are the ones who stand to gain or lose the most. As more than one doctor has pointed out, if State medicine is thrust upon the medical profession and the doctors don't like it, those who wish can escape by merely switching to some other line of business. But for the people, there is no escape. If State medicine is adopted and result in lowered medical standards there will be nothing the people can do about it—socialism is a one-way road. The people will be socialized, not the doctors.

The medical profession opposes State medicine because it has studied the lessons of history and knows that too much government in medicine will not bring adequate medical care to all the people. A tragic example of State medicine can be seen in the veterans' hospitals. Many veterans are getting worse than poor medical care all because their treatment is swamped in red tape—politics takes precedence over the requirements of good medicine. And who has suffered the consequences, the veteran or the doctor? Ask the veterans.

Bretton Woods Agreements

EXTENSION OF REMARKS

OF

HON. CHASE GOING WOODHOUSE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Friday, May 25, 1945

Mrs. WOODHOUSE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a statement from Americans United for World Organization, Inc., relative to the Bretton Woods Agreements:

Ulric Bell, executive vice president of Americans United for World Organization, issed today, May 21, a report of the public endorsement of the Bretton Woods Monetary Agreements. Mr. Bell stated that:

"One of the most encouraging aspects in the entire picture of international cooperation has been the widespread public support of the Bretton Woods Monetary Agreements. Because of our conviction of the importance of the adoption by the United States of the Bretton Woods Agreements, Americans United has followed closely the stand of various public groups on this subject.

"These national organizations endorsing the agreements represent women's, farm, labor, religious, and business interests. It is obvious from the varying groups represented that the American public as a whole is clearly aware of the significance of Bretton Woods and determined, moreover, that nothing shall interfere with its prompt adoption by the Congress.

"Americans United believes that this crucial test of our willingness to work with other nations for peace must pass the Congress without delay and without amendments which will require the calling of another international conference."

The list of organizations follows:

American Federation of Labor.

Advertising Committee on Public Affairs.

American Association of University Women.

American Farm Bureau Federation.

American Labor Conference on International Affairs.

Americans United for World Organization.

Board of Governors of the Federal Reserve System.

Brotherhood of Railroad Trainmen.

Central-Penn National Bank (Philadelphia).

Citizens Conference on International Economic Union.

Congress of Industrial Organizations.

Committee for Economic Development (with one slight amendment which can be negotiated without calling another conference).

Corn Exchange National Bank & Trust Co. (Philadelphia).

Council of Bishops of the Methodist Church.

Council for Social Action of the Congregational Christian Churches of the United States of America, the.

Camden-Rockport Chamber of Commerce (Camden, Maine).

Commission to Study the Organization of Peace.

Export Managers Club of Chicago.

First National Bank (Damariscotta, Maine).

Girard Trust Co. (Philadelphia).

Girls Friendly Society of the United States of America.

Independent Bankers Association.

Independent Committee for the Arts and Sciences.

International Federation of Architects, Engineers, Chemists and Technicians.

Land Title Bank & Trust Co. (Philadelphia).

Market Street National Bank (Philadelphia).

National Association for the Advancement of Colored People (San Francisco Branch).

National Association of Women Lawyers, North Middle Atlantic Conference.

National Board of the Young Women's Christian Associations.

National Congress of Parents and Teachers.

National Cotton Council.

National Council of American Importers, Inc.

National Council of Catholic Men.

National Council of Catholic Women.

National Catholic Welfare Conference.

National Council of Jewish Women.

National Council of Women of the United States, Inc.

National Farmers Union.

National Federation of Business and Professional Women's Clubs, Inc.

National Foreign Trade Council, Inc.

National Board of the Young Women's Christian Associations of the United States.

National League of Women Voters.

National Women's Trade Union League of America.

National Peace Conference.

Pennsylvania Bankers Association, Committee on International Finance (Pittsburgh, Pa.).

Pennsylvania Company for Insurance on Lives and Granting Annuities.

Philadelphia National Bank.

Philadelphia Saving Fund Society.

Provident Trust Co. of Philadelphia.

Southern Conference for Human Welfare.

Tradesmen's National Bank and Trust Co. (Philadelphia).

Unitarian Fellowship for Social Justice.

United Christian Council for Democracy.

Women's Action Committee for Victory and Lasting Peace.

Women's Conference on International Affairs.

Women's Division of the American Jewish Congress.

Women's Division of Christian Service of the Board of Missions and Church Extension of the Methodist Church.

Women's International League for Peace and Freedom.

Western Saving Fund Society (Philadelphia).

Federal Council of Churches of Christ in America.

Business and Industry for Bretton Woods.

National Association of Alcoholic Beverage Importers, Inc.

Organizations which have filed resolutions or statements in opposition to the Bretton Woods legislation with the House or Senate Committees on Banking and Currency:

American Bankers Association.

American Coalition.

Bankers Association for Foreign Trade.

New York State Bankers Association.

United States Chamber of Commerce.

The Grange.

Contra Costa County (Calif.) Walnut Growers' Association Protest Application of Most-Favored-Nation Treatment to Trade Agreements and Demands That They Be Made Subject to Congressional Approval

EXTENSION OF REMARKS
OF
HON. BERTRAND W. GEARHART
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Friday, May 25, 1945

Mr. GEARHART. Mr. Speaker, agriculture's deep concern over the future of this basic industry under the Hull trade agreements is further evidenced in a resolution of the Contra Costa County (Calif.) Walnut Growers' Association, which I am, with permission of the membership, extending in the CONGRESSIONAL RECORD as a part of these instant remarks.

With the importation of agricultural products, the American farmer's competition, increasing during the years of so-called reciprocal trading by 71 percent, and the exportation of agricultural products, the American farmer's opportunity of profiting, falling off in 1940 to 10 percent less than our exports of 1934, it is high time that the American farmer, especially the western farmer, should "stop, look, and listen."

The resolution to which I have just referred, Mr. Speaker, is the following:

CONTRA COSTA COUNTY WALNUT GROWERS' ASSOCIATION,
Walnut Creek, Calif., May 23, 1945.

HON. BERTRAND W. GEARHART,
House of Representatives,
Washington, D. C.

DEAR SIR: At the annual meeting of the members of the Contra Costa County Walnut Growers' Association, held in Walnut Creek, Calif., on May 7, 1945, the following resolution was offered and passed unanimously:

"Whereas the Reciprocal Trade Treaty Act represents a further surrender of authority by the people and Congress to the executive branch of the Government; and

"Whereas it permits tariff reductions by such undemocratic processes as prevent affected industries from obtaining full and unbiased hearings; and

"Whereas the facts and figures reveal that prior to the war the act failed in its purpose of stimulating American exports commensurate with the increase in imports, and that the treaties were not truly reciprocal; and

"Whereas many California agricultural industries, and specifically the nut industries, are placed in constant jeopardy by threatened tariff reductions and would be subjected to ruinous competition if tariff protection were reduced as permitted under the act: Therefore be it

"*Resolved*, That the Contra Costa County Walnut Growers' Association, which in 1944 packer $1,976,601 worth of walnuts for its 780 members, at its annual membership meeting, opposes H. R. 2652 which would extend the act for 3 years and would empower the President to make even deeper tariff cuts than were heretofore permitted; and be it further

"*Resolved*, That this association approves the principle of reciprocal-trade treaties only if such treaties are subject to congressional approval, thereby safeguarding the inherent rights of the people and the industries affected, and further, if the inequitable effects of the most-favored-nation clause are removed; and be it further

"*Resolved*, That Members of Congress representing this association's growers be urged to oppose H. R. 2652 and to support the views expressed herein."

Respectfully submitted.

D. SADOROFF,
Assistant Secretary, Board of Directors.

Suggested Methods of a Good Understanding and Appreciation of the Importance of Immediate Collaboration Between and Among Three of the Great Powers, the United States, Great Britain, and Russia, in the Interest of Peace and Security

EXTENSION OF REMARKS
OF
HON. JOHN H. FOLGER
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Friday, May 25, 1945

Mr. FOLGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following text of broadcast by Sumner Welles over Station WMAL, Washington, D. C., Tuesday, May 22, 1945:

It would be far more agreeable for me tonight to limit myself to telling you of the nature of the progress which has this week been made at the Conference at San Francisco.

On one critical issue, which has up to now been a major stumbling block, a solution has been found. The Soviet delegation, after some delay, has agreed with the delegations of the other major powers as to the way in which regional systems of collective security will be enabled to function under the authority of the world organization. This formula is acceptable to most of the other American republics which have been insistent that the inter-American security system should not be prevented by the world organization from operating if some country of the new world is attacked.

The solution of this difficulty makes it now seem probable that the conference can complete its work by June 9, and that all of the United Nations will then agree upon the final charter for a new international organization.

But there is nothing more dangerous than for an enlightened democracy, such as ours, to shut its eyes to facts and to think that, because the charter of the new international organization will be agreed upon at San Francisco, we can, as soon as our victory over Japan is won, sit back and enjoy the blessings of a peaceful world. For there is little use in concentrating upon the progress that is being made at San Francisco, and less than any use in believing that that alone implies an end to future wars and the security of our own country, so long as the present tension between the Soviet Union and ourselves becomes constantly more serious.

For while a charter for international organization will be agreed upon at San Francisco, it can neither function effectively, nor even perhaps be prevented from breaking down completely, unless this country of ours is able with vigor and determination to establish in the immediate future a wholly different relationship between the Soviet Union and the United States than that which, unfortunately, exists today.

When the final history of these times is written, I believe it will be realized that one of the greatest contributions which President Roosevelt made to the future interest of this country was his effort to establish a working agreement between our Government and Moscow. For President Roosevelt saw clearly that no world organization can operate successfully in the first years after the war unless it is based on understanding and cooperation between Russia and the United States. He knew that cooperation between the United States and Great Britain, whatever temporary difficulties might arise, could always be achieved. He knew that in the long run cooperation between our country and France or China would be possible.

But in the case of the Soviet Union, he always had in mind these facts.

Russia has been isolated from the rest of the world for a quarter of a century. For this reason, and because of the policies of the great powers during the years between the two great wars, deep-rooted suspicions of the western powers are imbedded in the minds of Russian leaders and of the Russian people.

Because of the stupendous victories which the Russian armies have won against Germany, the Russian Government, the Russian military leaders and the Russian people have today a feeling of almost unlimited physical power in their part of the globe.

The Russian concept of legitimate postwar security differs very materially from the ideas which the western powers hold on that point.

Present and traditional reasons for rivalry and antagonism between Russia and Great Britain are very deep indeed.

For all of these reasons, and for reasons of ideology as well, the President foresaw that the establishment of any true understanding between the United States and the Soviet Union would prove to be one of the most difficult tasks which our Government was going to confront.

On the other hand, the President remembered that during the whole of our independent history the United States has never had any basic causes for hostility towards the Soviet Union. He knew that there are neither geographic, political or economic reasons for rivalry or for antagonism between the Russian people and the people of the United States.

He saw that in its own interest and in the highest interests of world peace, the United States should undertake a patient, constructive and continuing attempt to serve as moderator when difficulties arose between the Soviet Union and the other great powers, and particularly between Great Britain and the Soviet Union.

He never had the faintest idea of permitting the United States to be used as a cat's-paw either by the Soviet Union or by Great Britain. But he did believe that when disputes arose between those two countries, as he knew they would arise, the United States could act as a mediating and conciliating influence, and by refraining from serving the individual interests of either nation, undertake to serve the highest interests of the world.

In five short weeks since the death of President Roosevelt the policy which he had so painstakingly carried on has been changed. Our Government now appears to the Russians as the spearhead of an apparent bloc of the western nations opposed to the Soviet Union.

At the present moment there are four outstanding causes for friction between the Soviet Union and the United States.

These are the bitter controversy over what kind of a democratic government of Poland is to be set up under the agreement of Yalta; the action of the Soviet Government in establishing a government of Austria without the knowledge or consent of the United States or of Great Britain; the action of the Moscow-dominated government of Yugoslavia in occupying Trieste and the Istrian Peninsula

and regions in southern Austria; and the persistent refusal of the Soviet authorities to give the western powers any real knowledge of what is going on in such countries as Poland, Hungary, Rumania, and Bulgaria, all occupied by the Soviet, as well as in that sector of Germany which is occupied by Russian troops. To these grounds for dissension there may well be added the inexplicable policy pursued by the Russian armies with regard to American and British prisoners of war who were liberated by the Russian forces from German prison camps.

Now, in my judgment, the policy pursued by the Soviet Union in regard to every one of these issues is wholly unjustifiable. What will do more harm, perhaps, in the long run is the failure of the Soviet Government to explain clearly to public opinion in the United States its own reasons for what it has done. There are few instances in modern times where the policy of a great nation has been so ineptly presented to public opinion in other parts of the world as in this instance.

The result has been that a certain section of the American press which thrives on its effort to create ill will between the American people and the people of certain other countries has been able to seize the opportunity to fan the flames of resentment. This element of the American press has been helped by many powerful groups within the United States which hate the Soviet Government. Every shred of alleged evidence which could be presented to foster prejudice and suspicion here has been utilized. Blind passion is rapidly rising.

And at the same time the Russian press appears to have given quite as biased a picture of American policy and of American intentions to Russian public opinion.

But if we here in the United States intend to be fair in our analysis of the reasons for the present situation, we will have to confess that the Russian press has been able to cite many evidences of American policy which can understandably stimulate popular misunderstanding and resentment in the Soviet Union.

At the very moment when the Russian armies and the American armies have as allies won their bloody victory against the common enemy, Germany, the people of Russia are informed of the increasingly bitter attacks which are daily being made in the United States against the Soviet Union.

They are told to their amazement of the extraordinarily cordial treatment accorded to leading Nazi criminals by the American armies which have captured them. They learn of Mr. Churchill's official announcement that German authorities will be permitted to administer Germany because it will be too much trouble for authorities of the United Nations to undertake the task. They learn that no contrary view has as yet been expressed by the Government of the United States.

To the average Russian such reports as these are quite as incomprehensible and quite as infuriating as the reports which we Americans receive with regard to those recent actions of the Soviet Government which I recited a few moments ago.

And what are in reality the chief causes for the present situation?

First of all, there is no committee, or council, of high-ranking authorities of the major powers through which political disputes, such as those which now exist, can be threshed out, and settled. If Russia enters the war against Japan, such machinery would be all the more necessary.

There is no agreement between the United States and the Soviet Union on postwar policy toward Germany.

There is no agreement as to the treatment to be given German war criminals.

There is no agreement whatever upon a joint policy toward Poland, toward Hungary, toward Rumania, Yugoslavia, or Bulgaria, toward Austria, or with regard to the major economic questions, such as reparations, which have to be decided promptly if the situation in Europe is not to degenerate into a state of open anarchy, and if relations between the Soviet Union and the United States are not to deteriorate into open and bitter hostility.

There exists as yet no basis for that kind of cooperation between the two greatest powers of the world which is indispensable if world order is to be restored.

If this situation continues in the powder keg which is Europe, almost anything can happen.

There are two immediate remedies which can be tried.

The first is for President Truman, Prime Minister Churchill, and Marshal Stalin to meet without further delay in order to seek equitable and constructive solutions for the difficulties which have already arisen, and in order to set up adequate intergovernmental peace machinery capable of working out precise agreements upon every one of the settlements which must be had if a real peace is to be restored to Europe.

And the second step is for us here in the United States to refuse to be stampeded into that blind popular hostility toward the Soviet Union, into which many powerful and some sinister forces in this country—and by no means least among them those German propagandists who are in our midst—are endeavoring to drive us.

Of one thing we can be everlastingly certain, and that is that, unless the United States and the Soviet Union find the means of constructing a relationship of cooperation so that we can work together in solving the innumerable problems with which we will all be faced during the years to come, not only will the international organization to be founded in San Francisco prove to be ineffective, but chaos throughout the world may well become inevitable.

Reciprocal Trade Agreements

EXTENSION OF REMARKS

OF

HON. ROBERT F. RICH

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 25, 1945

Mr. RICH. Mr. Speaker and Members of the House of Representatives, in discussing this bill extending the life of the reciprocal trade agreements and reduced tariffs, I would support 1 year's extension at this particular time of reciprocal trade agreements if for no other reason than what some have termed good will to foreign countries, or to render psychological assistance in bringing about the desired results of the San Francisco Conference to outlaw wars. However, I do not want any reciprocal trade agreements when they sell America short.

However, to my mind the present bill will not do that. This bill digs down to the roots of American prosperity and the American standard of living.

In 169 years America has grown and prospered as no other nation on the face of the earth. We have had a happy, contented people. We have given our people a fine education. We have raised our standard of living, until today we have the highest standard of living of any country in the world. To be sure, we have had ups and downs, and they may come again, but, from the knowledge gained of experience, we want to prevent that if possible. Our laws are becoming broader and take care of the weak against the strong; they look after the poor by making the rich pay more taxes. Our wage rates are high, and our hours of work are few. Our recreation is plentiful. We have freedom of religion, speech, and press. Oh, what a grand country we have built upon the foundation of our Constitution, given us by sound-thinking, hard-working ancestors. We should be grateful to them.

What has been the one thing which has aided most in reaching our high standard? I should say a protective tariff. A tariff for revenue is one thing, but the protection is the greatest advantage. Protection for what and for whom? Protection for agriculture, industry, and for our workingmen. To be sure, if we have no tariff, we can buy cheaper goods, manufactured in foreign countries by cheap labor rates. No one disputes that. If we permit this to happen, then where do our markets go? To foreign countries. And who gets the work to do? Foreign manufacturers. And who does the work? Foreign labor. What happens to American manufacturers? They close down and go out of business. What happens to American labor? They have no jobs and have to go on relief. What happens to the Federal Treasury? It continues to go in the red and eventually into bankruptcy.

Gentlemen, this bill proposes to grant to the President and the State Department the authority to further reduce the tariff to the extent 50 percent on the 1944 scale of tariff, which means a 75-percent reduction in the tariff under our last act and I am opposed to it. It is wrong in theory; it is wrong in principle. It means a wreck ahead for our American business. It means less jobs, and poorly paid jobs for labor. I am not going to vote for that. Congress is the board of directors, and I am one of its Members, and shall do what I think best for our people, and as I see it, it is best to vote against this bill.

So many of our people today are talking loudly for foreign countries, and forgetting America. There are too many dreamers and idealists. Our troubles are due to human errors, and can be corrected. If we are to survive as a Nation, we must correct many things that have taken place in the past 10 years. First we must finish the war with Japan and bring the boys home. Aid and assist foreign countries by good will, by kindness, and by our limited dollars, but stop playing Santa Claus. We should terminate lend-lease to all countries not at war with our enemy at once, get rid of the Johnson Act and do business on a business basis. Stabilize the gold standard, terminate the executive power to devaluate the dollar, and terminate the broad powers granted by Congress to the Chief Executive and bureaucrats. Do the things that Congress should do, by looking after the interest of our American citizens at home. Remember that as you spend, so you must tax. As you sow, so shall you reap. As the board of directors looking after American inter-

ests, it is our duty to do that. Do not destroy those things that we know have made America great. Vote against this bill and save America for ourselves and our posterity. This should not be a party measure; it is an American issue.

Reduction of Sugar for Canning

EXTENSION OF REMARKS

OF

HON. JOSEPH R. BRYSON

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 25, 1945

Mr. BRYSON. Mr. Speaker, it is shocking to learn that the War Production Board has again given the green light to the distillers of the country, permitting them to manufacture almost unrestricted quantities of beverages. This astounding announcement follows recent further reductions in sugar allowances to householders for preserving and canning of fruits and berries. Such policies do not meet the approval of the people for whom I speak. I attach hereto an editorial from the Spartanburg Herald of May 24, as follows:

SUGAR TO CAN PEACHES SHOULD BE GRANTED

It is to be hoped that the OPA can see fit to release more canning sugar for preserving peaches.

Millions of trees in Spartanburg County and other South Carolina orchards are loaded down with a bumper crop of this luscious fruit.

A substantial portion of the crop will have to be disposed of through canning. It would be a shame if any of it went to waste because sugar is not available in the needed quantities.

The financial loss to the growers in having to abandon part of their crop would be bad enough, but even worse would be the food loss when millions of people throughout the world are going hungry.

Peach growers who met here yesterday are to be commended for their action in asking the OPA to increase home canning sugar allotments in order that peach preserving needs may be taken care of.

Although the sugar supply situation is admittedly tight, it seems that some sort of emergency plan could be devised to permit the canning of the huge quantities of peaches that will be available for preserving.

Oil in the Trade Agreements

EXTENSION OF REMARKS

OF

HON. LEON H. GAVIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 25, 1945

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement of the Independent Petroleum Association of America:

The independent producers of petroleum of the United States oppose further enlargement of the power of the State Department over import policies and restrictions.

These are the producers of the type who have discovered the majority of the fields in the United States.

We submit two broad considerations: An unrestricted oil import program such as is implied in the declarations of those who seek the enlarged authority will (1) establish oil monopoly at home; (2) it will place in jeopardy the national security.

As to the first proposition, there is no domestic petroleum industry in the countries which have large reserves of petroleum available for importation into our markets. A few American, British, and Dutch companies have found and developed those reserves. The funds for such foreign ventures came in large part from profits made in the United States. Venezuela would not export oil to the United States; these few companies would bring it in and further depress and control the independent petroleum industry.

As to the second proposition, national security in this war was assured by the oil of the United States. For a long enough period to have lost the war, no other oil was available to ourselves of our allies. The German submarine campaign made temporarily useless all outside reserves of oil.

Years ago, the program now being advocated as to oil was urged upon this Nation. Had it not been prevented by Congress, we would have entered this war with a large refining industry at home, chiefly in the hands of a few companies, dependent upon a supply of crude oil that was water-borne and vulnerable to enemy action.

The domestic producers of petroleum have already felt the effect of the exercise of authority to make trade agrements. Following are a few facts which we hope will be given proper weight in considering the bill which would make it possible to still further restrict the size and the energy of the domestic industry.

The policy of Congress made possible a strong, virile domestic petroleum industry to which the world is indebted for our present strength in winning this war. The policy of the State Department in creating monopoly is greatly weakening this industry.

Under the policy of Congress imposing restrictions on imports passed July 1, 1932, imports of petroleum fell from 388,000 to about 106,000 barrels a day for the balance of 1932.

The State Department in 1937 announced the intention to negotiate a trade agreement with Venezuela that would affect oil. It was finally concluded in 1939, reducing the tax 50 percent, or 10½ cents per barrel.

Concurrently with the announcement of the State Department to negotiate the trade agreement, the price of domestic crude oil began to fall off until in 1940 it reached the level of $1.02 per barrel, a drop of 16 cents per barrel from the 1937 average price.

The imports of petroleum in the 2 years following 1939 were 62 percent greater than for the 2 years preceding 1939.

Consumption and export demands for petroleum rose substantially in 1939, continuing through 1940 and 1941, yet following announcement of the trade agreement new well completions in 1939 were 5,223 less than in 1937. In spite of our greatly increased need, the completions have not again reached the total of 1937.

According to the Petroleum Administration for War, new crude oil discovered in 1939 was less than half of that found in 1937 or 1938. The average annual amount of oil found since 1939, according to that authority, has not exceeded half of the 1937 or 1938 figures.

In 1938 there were 5,992 corporations engaged exclusively in the production of oil and gas who filed income-tax returns with the Bureau of Internal Pevenue. In 1942 there were only 4,496 such returns made; 25 percent of the number of corporations engaged in the oil business in 1938 had gone out of business.

Economic Paradoxes in Government Policies

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 17, 1945

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article, which is one of the soundest and soberest statements I have seen of the economic difficulties our country faces, and the impossibility of solving them by any panaceas, whether tariffs or otherwise, unless we are more willing to make certain adjustments than we have been in the recent past. The article is one of the weekly letters to businessmen and investors by a financial adviser who has a remarkable record in forecasting economic events to come:

ECONOMIC PARADOXES IN GOVERNMENT POLICIES

It is obviously very easy for an individual or a corporation to do rather absurd things in the realm of policy, and, granting this to be true with individuals and small groups, it is doubly true in a democratic government, where long and short views have to be merged, where political conditions are of the greatest importance, and where policy, right or wrong, has to be fundamentally popular to be acceptable.

The last 10 years of our history have been particularly full of such problems. We have pursued contrary courses without apparently any realization that history would record that we were negating our own efforts and doing so with extreme bursts of popular enthusiasm. A few instances might illustrate the trend. Not so long ago we went all-out for the NRA, apparently without the least realization that the long groundswell of anti-monopoly legislation and the NRA would run into a head-on collision at some future time and that we would face some economic problems entirely unacceptable to the American people. At a little later date, while preaching abundance and more sustenance for the underprivileged, we went through a period of killing little pigs and plowing up crops on some theory that price maintenance and wide abundance were good bed fellows. Fortunately for us, the unexpected and indirect difficulties of such programs broke them down of their own weight and we have been able to discard and forget some of these fantastic experiments.

The two examples that I have cited seem like an indictment of the New Deal, which is not my sole intent. It is very easy to go back into the previous Republican administration and review some economic absurdities that even to this day enter deeply into the thinking of many people.

The days after the last war found us burdened for the first time in our history with the responsibilities of being a great creditor nation, a responsibility that is a serious economic abstraction understood by few people. As a nation, we were delighted at our new prospect but had little sense of the difficulties that our new position develop for us. It is interesting to think back to the financial undertakings of the early twenties. We were a creditor nation with the balance of payments tending to come our way. We had a greatly expanded industrial and agricultural potential and for the first time in our history, really needed a great export market. Many people in all classes of society, both industrialists and

workers, felt that we had prospered under a highly protective tariff system and the average man seemed to be quite incapable of realizing that the postwar world was mathematically barred from buying from us unless they balanced such purchases with sales to us.

One element after another of our domestic industry began to break under the strain and the temporary expedient was indulged in, of lending generously abroad with many such loans including the provision that the proceeds of the loan should be spent in our country. Simultaneously we "upped" our already high tariff on the theory that this would stem a deluge of so-called underpriced foreign goods. For a while we sailed on under our own momentum but finally the pay-off came: The foreign loans were not good, altogether as the result of the exchange relationship that surrounded them. Our agricultural economy broke down most seriously. As we view the late twenties from the vantage point of the present, it is very clear that we as a people tried to get an economic rabbit out of a hat that had a hole in it. The troubles and emergencies that we have gone through and even the war that we are now facing are in no small degree the result of misunderstandings, ignorance, domestic selfishness, supplemented by a leadership which might have been good in some ways, but was inadequate to the problems that it faced.

The question is whether our experience has brought an end to these contrary and incompatible tendencies in our national policy. I dislike being a pessimist but I see troubles looming for the next few years very much akin to those that have been tried and found wanting in the past. Let me discuss one of them briefly. Our economic status from a world point of view is undoubtedly a further exaggeration of our great creditor position. If our wealth is the means of producing social requirements, the United States will be not only richer than it ever was before but relatively richer and more productive than any other nation ever was in history. Therefore, from a foreign exchange point of view, we are going to be burdened with the responsibility of receiving drafts of foreign credit as an offset to any lend-lease repayments that are made plus foreign relief and foreign reconstruction. There are only three known ways of absorbing such payments: First, we must accept dollars or their equivalent; second, we must extend long-time credit or make foreign investments; third, we must receive great quantities of foreign goods in liquidation of our accounts.

In addition to this very definite background, we have certain intangible social aspirations, namely the expectation of a high national income, an ever higher standard of living, this supplemented by a very general and hazy idea that we can run our economy so as to absorb and distribute the potential productiveness of that economy.

In this general conglomeration of very definite trends, there are some serious inconsistencies that may cancel out any prospect of an ultimate successful solution. In the first place, a large section of our society feels very strongly that we should be reimbursed for our lend-lease and relief extended. Of course, there is no reason why we should not be, but if it is paid for, it must be done by the importation of goods and not by foreign exchange.

In another direction, I am much impressed with the fact that all classes of society are taking a one-sided view of foreign markets. Many a manufacturer today has an interested eye on the potentials of South America, a reconstructed Europe, and an expanding Asia. He sees endless possibilities for the distribution of his product and for his ability to give employment at good wages and to ship that product into other parts of the world. Again, I say that such plans are faulty unless the concept is added that we must arrange to buy so that we can be paid for what we sell.

It is a fact that we have an enormously expanded manufacturing plant and apparently will have a surplus to send to many parts of the world but we also have a greatly expanded agricultural plant that must send its product into other parts of the world. If one assumes that lend-lease is to be terminated at some future time, we will have a fantastic number of millions of bushels of wheat and tons of lard, tobacco, and cotton that must find its final resting place in foreign lands, or we will again face the agricultural congestions of the early twenties.

It would take great wisdom to handle our affairs constructively even though we occupied a much more modest status in the world than we do. If we were less important, we might ship our millions and have them paid for by the importation of other millions, thereby balancing the transaction but we not only have our millions to ship but we have a residue from the past in the way of credits or lend-lease that may rack our exchange markets to the bone unless handled constructively.

There is one other important element of incongruity that should be mentioned and this is the general effect of our expanding labor costs and social security costs on the price structure of our production. It can be pretty definitely said that as a national policy, our shorter hours and minimum wages and our general efforts to supply economic privileges to the underprivileged is having its effect on our price structure and, after the peace comes, which we are dedicated to win, we face the inescapable fact that as the months roll by we will be the high-cost market of the world as far as basic material is concerned.

Under such circumstances, the automatic response is apt to be, let us increase the tariff, let us protect our cost structure so that our workers can enjoy in peace and comfort the high earnings which an enlightened policy has given them. If this is done we are again apt to face the incongruities and crushing pressures of the twenties. We may find that we have practically isolated ourselves from the trading world and that a further cut in the value of our dollar will appear as necessary as it did in 1932.

At the best, we have pretty grim news to face and serious problems to solve and it is going to be very expensive to try to solve them by methods that we have tried in the past and found wanting. We hear it preached on all sides that we are now one world, that we have got to cooperate, that we have got to trade and that the standards of all mankind must be based on reasonable living conditions. I firmly believe in these aspirations, but are we prepared to adopt the national policy and make the contributions to the cause which economic reality will eventually demand to accomplish our aspirations.

ECONOMIC TREND LINE STUDIES.
CHESTER D. TRIPP.

Meat Shortage at Schenectady, N. Y.

EXTENSION OF REMARKS
OF
HON. B. W. (PAT) KEARNEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Friday, May 25, 1945

Mr. KEARNEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to call the attention of the House to the worst meat famine in the history of Schenectady, N. Y., which is included in the Thirty-first New York Congressional District.

This situation is of such a nature as to demand immediate action for relief. The meat supply there is practically at rock bottom in both wholesale and retail establishments, and the meat famine will last a long time unless something is done immediately. This situation has reached its critical stage and it was apparent even as late as last night that consumers who were turned away at the meat markets will find little relief in the restaurants, which also are seriously feeling the present pinch. Locally the wholesalers and retailers have no fresh meat at all; no fresh-meat shipments have come into the city during the week; and in some instances dealers have even given cutters part of their annual vacation because there was nothing to do. Restaurateurs said the situation was very bad as far as they were concerned. All legitimate meat sources are now dried up; and prices for chicken and other fowl, if they can be obtained, are way beyond reason.

In this connection it is believed that the black market is intensely active in this area; and it is my intention to press the FBI for an immediate investigation.

At Ellis Hospital, where more than 400 patients are being fed daily—in addition to the several hundred staff members and employees—the shortage is also being felt.

This is an unbearable situation and exists not only in that locality but elsewhere, despite the fact that the War Food Administration cites figures showing the Nation now has more live cattle than ever before in its history.

Five hundred members of the Schenectady Consumers Corporation are unable to obtain meat due to the fact that the packers allege they cannot supply meat at ceilings without great loss. In the meantime, to the crying shame of the Nation, the black market is still active.

We, the People

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Friday, May 25, 1945

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to include the following most timely and forceful editorial from the May 20, 1945, Sunday Item, Lawrence, Mass., in opposition to any further reductions in the tariff rates under our reciprocal trade agreements. I sincerely hope that all the Members may have a chance to read the very interesting article:

WE, THE PEOPLE—WE MUST FIGHT FOR OUR OWN

The bill calling for Presidential power to reduce tariffs a further 50 percent under the reciprocal trade treaties comes up for congressional action in the early days of June. For the social, business, and industrial lead-

ers and organizations of this textile center the time for a concerted crescendo of protest against this measure has arrived. From now until the bitter end of a bitter battle there can be no let-up until victory perches on our banners.

And in this fight for our very economic existence, be it remembered that we have all the strength of American tradition on our side. One of the prime purposes of the founding fathers in writing the greatest political document ever to come from human hands was to afford protection and assistance to American commerce and industry. They were practical idealists who knew that political freedom withers unless it is rooted deep in the soil of economic stability.

Despite an original difference in tariff views between the two great political parties in this country, the whole purpose of both of them in levying duties on foreign imports has been to favor domestic industries and economic interests. Any disagreement between the parties has been more political than real.

In the olden days of the young Republic our infant industries had to compete against the better machinery and the admittedly superior managerial ability of Europe. As a result, we had to have tariff walls. But the change that has come is in the labor cost. Throughout the rest of the world the war has brought a terrific drop in living standards. To save their national economies and to recapture and expand lost business in the postwar world, European and Asiatic nations, which are fast becoming industrialized, will resort to slave labor and huge governmental subsidies. This last measure is itself a disguised tariff.

Already in the halls of Parliament and in the pages of the London Economist there have appeared unmistakable signs that English interests are growing aggressive, not to say truculent, in their plans to dig into our trade. Russia, with her revolutionary government flushed by victory in the field, is entering a period of intense nationalism in politics and economics.

In the face of these growing signs of international economic bitterness, and sustained by our knowledge that we are holding fast to the American tradition and way of life, it is high time we let the Congress know in very decided terms that we crave a bit of economic rest after 12 breathless years of economic crusading, that we feel the need to consolidate our great gains before we dispense any more largess to the world at large.

The sliderule boys with their beguiling theories have made a murderous mess of our food, gas, oil, paper, and rubber supplies. Why let them play ducks and drakes with our very livelihoods? We have given the world our armaments, our ships, our clothes, our food—and, dearest of all, our boys and girls. Let us keep at least our jobs so that we can have something to offer our veterans when at long last they do come home.

Practical Patriotism

EXTENSION OF REMARKS

OF

HON. JAMES C. AUCHINCLOSS

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, May 25, 1945

Mr. AUCHINCLOSS. Mr. Speaker, while I am well aware of the fact that in this beloved country of ours there are literally millions of fine patriotic Americans who are making many sacrifices and are bending every effort to bring about the ultimate victory, yet once in a while, like a shooting star in the firmament, we learn of individual citizens who are contributing a particular human touch to the cause of suffering humanity. I think every one of my colleagues has undoubtedly had this experience and I believe it is a great help to us to bring such incidents to each other's attention.

In my district at Belmar, N. J., there is a great American couple who are contributing from the bounty of their hearts to the rehabilitation of our wounded veterans. Pat and Sandy Breslin operate a fishing concession at the Belmar Marine Basin where they rent boats, bait, and fishing tackle for those who are so inclined. Throughout this whole war Pat and Sandy have never charged any man in the uniform of the United States a cent for the rental of their boats or their fishing equipment, and they have also furnished free hot dogs, soda pop, and the like to them. Once every month the entire gross proceeds of their business was given to the Red Cross.

Now these generous-hearted Americans have set aside every Monday for the rest of the season for the exclusive use of the wounded boys who are located at the hospitals near-by. They are given free use of the boats, bait, and lunch, and they are urged to enjoy themselves to their hearts' content.

Pat and Sandy practice practical patriotism. They do not wear their Americanism on their sleeve; it is deeply entrenched in their hearts and they are setting us all an example as to what we should do to make this great country of ours a better place.

Stettinius and the San Francisco Conference

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 25, 1945

Mr. MANSFIELD of Montana. Mr. Speaker, under unanimous consent, I am inserting in the RECORD an editorial from the Great Falls Tribune, of Great Falls, Mont., dated May 18, 1945, and an article from the New York Times of May 24, 1945, both having to do with the good work being done at San Francisco by our Secretary of State.

I feel that these two expressions of opinion are important enough to call to the attention of the membership so that it can see for itself the type of leadership and activity Mr. Stettinius is bringing to the Conference. I know that as he faces the many problems which confront a world meeting of the kind now being undertaken at San Francisco that he is doing his best to settle them in a business-like manner and with a true appreciation of the feelings of our country and our people. He is, as Mr. Porter points out in the New York Times article, growing in stature as each issue comes up for settlement, and furthermore it is well to note the statement made by Mr. Porter to the effect that the Secretary has kept constantly in mind the fact that the charter must be ratified by the United States Senate and has to the very best of his ability endeavored to act accordingly.

The editorial and article follow:

[From the Great Falls (Mont.) Tribune of May 18, 1945]

LEADERSHIP AT SAN FRANCISCO

Following informative comment in this column on Tuesday morning the clear-cut positions taken by Secretary of State Stettinius may well inspire confidence in the mind of every American citizen. His forceful statements encompass just what needs to be said as he places the world policy of this country before the delegates from 48 other nations at San Francisco. There is satisfaction as he is reported to have pounded the desk to emphasize his statement that the world security council of 11 must have precedence and authority in making serious decisions.

The Secretary expresses the impressive wish that we may write into the general framework satisfaction to Latin-American countries. He is entirely willing to take into consideration all existent bilateral treaties and agreements. That is fair enough, and the San Francisco Conference would fail in its mission, if the security council cannot take effective action as occasion arises.

It is the leadership of Secretary Stettinius, and others who are willing to follow that leadership, which would enable a world peace to stand the test of history.

[From the New York Times of May 24, 1945]

STETTINIUS HAILED FOR PART IN PARLEY—DURING ABSENCE IN WASHINGTON OBSERVERS STRESS CONTRIBUTIONS TO CONFERENCE SUCCESS

(By Russell Porter)

SAN FRANCISCO, May 23.—Secretary of State Edward R. Stettinius, Jr. is expected to return here tomorrow to make renewed efforts to bring the World Security Conference to an early end. While he has been in Washington conferring with President Truman, observers here have been evaluating his contributions to the Conference as one of its four copresidents and his achievements in protecting American interests as chairman of the United States delegation.

Despite minor criticism to the effect that Mr. Stettinius does not appear to as much advantage at plenary sessions and press conferences as do some of his more experienced colleagues, especially Anthony Eden, Foreign Secretary of Great Britain, and Foreign Commissar Molotoff, of Russia, it is generally agreed that he has made important contributions to the success of the Conference.

PROMOTES FEELING OF UNITY

The most important contribution is the feeling of unity which he has promoted, first among the members of the American delegation and its advisers and consultants, then among the Big Five, and finally throughout the Conference. As one issue after another came to the fore, and had to be settled in the give-and-take of cross-table negotiations, the Secretary of State grew in stature. His approach is that of the practical businessman and he has a genuinely friendly way of dealing with people. Foreign delegates seem to like it, especially the Russians, regarding it as typically American.

Throughout the Conference he has stood consistently for decisions which would make the charter of the new world organization more effective. In the settlement of the regional question, Mr. Stettinius took a strong stand for the amendment which prevailed, maintaining the superiority of the

world organization without any question, while at the same time preserving the Pan-American region system and retaining the confidence of the Latin-American group that Washington intended to stick to the act of Chapultepec.

On another line he has stood for liberalizing the charter as much as possible, consistent with its effectiveness. He put his full influence enthusiastically behind the fight for the human rights amendment and was instrumental in getting unanimous agreement on it. He also played a leading role in the move to strengthen the economic and social council.

Mr. Stettinius has stood firm for the protection of American interests, particularly in the trusteeship question. At the same time he has persuaded the British to go far enough along the trusteeship road to offer real hope for the independent peoples of the world in the future.

It was largely the influence of Secretary Stettinius that persuaded Mr. Molotov to stay here 2 weeks longer than he had intended and join in the negotiation of the joint four-power amendments which took several controversial issues out of the Conference.

Mr. Stettinius also took the responsibility for carrying out the late President Roosevelt's Yalta pledge to support the admission of the White Russians and Ukrainian delegations. Despite disturbing factors such as the Polish question, a remarkable degree of cooperation developed between the Russian and United States delegations, and Mr. Molotov left the Conference voicing very friendly sentiments toward the Secretary of State, as did Mr. Eden also.

The day before Mr. Eden left San Francisco the regional issue was still unsettled at 3 o'clock in the afternoon. Mr. Stettinius proposed that British and American experts put in an intensive survey, and 3 hours later Mr. Eden presented a British proposal acceptable to us, which the Russians later adopted with slight changes

The Secretary's friends say he has kept constantly in mind that the charter must be ratified by the United States Senate.

Witnesses for and Against Extension of the Trade Agreements

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, May 25, 1945

Mr. REED of New York. Mr. Speaker, an analysis of witnesses appearing against the extension of the trade-agreement bill and those appearing for the extension is revealing. Those against the extension of the bill outnumber those for the extension of the bill by practically two to one.

Those persons and firms opposed to the extension of the trade-agreement bill are largely in favor of keeping up our national defense. These patriotic persons and firms do not want the internationalists to put the United States in a position where it will be caught short of essential war materials and obliged to depend on foreign nations for those materials, whether mineral, agricultural, chemical, or mechanical, which, if adequately protected, will underwrite our safety in time of either peace or war.

It is significant also that many of those appearing for the trade-agreement bill extension have an interest as exporters or importers, or as advertisers of foreign-made goods, sugar brokers, and those interested in promoting luxury exports to be paid for by the competing products of the lowest-paid labor in foreign countries.

Under leave to extend my remarks, I insert the line-up of witnesses and briefs filed for and against the trade-agreement program during the hearing on the bill:

ANALYSIS OF WITNESSES APPEARING AND OF BRIEFS FILED WITH THE WAYS AND MEANS COMMITTEE OF THE HOUSE OF REPRESENTATIVES IN CONNECTION WITH HEARINGS PERTAINING TO H. R. 2652 PROVIDING FOR EXTENSION OF RECIPROCAL TRADE AGREEMENTS ACT

For the bill:	
Administration officials	7
Members of Congress	1
Other witnesses	25
Parties filing briefs	21
Total	54
Against the bill:	
Members of Congress	4
Other witnesses	54
Parties filing briefs	30
Total	88

Other briefs may have been filed and may appear in final printed reports following part 19.

WITNESSES AGAINST THE DOUGHTON BILL (IN WHOLE OR IN PART)

Oral statements

Members of Congress (4)

Carl Hinshaw (Republican), of California.

Earl R. Lewis (Republican, of Ohio.

Reid F. Murray (Republican), of Wisconsin.

Jennings Randolph (Democrat), of West Virginia.

Others (54)

Arthur Besse, president, National Association of Wool Manufacturers.

T. Albert Potter, president, Elgin National Watch Co., American Watch Industry.

Joseph C. Mahoney, Soft Fibres Manufacturing Institute.

H. Wickliffe Rose, American Tariff League, Inc.

Claudius T. Murchison, president, Cotton Textile Institute (also American Cotton Manufacturers Association, National Association of Cotton Manufacturers).

Irene Blunt, secretary-treasurer, National Federation of Textiles, Inc.

E. R. Van Vliet, vice president, Tubize Rayon Corp., Rayon Yarn Industry.

Charles B. J. Molitor, American Lace Manufacturers Association.

J. Carson Adkerson, president, American Manganese Producers Association.

Russell B. Brown, general council, Independent Petroleum Association of America.

Ernest V. Gent, secretary, American Zinc Institute, Inc.

Charles W. Holman, secretary, National Cooperative Milk Producers' Federation.

F. E. Mollin, American National Livestock Association.

Kenneth O. Bates, Armstrong Cork Co., Linoleum and Felt-Base Floor Covering Industry.

Don E. Mowry, Fountain Pen and Mechanical Pencil Manufacturers.

Robert S. Palmer, manager, Colorado Mining Association.

Norris E. Phillips, vice president, Tile Council of America.

J. B. Wilson, National Wool Growers Association.

Felix Edgar Wormser, secretary-treasurer, Lead Industries Association.

Fred G. Taylor, vice president, United States Beet Sugar Association (also American Sugar Cane League, Farmers and Manufacturers Beet Sugar Association, Hawaiian Sugar Planters Association).

Charles A. Turner, president, Chester Lace Mills, National Association of Lace Curtain Manufacturers.

Wilwyn Herbert, secretary, Narrow Fabrics Institute.

D. K. Brown, American Paper and Pulp Association.

H. L. Coe, Bicycle Institute of America.

Alvardo M. Garcia, president Cigar Manufacturers' Association of America.

Carl H. Wilken, National Association of Commissioners, Secretaries and Directors of Agriculture.

D. H. Angney, Rhode Island Textile Association.

Tom Linder, Georgia commissioner of agriculture.

H. K. Thatcher, Arkansas commissioner of agriculture.

John Burns, Amalgamated Lace Operatives of America.

Albert O. Trostel, Jr., Tanners' Council of America.

Edward B. Benjamin, president, Bay Chemical Co. and Myles Salt Co.

O. W. Bilharz, Bilharz Mining Co.

Millard D. Brown, president, Continental Mills, Inc., Philadelphia Textile Manufacturers Association.

James K. Love, Shenango Pottery Co.

C. W. Carlson, president, U. S. Glass Co., American Glassware Association, handmade glassware section.

Frederick Dixon, Amalgamated Lace Operatives of America.

Walter W. Generazzo, national president, American Watchmakers Union.

Harry H. Cook, international president, American Flint Glass Workers Union of North America.

John G. Lerch, attorney, Toy Manufacturers of U. S. A. and Industrial Wire Cloth Institute.

J. M. Jones, National Wyoming Wool Growers Association.

C. J. Uhrmann, vice president, Imperial Glass Corp.

E. L. Torbert, vice president, Onondaga Pottery Co.

J. M. Wells, Homer Laughlin China Co.

James Duffey, National Brotherhood of Operative Potters, AFL.

Alfred C. Guant, Merrimac Mills.

Otto Herres, Combined Metal Reduction Co.

George E. Colby, International Braid Co.

Dr. Leo M. Christensen, University of Nebraska.

Frank F. Payan, French Worsted Co.

Norman Randall, Elastic Webbing Industry.

H. B. Van Dorn, Joseph Dixon Crucible Co.

J. M. Welsh, Farms Crops Processing Co.

Matthew Woll, president, American Wage Earners Protective Conference, AFL.

Parties Who Filed Briefs or Statements With the Ways and Means Committee

National Association of Manufacturers (Francis Hopkinson).

WITNESSES IN FAVOR OF THE DOUGHTON BILL

Oral statements

Administration Officials (7)

Hon. William L. Clayton, Assistant Secretary of State.
Hon. Nelson A. Rockefeller, Assistant Secretary of State.
Oscar B. Ryder, Chairman, United States Tariff Commission.
Hon. Charles P. Taft, Director, Office of Wartime Economic Affairs.
Hon. Fred M. Vinson, War Mobilization Director.
Hon. Henry A. Wallace, Secretary of Commerce.
Hon. Claude Wickard, Secretary of Agriculture.

Member of Congress (1)

Cleveland M. Bailey, Democrat, of West Virginia.

Others (25)

Irving Richter, United Automobile Workers, CIO.
Byrl A. Whitney, assistant general counsel, Brotherhood of Railroad Trainmen.
Emil Rieve, general president, Textile Workers Union of America.
Jacob S. Potofsky, chairman, CIO Latin-American Affairs Committee.
Bjarne Asper, president, Overseas Automotive Club.
Benjamin Marsh, the Peoples' Lobby.
Franklin Johnston, publisher, the American Exporter.
Mrs. J. Austin Stone, National Women's Trade Union League.
Anna Lord Strauss, National League of Women Voters.
Dr. Caroline F. Ware, American Association of University Women.
Mrs. Harvey Wiley, General Federation of Women's Clubs.
Ralph E. Flanders, Research Committee, Committee for Economic Development.
Louis Marbe Cohn, importer.
Ernest Kanzler, chairman of board, Universal C. I. T. Credit Corp.
Stacey May, assistant to president, James H. McGraw, Jr., president, McGraw-Hill Publishing Co.
R. E. Short, president, Arkansas Farm Bureau Federation, American Farm Bureau Federation.
James W. Bevans, National Council of American Importers.
Samuel Fraser, International Apple Association.
Mr. Vyrgil Atkinson, Reid Robinson, president, International Union of Mine, Mill & Smelter Workers, CIO.
James B. Carey, secretary-treasurer, CIO.
George Harrison, Railway Clerks' Union, AFL.
Clark H. Minor, director, United States Chamber of Commerce.
Robert Lincoln O'Brien, former Chairman, United States Tariff Commission.
Maurice T. McGovern, American Chamber of Commerce of Cuba.
R. H. Patchin, vice president, W. R. Grace & Co.

Parties Who Filed Briefs or Statements in Favor of the Doughton Bill (21)

Hon. E. R. Stettinius, Jr.
Hon. Cordell Hull.
Amalgamated Clothing Workers.
California CIO.
Detroit Board of Commerce (Allen Dean).
Export Division, United States Chamber of Commerce (C. A. Richards).
International Economic Council, Chicago, Ill.
Women's Action Committee for Victory and Lasting Peace.
International Harvester Co., foreign operations, Chicago (G. C. Hoyt, vice president).
American Watch Assemblers' Association, Inc., New York.
National Council of Jewish Women, New York.
American National Retail Jewelers Association, New York.
YWCA of United States (Mary S. Ingraham).
Typewriter Manufacturers Export Association, Washington, D. C.
United Electrical Radio and Machine Workers of America (CIO).
National Farmers' Union, Denver, Colo. (James G. Patton, president).
National Foreign Trade Council (Eugene P. Thomas).
List of 1,300 American economists.
James A. Farley.
H. H. Pike & Co., New York (sugar brokers).
Drug, Chemical, and Allied Trade Section of New York Board of Trade.

New Type of Disk Plow

EXTENSION OF REMARKS

OF

HON. JOHN PHILLIPS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 25, 1945

Mr. PHILLIPS. Mr. Speaker, the whole world is marveling today at the inventive genius of the men and women, many of them Americans, who have contributed the ideas which have been built by American engineers and industries into the tanks, guns, planes, ships, and all the other items which the industrial genius of the world is turning out in implements of war. We are aghast at V–1 bombs which fly without human control, and at V–2 bombs which go into the stratosphere and travel at an unbelievable speed before they drop on the designated objective. We wonder what jet planes will do to future aviation plans. We realize what inventions in light metals and plastics will do to post-war living. We try to determine in our minds this strange balance of the cruelties and sufferings of war on one side and the resulting improvements and inventions in surgery and drugs and methods on the other.

I thought it might interest the House, Mr. Speaker, to have me call attention to a peacetime invention, almost completely overlooked in the more striking inventions of the war, which many people believe can revolutionize orchard cultivation in agriculture.

The invention is very simple. It is a new type of disk plow, invented by Mr. Steven Toth, of Perris, Calif., which is in my congressional district. The new plow is so constructed that it will allow operation on a much shorter turning radius than present, more conventional designs. It will also allow right-hand turns and backing, maneuvers which Mr. Toth says are unknown in any similar implement presently in use. It permits close cultivation around trees and other obstacles, or in fence corners. At the beginning and during a turn, the disk assembly is automatically raised, and the turning is facilitated without hand operation and without stopping. Another advantage is said to be in the arrangements for raising and locking the disks or the plow while moving from one location to another or along the road.

There is a novel feature which gives a higher than normal suspension, and which consequently prevents the plow from accumulating weeds or other debris. This removes the frequent stops which the older models required. The plow can be rigged for tractor hitch or for pulling by draft animals, and the disk blades are interchangeable with moldboard types of plowshares.

I suggest, Mr. Speaker, that this is a very practical demonstration of what the peace-loving peoples of the world want to see, the beating of swords into plowshares.

Ellison DuRant Smith

MEMORIAL ADDRESS

OF

HON. ROBERT F. RICH

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 23, 1945

On the life, character, and public service of Hon. ELLISON DURANT SMITH, late a Senator from the State of North Carolina.

Mr. RICH. Mr. Speaker, there comes a time in every man's career when he must lay down his working tools and depart this life for the Great Beyond.

Our good friend Senator ELLISON SMITH, of South Carolina, was a great leader, an energetic Senator, and an advocate of those things of benefit to his country. He was especially interested in the affairs of his own State of South Carolina. His interest in cotton, and the farmers engaged in agricultural pursuits, earned him the title of "COTTON ED" SMITH.

It was my privilege and pleasure to live at the same hotel as Senator SMITH for a number of years. We both were members of the same college fraternity, Phi

Kappa Psi. As a result of these associations I learned to know "COTTON ED" intimately. He was a big-hearted man, unselfish and interested in the welfare of others. He was truly a great Phi Psi and our national fraternity will miss him. Our Federal Government has sustained a great loss, and his own State of South Carolina has lost a good friend to whom its people are indebted in a great many ways.

Now his work here is over and Senator SMITH has gone to his eternal rest. To this old friend and fraternity brother, I might say, We miss you, and we shall continue to miss you. But some day we hope it shall be our privilege to join you around the Great White Throne.

It is an old belief
That on some solemn shore,
Beyond the sphere of grief,
Dear friends shall meet once more.

Foreign Trade in a Stable Postwar World

EXTENSION OF REMARKS
OF

HON. L. MENDEL RIVERS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Saturday, May 26, 1945

Mr. RIVERS. Mr. Speaker, in observing National Foreign Trade Week and National Maritime Day, the chamber of commerce and the Propeller Club, port of Charleston, S. C., was fortunate in having as its speaker the Honorable Amos E. Taylor, Director, Bureau of Foreign and Domestic Commerce of the United States Department of Commerce.

I had often heard my very dear friend, C. W. Martin, of Charleston, who represents the Commerce Department in my city, speak of the outstanding ability of Dr. Taylor. I have known of the splendid work being done by Mr. Martin in my city and, therefore, knew that his director would have a fine message for the people of my community.

In obtaining permission to extend my remarks in the CONGRESSIONAL RECORD, I am privileged to include therewith a copy of the excellent address made by the distinguished Director of Foreign and Domestic Commerce, Dr. Amos E. Taylor.

I have just come from Savannah whence the steamship bearing that city's name sailed on May 22, 1819, on what was an historic mission. We have good reason to celebrate this event, the real significance of which was hardly understood at the time. The intervening period of 126 years, though representing perhaps a relatively short span in the history of our Nation, has bridged a wide gap in our industrial history. The period encompasses our growth from a nation of less than 10,000,000 facing a broad western frontier to an ocean-to-ocean economic empire of more than 130,000,000. In 1819 we were engaged in the development of a system of internal transportation which after another half century carried us to the Pacific. At the time the *Savannah* set sail the Erie Canal was in process of construction and, like most undertakings of that type, it was financed largely by European capital. The Atlantic was not a barrier but an avenue of contact.

The economic development of the United States during the nineteenth century was accelerated and in fact made possible largely through the use of capital borrowed abroad. It was as a debtor nation that this country began its rapid physical growth and development. With a rapid increase in wealth and national income and a growing foreign demand for our agricultural products the meeting of interest and dividend payments was simply part of a happy process which assured ready and profitable world markets.

Our ability to produce and transport goods in large volume was clearly demonstrated to the world during the First World War when the weight of our participation quickly made itself felt on both the economic and military fronts. Private and public loans granted to foreign governments with which we eventually became associated in a common effort, together with a substantial liquidation by Great Britain, France, and other foreign countries of their holdings in the United States, shifted our international position almost overnight from that of net debtor to net creditor.

I shall not be surprised if the historian of the future should find that the year 1945 marked the close of one era and the beginning of another. For it so happens that we are on the threshold of important decisions. Whatever the final import of those decisions, I believe that the Conference at San Francisco reflects a universal acknowledgment that the relationship of each part of the world to all others requires not only a code of law and order but a permanent basis of mutual understanding. We have long been conscious of a growing degree of economic interdependence among the nations of the world but it is somewhat ironic that it required two destructive world wars and a world depression to impress upon us the need for concerted action. While nations were moving closer and closer together they were totally unprepared to live together in peace. The failure to understand the nature of the world we live in led us to the brink of disaster and we cannot afford to repeat.

The war itself has produced far-reaching changes which have emphasized the necessity for cooperative action and organization. Compelled by the necessity to utilize our human and natural resources to the maximum we have found new means for applying energy drawn from nature's bounties for the production of goods and services in ever-increasing volume. This fact alone is of tremendous significance as we contemplate utilizing these same sources of power in time of peace. There is virtually no limit to what we can produce but if the machinery of production is to be kept operating at full capacity we must find means whereby each person able and willing to work can contribute his share and participate in the final result. It is only by making possible such contribution that all of us can enjoy the things which we produce. If we achieve this desirable end, it will necessarily mean a higher standard of living for all of us. Such an accomplishment cannot be achieved, however, by one region within the country at the expense of another. Nor can it be achieved by one country or world area at the expense of another.

If we assume, then, that a maximum level of employment and a system of international collaboration are both essential we can appropriately turn our attention to the importance of foreign trade as a means of achieving effective results. For it is in the field of foreign trade where the practice of making a living and instruments of international understanding can be most effectively combined into a practical formula. The free flow of goods and services in large volume is the only means whereby all nations can hope to participate in common opportunities for maintaining high standards of living. Countries dependent, for example, upon shipping as an important source of national income will find a necessary means of livelihood cut off if world trade falls to the low levels experienced, for example, during the early thirties. Moreover, it is only under conditions of unhindered world trade that many countries can find real opportunities for acquiring the foreign buying power so essential to the purchase of consumer products in foreign markets.

The primary requirement in such a program is the development of a state of economic health throughout the world. Export trade cannot be looked upon as an end in itself; it is part of a process which, if it is to be maintained, requires a good economic climate and sound economic conditions at each end of the transaction. It is only under such conditions that business can long be maintained on a basis of mutual confidence and benefit.

The United States constitutes the most important free marketing area in the world. Our unhappy experiences under the articles of federation prompted us to guard against any system of tariffs or trade restrictions between the States under the Federal Constitution. We have thus been able to develop our resources and to exchange goods and services freely throughout the whole Nation. That even national frontiers need not be viewed as difficult barriers to the exchange of goods and services in the larger world community is evidenced by the high volume of trade between the United States and Canada. Our heavy expenditures for travel in Canada and the large net purchases by Canadians of our merchandise represent reciprocal processes whereby the individual demands of thousands of people on each side of the border are met to the benefit of all.

The break-down of the international financial machinery in 1931 and the subsequent developments were the byproducts of an unstable world order that we are finally, let us hope, in the process of reconstructing on a firm foundation. While we may differ on details we are generally agreed on the necessity for establishing by international cooperation a program for stabilizing world currencies. We view with sympathetic understanding the need for other steps such as the establishment of an international bank which would by direct action or by its guaranty of private loans assure the availability of long-term funds for the development of resources wherever such development can be profitably undertaken. The proposed legislation providing for the removal of the Trade Agreements Act of 1934 is designed to make it possible for us to exchange further concessions with other countries, to the benefit of all.

If we should view the period of a century and a quarter since the historic crossing of the *Savannah* as a cycle in our economic history we may perhaps be justified in hoping for a new era of good feeling such as our political historians have long associated with the close of the second decade of the nineteenth century.

An examination of the statistics of our foreign trade shows that our prosperity index and the volume of our imports follow parallel lines. Since foreign buying power in the United States depends largely upon the dollar payments made by us when we import it follows that our ability to develop and maintain a prosperous economy determines in large part our success in developing foreign markets for our products on a sound and sustaining basis. Because of the importance of our export and import trade in the total stream of world commerce it is evident that our postwar level of domestic business activity will materially influence the degree to which the outside world will be free of the pressure which

might otherwise perpetuate a system of tariffs, quotas, and other restrictions.

Assuming a sound international investment policy and the effective reconversion to full civilian production and employment after the war we believe, in the Department of Commerce, that this country may look forward to total merchandise exports of $10,000,000,000 or more a year. On the basis of an estimated national income of $150,000,000,000, which a program of full employment should make possible, such a goal reflects a conservative ratio of export to total output. Also, with our expanded industrial capacity as a result of the war, major American industries will necessarily expect wider world markets if they are to operate at maximum capacity and under full employment. They will look for larger markets abroad for capital goods produced in this country. Any sound program of industrialization in undeveloped areas will mean not only a wider demand for equipment produced in this country but will also contribute toward the attainment of higher standards of living and thus broader world markets generally. The history of the United States during the nineteenth century as a world borrower bears ample testimony to this kind of mutually profitable development.

It is only under conditions of a rising level in world trade that we can hope to achieve these objectives. If we should assume that larger and larger markets for American goods were to be developed under conditions of a stationary level of international commerce, we would have to view international trade as necessarily a form of economic warfare and plan our trade-promotion problem accordingly. Unfortunately, in the past national trade policies were too frequently formulated on the assumption that the volume of total world trade was more or less fixed and that if we allowed the other fellow to get into a market, we would be deprived of such a market in direct proportion to his success.

Foreign trade and domestic trade cannot be cataloged in separate compartments. They go together, since imports in the long run provide the means of paying for exports. To us in the United States many of the former are essential and are not produced at home. Foreign markets absorb a relatively large proportion of the output of certain industries as well as of certain regions even though total exports may be a comparatively small part of our total national output. You are all familiar with the truth of this statement as it relates, for example to such export commodities as cotton and tobacco. As has been demonstrated during periods of national adversity a decline in exports and imports deprives our consumers and our industries of many products and raw materials which we can either not replace at all or replace only with difficulty. At the same time American industries are deprived of profitable outlets for their products.

Under conditions of full employment in the United States our ability to save is enormous. Our industries have achieved a much more advanced stage of development than have those of other countries. In many countries capital is relatively scarce and opportunities for profitable investment will be open to us throughout the world. Such opportunities if directed along sound lines are bound to result in higher levels of employment and income, higher standards of living, and stable social and economic conditions. The net result is a sure contribution to world peace.

The resources of all parts of our country are essential to the maintenance of a sound national economy. The industrial capacity of certain sections has risen sharply as a result of wartime developments. In these newer industrial areas labor and resources are available for continued development after the war. This is true, for example, in the South where the possibilities for expanded world trade are enhanced by the existence of excellent ports open throughout the year, ports located at what we might call our gateways to Latin-American and other markets. A sound development of these markets will contribute to higher standards of living, both at home and abroad.

In its recent report, The Postwar Foreign Economic Policy of the United States, the House Special Committee on Postwar Economic Policy and Planning emphasized the fact that our foreign trade, even though small in relation to national income, is bound to have a very important impact upon the economy of foreign nations. Many countries depend heavily upon international trade as a source of national income. Since the United States is in position to contribute most to United States and world prosperity, the full utilization of our enormous capacity to produce, to consume, and to save must result during the postwar years in an expansion of exports, expansion of imports, and an expansion in foreign investments. It is important, therefore, that national policies relating to foreign trade and foreign investments be properly synchronized in order that we may avoid the unfortunate consequences of the 1920's. The scarcity of capital in undeveloped areas and in countries devastated by the war provides broad opportunities for investment. Under programs of economically sound industrial expansion both lender and borrower will benefit. Such form of mutual participation in an expanding world economy is reflected in the history of the United States during the century following the event which we are now celebrating.

Since trade and finance are interdependent it is well that we examine the case for future foreign lending. We are all familiar with our experience during the 1920's. It was not an entirely happy experience, but it is important that we do not confuse cause with effect. Our mistakes lay less in the fact that we engaged in foreign lending than in the fact that we failed to understand the nature of our position as a world creditor. We continued to be ruled by a debtor psychology and thus pursued policies which were inconsistent with each other.

American business has long had a tremendous stake abroad in the form of industrial and other investments. These investments range all the way from mineral developments in Latin America, plantations in Central America and Middle East, to branch plants in Canada, Great Britain, and the Continent of Europe. These investments taken as a whole have proved profitable to American business even during the depression of the thirties and have provided a source of foreign buying power to the countries in which they have been made. Foreign sources of raw materials become of increasing importance to us as our domestic reserves are being more and more heavily drawn upon by our highly developed industrial machine.

Although the United States has become the temporary guardian of billions of the outside world's capital funds, this country is destined to continue its strong creditor role after the war. It is not possible to draw up a blueprint showing in statistical terms the exact position the United States will occupy in the world economy after the war. We do have, however, a measure of the economic factors which are available as guides if we would turn to universal advantage the opportunities implicit in the country's economic power. The United States has achieved a degree of maturity in technological experience which has stood the world in good stead during the present war. This experience can be utilized after the war to the advantage of both ourselves and the rest of the world. Indeed, our responsibility as a nation wielding an unprecedented balance of economic power permits no other course.

During the period between the two wars the international economic and financial position of this country reflected many signs of instability. The causes lay partly within the United States but yet not entirely so. The modern industrial world is exceedingly dynamic; impulses generated by developments in a given world area do not automatically spend themselves when they reach a national frontier. The periodic disturbances in the United States balance of payments during the two decades following the last war had world-wide repercussions. Yet in a world which is rapidly becoming a more and more highly integrated economic unit it is safe to suggest that such disturbances are inevitable so long as machinery for international collaboration and for the effective handling of international economic problems does not exist.

The wide fluctuations between boom and slump and the erratic behavior of capital movements during the twenties and thirties reflected not only conditions of instability in the United States but they impressed upon us the important fact that, in view of the international repercussions, steps must be taken in the future to guarantee a closer coordination of the business-cycle policies of all the principal industrial nations. The possibility of such coordination rests upon a frank recognition of the principle that the modern interdependent world must do business with itself if peace and security are to be more than a distant hope.

The recognition of this fact is more important than the details of means and methods for achieving results. We cannot safely refuse to recognize the need for international exchange stability just because every detailed operation cannot be demonstrated in advance by a miniature model or because of a vague fear that a particular nation has ulterior motives whenever its spokesmen comment favorably upon some particular anticipated benefits.

The balance of economic power held by the United States after the war carries with it definite responsibilities in making it possible for goods and services to move and in making an adequate contribution to the total volume of world trade. On the other hand, it must be recognized that certain rights attach to such responsibilities. International cooperation, to be effective, requires that all parties be as willing to recognize each other's rights as to receive benefits from the common effort.

Fallacious Editorial

EXTENSION OF REMARKS

OF

HON. ED GOSSETT

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Saturday, May 26, 1945

Mr. GOSSETT. Mr. Speaker, an editorial appearing in the Washington Post today, Saturday, May 26, entitled "Strange Melting Pot" is unfair to the House Committee on Immigration in general and to me in particular. This editorial, among other things in referring to me, states: "He does not intend to have any German or Italian girls admitted to this fair land." No statement ever made by me is subject to such interpretation. As a matter of fact, I would not exclude or reduce the immigration quotas from Germany or Italy without making similar reductions in the

quotas from all other nations now permitted immigration. I favor, and I am sure the majority of the members of the Immigration Committee favor, the admission of all bona fide spouses of American citizens who are not subject to exclusion under existing laws. I do oppose the enactment of legislation which might encourage promiscuous foreign marriages. Furthermore, I am advocating and have introduced a bill to exclude from this country persons who actively served in the armed forces of any nation while such nation was at war with America. The purpose of my bill is to exclude insofar as possible Nazis and Fascists.

I have both German and Italian communities within my congressional district. Many of the best citizens of America are of German and Italian extraction. Some of us on the House Commitee on Immigration feel that we should reduce the number of persons permitted to immigrate to this country, regardless of their national origin. Most of us feel that we should be much more selective in the matter of aliens who are given admission to these shores.

However, neither I nor any member of the Immigration Committee has made any statement justifying the erroneous and fallacious editorial above referred to.

Spain and the International Situation

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Friday, May 25, 1945

Mr. COFFEE. Mr. Speaker, editorial writers in numerous newspapers throughout America have commented critically and caustically upon the effect of our continued collaboration with Franco Fascist Spain and with the Argentine—a Fascist camp follower of Franco.

With the consent of my colleagues, I am including hereinbelow some editorials typical of the viewpoint of outstanding newspapers of America.

[From the Atlanta (Ga.) Journal of April 25, 1945]

OUT IN THE COLD

When the delegates of the 46 United Nations assemble today in San Francisco to form a world security league, no nation will view the proceedings with the same forlorn misgivings that must beset Fascist Spain at this moment of Axis defeat. Spain, as a neutral, is out in the cold, as are 5 other neutral nations, but only Spain's Fascist leaders can grasp the terrible significance of events both in Germany and in San Francisco.

German and Italian aid during the civil war of 1936–39 enable Gen. Francisco Franco to fasten fascism on Spain. Grateful for this support, the Spanish dictator made no secret of his sympathy as long as Hitler held the upper hand in Europe. But after the fall of Italy in 1943, Spain abandoned her status as a nonbelligerent ally of the Nazis and became a neutral. Now Spain, the only neutral that openly aided the Axis, sees every blow of the Allies bringing closer the day when she will become an island of fascism on the Continent of Europe. When the war is over, can this single Fascist state stand against the resurgent forces of world democracy? It hardly seems likely. No wonder General Franco recently has attempted to ingratiate his government with the Allies.

The victorious forces of democracy are not all that Franco has to fear. He is in danger at home. High prices, low wages, food shortages, and the bitter memories of civil war make him as unpopular with his own people as with those abroad. He is sustained in power principally through fear of more civil war that might follow his overthrow.

There are two principal groups contesting to succeed the Fascist regime. One is the monarchists, led by Don Juan, pretender to the Spanish throne, who has denounced the Franco Government and is expected to seek British support in restoration of the Spanish monarchy as the only way, he claims, to reestablish peace in Spain.

The other is the Republicans, who contend that an attempt to put Don Juan on the throne would lead to civil war, and that Spaniards will have no trouble in getting rid of Franco if foreign governments will keep hands off. Furthermore, Republican leaders feel that Franco's fall would be hastened if the Allies withdrew diplomatic and economic support. It also would be hastened, we might add, if the Republican factions, at home and in exile, could unite on a course of action. Representative COFFEE of Washington has introduced in the House a resolution urging the President to break relations with Franco and send arms and medical supplies to Republican guerrila forces in Spain.

Now that the Axis is in its death throes and Spain no longer poses any military threat on the Continent, the Allies can afford to withdraw diplomatic and economic support from the Franco regime and permit it to suffer from its own people the full fruits of its tyranny. If it is our purpose to rid the world of fascism once and for all, certainly the Franco regime in Spain cannot be overlooked. Spain must not remain a Fascist seedbed from which a third world war might easily sprout.

[From the San Antonio (Tex.) Express of April 27, 1945]

STRAINING AT A GNAT AND SWALLOWING A CAMEL

Sometimes one wonders about Congress. Particularly now one wonders at the weird mental processes animating the House Foreign Affairs Committee's resolution—which it urges that both branches pass—calling upon the Government to use force and ignore treaties in pursuing war criminals even into so-called neutral countries. The emerging picture of Congress' behind-the-brow workings is almost incredible.

The obvious thing in such a picture is that—whether or not it knows it—Congress thereby would be calling for war. That is what armed suasion or invasion of a neutral country would be. More than that, it would be aggressive war. Third, it would constitute aggression by the Nation that presently is putting forth such large gestures against aggressive war now and in future. Again, by the same token, that invasion would destroy—probably forever—any confidence in the United States good faith which the smaller countries now may feel. Nor would this Nation's assurances that it sought only war criminals have any effect.

The picture holds something even more alarming: It reveals the unhappy lack of perception in Congress concerning the present nature and situation of the enemy's real strength. What surely is plain to anyone except some Congressmen is that German war criminals are not worth such high political and other prices—because they are known, marked men and thus are relatively useless in future to their masters. They should be hounded down, taken, and punished where that can be achieved through normal processes; but they are not worth the kind of action or attitude which Congress proposes that this Government take.

What Congress had far better concern itself with is the fact that real German strength and brains today are ensconced in most "neutral" European nations and in Argentina, and that those brains and that strength are being turned to use in Latin America through Spain's embassies and legations there.

What Congress had better learn is that German agents—working with and through the Spanish Falange—already have created subversive organizations that are strong, tightly disciplined and growing and that reach into the United States. Federal agencies dealing with such matters are keenly aware of the scope, strength, and vicious means of appeal and command which Falange, Sinarquismo, and similar subversive movements have here, as well as largely throughout Latin America. It is high time—indeed, well past time—that Congress learn something about that menace.

The armed warfare with Germany in Europe is about over—for this time—but the war with Germany has not stopped and will not stop. It merely has moved its loci of operations from Germany to Argentina, Spain, Switzerland, Sweden, and Portugal—to name them in the probable descending order of their importance to the German General Staff.

No guesswork is involved. The Germans are here, in this hemisphere—now. They have investments in Argentina alone, which an Argentine official in 1944 estimated at not less than a billion dollars—and probably by now one and one-half million—as against Britain's approximately $700,000,000. Those investments do not represent the total of German resources in Argentina, let alone throughout Latin America.

The Germans have boasted and still boast that they will succeed in disrupting this country from within and take it in the next armed phase of the continuing World War. They already have a long head-start in Latin America and a strong bridgehead in the United States.

If Congress be feeling its oats enough to want to invade something—fight some enemy force—let it take on the German General Staff, the Falange, and the Sinarquismo.

Resolution of Northeastern States Development Agencies Conference

EXTENSION OF REMARKS

OF

HON. JAY LeFEVRE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Saturday, May 26, 1945

Mr. LEFEVRE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution, which was unanimously adopted by the Northeastern States Development Agencies Conference at a meeting held at the Hotel Roosevelt in New York City on May 3 and 4, 1945. The resolution was received by me this morning from M. P. Catherwood, of the Department of Commerce, Albany, N. Y.:

Representatives of the development agencies of the Northeastern States, including Connecticut, Maine, Massachusetts, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island, and Vermont, having conferred on matters of mutual concern and interest at a meeting held in New York City

on May 3 and 4, have unanimously adopted the following resolution:

"The Northeastern States were the cradle of liberty and economic progress and are the heart of the commercial and industrial life of the Nation. These States are the homes and workshops of nearly one-third of the people of the Nation, and therefore America's greatest consumer market. At the same time they stand as the chief gateway for the exchange of goods between this country and the rest of the world.

"We combine a rich experience in industrial skills, business judgment, and advanced labor relations with a wealth of youthful ideas and energy, and shall continue to expand our contributions to the benefit of the entire country.

"We are continuing, as ever, to lead the way in progressive government and business measures for the benefit of all peoples everywhere. Our histories have demonstrated that economic and political freedom are not merely compatible but complementary.

"It is the sense of the meeting that the postwar prosperity of the Nation, particularly the reemployment of our returning service men and women, is the first order of business of the development agencies of the Northeastern States. To achieve this high objective the Nation requires the mature experience and skilled workmanship of the people of the Northeastern States.

"In peace, as in war, we take pride in the industrial development and prosperity of our entire Nation, and shall continue to give our best efforts and "know-how" to the end that all States will profit from the contributions of each, so that economic expansion can be general.

"We shall continue to resist any effort to destroy the national free market, the birthright of every American, or to erect artificial trade and industrial barriers between States or regions, or to grant any special privileges to any sections of the country at the expense of the others. Opportunity for growth is unlimited throughout America, and we shall all prosper as we expand together."

Thoughts of a Fighting Soldier

EXTENSION OF REMARKS

OF

HON. THOMAS A. JENKINS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Saturday, May 26, 1945

Mr. JENKINS. Mr. Speaker, under leave to extend my remarks, I am glad to have printed in the RECORD a copy of a poem written by my lifelong friend, Col. Lester J. Abele.

This poem portrays the thoughts of a fighting soldier on the front line who knows that his son is also wearing the same uniform and fighting the same big battle:

SOMEWHERE DEEP IN GERMANY,
March 27, 1945.

MY DEAR SON TONY:

I wish I had the power to write
The thoughts wedged in my heart tonight
As I sit here watching that great big star
And wondering how and where you are.
You know, Tony, it's a funny thing
How close a war can always bring
A family, who for years with pride
Has kept emotion deep inside.
I'm sorry that when you were small
I let reserve build up that wall—
I told you real men never cried
And it was mommie who always dried
Your tears and smoothed the hurt away
So that you soon went back to play.
But, Tony, deep down within my heart
I longed to have some little part
In drying that small tear-stained face.
But we were men—men don't embrace,
Now suddenly, I find my son
A full grown man, with childhood done,
Tonight you're far away across the sea
But soon you'll be waging war for men like me.
Well, somehow pride and what is right
Just doesn't seem to go tonight.
I find my eyes won't stay quite dry;
I find that sometimes men do cry.
And if we stood here face to face
I'm afraid we'd find men do embrace.
Tony, dads are quite a funny lot
And if I've failed you in some spot
It's not because I loved you less,
It's just this cussed manliness.
But if I had the power to write
The thoughts wedged in my heart tonight
The words would ring out loud and true
I'm proud, my Tony, so-o-o proud of you.

Your dad,

LESTER J. ABELE,
Colonel, JAGD, Staff Judge Advocate,
Twelfth Corps.

It Should Be Permanent

EXTENSION OF REMARKS

OF

HON. WALTER A. LYNCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Saturday, May 26, 1945

Mr. LYNCH. Mr. Speaker, under the unanimous consent granted me to extend my remarks, I desire to include a splendid editorial that appeared on May 11, 1945, in the Home News, the leading publication in Bronx County, N. Y.

The Home News has long been noted for the soundness of its editorial policy and its ability to clearly reflect the opinion of the great community it serves. In its advocacy of a permanent FEPC it unquestionably expresses the firm conviction of almost the entire population of our Bronx County.

The editorial follows:

IT SHOULD BE PERMANENT

A few months before the war began for the United States, President Roosevelt, by Executive order in the summer of 1941, created the Fair Employment Practice Commission, to help assure that the intensifying national need for industrial manpower should not be balked by discrimination on account of race, creed, or color. This year, with the European hostilities nearing their predestined close, New York State, through legislation strongly endorsed by Governor Dewey, provided for establishment of an effective antibias agency of its own, becoming the first State to take such action.

The Federal FEPC has functioned to excellent purpose. Though without power to enforce its decisions, it has successfully handled thousands of cases, thereby playing a significant role for maximum manning of war industry while protecting Americans of every race in their basic right to earn a living. But it remains nonetheless purely a wartime bureau, temporary and due for dissolution when the war ends. Unless Congress moves for a permanent FEPC, hard times may loom for multitudes whose job prospects will be poorer in the postwar economy than they could possibly have been in the general wartime cry for workers of any description, and no questions asked—save in those numerous yet relatively exceptional instances where FEPC intervention has been necessary.

The Empire State has shown the way. For the implementation of a principle deep-rooted in American philosophy, Washington should take a lesson from Albany. New York projects its thinking, its idealism, and its respect for human rights into a coming era when job-finding may be less easy than during the past few years—and when, by every canon of justice, the willing and qualified worker ought not to confront extra difficulties because of his race or religion.

New York State formally asseverates that persons good enough to hold wartime jobs without regard to their ancestry or complexion are good enough for peacetime employment, too—especially after a war in which this country's sons of all races and religions have bled, and still bleed, to wipe out foreign tyrant enemies of democracy, equality, and fraternity. If the State of New York can do anything about it, none of those men (or any other) is going to be an economic victim of prejudice. And since the State of New York is very definitely trying to do something about it, the United States Government ought to do no less for all its people.

Pending in the House of Representatives is a bill by Congresswoman MARY T. NORTON, of New Jersey, to set up a permanent FEPC as an administrative agency with adequate powers of its own to prevent discrimination and proceed against violators. The House Committee on Labor has reported the measure favorably, but it lies dormant in the Rules Committee. To bring the bill before the House for an immediate vote, 218 Congressmen must sign a petition now circulating. Many have signed, but more are required.

It is true that legislation of this kind flies in the face of widespread, unenlightened, age-old prejudices. It is true that injudicious administration of antibias laws might spur serious resentments. But the social good and individual justice which such laws are designed to foster are considerations incomparably surpassing any real or fancied issues of expediency. This country should have a permanent commission for fairness in employment, and the people must tell Congress as much.

The Poll Tax

EXTENSION OF REMARKS

OF

HON. MALCOLM C. TARVER

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Saturday, May 26, 1945

Mr. TARVER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter written by Judge Samuel H. Sibley, senior judge of the Fifth Circuit Court of Appeals, to Mr. Jesse F. Orton, of Jackson Heights, N. Y.:

ATLANTA, GA., *May 3, 1945.*

MR. JESSE F. ORTON,
Jackson Heights, N. Y.

DEAR MR. ORTON: Thank you for sending me copy of your brief on the subject of congressional power to require abolition of poll tax as a prerequisite to voting in Federal elections. I find your argument against the power unanswerable, though I myself needed no persuasion, for I have never understood how such a power could be claimed by Congress.

I am interested too in the statement the pamphlet bears, that you are personally opposed to limitation of suffrage by requirement of poll-tax payment. This, of course, is a matter of State policy. I am provoked to make a word of explanation of the policy and its history in my State, Georgia. I see in you a fair-minded man, really interested in the matter.

The poll-tax States are commonly spoken of as having invented the system to prevent the Negro from voting. The idea is mere provincialism and ignorance on the part of some; of willful misstatement on the part of others. I think southern people ought to take more trouble to explain to outsiders their ideas and position on many matters which the latter undertake to criticize.

In Georgia, the poll tax has nothing to do with the Negro, and the requirement of its payment for voting is not special, but applies equally to all taxes. So far as I know the poll tax dates way back before the Negroes paid any taxes, and so far as I know it has always been required of everyone in Georgia that they pay what they owe in support of the government before they are allowed to help run the government. This idea still seems just and right to me, especially as to recent taxes and those not so burdensome as to be unpayable. The poll tax in Georgia is small, so small that a man can deprive himself of tobacco for a week and pay it. If he can work at all, he can pay it if interested enough to take the trouble. The dues in every labor union are, so far as I know them, at least 12 times more onerous, but no union permits a man who does not pay his dues to vote, hold office, or have any benefits of the union if it can be prevented. The clubs of the country are the same way. I cannot see why the citizen should not pay moderate personal dues to his government in recognition of the benefits he daily receives. I would not take away the benefits if he will not pay, but I would deny him the privilege of helping to control taxation, expenditure, and other policies of government. My State, in sponse to pressure from unions and others who seek to have as many irresponsible voters as possible, has recently abolished the poll tax, but I regard it as the result of pressure, and not the expression of any real principle, unless it be to let everybody vote. This principle would also remove educational, age, crime-free qualifications as well. Georgia has also imitated Soviet Russia, though I have never seen any allusion to the imitation, in putting the age down to 18, males and females.

But to get back to the point: When in 1868, the Negro having become a voter, and the carpet baggers being in control of the State, a new constitution was adopted, the law stood thus:

A poll tax existed on "every free white person between the ages of 21 and 60." (Irvins Code, sec. 806 (3).)

The then onstitution, as its predecessors, required as a condition of voting that all taxes should be paid. (Art. V, par. 1, Irvins Code, sec. 4980.)

The new constitution (art. II, sec. II) continued the requirement for voting: "And shall have paid all taxes which may have been required of him and which he may have had an opportunity of paying."

In article I, section XXVII, for the first time among the objects of taxation was included this: "To provide a general school fund." Theretofore the State by statute had extended aid for schools in the counties, though quite inadequate, but there was no State system of common schools. This is remarkable, seeing that Georgia pioneered in State higher education, establishing its university in 1784, the oldest of the State universities.

Article I, section XXIX, read: "No poll tax shall be levied except for educational purposes, and such tax shall not exceed $1 annually on each poll."

Article VI, section I, required the general assembly at its first session to provide "a system of general education to be forever free to all children of the State." Section III sets up the educational fund, including, among other special taxes, the poll tax. A general ad valorem tax was to supplement the fund as needed.

In Georgia the poll tax, at $1 per head, was thus interwoven with the educational system of common schools in the days when the Negroes ruled the State, most white persons being disfranchised by participation in the late war. The good and wise arrangements then made about education were, however, retained in the succeeding constitution of 1877, along with the irrevocable pledge of the poll tax to the public schools, and remains the law today. It is a sorry man who will not pay $1 per year for the general support of the government. It is a sorrier man who will not pay it for the education of his own and his neighbor's children. I do not see how he can live at all and not be able to spare that dollar for this purpose. I shall always think he ought not to vote. It is the only way to call the attention of such a sorry fellow to his duty to pay the dollar. It is not worth the tax collector's time to try to collect it in any other way.

In operation, as many or more whites have been disfranchised as Negroes. There has been an abuse, whereby candidates for office have offered to pay up the taxes of white or black to enable them to vote for that candidate. This was fair and right in some cases. In others, there was mere vote buying. Such sorry citizens will continue to sell their votes all the more freely if the money comes to them instead of going to pay the poll tax.

The point is that in Georgia the poll tax came into the constitutional law by the action of the Negroes, and their radical guardians, and to aid in elementary education, and this is irrevocably dedicated to that use; and the thought has always been that a man who would not pay it for such a purpose was simply not a good citizen. There was the other thought too that those who had no property could not otherwise be made to pay. Being an old man, over 70, I still think both ideas sound. We did right in making a constitutional amendment whereby taxes for only a few years back are now required to be paid, and I would prefer that we had stopped there.

The danger I foresee is that our citizenry are departing from the old idea that they ought to support the Government, and are now clamoring that the Government support them. This can be accomplished for awhile by taxing those who have, and distributing to those who have not. It is a fine principle of private life, but a dangerous policy of Government. It is doubly dangerous when the irresponsibles who want to be supported are multiplied over those who are willing to help support the Government. The direct tendency is to increasing socialism, or communism, or disaster. I have great faith in the wisdom of our people if they understand a thing, and take time to think. I am chiefly worried over the tendency to speed up many things in themselves good, but which ought to take time to build up solidly. Among these I count the attempt to attain a general social security that bears fairly on all, and does not favor special organized groups; and the difficult questions of racial antipathies which exist north and south, east and west. I feel sure that in both these fields we had best make haste more slowly.

With renewed thanks for your service in the matter to which you have directed your thought, and hoping that I may have given you some insight into the State aspect of that question,

Yours truly,

SAMUEL H. SIBLEY.

Furlough Credits for Members of the Armed Forces

EXTENSION OF REMARKS

OF

HON. CHARLES R. ROBERTSON

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Saturday, May 26, 1945

Mr. ROBERTSON of North Dakota. Mr. Speaker, at this particular time in the Nation's history the country is concerned with returning veterans from all phases of this war. The question, therefore, foremost in the minds of many of the people of the Nation is to the best methods of treatment to be accorded them by the Government, the length of their furlough periods, as well as an equitable recognition of rights between enlisted men and commissioned officers.

Under leave to extend my remarks in the RECORD, I include a set of resolutions by the American Legion, Grafton Post, No. 41, Grafton, N. Dak.:

Whereas military and naval personnel of the United States, under existing regulations, may be granted a total of 30 days' leave or furlough each year with full pay and allowances, by their commanding officers, if such leave or furlough does not interfere with the requirements of the military or naval situation; and

Whereas commissioned officers of the military or naval forces of the United States, if they have not been granted leave or furlough in a total amount of 30 days for each year of active service in the military or naval forces, are granted a "terminal leave" on separation from such active service, with full pay and allowances for such time as would equal such accumulated leave that they have not received; and

Whereas many enlisted members of the armed forces of the United States have been and are now being released from such active service, who have served honestly and faithfully for periods of time varying up to several years and who have not been and are not being granted furlough or leave, or pay therefor as would have been due them had they been granted the same privilege as is granted commissioned officers of the armed forces of the United States; and

Whereas it is the consensus of opinion of the members of this post that enlisted personnel are entitled to equal consideration, in the matter of leave or furlough, as commissioned officers, and that they ought not to be deprived of the privilege of leave or furlough that they have earned and not received: Now, therefore, be it

Resolved by the membership of Grafton Post, No. 41, American Legion, Department of North Dakota, That legislation now be enacted to the effect that commissioned officers and enlisted personnel of the military and naval forces of the United States be granted leave or furlough credit, to be computed at the rate of 2½ days for each month in which they are in active service from and after December 7, 1941, and continuing until the date of separation from such active service or until 6 months after the present war shall have been declared to be over, whichever date is the sooner, such leave or furlough if not received to be cumulative from year to year, and that upon separation from such active service of any commissioned officer or enlisted man of the military or naval forces of the United States, if such person has not received a total of 2½ days of leave or furlough for each month of such active

service between the afore-mentioned dates, then those persons shall receive a sum of money computed at the regular rate of their pay for such length of time as equals the total time of such leave or furlough, accumulated and not received, and such pay and allowances shall be in addition to any other pay and allowances that may be then due them; and be it further

Resolved, That copies of this resolution be spread upon the minutes of this post and be placed in the hands of the representatives now in the Congress of the United States, who were elected from the State of North Dakota, with our earnest request that they consider the justice of the proposed legislation and take such legislative action as is indicated herein and that copies of this resolution be placed in the hands of the proper officers of the American Legion, Department of North Dakota, that they may be acquainted with the desirability of such legislation and that they may ask the assistance of other posts and departments of the American Legion to the end that such legislation as is indicated may be enacted.

Adopted by unanimous vote of the members present at a regular meeting of Grafton Post, No. 41, Department of North Dakota, American Legion, May 15, 1945.

A. G. KERIAN,
Commander.
E. F. SCHUMACHER,
Adjutant.

Some Further Aspects of Aluminum

EXTENSION OF REMARKS
OF
HON. JOHN M. COFFEE
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Friday, May 25, 1945

Mr. COFFEE. Mr. Speaker, because there has been so much discussion in the press lately relative to dealings between the United States and subsidiary Government corporations and the Aluminum Co. of Canada, a subsidiary of the Aluminium, Ltd., I thought it would be of interest to Congress and the country to read a recent article in the New York daily newspaper, PM, which discusses the aluminum plant at Maspeth, Queens, New York, operated by ALCOA for the Defense Plant Corporation during the time it was producing aluminum. However, the plant is now in disuse.

For a long time, ALCOA exulted in a decision it secured somehow in the United States District Court, holding that it was not a monopoly, but, on March 12, 1945, the United States Circuit Court of Appeals reversed the lower court and officially declared that ALCOA was a participant in a monopolistic conspiracy to violate the Sherman Antitrust Act.

However, the United States continues to employ this gigantic enterprise as operator, or manager, of the major share of the Nation's aluminum-producing plants.

The article from PM is as follows:

MASPETH ALUMINUM PLANT IS GOVERNMENT'S WHITE ELEPHANT—BUT MRC BUYS METAL FROM SHIPSHAW CANADIAN PLANT

(By James Parlatore)

There is no indication today that the $33,700,000 aluminum plant in Maspeth, Queens, will provide a single postwar job for New Yorkers.

Sam H. Husbands, president of the DPC (Defense Plant Corporation), owner of the installation, told PM that "no definite arrangements have been made for postwar use" of the plant, "but (we) would welcome any suggestions."

Largest DPC metal-producing unit in the country, the plant was ordered to stop production in June 1944, after operating for only 16 months, because the WPB (War Production Board) decided we had an oversupply of the light metal on hand. Several months later the Navy was given permission to use the plant to recondition Diesel motors and to produce ordnance material.

How long the Navy will use the site no one in authority could say, because the Navy considers its job in the Pacific to be "a long and tough one." Naval headquarters in Washington told PM that "the final decision concerning all plants to be retained by the Navy has not yet been determined." But a spokesman added that "when there is no longer any need for the plant, the Navy undoubtedly will not use it."

CONSPIRACY

The Aluminum Co. of America, which ran the plant for the DPC during the time it was producing aluminum, does not expect "ever again to be given the opportunity to operate that place," since the United States Circuit Court of Appeals, on March 12, declared the company was a participant in a monopolistic conspiracy to violate the Sherman Antitrust Act.

The Maspeth plant was planned and built to meet the increasing need for aluminum during the early stages of the war. Since one of the biggest items in the construction of such a plant is the availability of tremendous electrical power, to run the "pot lines" which smelt the metal, the Government had to build its plants wherever it could find sufficient electrical energy. Because of this consideration, New York City was included.

ELECTRICAL COSTS

Ordinarily the soundest competitive cost of electrical energy is less than 2 cents per pound of aluminum, and it requires about 10 kilowatt-hours for every pound of the metal. For this reason, most of these big aluminum plants are built near sources of hydroelectric power, but because the Government was more interested in getting the material to meet the critical needs of the Army and the Navy it decided to overlook this cost factor.

Consolidated Edison went as far as possible in furnishing cheap power to run the Maspeth plant, "but the cost of electricity there was too high," according to an official of Alcoa.

On the basis of this factor, then, this aluminum executive declared it was his opinion that "it would not pay anyone to operate that plant" as an aluminum-producing unit "unless he were willing to take a terrific loss."

The plant, which began to operate in February 1943, had an estimated annual output of 260,000,000 pounds of aluminum and employed about 1,600 men. On May 1, 1944, the WPB ordered an annual reduction of about 72,000,000 tons in production of aluminum, "as another step to bring aluminum metal production more closely in line with consumption." As a result of this ruling, not only the Maspeth plant but also another in Burlington, N. J., was shut down.

UNION CHARGES

Soon after Nicholas A. Zonarich, president of the Aluminum Workers of America, CIO, charged that curtailments of domestic aluminum production were ordered because Alcoa was preparing to restore a carefully controlled market in the light metal after the war.

In the spring of 1943 PM exposed how the United States Government bought aluminum from Canada at a higher cost, while domestic operations were being shut down in the United States of America. These purchases continued under secret contracts negotiated by Jesse Jones, former Chairman of the DPC.

In May 1941, the United States Government advanced $68,500,000 as a down payment to help finance construction of Alcoa's sister Canadian corporation, the Shipshaw Plant in Arvida, Quebec.

ALCOA OPTIONS

Under this contract, the United States Government was to get 1,370,000,000 pounds of aluminum in exchange for the money advanced. Records show that the first 1,000,000,000 pounds have cost the United States of America an average of 18.56 cents a pound delivered from Canada. On the basis of this experts feel that Alcoa will have repaid its debt to the United States by the middle of this year. This also means that Alcoa gets its Canadian plant free.

While the United States Government was shutting down the Maspeth plant and several others in this country, we continued to take aluminum from Canada because, under the terms of the contract, that was the only way the United States of America could get back the money advanced to Alcoa.

Although there have been rumors that Alcoa had an option on several of the Government-owned plants in the United States of America, including the Maspeth site, Husbands told PM that "Alcoa does not have an option or any purchase rights of any character in this plant, nor does any other party."

The electrical equipment and machinery was installed in the plant during a critical copper shortage. To meet this shortage, the Treasury Department permitted use of silver for bus bars (conductors used for carrying electrical current).

When PM asked a top Alcoa official if the amount of silver installed at the plant amounted to "several hundred thousand dollars," the executive said:

"If you added a great deal more ciphers to that figure, you'd be nearer the truth."

Alcoa declared that the company "acting as an agent for a general contractor for the DPC, supervised the taking out of the machinery and stored it in Queens for such disposition as the DPC sees fit." When DPC confirmed that the machinery and equipment still is located in the plant, Alcoa added:

NEW CONTRACT

"Some of the machinery that can stay out of doors without being damaged is out of doors, while that machinery which is subject to corrosion is set aside in storage space especially designated for it."

In the meantime, the MRC (Metals Reserve Company), acting on a request of the WPB last month, signed a new contract with the Shipshaw plant for an additional 250,000,000 pounds of aluminum, because petroleum production of the light metal "would be below the estimated requirements for the rest of the year." The cost to this Government, under the agreement, will be about 14 cents a pound plus an allowance of seven-tenths cent for transportation, or less than 15 cents a pound delivered to its destination in this country. Since its debt to the United States of America soon will be paid, this sale represents a clear profit for the Canadian plant.

Because the Maspeth plant must use electrical power manufactured wholly from coal, the cost of aluminum would be about 16 cents a pound. Since it would take about 2,500,000 kilowatt-hours to make the amount of aluminum called for in the new

contract, the Government feels the coal needed to make this energy can be used for other war purposes.

WAR VIEWPOINT

Experts point out, however, that had the power potential of the St. Lawrence River been developed, enough cheap electricity could have been brought to New York to operate the Maspeth plant at a much lower cost than that paid to Canadian interests.

From the viewpoint of the entire war effort, here is what actually happens:

Canadians must import bauxite from British Guiana by ships either to New York or to Portland, Maine. From these ports the ore must go by train to Canada. Since it takes about 4 pounds of bauxite to make 1 pound of aluminum, about 1,000,000,000 pounds of the mineral must be hauled by rail. And coal is needed for this ride.

Critics of the Canadian contract declare that great quantities of coal still are being consumed in transportation and that shipping space, used to import the bauxite from South America, could be used for other war purposes if the aluminum were made in this country from domestic ore.

We Must Feed Europe to Guarantee World Peace

EXTENSION OF REMARKS

OF

HON. WALTER A. LYNCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Saturday, May 26, 1945

Mr. LYNCH. Mr. Speaker, under the unanimous consent granted me to extend my remarks in the RECORD, I am including the sixth and last of a series of splendid articles on the food situation, written by the distinguished newspaper correspondent, Malcolm Logan. These articles have appeared at various times in the New York Post, which has been endeavoring to bring the food scarcity and the reasons for it to the attention of the American public. Mr. Logan has placed the blame where it belongs. That he has placed that blame properly can be fairly adduced from the recent change in the War Food Administration.

The article which I presently include in my remarks appeared in the issue of the New York Post of April 18, 1945, and reads as follows:

WE MUST FEED EUROPE TO GUARANTEE WORLD PEACE

(By Malcolm Logan)

When Senator THOMAS, Democrat, of Oklahoma, appointed five members of the Agriculture Committee to investigate our food shortages last month, he announced:

"War workers should not be robbed of an adequate diet so that people of other nations can be fed."

That remark was symptomatic of a strong tendency in Congress to welsh on our Government's repeated promises to avert hunger in liberated Europe rather than ask the American people to give up some of their food.

President Roosevelt answered this argument by saying that he believed America as a whole would make the necessary sacrifices as a matter of decency to prevent starvation abroad.

BUT ARE WE DOING THAT?

"We are feeding practically all the people of the world," Representative ALLEN, Democrat, of Louisiana, said recently, "and I am beginning to wonder if maybe the United States is not the biggest sucker."

Well, let's look at the facts and see if we are feeding the whole world.

UNRRA, which faces the job of feeding Greece, Yugoslavia, Czechoslovakia, and Poland, set its meat requirements for the rest of the year at 633,000,000 pounds. Of that amount, only 33,000,000 pounds is in sight—and every ounce is coming from Canada.

"Of all food items in short supply—dairy products, all meats and all fats except lard," says Andrew Cairns, chief of UNRRA's food division, "we are getting little or nothing during the second quarter of this year."

THE HOPE AND THE REALITY

Director General Lehman, of UNRRA, said last month that his organization's request for meat from this country for the second quarter "means that 1 pound out of every 350 of the United States civilian supply would go to war victims in Europe whom UNRRA expects to help with food."

But UNRRA isn't even going to get that three-tenths of 1 percent of our meat supply.

We have begun to send lend-lease food to France, yet every correspondent who has investigated the food situation there agrees that it is far more critical than we here realize. Belgium, which always imported most of its food, is as badly off, and in occupied Holland people are dying daily of starvation.

NOT EVEN GETTING THE MINIMUM

The question is not whether we are making suckers of ourselves in order to feed Europe. We are not providing even the minimum food needs of Europe during these critical months.

The real question which we face is whether we can afford, in our own selfish interests, to let Europe go hungry much longer.

Many officials in close touch with conditions abroad are fearful that there may be rebellions in liberated countries. In France mass meetings have booed the name of the Food Minister.

The Dutch are reported turning against the Allies because of our delay in invading the starving occupied provinces.

A hungry Europe might well go antidemocratic; and if that happens, the security organization which is to be formed in San Francisco may be nullified before it even starts to operate. The future peace of the world may come down to the question of whether America is willing to give up a little of its food now.

English as a World Language

EXTENSION OF REMARKS

OF

HON. A. S. MIKE MONRONEY

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Saturday, May 26, 1945

Mr. MONRONEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to insert a letter from Hon. Robert L. Owen, a former United States Senator from Oklahoma, with further reference to the progress of his heroic undertaking to establish English as the world language.

Our difficulties in the postwar period will be greatly magnified by our lack of understanding of the languages of other people and their lack of understanding of ours. Senator Owen has perfected the global alphabet comprising a phonetic system of 33 letters and 9 digraphs by which any language in the world can be read and correctly pronounced. More than 200 leading linguists of the world have endorsed this system.

It is said that the global alphabet can be learned in 1 day by a child of 8 or 10 years of age. Senator Owen's recent letter briefly outlining the purpose and need for such an alphabet, and the ease with which it can be studied, is incorporated in my remarks.

I would like also to call the attention of the House to House Concurrent Resolution 33 by the Oklahoma State Legislature recently passed commending the global alphabet to all educators and language students, and requesting that the Congress and the President devise ways and means to promote the study and use of it to encourage English as a world language.

As a further supplement, I include a list of publications further explaining the global alphabet as published in the CONGRESSIONAL RECORD since 1942:

WASHINGTON, D. C., *May 24, 1945.*

Hon. A. S. MIKE MONRONEY, M. C.,
New House Office Building,
Washington, D. C.

Subject: English spelling and pronunciation.

MY DEAR MR. CONGRESSMAN: English is the most widely distributed language in the world. It is known to 200,000,000 people. It is the official language of India of between three and four hundred million people, but it is unknown as a spoken and printed language to approximately 2,000,000,000. It has one serious obstacle, to which I call your especial attention. As currently printed, foreigners find the pronunciation and spelling impossible except through a professional tutor who will teach them the pronunciation word by word.

Our revered ancestors, in spelling English, gave multiple meanings to the letters, especially the vowels and the compound vowels. For example, the letter "a" has 9 different sounds, as in the words "man," "plate," "far," "fall," "ask," "fare," "prelate," "errant," "Persia." The letter "e" has 6—for example, "met," "meet," "her," "Episcopal, "prudent," "the." The letter "i" has 3—"pin," "pine," "machine." The letter "o" has 7—"not," "note," "move," "nor," "eulogy," "actor," "women." The letter "u" has 5—"tub," "mute," "pull," "singular," "nature."

I have a recent letter from Mr. R. Wrenick, member of the executive committee, Simplified Spelling Society, Ashley Rise, Walton-on-Thames, England. Mr. Wrenick in a printed article sent me says:

"Muddle in pronunciation: In addition, the digraph OO has 5 sounds, OU has 7, EA has 5, and EI 5, making a total of 22 sounds for 4 digraphs.

"Muddle in spelling: The sound A in eh, aid, lady, may, they, weigh, great, grate, gaol, and gauge is spelled in 10 ways. Similarly the sound E is spelled in 10 ways, I in 11, O in 11, and U in 11, making a total of 53 ways of spelling 5 sounds. In addition to this, short I sound is spelled in 10 ways, long OO in 10 ways AA/AR in 11, AU/OR in 11, making a total of 42 ways of spelling these 4 sounds.

"This muddle in spelling and pronunciation is the despair of foreigners and the confusion of our children, necessitating constant correction for which no adequate reason can be given. In Italy and Germany, where the spelling is phonetic, children of 7 and 8 can read as well as English of 9 and 10."

Mr. Wrenick further asks:

"In order that English may become a common world language as suggested by Mr. Winston Churchill, why not join the Simplified Spelling Society?"

The great amount of time it takes to learn to spell English correctly and pronounce it correctly is well known to all teachers. The amount of mental energy consumed in learning to spell and correctly pronounce English words could be advantageously employed in learning the facts of life of importance to children and adults alike.

The silent letters employed in English spelling multiply the difficulties cited above, because nearly four-fifths of English words contain from one to three silent letters, adding to the difficulties of foreigners in learning to pronounce English words.

The global alphabet requires the memory to deal with only 33 letters and 9 digraphs composed of such letters. The letters of the global alphabet are in form the simplest humanly possible and easily remembered. They can be learned in 1 day by a child of 8 or 10 years of age.

With this alphabet any person in the world can write any language in the world, and read and correctly pronounce the words of any language printed in the global alphabet. During the last 3 years I have given thousands of hours to the perfection of this alphabet and explaining it to others.

As you request, I enclose a memorandum giving some of the particulars where the global alphabet has been explained in the records of Congress, which I hope may be of interest to students of the subject matter. Within these records are the endorsements of Prof. Mario A. Pei, Ph. D., Columbia University, and Rev. Frank C. Laubach, Ph. D., director of the Committee on World Literacy, and many of their associates.

I deeply appreciate the endorsement of the Oklahoma delegation in Congress of February 10 last, particularly your friendly attitude.

Since dictating the above letter I have just received from the Honorable Robert S. Kerr, Governor of Oklahoma, a copy of a concurrent resolution of the Senate and House of Representatives of the State of Oklahoma, which the Governor sent me as having passed the two houses. I enclose it as a part of this letter to you for your information.

I am grateful to the people of Oklahoma and to Governor Kerr for their study of this matter and for their approval. I submitted the global alphabet and an explanation of it to over 200 leading linguists and have the approval of many and the disapproval of none of them.

With kind regards,

ROBERT L. OWEN.

House Concurrent Resolution 33

Concurrent resolution in appreciation of the work of Hon. Robert L. Owen, former United States Senator from Oklahoma, pertaining to the teaching of English as a world language through a global alphabet, and memorializing the President and Congress

Whereas the Honorable Robert L. Owen, who was elected United States Senator by the people of Oklahoma in 1907, and who served for 18 years consecutively in that high office, has devoted much time and study in recent years to the development of a global alphabet to promote international understanding by the use of English as a world language: Now, therefore, be it

Resolved by the House of Representatives of the Twentieth Legislature of the State of Oklahoma (and by the Senate), That the proposed global alphabet is hereby commended to educators and language students in schools and colleges for their study and evaluation as a means to encourage the use of English as world language to promote international good will and understanding; and

That the Congress of the United States and the President are hereby memorialized to devise ways and means to promote the study and use of the global alphabet as a means to encourage the use of English as a world language.

What Kind of Shenanigans Would You Call This?

EXTENSION OF REMARKS

OF

HON. J. PARNELL THOMAS

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Saturday, May 26, 1945

Mr. THOMAS of New Jersey. Mr. Speaker, under leave granted, I desire to insert in the RECORD an editorial from the Hillsdale Herald, Hillsdale, N. J., which speaks for itself:

WHAT KIND OF SHENANIGANS WOULD YOU CALL THIS?

Mr. Taxpayer, would you shell out $2 to get back $1? Or would you rather receive three bucks for your one?

Well, don't laugh. Both of these propositions are being readied at Washington for the taxpayers of the Nation in the pending Federal $300,000,000 aid-to-education bill. It all depends upon what State you live in—whether you draw the big end or the little end of the Federal hand-out. Most of the money would go for school teachers' and school employees' salaries, says the New Jersey Taxpayers Association.

Under this bill, the taxpayers of New Jersey would pay $11,288,000 to get back $5,983,868 in Federal funds. Our $2 brings back $1.

It just isn't a game New Jersey ought to be playing in. Now watch the dealer closely. And the map. Here's the pay-off: Arkansas, Alabama, and Kentucky each receive $3 for every dollar they pay in. And the State of Mississippi gets four bucks for its one.

So it goes all the way down the line. Peter pays for Paul because Paul has a good location on the map. Paul is one of the so-called "poorer" States, many of which have big cash surpluses in their State treasuries but still like to lean on their big-hearted Uncle Sam.

The old shell game on the circus grounds would give New Jersey as good a break for its dollars.

The American Railroad System

EXTENSION OF REMARKS

OF

HON. GEORGE A. DONDERO

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Saturday, May 26, 1945

Mr. DONDERO. Mr. Speaker, I offer for the CONGRESSIONAL RECORD a brief statement on the American railroad system. It contains much information, said in few words. I believe it will be of interest to every Member of the House:

THE AMERICAN RAILROAD SYSTEM

(By Carlton J. Corliss)

I am the burden bearer of the Nation. I am the Nation's No. 1 delivery boy.

I carry the products of millions of American farms to thousands of American factories and to millions of American homes.

I take the coal from the mines, the ore from the hills, the stone from the quarries and carry them to the market places.

I keep the factories of the Nation supplied with raw materials. I distribute the products of these factories to cities and towns and hamlets from Maine to California, from Oregon to Florida.

I meet the ships of the seven seas at our seaports. I receive the coffee, the sugar, the spices, the rubber, the copra, and the countless other things which these ships bring to our shores, and I deliver them to the factories and stores and homes where they are wanted. I gather up the surplus products of farms, forests, mines, and mills, and carry them in endless stream to fill the ships that come for cargo.

I bring the circus to your city, the entertainers to your theaters, the films to your movies.

I speed across America, from city to city, from town to town, with your express shipments—parcels and crates and boxes.

I am the mail carrier for the Nation. I carry 93 out of every 100 pounds of mail in this country. I bring you letters from distant relatives and friends—letters that mean so much in your life. I also bring you post cards, registered packages, and your favorite magazines.

I am the Nation's safest carrier of passengers. I am the swiftest carrier of passengers by land.

Not only do I carry the American people on their myriad errands—I provide them with comfortable beds in which to sleep. I serve them food and refreshments, and I look after their every want while they are my guests.

I am an employer as well as a transporter. Almost a million and a half men and women work for me and with me in performing my great transportation tasks.

I am one of the chief shoppers of the Nation. I am constantly buying; yet my wants are never satisfied. Yesterday I spent millions; today I am spending millions more; tomorrow I will spend other millions with mines and mills and factories and wholesalers for the many things I must have to keep my millions of wheels rolling.

I am one of the chief supporters of government. The taxes I pay—amounting to $2,000,000,000 a year—help to support our Army and Navy, to pay the salaries of our public officials, to meet the expenses of our public schools, to maintain our fire departments and our police forces, to build and repair our city streets and our public highways and to defray the cost of our public institutions.

I am an empire builder and a promoter of unity. I have knit this far-flung Nation together, linking North with South, East with West, in one great community of common interest and common understanding.

I never sleep. Night and day, month in and month out, year after year, summer and winter, rain or snow, in storm or flood—I carry on.

I am a vital part of the Nation's economic life.

I am indispensable in wartime.

I am the American railroad system.

Franklin Delano Roosevelt

EXTENSION OF REMARKS

OF

HON. RAY J. MADDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Saturday, May 26, 1945

Mr. MADDEN. Mr. Speaker, under leave to extend my remarks, I wish to include a resolution adopted by American Legion, First District of Indiana, on the death of President Franklin Delano Roosevelt:

Whereas God, the Almighty Commander, has summoned Franklin Delano Roosevelt, President of the United States of America, to his immortal realms; and

Whereas words are not at our command to fully describe the life of our beloved President and Commander in Chief of the armed forces of America, who suddenly departed this life on the 12th day of April 1945, at 3:35 p. m., without being able to see the fruits of his toil for an enduring peace, so nobly rendered by him for the United States of America and for all liberty-loving people of the world; and

Whereas he was truly a great man; a champion of the right of the wage earners, of the oppressed, and of the crippled children, a guiding light in the darkest hour of peace and the guiding light in the darkest hour of war; and

Whereas his voice convinced America and the world that liberty and justice must first be attained, upon which foundation we could build a lasting peace; and

Whereas he was sincerely the world emancipator and the herald of freedom; and

Whereas he died on the battlefield as a courageous man for his country, and no citation can be given to this great soldier by Congress except through a special act; and

Whereas he was called away from our midst by the Commander of all, without leaving a written will to the people, but his acts and deeds in the past, manifested love and affection of mankind and unity of the people of America and of the world, which unbounded energy and courage filled the hearts of those who needed courage; and

Whereas the tragic grief that engulfed America and the world by said loss, caused the humble and great to feel the most solemn and deep sorrow over the departed President of the United States of America, as he was the most understanding and a great man: Therefore be it

Resolved, That the American Legion of the First District, Department of Indiana, in district convention assembled, do on this 2d day of May 1945 go on record as expressing its profound sorrow for his loss; and be it further

Resolved, That a copy of this resolution be furnished to the members of his family, one copy to the American Legion, Department of Indiana, one copy to Hon. RAY J. MADDEN, Congressman of the First District of Indiana, one copy to the Congress of the United States of America to be recorded in its minutes, and required copies to the press, published in Lake County, State of Indiana.

Respectfully submitted by the American Legion of the First District, Department of Indiana:

LOUIS H. GEORGE,
Chairman, Resolution Committee.
MOR N. OPPMAN,
District Commander.

Attest:

A. L. KRUEGER,
District Adjutant.

Establishment of Veterans' Hospitals in Indiana

EXTENSION OF REMARKS

OF

HON. GEORGE W. GILLIE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Saturday, May 26, 1945

Mr. GILLIE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

Concurrent resolution requesting the Congress of the United States to appropriate funds for the early establishment of Veterans' Administration hospitals within the State of Indiana, for honorably discharged ex-service persons

Whereas the World War Veterans' Act of 1924, as amended, provides that "the Administrator of Veterans' Affairs is authorized to furnish hospitalization and necessary traveling expenses to veterans of any war, military occupation, or military expedition not dishonorably discharged, without regard to the nature or origin of their disabilities: *Provided*, That preference to admission to any Government hospital for hospitalization under the provisions of this subdivision shall be given to those veterans who are financially unable to pay for hospitalization and their necessary traveling expenses, etc.; and

Whereas as a result of the above enactment of Congress there has been and continues to be an alarming increase of admissions to hospitals from the services of the military to the Veterans' Administration hospitals, and as this increase of admissions is expected to continue for years to come; and

Whereas in this State there is only two Veterans' Administration hospitals, the Marion facility and the one at Indianapolis, which are constantly filled to capacity; and,

Whereas those ex-service and present service persons of World War II triples the number in the service in World War I: Therefore be it

Resolved by the Senate of the State of Indiana (the House of Representatives concurring):

That the United States Government is hereby respectfully urged and requested to provide the necessary funds for the establishment of three Veterans' Administration facility hospital centers, and that the present capacity of the Indianapolis facility be increased to 1,000 beds.

That the secretary of the senate is hereby directed to send certified copies of this resolution to each of the United States Senators and each Congressman from Indiana.

RICHARD T. JAMES,
President of the Senate.
HOBART CREIGHTON,
Speaker of the House of Representatives.

Approved March 6, 1945.

RALPH F. GATES,
Governor of the State of Indiana.

Portland, World Port

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Saturday, May 26, 1945

Mr. ANGELL. Mr. Speaker, under leave to extend by remarks in the RECORD, I include the following editorial from the Oregon Daily Journal of May 23, 1945:

PORTLAND, WORLD PORT

One of the marvels of the maritime world is the rate at which ships have been built in the Portland-Vancouver area. In 4 years local shipyards have turned out 1,100 new and reconverted ships aggregating 11,000,000 tons. We have done a shipbuilding business in this vicinity approximating $2,000,000,000 in the 4-year period. The fleet built here is just about 20 percent of the anticipated postwar American fleet of 5,300 vessels, totaling 54,000,000 tons and representing an investment of $18,000,000,000. In passing, the American merchant fleet will have the preponderance of weight in the postwar world fleet which, it is estimated, will aggregate 90,000,000 tons.

No port in the United States has given, in shipbuilding record, a more salutary demonstration of its capacity to be a world port than has Portland-Vancouver.

But the fleet built here is a one-way fleet. Its vessels depart from the Columbia River, in most instances not to return. Its vessels sail the seven seas and reach the ports of many lands, but after leaving their launching slips are not seen here again.

National Wartime Maritime Commerce Week brings home to Portland—brings home to the ports of the Columbia—the urgency of steps that must be taken now to reestablish Pacific coast leadership of this port in general cargo movement. These are practical steps. We need:

1. Home-owned steamship lines to make this turn-around port, leaving the values of their operation here. A comparatively small number of the ships we build could establish for Portland a conspicuous position in ship operation.

2. Modernized sea terminals. Portland has now berthing capacity for only 28 working ships at 8 private and 3 municipal docks. A $3,000,000 bond issue voted last year for port improvements is in the control of the dock commission, and full public information concerning the commission's plans is extremely desirable.

3. Service—economical and efficient—to shippers and to trade territory.

4. Reestablishment of the Columbia Basin rate differential, which was justly won by dint of hard fighting before the Interstate

Commerce Commission, and lost for technical reasons that no longer exist. The original set of factors which won the 10-percent rate differential favoring this port should win the reestablishment of the rate, and this is learned on high authority.

5. The tie-in of cheap and abundant power, of industry, and of highway, rail, water, and air transportation, should be vividly pictured.

In 5 tracts, 4 inside, 1 outside, the city, the port of Portland has obtained 569 acres available for industrial sites. Will this area meet demands of new industry or should conversion of Vanport be a prominent consideration?

6. Studies should be thorough, dealing with raw materials, processing, education and research, and marketing.

7. Understanding should be clear of the importance of a deep harbor entrance, the widened and deepened channel from the sea, and the advantages of a fresh water harbor, with long shorelines and great potential berthing areas. Also the barnacles drop off the ships.

8. Taxes: Ability to meet competition of other States in a tax structure that encourages industry, and investment is an essential feature of any program that involves the port, the city, or the State.

9. Coordination: In the course of his administration Mayor Riley has done nothing more creditable than to announce that he will appoint a committee assigning to it the coordination of the activities and related interests of the port and the community.

Competition will be increasingly keen among Pacific coast ports. By aggressive policy capitalizing natural advantages, Portland can stand out in the list that includes Puget Sound, San Francisco Bay, Los Angeles, and San Diego. Or, by apathy and lack of concerted effort, we can be lost in the hurly-burly of shouldering competition.

This is the time to decide. This is the time for action.

War Food Administrator

EXTENSION OF REMARKS

OF

HON. ROBERT RAMSPECK

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Saturday, May 26, 1945

Mr. RAMSPECK. Mr. Speaker, the President has received the following letter from the Honorable Marvin Jones:

MAY 22, 1945.

DEAR MR. PRESIDENT: At the time I tendered my resignation as War Food Administrator to you in April I advised you of my desire to return to my work on the Court of Claims. You requested that I stay on a while as War Food Administrator which I agreed to do. You indicated that I should let you know when I felt I should leave.

The Chief Justice has said that he would like for me to return to the bench as soon as my work here will permit. The Court has been very generous in giving me leave of absence. However, I feel that I should return to my regular assignment at an early date.

If it meets with your approval I should like for the resignation to become effective not later than June 30, the end of the fiscal year, although of course the date could be adjusted to suit your convenience.

In this connection I suggest for your consideration the advisability of merging the War Food Administration and the Department of Agriculture.

While the war was being fought on both fronts there was considerable logic in having an independent War Food Administration. It has worked well. In each of the war years there has been an outstanding record of production. There has been complete cooperation between the Secretary of Agriculture and myself.

Now, however, that victory in Europe has been achieved, I feel that the work of the Department and War Food could well be carried on by the Secretary of Agriculture, probably with somewhat less expenditure of funds.

I shall await your pleasure in the matter.

Sincerely yours,

MARVIN JONES.

Following is the text of the President's letter of reply:

MAY 23, 1945.

DEAR MARVIN: In view of your desire expressed to me last month to return to your place on the Court of Claims, I regretfully accept your resignation. I understand that the Chief Justice of the Court is now anxious that you resume your judicial work as soon as possible.

Let me express my own appreciation, and also the thanks of the people of the United States for the hard, conscientious, and efficient work you have done as War Food Administrator.

It was a most difficult assignment. The needs of our armed forces, of our allies, and of our own civilian population called for the highest degree of competence in food production, management, and distribution. It is to the everlasting credit of the War Food Administration that even after supplying the great demands made upon us from all over the world, the American people as a whole not only did not go hungry but actually enjoyed a better diet than in the days before the war.

It is an accomplishment of which you can be very proud.

With best wishes for continued success and happiness in your work,

Very sincerely yours,

HARRY S. TRUMAN.

One Master for Railroads

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Saturday, May 26, 1945

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Oregonian of May 23, 1945:

ONE MASTER FOR RAILROADS

Representative BULWINKLE, of North Carolina, has introduced in Congress a bill to remove the apparent conflict between the Interstate Commerce Act and the antitrust law.

Out of the half-century-old laws creating an Interstate Commerce Commission for regulation of railroads has grown the concept of a national railway system, as distinguished from a large number of strongly independent and vigorously competing rail lines.

The spirit of the Transportation Act and the recommendations of the Interstate Commerce Commission have encouraged and supported the organization by rail lines of rate bureaus, committees, and associations which deal collectively with rates, services, interchange of equipment, and a great variety of other matters which in the days when competition had full sway produced flagrant discriminations in behalf of large communities and large shippers and to the prejudice of small communities and small shippers.

The products of co-operative and collective action by competing lines have been subject to clearance by the Interstate Commerce Commission. That agency is now empowered on its own motion to inquire into the reasonableness of railroad agreements, and the agreements are also subject to contest by interested shippers.

But last August the Department of Justice filed an antitrust suit alleging that rate schedules filed by western railroads were agreed upon in advance, and were coercive and in restraint of trade, and therefore in contravention of antitrust laws. At the time some commentators cynically remarked that the Department of Justice should have included among the defendants another arm of the Government—the Interstate Commerce Commission. Shippers' organizations, as well as the railroads, deprecated the filing of the suit, foreseeing aggravating, if not chaotic, results if the attempted dispersal of railroad committees and associations were successful.

The issue is not new. In 1943 it was presented in a Senate committee hearing. At that hearing the late Joseph B. Eastman, who had been on the Interstate Commerce Commission a quarter of a century and was then Director of the Office of Defense Transportation, told the committee he did not see how the railroads could comply with mandates of the Transportation Act and orders of the ICC unless they consulted and conferred with one another, and that, inasmuch as a public remedy for abuses existed, he believed the carriers should be relieved of antitrust provisions, and was not sure but that may be the law now.

The Bulwinkle bill puts into effect the recommendation of Mr. Eastman. It is also the recommendation of the National Industrial Traffic League, representing shippers of all types in all parts of the country and is supported widely by shippers' associations. The bill authorizes rail carriers, and also common and contract carriers by motor vehicle, or by water, who are subject to the Interstate Commerce Act, to apply to the Interstate Commerce Commission for approval of agreements between two or more carriers, requires notice and opportunity for hearing, and relieves the lines from the operations of the antitrust laws when the agreements are approved by the Commission.

Passage of the bill would automatically dispose of the antitrust case now pending. The bill is not new in principle. Agreements of the same type entered into by air carriers and approved by the Civil Aeronautics Board are relieved from operations of the antitrust laws, as are agreements by water carriers who come under the regulation of the Maritime Commission.

In short, the bill relieves the carriers involved from the impossibility of serving two masters whose orders conflict. It will put them exclusively under the mandates of the Interstate Commerce Act where they belong.

Abject Surrender of United States Market to Low Paid Labor Countries

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Saturday, May 26, 1945

Mr. REED of New York. Mr. Speaker, what has been the American traditional

interpretation of most-favored-nation treaties? Let me quote from the Dictionary of Tariff Information as follows:

It (the most-favored-nation clause according to its traditional interpretation) rests not only upon sound reason but upon continuous precedent. Mr. John Quincy Adams declared the same view in 1817 in respect to France—that the "most-favored-nation clause only covered gratuitous favors and did not touch concessions for equivalents expressed or implied." President Monroe, in his annual message of 1821, speaking of the most-favored-nation caluse appealed to by France, said: "If this should be so construed as that France should enjoy, of right, and without paying the equivalent, all the advantages of such conditions as might be allowed to other powers in return for important concessions made by them, then the whole character of the stipulations would be changed. She would not only be placed on the footing of the most-favored-nation but on a footing held by no other nation." Mr. Gallatin, in 1823, in a note to the Viscount de Chateaubriand, took the same position, and said that "when not otherwise defined the right of the most-favored-nation treatment is that, and can only be that, of being entitled to that treatment gratuitously, if such nation enjoys it gratuitously, and on paying the same equivalent if it had been granted in consideration of an equivalent." Mr. Livingstons, Secretary of State under President Jackson (1832), reaffirmed this position. Mr. Frelinghuysen, Secretary of State under President Arthur (1884), instructing the United States Minister in Japan, approved the like position when taken by the Japanese Government, and said "that if a favor for a specific condition be stipulated with any one nation, no other may enjoy the favor except upon identical or equivalent conditions." In another instruction (to the Minister in Spain), speaking of the most-favored-nation clause, he wrote: "This country has that clause in many of its compacts with foreign states, but it has never occurred to them or to us to suppose that we were thereby constrained to grant those treaty powers without equivalent the privileges which we had by special engagements stipulated to concede to countries like Hawaii and Canada for a valuable consideration." In the case of our reciprocal treaty with Hawaii, both Great Britain and Germany acquiesced in the construction.

The question here discussed was presented in 1853 for consideration of the Department of Justice, Caleb Cushing being then Attorney General. That eminent lawyer, in the course of his opinion, commenting on the favored-nation clauses of our treaty with Denmark (1836), said that such clauses "are not applicable to advantages growing out of treaties containing various articles of reciprocal pact and stipulation; for such advantages are purchased upon consideration, upon mutual and correlative engagements * * * with perfect reciprocal obligation in terms and manner as to the things to be done or suffered. Such treaty benefits are not favors, boons, or concessions. These expressions apply only to things proceeding from the mere will or pleasure of the state granting them, in matters within its own sole jurisdiction, and which the other party, to whom they are proffered, may or may not, in its own good pleasure, accept."

The Supreme Court of the United States in 1887 had this precise question before it upon a claim made by importers of Danish sugar. The claimants asserted their right under the most-favored-nation clause of the United States treaty with Denmark (1826, renewed 1858) to the admission of their sugar imported from the Danish island of St. Croix free of duty, because the United States by a recent convention of reciprocity with the Kingdom of Hawaii had conceded to the sugar of Hawaiian production that privilege. This claim required a construction by the supreme tribunal of the most-favored-nation clause of our treaty with Denmark.

The decision of the Court is stated in the following language:

"Our conclusion is that the treaty with Denmark does not bind the United States to extend to that country, without compensation, privileges which they have conceded to the Hawaiian Islands in exchange for valuable concessions" (*Bertram et al.* v. *Robertson, collector of the port of New York* (U. S. Sup. Ct. Rept., vol. 122)).

The construction above given to the clause in question has been so long continued, and so generally acquiesced in by other nations, that it may now be fairly considered as a part of international law.

Mr. Speaker, it is a striking fact that it was only during the period when Great Britain felt she was so far superior to all other nations in industrial efficiency, and therefore able to compete with every other country in the world's markets, that she shifted to the unconditional most-favored-nation principle. This was done in the hope of either forcing or inducing other nations to remove every obstacle to her penetration and complete capture of the world's markets.

The unconditional most-favored-nation trade-agreement policy is now and always has been a condition precedent to free trade. This is why the New Deal departed from our traditional policy of conditional most-favored-nation principle in 1934 to play into the hands of the low-paid-labor countries of the world by giving them access to our market without consideration from them or concessions comparable to those generalized to them.

Now that our New Dealers have been maneuvered into the position of gradually surrendering our market under the unconditional most-favored-nation principle, the low-paid-labor nations have cleverly set up 29 trade barriers to shut the United States out of their markets while they have free access to ours.

An historical review of most-favored-nation treatment in political treaties, commercial treaties, and trade agreements covering policies adopted and changes made even in the more important nations of the world would involve a book of many pages. Suffice it to say that there have been periods of 50 years during which the trend has been toward unconditional most-favored-nation treatment and other similar periods during which the trend has been toward conditional most-favored-nation treatment.

Most treaties have been devoted largely to matters of foreign travel, international shipping, foreign investments, and a multitude of other similar matters. The problems involved have been the treatment of travelers, the right of vessels flying flags of different nations, the protection of investments of people of other countries, and similar matters. Needless to say, in this vast field of international, economic relations the effort constantly has been in the direction of uniform treatment for the people, ships, investments, and so forth, of all countries. In that vast area of foreign relations the trend generally has been toward the unconditional most-favored-nation treatment.

This principle has been steadily modified during the past 100 years or longer by the development of dominions, colonies, and other territorial possessions, immigration between nations and vast developments of merchant marine and foreign investments, with the result that a multitude of exceptions including preferential treatments have arisen. This in turn has led important nations to legislate reservations intended to modify the unconditional most-favored-nation provisions in treaties. Thus, when the Tariff Act of 1942 was passed, two major reservations were made by the United States: One provided for methods of conduct in the case of unfair methods of competition, dumping, and so forth; the other provided for action in foreign discriminations against the trade of the United States. Thus while in form we and many others were tending in the direction of unconditional most-favored-nation treatment in treaties, nonetheless we were reserving methods of protection against anything considered by us to be unfair or discriminatory.

While the above statement indicates the general direction toward unconditional treatment in the writing of treaties, it is significant that while the United States had such treaties with 32 countries in 1934, these countries supplied only 18.8 percent of our total imports and took only 14.2 percent of our total exports. The total trade of the United States with these countries—the sum of the imports and exports—amounted to only 16.2 percent of our total trade with the world. Thus we had unconditional arrangements with 32 countries but they provided less than one-sixth of our foreign trade. And, furthermore, in the Tariff Act of 1922 and again in the Tariff Act of 1930 we preserved conditional treatment with all nations by specifically reserving the right to act in our own defense in the case of any unfair method of competition and in the case of any foreign discrimination against our exports.

During the world depression which began in some parts of the world as early as 1925–26 and extending through the war period and has continued for a period of 20 years, the general trend has been toward literally hundreds of special bilateral trade agreements in which special concessions have been granted in return for equivalent concessions. These are generally defined as reciprocal agreements on the assumption that equivalent concessions are granted and received. The United States is the only principal nation which has attempted to apply the unconditional principles of uniform treatment to travelers, the merchant marine, investments, and so forth, to this field of reciprocal trade.

Over a long period of time most foreign nations have maintained from two to five different or alternative sets of tariff rates to apply to commodities which enter into international trade. Generally there has been either free trade or preferential rates of duty as between national governments and their several dominions, crown colonies, possessions, and so forth, with various degrees of higher rates applied to various other countries and used

as a basis for negotiating preferential areas. Many of these have taken the form of bilateral trade agreements.

The United States has generally maintained a uniform rate of duty in the case of each commodity applied to that commodity without regard to its foreign origin. Cuba has been the most outstanding exception to that rule. It must be remembered, however, that even the United States over a long period has with meticulous care distinguished between commodities by applying ad valorem rates of duty in some cases, specific duties in other cases, and other combinations. Furthermore, by classifications based upon values, prices, and other characteristics, the United States adjusted her tariff to the national economy of different foreign nations depending upon the character of commodity received from each.

When it is said that the United States has extended uniform treatment or unconditional, most-favored treatment to most or all foreign nations by general act of Congress, that is literally not true. Prior to 1934 the unconditional, most-favored-nation treatment was never extended to any foreign country except in the form of a treaty subject to Senate approval by a two-thirds vote of that body. The Reciprocal Trade Agreements Act of June 12, 1934, is the first specific act by Congress purporting to grant universal unconditional, most-favored-nation treatment—except in the case of specific discriminations—to all nations without securing in return a treaty agreement to extend similar treatment to the United States.

Two Thousand Five Hundred Dollars Expenses Held Fair for Lawmakers

EXTENSION OF REMARKS

OF

HON. WALTER C. PLOESER

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Saturday, May 26, 1945

Mr. PLOESER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by David Lawrence from the Washington Star of May 26, 1945:

TWO THOUSAND FIVE HUNDRED DOLLARS EXPENSES HELD FAIR FOR LAWMAKERS—WRITER URGES CONGRESS MEMBERS TO FACE PAY QUESTION SQUARELY

(By David Lawrence)

Members of Congress are going through a rather uncomfortable experience these days on the matter of their salaries. Some of them are frank and outspoken about the need for more money to meet expenses incurred in the line of duty and others are fearful they may be criticized for boosting their pay at a time when wages are frozen.

This is the kind of question which is difficult to handle because the Members who are up for reelection next year can be attacked in the primaries and also in the final elections by opponents, whereas two-thirds of the Senators do not come up for reelection next year and will not have to face the issue.

This does not mean that the cleavage that has appeared thus far is confined to those who are up for election and those who are not. On the contrary, in the ranks of opponents of the proposal will be found many Members who are not required to face an election for some time to come.

This problem is one that ought to be faced squarely and without hypocrisy. The Little Steel wage formula provides for an increase of 15 percent in wages over and above January 1941. Also workers have been able by overtime pay and other devices to increase their earnings. They also have been able to leave one job for another with higher pay and get more earnings that way. Yet Members of Congress have had no increase in salary for many years.

AFFECTED BOTH WAYS

The real reason why the Senators and Representatives deserve an increase in pay is that their expenses have gone up and their salaries are subject to taxes just the same as everybody else so that they have been affected both ways.

Most people in the white-collar class have also suffered a reduction in take-home pay and moreover have not been able to switch jobs during the war period. But the heavy expenses of a Member of Congress are due to the fact that theoretically he is supposed to maintain a residence in his district and in Washington, too. Congress long ago recognized that a Member should be paid transportation going from and coming to Washington when a special session is called, and at the beginning and end of a regular session. Yet again and again a Member of Congress finds it necessary to go home to see his constituents and he has to pay his own transportation.

Then there is the matter of entertainment. Constituents come to Washington, and many of them feel the Member of Congress should buy them a lunch or take them out to dinner. If the constituent is particularly influential, the Member wants to be the host. In the long run, and year in and year out, this amounts to a sizable sum. Yet no tax deductions are given for such purposes, whereas a businessman or sales manager in private business who makes trips does get a chance to charge the expense to his firm and the company is allowed to deduct the item as an expense for tax purposes.

The courts ruled recently that a judge who maintained a home at a State capital where the court was in session could not get as a deduction from Federal taxes the expenses he incurred in maintaining a home in his original place of residence.

LOOK TO OUTSIDE SOURCES

While $10,000 a year seems like a lot of money, it is nearer $7,500 after the tax collector takes his share. Out of this sum the Member must pay for two residences and entertain hundreds of his constituents a year. The unfortunate consequence of this is that too many Members of Congress have financial worries and are tempted to look for outside sources of income. Some of them practice law and take fees on cases presumably unrelated to Federal business. Others deliver lectures and accept fees from organizations that have been known to make the fees larger than usual in the hope of currying favor with a Member of Congress.

The job of Senator or Representative is worth at least $12,000 a year to the Nation. For members of the Cabinet get that sum, and they have all sorts of perquisites to go with the job, such as an auto at Government expense. There are various plans but what is being proposed in the main now is an expense allowance of about $2,500 a year for each Member of Congress.

This is a fair solution of the problem and Members of Congress ought to vote that for themselves with a feeling that it is more important to put an end in the possible abuses through outside sources of income for Members of Congress than it is to face the criticism of a self-granted increase in pay.

The Paper Industry and Reciprocal Trade Agreements

EXTENSION OF REMARKS

OF

HON. ROBERT SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Saturday, May 26, 1945

Mr. SIKES. Mr. Speaker, some outstanding facts as to the relationship of the paper industry to the proposed expansion of the Reciprocal Trade Agreements Act, by H. R. 2652, can be summarized as follows:

First. The paper industry is particularly sensitive to foreign competition because foreign nations have machinery of equal efficiency, and its workers have the same know-how as our own, with the result that every country in the world is a lower cost producer of paper than the United States, due to lower wage and lower standards of living. If the United States paper industry is to survive, it must either be by means of reduced wages and living standards, or by means of such tariff equalization as will permit the continuance of United States standards of wages and living.

Second. Every ton of imported paper is the equivalent of 3 days of lost time by one skilled American paper maker.

Third. American wage rates are from two to three times those for comparable workers abroad.

Fourth. Reciprocity cost the United States three-quarters of its newsprint industry. The Reciprocal Trade Agreements Act has resulted in a progressive loss of markets for American manufacturers. For instance, novel news, a dutiable printing paper was formerly produced in the United States for a large portion of the consumption requirements. United States mills made 35,000 tons of this paper in 1939, less than 1,000 tons in 1944. This is equivalent to a loss of potential employment by United States paper makers of over 100,000 working days by skilled American workmen. The same condition is developing in four other printing paper grades, approximately 60 percent of the domestic market being taken over by lower cost Canadian producers. This has transpired in 5 years, and when the war is over the influx of Scandinavian paper will accelerate the destruction of domestic production of these grades.

Fifth. Of particular interest to the South is the effect of duty reductions on kraft paper. Foreign machine-glazed kraft, under the impact of duty reductions effected by trade agreements with Sweden and Finland, was sold in this market at $2.87 per hundredweight, as against a domestic price of $5.25. The entire domestic market was affected by reductions made to hold customers who were transferring their business to foreign manufacturers.

Sixth. Paper-mill profits are not excessive. In only two of the past 10 years has the average profit been above 5 percent, and the top figure was in 1941, a year of maximum prosperity, when the profit was 7.18 percent.

Seventh. Proponents of the Doughton bill state that the objective is to reach the low-tariff level of the Underwood Act of 1913. In the paper field, rates on 18 out of 23 grades of paper on which reductions have already been made under the Trade Agreements Act are as low or lower than those in the act of 1913. The Doughton bill would permit reductions to half of the rates in effect in 1913. The appended table gives the comparative paper tariff rates in detail under the acts of 1913, 1922, and 1930, and those now in effect under the Trade Agreements Act.

Eighth. The Reciprocal Trade Agreements Act binds the hands of Congress, denying Congress its constitutional duty to determine tariff rates. Under reciprocal trade agreements the Nation is bound by any action of the State Department, and pledged not to make any changes, by legislation or otherwise, in conflict with the decision of the State Department to reduce duty rates. No duty rate fixed by any trade agreement can be altered by act of Congress for 3 years from the effective date of any such agreement. The agreements are placed in effect for 3 years, and automatically extended unless formal notice is given in advance of a wish to nullify any such agreement.

Ninth. The United States paper industry represents an investment of $2,900,000,000, and must be maintained at approximately 75 percent of capacity to keep "out of the red." Its mills are located in 38 States.

Tenth. Of particular interest to Florida is the effect of trade egreements reducing paper mill output on the prosperity of communities where paper mills are located. Approximately half of the industry's entire investment is in towns wholly or partly dependent on the business developed through those mills. Fifty-eight percent of the Nation's mills are in communities with a population of under 10,000 and the largest percentage of the primary industry is in communities estimated to be from 70 to 100 percent dependent on the mills.

Eleventh. The paper industry is one of Florida's infant industries with possibilities of extensive enlargement unless tariff concessions to foreign competitors suppress efforts to expand the paper industry in the South. Fernandina and Port St. Joe are from 90 to 100 percent dependent on their paper mills for their existence. Panama City is from 25 to 50 percent dependent on the paper industry for community prosperity and Hialeah, Jacksonville, and Pensacola are classified as being up to 25 percent dependent on the mills in those localities.

APPENDIX C.—*Duty rates on paper, 1913 to 1945—Grades on which duty rates have been reduced by reciprocal trade agreements*

Grade	1913	1922	1930	Jan. 1, 1945	
				Actual rate	Equivalent to ad valorem computed on latest available statistics of actual importations
	Percent				
Printing	12	¼ cent per pound and 10 percent	¼ cent per pound and 10 percent	⅛ cent per pound and 5 percent	10.8 to 12 percent.
Paperboard, plain	5	10 percent	10 percent	10 percent (bound)	
Paperboard, processed	25	30 percent	30 percent	$14.50 per ton, not less than 15 percent or more than 30 percent.	
Pulpboard in rolls for use in manufacture of wallboard.	f	10 percent	10 percent	5 percent	
Same, processed	25	30 percent	30 percent	15 percent	
Tissue, light weight [1]	30	6 cents per pound and 15 percent	6 cents per pound and 20 percent	If valued at not over 15 cents, 3 cents per pound and 10 percent.	30 percent.
Tissue, heavy weight [1]	30	5 cents per pound and 15 percent	5 cents per pound and 15 percent	If valued at not over 15 cents, 2½ cents per pound and 7½ percent.	28.7 percent.
Tissue, stereo, carbon, pottery, light weight.[1]	30	6 cents per pound and 15 percent	6 cents per pound and 20 percent	If valued at more than 15 cents, cents per pound and 15 percent.	21.5 percent.
Same, heavy weight [1]	30	5 cents per pound and 15 percent	5 cents per pound and 15 percent	If valued at more than 15 cents, 4 cents per pound and 10 percent.	17 percent.
India Bible (over 10-pound)	12	4 cents per pound and 15 percent	4 cents per pound and 15 percent	2 cents per pound and 10 percent	13.6 percent.
Crepe paper	30	6 cents per pound and 15 percent	6 cents per pound and 15 percent	3 cents per pound and 7½ percent	32.5 percent.
Simplex decalcomania	35	5 cents per pound	5 cents per pound and 10 percent	2½ cents per pound and 10 percent	22.1 percent.
Drawing paper	25	3 cents per pound and 15 percent	3 cents per pound and 15 percent	2 cents per pound and 10 percent, if over 40 cents per pound.	13.7 percent.
Hand-made paper	25	do	do	2 cents per pound and 10 percent, if valued at over 50 cents.	12.9 percent.
Bristol board	25	do	do	2 cents per pound and 10 percent, if valued at not over 15 cents.	33.7 percent.
Hanging raw stock	12	10 percent	10 percent	7½ percent	
Filtering	30	5 cents per pound and 15 percent	5 cents per pound and 15 percent	2½ cents per pound and 7½ percent, if valued at 75 cents or more.	8.1 percent.
Blotting	30	30 percent	30 percent	15 percent	
Wrapping, kraft	25	do	do	20 percent	
Wrapping, other	25	do	do	25 percent	
Vegetable parchment	25	3 cents per pound and 15 percent	3 cents per pound and 15 percent	2 cents per pound and 10 percent	29 percent.
Straw board and paper, less than 12 pt. not less than 8 pt.	5–25	10–30 percent	30 percent	15 percent	
Cigarette	f0	60 percent	60 percent	45 percent	

[1] Lightweight refers to paper weighing not over 6 pounds per ream of 288,000 square inches. Heavyweight is paper 6 pounds or over, less than 10 pounds.

Will the Peace Agreement Stick?

EXTENSION OF REMARKS

OF

HON. MAX SCHWABE

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Saturday, May 26, 1945

Mr. SCHWABE of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Columbia (Mo.) Daily Tribune of May 23, 1945:

WILL THE PEACE AGREEMENT STICK?

Some of the major disagreements that now stand in the way of a world security organization and a lasting peace are nothing more than old sores caused by wounds that were inflicted soon after the end of World War I.

The squabble over Poland at San Francisco, for instance, dates back to 1920 when Poland attacked Russia, and after victory with French aid, flouted one of the territorial agreements of the peacemakers by annexing territory east of the Curzon line. Later Poland absorbed territory which had been awarded to Lithuania, and Lithuania forthwith tore up another peace settlement by taking over Memel.

Likewise, the trouble the Allies are having with Marshal Tito can be traced back to Mussolini's annexation of Fiume, which had been reserved to Yugoslavia by the treaty of Versailles. By making demands in Poland and Trieste, Premier Stalin and Marshal Tito are simply righting what they consider to be wrongs inflicted upon their respective countries by the failure of other nations to abide by the promises they made at the peace table. And while this may not be the way to harmony and lasting peace, it is most certainly a natural reaction. Therefore, the chances for establishing a lasting peace this time depend largely upon the kind of peace settlements that are made and whether those settlements will stick.

World War II could hardly have broken out if the settlements of the armed conflict of 1914–18 had stuck—if the League of Nations

had worked, or if the provisions of the Versailles Treaty on German disarmament and conscription and submarine building had been enforced. Germany met her original reparations obligations to a considerable extent for 5 years, if only by dint of receiving war loans, especially from the United States. But reparations were scaled down by the Dawes plan of 1924, which also ended the French-Belgian occupation of the Ruhr, and were scaled down still further by the Young plan of 1929. Only 2 years later—in 1931—reparations, as well as war debt payments, stopped completely. The general disarmament conference of that year got nowhere. Japan was allowed to absorb Manchukuo. And early in 1933 Adolf Hitler was allowed to come to complete power in Germany, although his program called for flat repudiation of the peace treaty.

After this there followed a series of open and official repudiations of the peace treaty. In 1935 Hitler formally flouted the clauses imposing disarmament on Germany and forbidding conscription. One year later he violated the treaty's prohibition on refortifying the Rhineland. Mussolini annexed Ethiopia and was allowed to get away with it. In the face of all this, Great Britain agreed to let Germany build up to one-third of the British naval strength.

In 1937 China was left unaided against the Japanese invasion. In March 1938, Hitler annexed Austria. In September he took the Sudeten areas of Czechoslovakia. Poland took the Teschen area, Hungary took some of southern Slovakia. In March 1939 Germany and Hungary took the rest of Czechoslovakia, and Germany took Memel. In April of that year Mussolini took Albania, and on September 1, World War II broke out.

These are the highlights in the story of the years between wars. It is a story of jealousy between the big powers, secret intrigue, and broken promises leading up to open repudiation of agreements solemnly entered into at the peace table. Similar agreements are now being made at another peace conference. Will they stick any better than they did before?

Reciprocal Trade Agreements

EXTENSION OF REMARKS

OF

HON. GEORGE J. BATES

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Saturday, May 26, 1945

Mr. BATES of Massachusetts. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following speech of Alfred C. Gaunt, former president of the New England Small Business Association, on reciprocal trade agreements:

I am an owner of a small worsted mill. I was the first president of the N. E. Smaller Business Association and chairman of the National Advisory Council of Independent Small Business. I come as a private citizen interested in the promotion and preservation of small independent business in America.

You gentlemen of the committee possibly have not had presented to you the particular angle of the so-called reciprocity program as it affects small business, and I should like to lay before you some facts that may help you in arriving at a sound decision.

You may be interested to note that the remonstrants against lowered tariffs are almost without exception from industries which are not monopolistic, but primarily made up of small-owner operated units, and among whom exists full, free, and fair competition.

Some of them are the following:

	Employees
Paper and allied products	264,716
Clock and watch manufacturers	20,287
Surgical instruments	14,339
Hat manufacturers	23,369
Lace manufacturers	7,254
Lumber manufacturers	360,613
Cutlery, tools, and hardware manufacturers	73,664
Cotton weaving	312,249
Footwear	218,028
Woolen and worsted	140,022
Cotton yarn	70,452
Rayon weaving	65,432
Chemicals	287,136
Tableware	27,330
Shoes	18,845
Glass manufacturers	67,000
Toys	15,610
Sugar refining	14,133
Vitreous and potteries	33,105
Beet sugar	10,410
Perfumes	10,363
Total	2,054,357

If to these are added such of the owner-operated farms and farm products processors, and the miners and others not on this list who ask or need protection, it is unquestionably fair to say that tens of thousands of small business concerns, and the jobs of several millions of their employees, will be adversely affected by any reduction of tariff which permits increased imports of lower-labor-cost products from abroad to undercut them. The long period of depression followed by tariff cuts had already put multitudes of small industries out of business, and many others like myself were "hanging on the ropes" when we were saved by the cessation of imports when war came.

To demonstrate to you that these industries are genuinely small business, may I give you the break-down of the business I know the best, the woolen business, which I think is largely typical of these small businesses listed. In the woolen business there were in 1937—

Plants employing from 1 to 100 persons	241
Plants employing from 101 to 500 persons	293
Plants employing from 500 to 2,500 persons	43
Plants employing over 2,500 persons	6
Total	583

There are no restrictive practices or patent or price agreements among the woolen mills. The largest single concern in the business by no means dominates, having less than 10 percent of the looms of the industry. There exists full free and fair competition, and free enterprise in its true sense. The units are generally located in small communities of which they are the chief support. They are over 95 percent resident-owner operated.

Cotton textile mills also belong in the same category. The potteries, the lumber manufacturers, the hat and shoe and lace manufacturers, and others, and their employees, are likewise all of the type and geographical distribution that are essential to the healthy economic and social life of America as a whole.

The point which I would like to make, which I feel sure has not occurred to you, is that the sufferers from lowered tariffs will not be the aluminum or steel or General Electric or automobile big business.

WOLVES

It will be the little fellows and their employees who will be thrown to the wolves. It is the existence of innumerable small businesses that is now threatened by the advent of peace.

Congress has universally and uniformly been friendly to small business. Congress passed by a unanimous vote of both Houses the bill creating Smaller War Plants Corporation. Most of the gentlemen on this committee are on record as being for the promotion and preservation of independent small business.

SACRIFICE

The glib answer of those who espouse lower tariff, that "it may be necessary to sacrifice one industry to promote another," overlooks entirely the importance to the Nation of the small industries they propose to sacrifice.

Most small businesses and farms cannot be moved. It would be uneconomic and antisocial to move them to Detroit, even if Detroit is booming with export orders. Moreover, not all small businessmen and their workers wish to uproot themselves and their families from their small communities.

Wool growing, for instance, is an occupation in almost every State, and the most important occupation of 11 States, which have a rural population and small towns.

To increase the activity and congestion and concentration in big centers, while small communities go on WPA, is certainly a condition we, all of us, wish to avoid.

So also the policy of snuffing out what some may call an inefficient industry is at direct variance with that of President Woodrow Wilson when he said, "We were absolutely at the mercy of the world on chemicals. We are not going to get caught that way again." A wise tariff policy launched shortly thereafter turned what many thought was an inefficient industry—chemicals and dyestuffs—into one that now leads the world. Without this industry our country would have been placed in a disastrous position for rubber and ammunition. Without the textile industry—also erroneously characterized by some as inefficient—our boys would have gone cold and short of shelter.

Any definition of "inefficient industry which should be sacrificed" as being "one which pays low wages" ought to be examined, especially if it is an industry marked for extinction. The textile industry would almost immediately qualify under this definition as inefficient unless one gets the whole story. If we say, for instance, that the automobile industry is efficient because it pays an average of $1.25 an hour then the textile industry is inefficient as its average is 81 cents an hour.

But here is the fallacy. In the automobile industry there is normally one worker in each family—the man. The variety and lightness of work in the textile industry makes it possible for not only the man to work but perhaps several of his unmarried daughters. I know of one typical family where the mother holds out her apron, and the husband and daughters and a crippled son toss in over $200 every weekly pay day. The average family income in textile communities is as great or greater than the average family income in the automobile industry or the mining industry or others where the rates per hour are apparently higher.

Condemnation or sacrifice of any such industry is a disservice to our plans for full employment.

The problem of survival of small business is very real. The mortality among small business because of war conditions has been over 500,000. Big business meanwhile has thrived and grown greater.

You gentlemen of the committee are naturally turning your eyes to the postwar period in your study of this trade-agreement bill.

HISTORY

After the Napoleonic wars, with the low protective duties then existing in our country, England sent shipload after shipload of products into the United States and nearly ruined what little industry we had at that

time. We were saved by erecting tariff barriers, as the Hollanders have been saved from the sea by raising their dikes.

You perhaps remember the period after the last war. The replacement of destroyed material kept all industries booming, until the tumble that came about 18 months after Armistice Day. We were at that time operating under the low-tariff Underwood bill of 1913. A tremendous flood of foreign goods started to overwhelm this country. We pulled out of that slump by raising the tariff. The Underwood low tariff was replaced with an antidumping bill and an emergency tariff in 1921, followed by the Fordney-McCumber tariff in 1922.

While the world-wide destruction of goods will keep productive facilities going at top speed for a period after the war, we know that the world's productive capacities will soon overtake the demand. It is time right now to put our tariff house in order.

The British Board of Trade already have sent scouts and "research men" to this market. They have appropriated substantial sums of money to place agents here who have already canvassed the users of fine woolens and worsted goods.

These British propaganda missionaries are earnestly working to revive the old idea that something imported from abroad is better than can be made in this country, notwithstanding the fact that it has been demonstrated now over many years that the American craftsmen and workmen are as skilled as any that exist anywhere. They used to tell us that only from Germany could be had such wonderful dyestuffs. Today our laboratories produce products which surpass any things that Germany ever did. It used to be that if a man wanted a fine automobile he went after a foreign make. Today our automobiles lead the world in beauty and value and serviceability. Certain interests still promote the propaganda that imported woolens are superior to American woolens. They even go so far as putting a tag on certain fine American woolens and stamp them "imported." I have seen where this very thing had been done on products of our own mills by some unscrupulous person. Today American ingenuity and skill and good taste produce woolens as fine or finer than those made anywhere in the world; and in sufficient volume to serve this greatest luxury market in the world.

Headlines in British papers frankly state they are looking to the "rich American market." In the prewar year 1939, the first year Britain got the benefit of reduced tariff on woolens, she jumped her shipments to us over 350 percent. Only the war prevented further distress to our woolen mills, most of which are owner-operated small independent businesses. Britain already is "squared away" to jump in at the advent of peace, even under the present 50-percent concession. She needs no further 50 percent. She should get less than 50 percent. This drive of hers is going to hit most especially the smaller mills like my own. You see the finer goods requiring higher skills are mostly made in the smaller units; and inasmuch as the finer cloths have the greater labor content, Britain with her much lower standard of living for workers is in a preferred position on finer goods to knock out our smaller mills. Our wage scale is more than double that of Britain. Czechoslovakia and Italian and Japanese wage rates are still lower, and they all have the same modern machinery that we have.

The tariff rates as now in effect under the Reciprocity Act on the products of these small mills are today lower than those which prevailed at the time the Underwood Act was in force, and when the 1920 postwar flood of foreign goods submerged us.

VETERANS

Under no circumstances should the power of making still further reductions be granted, unless you wish to kill off more small independent businesses. Hopeful as we are that the return of the veteran will open up many new small businesses, we must be concerned with seeing that he gets a fair start and fair show. In Sunday's New York Times is an ad of a returned veteran seeking to buy a small woolen mill. What a tragedy if we hand him one that must stand idle while Britain's mills run night and day.

The small businessman does not ask subsidies. He does not fear fair competition from big business neighbor or from abroad; but you note I say fair competition. As labor has protection from unfair labor practices, so must small business have protection from unfair business practices. The foreigner has no 40-hour week. He does not pay time and a half. He pays his labor low wages. Small business has a right to expect from its elected representatives laws that will shield it from this unfair competition. You may remember that as between North and South NRA said that it was unfair competition for industry to make profits out of lower wage rates. Exactly the same sort of fair parity as that directed between North and South should be established as between foreign producers and domestic producers. What the small businessman asks is a parity tariff—one that takes care of the cost differential (principally labor) and other unfair or artificial advantages that foreigners employ.

The farmer has a formula for agricultural parity, but we do not have any accepted standard of practice or policy of establishing a parity tariff for industry.

The reciprocal trade agreement law gives no practicable rule or standard by which changes in any tariff rates can be determined. They are left to the uncontrolled direction of the President—the only present limit being that he may not increase or decrease any duty by more than 50 percent. Although we have numerous studies of costs here and abroad and information on comparative labor rates, we make no use of these figures in arriving at changes. I know of no study that has ever been made, however, of the relative impact of so-called reciprocity reductions on small business versus big or monopoly businesses.

If you say "Well, why does not small business develop its export trade?"—you have the answer when you note that the principal manufactured exports that interest foreign buyers are our mass-production products; and small business does not and cannot make mass-production items. Moreover small business is not organized with export branches as is big business. The natural markets for small businesses are the nearby or home markets to which it should have access on at least as fair a basis as any foreigner. Big exporting business would in effect be given a further subsidy of tariff favors with further lowering as proposed.

PEACE AND WAR AND THE TARIFF

The absurdity of some arguments for a reduced tariff have doubtless already impressed you. For instance, the statement to the effect that anyone against continued or further reduced tariffs contemplated in this bill "is advocating another war." In fact when one examines the record, he is impressed by the regularity of war following a decreased tariff. In the 1890's we had the Cleveland low-tariff bill followed by the Spanish War. In 1914 World War I followed the tariff cuts of the Underwood bill. In 1934–37 came the so-called reciprocity reductions followed by World War II.

Does it not lie nearer to the truth for us to conclude that friction and irritation and disruptions and wars are more often caused by violent or radical shifts or changes in tariff policies and levels? Was not the reversal of Britain's free-trade policy and establishment of protection and Empire preference a restriction of world trade and a source of world irritation? And did not Britain attribute that change of her policy to our American "weather-vane" policy?

RECIPROCITY

As to foreign trade—of course, we want foreign trade. But it should be true reciprocity—on the basis of our buying from the other fellow what we can use without detriment to ourselves; and selling to the other fellow what he wants to buy. This can be done either in direct trade or in the so-called three-way trade. Rubber or tin or coffee or a certain amount of Australian wool imported do not displace American labor, and such imports promote prosperity in the countries of the exporters. In return we sell them what they want, machinery, automobiles, gadgets. That produces prosperity and employment in our country. That is true reciprocity.

Then as they raise their standard of living and the labor differential is narrowed we gradually, not violently, reduce our tariffs, keeping them at a level where there is a basis for them to enter our market in fair competition, not with an overwhelming flood such as hit and prostrated us in 1921.

The tariff should not be a football of politics or diplomats. A policy having been laid down, it should be consistent, based on scientific determination; and subject to supervision not by the State Department or bureaucrats far removed from public control, but by our Senators and Congress, who are the elected representatives of the interests and workers affected.

DECREE

You gentlemen, the duly elected representatives of the people themselves, are in a far superior position to know what is good for your constituents than are any bureaucrats or State Department officials trading behind closed doors. Opposition to referring back for ratification to you or the Senate is either a reflection on you or the assumption of a very great superiority on their part. If they fear to submit their agreements to you, they should not make them. If they are for the good of the country and its small independent businesses, they will be ratified. If they are not, they should not be ratified. No one man should have the power to decree the death of any industry and the unemployment of its workrs; and no few big exporting industries should be artificially giantized by killing off small businesses which supply our domestic market and do not need to export.

The State Department is open to severe criticism because of the method used in negotiating these treaties. Interested parties of small business or agriculture were not invited to attend preliminary mapping out of concessions to be discussed. Formal negotiations on the last British agreement began three weeks before the public hearings opened. The hearings given were so perfunctory and apparently so boring to our officials that everyone in attendance felt that the stage was already set. Announcement of the final agreements only confirmed our worst fears. The small businesses and small farmers had been made the sacrificial goats, and we had no forum of our elected representatives to whom we could appeal.

It is, of course, the hope of some that the lowering of tariff on imports will afford markets for increased American production, but the lowering should not be haphazard or done in star-chamber sessions. It is little consolation to a small business industry and its employees that is crippled or destroyed by foreign competition, that some big industry in some other section of the country is profiting.

I feel sure that this committee and the State Department have not fully appreciated the fact that the use of the authority to reduce tariff protection has been highly discriminatory and has been unwittingly applied to the detriment of small, independent, competitive business. Not only should there

be no further cut of another 50 percent of existing rates, but a policy of protection of small business having been established, let there be a reappraisal of all rates to the end that reciprocity, like charity, shall begin at home, with fair play and fair trade first of all to our own small industries and their employees.

If shortness of time and expediency indicate temporary measures, may I suggest that renewal be for but 1 year; and with rates frozen right where they are against any further reduction that will harm any independent competitive small business. Then during this ensuing year let a survey be made and recommendations be brought in for a parity tariff that will not discriminate against American independent competitive small businesses and their employees.

The Tariff Problem

EXTENSION OF REMARKS

OF

HON. BERTRAND W. GEARHART

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Saturday, May 26, 1945

Mr. GEARHART. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by George E. Sokolsky, from the New York Sun of May 8, 1945:

THE TARIFF PROBLEM

(By George E. Sokolsky)

To the fore again is the question of the American tariff—a political and economic irritant since Alexander Hamilton laid the foundations of our fiscal policies. The Republican Party has generally been for a high tariff; the Democrats have supported a lower tariffff, except on such agricultural products as they desired to have protected.

The author of the doctrine of reciprocal tariffs was a Republican, William Howard Taft, and his concepts have been expanded by Mr. Hull in the present tariff treaties. Those treaties are obviously obsolete because of the war and the alterations in the economies of all countries that have occurred during the war years. When, for instance, our reciprocal trade treaty with England was arranged, that country was the principal trading nation of the world. What is her trading position today? I think the British would like to know.

SIXTY MILLION JOBS?

Henry Wallace has, with characteristic self-assurance, hurled himself into this tariff argument and it seems to be his conclusion that if our tariff is low we shall enjoy 60,000,000 jobs, for which there can be no more than 46,000,000 workers, if any attention is paid to arithmetic. How does Henry Wallace or anybody else know what will bring more jobs out of foreign trade unless and until he knows the economic state of trading countries, the value of money—ours and theirs—rates of exchange, controls of production, wage scales, standards of living? For instance, what is the purchasing power of Germany today; what will it be 10 years from now? How can anyone tell?

A RUSSIAN LOAN?

Much is made of our postwar trade with Soviet Russia, yet every report indicates that that country is trying to borrow $6,000,000,000 for postwar purposes. In a word, Soviet Russia will pay us with our own money, which increases our national debt and our tax load. Is that kind of trade worth while? Maybe. But I should like to see some figures proving it. Henry Wallace's excitable words are not proof.

SHALL "WE RUSH IN WHERE," ETC.?

Before we can approach this question of a tariff rationally, we need to have some knowledge of the state of our own economy. We need to know what we shall be competing against, not only in the markets of the world but in our own market at home. Against what, let us say, are goods manufactured at $1 an hour to compete? Against goods manufactured at 20 or 50 cents an hour, or perchance against slave labor?

That is what we need to know before we decide for a high tariff, a low tariff, a reciprocal tariff, or any kind of tariff. We need facts which are today unavailable and without which no intelligent person can form an opinion.

KRUPP AND SKODA

For instance, we know that the Krupp works, the Skoda works, and similar European competitors of our steel-products companies have been bombed perhaps out of existence. Skoda used to manufacture locomotives and such heavy products in competition with us of excellent quality but lower price, the differentials coming out of their lower wage scale plus a subsidy from the French Government. Our plants had no such subsidy from any source and paid a higher price for wages and raw materials.

CAN THEY PAY?

Their destruction is to our advantage, if—and that is the big word—if somebody will discover a way for European countries to pay for what they want to buy. Up to now the only solution offered is that the United States lend them money, through credits or by exchange manipulations. That means that the American people pay for the goods that we sell to the Europeans and we agree to be repaid in goods, which we can ourselves manufacture, when they have them to offer us, and we pay for their goods in credits or cash. Then they pay the debts with our cash or their cheaper goods to compete with our wage scale.

LET'S STOP, LOOK, AND LISTEN

Maybe that is the only way it can be done. Maybe that is the only way we can keep our overexpanded industry going. But it will break us in the end because it is unsound. We need figures on all this—and accurate figures are still suppressed or unavailable.

Poland

EXTENSION OF REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Saturday, May 26, 1945

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement on behalf of the Eastern Massachusetts Congress, an affiliate of the Polish-American Congress:

POLISH AMERICAN CONGRESS, INC.,
EASTERN MASSACHUSETTS DISTRICT.

We, the members of the Eastern Massachusetts Congress, which represents 150,000 Americans, an affiliate of the Polish-American Congress, Inc., numbering 6,000,000 Americans of Polish descent, in a meeting assembled at the Hotel Statler, Boston, Mass., April 22, 1945, realizing the historical importance of the San Francisco Conference, express the following:

Today the entire world is looking to America for enlightened leadership to lasting peace. Much blood has been shed for the ideals we Americans cherish. New hope is given in the assurance made by the new President that he will support these ideals with all his strength. Consequently we are certain that America will never become a party to any plan for partial victory. To settle for merely another temporary respite would surely jeopardize the future security of the entire world.

The grave responsibility of procuring peace must rest with the defenders of peace—the United Nations. We realize that in this shrinking world, it is futile to seek safety behind geographic barriers. Real security can only be found in justice and charity, based on divine law.

A sound world organization is not an utopian dream. With the honest goodwill of nations, it can be realized, and a new era in international relations would be created. We call upon our leaders not to yield to defeatism, but rather to show courage and firmness, so that right may prevail over might.

The present war began with an unprovoked attack on Poland by Germany, with Russia joining in the attack. We entered war dedicated to the principles of the Atlantic Charter, loudly proclaiming the "four freedoms" to the whole world. We, the American people, are cognizant and agreeable for the necessity of a cooperative and harmonious war effort against Germany. But we, the American people, do not see the necessity, much less the justice, of achieving such an effort through the despoliation of the Polish Nation.

Poland is the test of our sincerity. Poland was and is a faithful ally of the United Nations. She should not have been treated as a conquered or liberated country. We should not be totally unconscious of the dictates of humanity. Both Churchill and our late President have frequently referred to the great part Poland played in our general victory. Rightly she was called the inspiration of nations. Contrary to promises and elementary fairness, Poland was not represented at Yalta. Her people, as was pledged, were not consulted concerning their fate. Heroic Poland was not treated as an ally, but more like an enemy. Among the nations of Europe none has a more heroic history than Poland.

The test for the possibility of world order may well be found in considering the Nation that has sacrificed so much in the cause of liberty and independence. Poland should have a prominent place within the circle of the Big Three or the Big Five. Instead she was adjudged at Yalta and now excluded from San Francisco.

The Crimean Charter may have given new promises of peace, security, international cooperation, and new life to the ideals of liberty and democracy. But the Crimean proposals as regards to Poland are shocking to all those who adhere to the cause of freedom and the right of self-determination. Poland is made a victim of injustice, its Government is delivered into the hands of an unfriendly power, contrary to all rules of right and justice—that Poland which has suffered more than any other nation in this world holocaust; that Poland which stood against Nazi aggressors from the very beginning of the war; that Poland where you find no collaborators with nazism; that Poland which has fought and is fighting courageously with our armies on every European front—is being forced by her allies to surrender half of her territory.

Our late President pledged our country that in the choice of a permanent Polish Government the people of Poland would be guaranteed the right of a free secret ballot and no foreign power would be permitted to influence this election. The peace of the

world demands a free, independent, and democratic Poland. Poland, secure in her rights of freedom and independence, will make further great sacrifices for humanity and will continue to contribute her share toward the international welfare.

Let not the new security organization start off with the bitterness of the small nations and the fixed impressions in the minds of many people that the seeds of a future war have been planted in the field of broken pledges and injustice. We, the American people, therefore must see to it that at San Francisco the fulfillment of the terms of the Atlantic Charter and the "four freedoms," under which we marched to conflict, be carried out to the letter.

We ask that these ideals be invoked not only for Poland but for all small nations. We have sacrificed flesh and blood; let us not sacrifice principles. Faith must replace force; law and not the gun must reign; freedom and not enslavement; liberty and not tyranny; God and not Belial must rule.

We are deeply concerned that our Nation's sacrifices may not prove to be in vain but that the San Francisco Conference be successful in bringing about a just and lasting peace. We therefore propose:

1. The recognition of the principle that all nations be bound by the moral law.

2. An international bill of rights for all individuals and all peoples that would guarantee freedom of worship, freedom from fear, and respect for human rights.

A copy of the above has been forwarded to President Harry S. Truman, the Senators and all Members of the House of Representatives in Congress from Massachusetts, Secretary of State Edward R. Stettinius, Hon. Cordell Hull, Hon. Harold E. Stassen, Senator Arthur H. Vandenberg, Senator Tom Connally, Representative Charles A. Eaton, Representative Sol Bloom, and Dean Virginia Gildersleeve, with the earnest request that the decisions reached at Yalta regarding Poland be revised at the forthcoming United Nations Conference at San Francisco, so that justice may be accorded Poland and all small nations who have remained steadfast with the Allies.

Rev. LADISLAUS A. SIKORA,
President.
ANTHONY TRACZ,
Vice President.
Mrs. A. DABROWSKA,
Vice President.
JOHN PIETRASZEK,
Treasurer.
Miss MARY V. PIKOR,
Secretary.

Pledge of Support to President Truman

EXTENSION OF REMARKS
OF
HON. THOMAS S. GORDON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Saturday, May 26, 1945

Mr. GORDON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a resolution adopted by the City Council of the City of Chicago, pledging support to President Truman and expressing confidence in his leadership:

Whereas divine providence has placed the supreme direction of our National Government and the command of our armed forces in the hands of President Harry S. Truman in this most critical hour of our Nation's history; and

Whereas the decisions to be taken by our Federal Government in the immediate future and their influence upon the course of action of other governments with which we are allied may shape for many generations to come the destiny not only of our Nation but of civilization itself; and

Whereas in reaching these decisions our President will have need of not only all the technical and intellectual resources of the machinery of government, but the moral support of a united American people, as well as the guidance of divine wisdom; and

Whereas throughout his career as farm boy, as hero of World War I, as local administrator, as United States Senator, and finally as Vice President, Harry S. Truman has proved himself a humble man of God, understanding, courageous, capable, and worthy of carrying forward the mighty banner handed on by the great Franklin Delano Roosevelt; and

Whereas in his first acts as President, Harry S. Truman took steps to further unity between the executive and legislative branches of government, to assure the continuation of plans for the establishment of an international organization to prevent future wars, to voice for the entire people our determination to prosecute the war to complete victory under our present military leaders, and to carry on the policies charted for us by his immortal predecessor; and

Whereas in his first address to the Congress on Monday, April 16, President Truman reaffirmed his resolve to carry on in accordance with the battle maps and plans for action already approved by the American people, specifically unconditional surrender with punishment of the war criminals, world organization to keep peace under law, continued cooperation of the United Nations with responsibility of the great nations to serve, and not dominate, the small; increased international trade, production, and employment and better living standards throughout the world; continued efforts to improve the lot of the comman man, preservation of religious tolerance, political freedom, and economic opportunity; and

Whereas the declaration of these lofty and courageous principles and objectives at a time of national and international mourning has given new hope and courage to human kind throughout the civilized world; and

Whereas in reaffirming these policies, President Truman has called upon his fellow citizens for their moral support in these words:

"With great humility I call upon all Americans to help me keep our Nation united in defense of these ideals which have been so eloquently proclaimed by Franklin Roosevelt," and again: "I appeal to every American regardless of party, race, creed, or color, to support our efforts to build a strong and lasting United Nations organization"; and

Whereas the people of Chicago in every national emergency have demonstrated their love of country by responding to each patriotic call that has been made upon them, to the point of offering their lives, their blood, their fortunes, the toil of their bodies, and their united will to victory: Now, therefore, be it

Resolved, That we, the members of the City Council of Chicago, in behalf of the citizens of Chicago, answer this call of our President and commander in chief by pledging our united and unfaltering support of President Truman and expressing our utmost confidence in his leadership; and be it further

Resolved, That, as a living symbol to the world of the measure of our support, we hereby authorize Mayor Edward J. Kelly to appoint a committee of one hundred consisting of representatives of the armed forces, of the clergy, the economic, social and intellectual life of our city, from members of all faiths, racial and national origins, to arrange at the earliest possible time for a mass demonstration and day of public prayer for divine guidance in behalf of President Truman and the American people; and be it further

Resolved, That a copy of this resolution, properly engrossed, be presented to President Truman, and that other copies be sent to both Members of the United States Senate from Illinois and to all Members of the House of Representatives from Chicago Congressional districts.

STATE OF ILLINOIS,
County of Cook, ss:

I, Ludwig D. Schreiber, city clerk of the city of Chicago, do hereby certify that the above and foregoing is a true and correct copy of the certain resolution adopted by the City Council of the City of Chicago, by a vote of yeas 44, nays none, at a regular meeting held on Monday, the 23d day of April A. D. 1945.

Witness my hand and the corporate seal of the city of Chicago the 18th day of May A. D. 1945.

[SEAL] LUDWIG D. SCHREIBER,
City Clerk.

Sol Bloom, Delegate to San Francisco

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Saturday, May 26, 1945

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Murray Frank, from the Jewish Advocate of May 10, 1945:

SOL BLOOM, DELEGATE TO SAN FRANCISCO
(By Murray Frank)

SOL BLOOM'S selection as one of the eight American delegates to the United Nations Conference at San Francisco is no accidental twist of circumstances. It is a public tribute to his accomplishments and a recognition of his capabilites as a statesman, which he has proved himself to be on many occasions during the past two decades.

Today SOL BLOOM, the only Jewish member of the American delegation, is looked upon by the State Department as one of the most esteemed and highly regarded Members of Congress who are of invaluable assistance in the conduct of this country's foreign relations. And that was frankly admitted by none other than Secretary of State Edward R. Stettinius at a testimonial dinner recently in honor of SOL BLOOM.

In appearance BLOOM has a striking similarity to George Arliss, and immediately the thought flashes through one's mind of Arliss' characterization of Disraeli, the great British-Jewish statesman of the last century. BLOOM is somewhat shorter than average height, has a lively, mobile face, and brown, thinning hair. Always nattily dressed, clean-shaven, and carefully groomed down to the broad black ribbon on his pince-nez eyeglasses. BLOOM looks every bit the statesman that he is as he makes his way through the maze of the Capitol corridors or receives his visitor in his private office in the Capitol Building.

INTERESTING CHARACTERISTICS

There are many other interesting features which characterize SOL BLOOM. A native of Illinois, raised in San Francisco, to which he is now returning as an official American delegate to the international parley, BLOOM later settled in New York, which to him became home, but is actually a resident of Wash-

ington ever since he was first elected to Congress more than 22 years ago. Originally a Tammany Democrat, he has far outgrown that bailiwick and is today a national figure, known as an ardent liberal and a strong advocate of progressive legislation.

As chairman of the House Foreign Affairs Committee, he has proved himself to be a parliamentarian and diplomat of first rank, skillfully guiding important legislation on national and international affairs of great significance to the United States in times of war or peace. By faith an Orthodox Jew, BLOOM is very much perturbed by the lack of unity in Jewish ranks, particularly so when dealing with governments and world leaders and at international conferences, such as at San Francisco.

When the eight American delegates to the international conference first divided among themselves the respective spheres of responsibility, BLOOM was delegated with authority to select and recommend the representative groups of the three religious faiths in the country. At once his cry went out for one united Jewish representation to be prepared to present the most pressing and most important problems of present-day Jewish life. On more than one occasion he literally cried his heart out to this correspondent complaining of the lack of cooperation on the part of American Jewish leadership, saying, "I am hitting my head up against a stone wall." The result, as we are all aware of it now, is that American Jewry is coming to San Francisco widely torn asunder and represented by two organizations possessed of conflicting views on major Jewish problems.

IN THE MIDST OF PLANNING AT 75

BLOOM celebrated his seventy-fifth birthday on March 9 last. He was born at Pekin, Ill., the son of poor Polish Jewish immigrants. After the family moved to San Francisco young Sol had to go to work at the age of 8, because of his father's ill health. In his later teens he was very successful in the theatrical and musical fields, where his enterprising business career was most successful, particularly in real estate and construction of apartment houses and theaters in New York.

By the early 1920's he was ready to retire "to devote his life to public service." In January 1923 he was elected to Congress in a special byelection, winning by a majority of 145 votes in a Republican stronghold. He has been a Member of Congress ever since, having been reelected 11 times. During his long incumbency of the legislative office BLOOM was a member of several important congressional committees, but his statesmanship and diplomatic skill developed and reached full maturity in the Foreign Affairs Committee, whose chairman he is since 1939. As a result, he found himself in the thick of American war planning throughout the war years, and at present is gradually emerging in the midst of international peace planning.

It would take us too far afield to recount his manifold efforts in guiding important legislation through Congress, a story which is by this time well known and universally recognized. Suffice it to merely mention his guidance and leadership in recent years in obtaining the enactment of the Selective Service Act, the Lend-Lease Act, repeal of the arms embargo and of the ban on arming merchant ships, UNRRA legislation and others. He has been a staunch supporter of the Roosevelt administration and a great admirer of our late beloved President. BLOOM was a member of the inner circle of congressional leaders who were in constant touch with President Roosevelt since the beginning of the war, and will undoubtedly continue in the same capacity under President Truman.

Despite his advanced age, BLOOM retains his clarity and freshness of mind, his joviality and quick wittedness, and his pleasant personality. His greatest pride is the fact that political friends and foes alike admit freely and frankly that he is fair and just, courteous and tolerant, in his role as committee chairman. On his birthday recently, the members of his committee gathered in the Speaker's dining room in the Capitol at a surprise luncheon, to pay tribute and express their admiration for SOL BLOOM.

His only daughter, Vera, lives with him in Washington. Prior to his wife's death several years ago, the BLOOMS led an active and enjoyable social life. Since her death, and more recently due to exigencies of war, BLOOM has sharply curtailed his attendance at social functions, limiting it to the most necessary. He now devotes all of his time to the intricate problems of foreign affairs, and lately to the problems of building a lasting peace and perfecting world security.

BLOOM AT SAN FRANCISCO

BLOOM will undoubtedly prove to be of invaluable assistance at San Francisco, no less than he has been in recent years to the State Department on matters of foreign policy. He will be a perfect representative of the American people, steeped in the knowledge of American history, a true patriot and a great humanitarian at heart.

Shortly before he left for San Francisco, I had a lengthy chat with him in his private office. We talked of San Francisco, of lasting peace for the world, of the possibility of Jewish problems coming up at the Security Conference, and of Jewish affairs. He had spent several hours that morning conferring with the other American delegates at the State Department. He looked somewhat tired, but nevertheless was full of enthusiasm about the Conference.

"Murray, despite all the talk you hear about disagreements and dissension," he said, "I tell you that San Francisco will be a success. We shall come away from there with a security agreement that will assure lasting peace for a long time to come. But I should like to see more than that. I should like to see all countries adopt and put into practice equal rights for all people all over the world. To me the individual counts most, and the people are above all. A true enactment of equal rights will automatically eliminate the troublesome minority problems with which the world has been afflicted in recent decades.

"As for purely Jewish problems, judging by the agenda of the Conference, I do not see where they will come up at San Francisco except in the discussion of the trusteeship plan for expanding the number of trustees over certain mandates, in which case Palestine may be involved. The mandates, as such, will not be changed. It is merely a plan for widening the responsibility for the mandates to two or more countries. You can be assured that where Palestine is involved, the Jewish representatives at San Francisco will be called in for consultation."

SOL BLOOM, who is known as a down-to-earth realist, is at heart really a dreamer of a happier and better world, a philosopher of the people and for the people. Though he mingles among the mighty of this earth, he stands humbly before God, in full humility that God has bestowed upon him a keen sense of understanding human needs and troubles, and has given him wisdom, sagacity, and good judgment in reshaping and building the world of tomorrow.

San Francisco, we are sure, will prove to be the crowning glory of an active public life, in the interests of his country, and in the interests of his people and all people of the world over. Godspeed to San Francisco, SOL BLOOM! We shall pray that your dreams are fully realized there, in the land of sunshine and newborn hope!

Reciprocal Trade A B C of American Prosperity

EXTENSION OF REMARKS
OF
HON. ELLIS E. PATTERSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Saturday, May 26, 1945

Mr. PATTERSON. Mr. Speaker, reciprocal trade is the A B C of American prosperity, of world prosperity, and of economic cooperation between nations. It substitutes economic cooperation for economic warfare. It gives substance to our good-neighbor policy. It lays the only possible basis upon which permanent peace and prosperity can be founded.

The United States, in order to utilize its full productive capacity and provide jobs for all, can and must produce more goods, farm and industrial, than can be sold profitably to the American market.

These surpluses must be sold abroad. For if they are permitted to pile up, unsold, here in this country, farmers and manufacturers lose money, wages go down, the home market is able to buy less, and the depression spiral is already twisting swiftly downward.

On the other hand, if we sell our surpluses abroad, farmers and manufacturers have larger and more numerous markets, the home market is expanded because more workers, employed in manufacturing products for foreign as well as home markets, have more jobs. With more employment, more goods, and more purchasing power, the standard of living of the whole Nation is raised. Foreign trade can supply 5,000,000 of the 60,000,000 job goal. The spiral of prosperity twists swiftly upward.

Foreign trade is, and must be, a two-way street. We cannot export unless we import. For our purchases from other nations give them the money with which to buy our goods. The more we buy from them, the more they can buy from us.

High trade barriers, tariffs, hinder the free flow of trade. By making it difficult for its own people to buy the things they need and want from other countries, a nation makes it difficult, and eventually impossible, for its own producers to sell their exportable surpluses in other countries. This of course means depression.

The purpose of the Reciprocal Trade Acts is to increase foreign markets for United States products. This is done by reciprocal adjustment of too-high trade barriers. The President is given power, by the act, in order to obtain lower tariffs from other nations on our exports to them, to cut our tariffs on certain of our imports from them. He can bind existing tariff rates on imports against increase, and guarantee continued duty-free entry of products now on the free list.

The President, by the terms of the act, cannot modify tariff rates except under a trade agreement with another nation whereby our exports to them benefit through their lowered tariffs. He cannot reduce the duty on any import by

more than 50 percent, nor can he transfer any item from the dutiable list to the free list.

Trade agreements can only be concluded, under the terms of the act, after the Departments of State, Agriculture, and Commerce, the Tariff Commission, and other appropriate Government agencies have been consulted, and only after public notice and full opportunity for presentation of information and views by any interested person.

Lowered barriers on imports similar to United States products will be granted only when they are in the national interest, when reciprocal concessions are obtained therefor, and then only after careful study of the whole question. Usually such imports are limited in amount and time.

Reciprocal trade protects American producers against foreign tariff and other discriminations. It makes for American prosperity and world prosperity. Among other direct advantages, reciprocal trade will encourage a large merchant marine, which, as an industry in itself, can be responsible for one-half million jobs and serve as an important arm of our national defense. Reciprocal trade ends economic warfare. Economic dog-eat-dog, cutthroat jungle life is supplanted by cooperation for the mutual benefit of all.

Today our trade agreements with the other American republics form one of the strongest pillars in the structure of hemispheric solidarity and of our global good-neighbor policy.

These agreements stand today for economic cooperation in war and peace. It took a second world war to teach the American people that political isolation from the rest of the world does not prevent, but rather breeds, wars. We must not allow a third world war to teach us that economic isolation is just as surely a breeder of war. Economic insecurity and unrest, depression, caused in large part by excessive trade barriers and discriminatory trade policies, proved a fertile breeding ground for fascism and helped bring about this war.

Secure peace after victory must and can only be built on the solid foundation of economic cooperation. The passage of the Reciprocal Trade Acts will strengthen our determination to win a victory that will be worth the cost. It will inspire confidence that the United States will undertake its responsibility in building a permanent peace. It will help build that peace.

The Reciprocal Trade Agreements

EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Saturday, May 26, 1945

Mr. LUDLOW. Mr. Speaker, as a worth while contribution to the discussion in connection with the reciprocal trade agreements bill, I present for publication in the CONGRESSIONAL RECORD a letter I have received from the Eli Lilly International Corporation of Indianapolis. The operattions of this corporation include many countries and it is well known throughout the world. Its letter follows:

ELI LILLY INTERNATIONAL CORP.,
Indianapolis, Ind., May 16, 1945.

Hon. LOUIS LUDLOW,
House of Representatives,
Washington, D. C.

DEAR SIR: The ways and means to secure a peaceful world are occupying the attention of all thoughtful people. In order to accomplish such an objective, an economically healthy world is necessary.

One of the essential measures tested and approved by 10 years of notably successful experience toward the attaining of this objective has been the Trade Agreements Act of 1934.

H. R. 2652, a bill to extend the Trade Agreements Act from June 12, 1945, is soon to be acted on.

We have carefully reviewed the pros and cons of what the extension of such a measure will mean and it is our conclusion that in the interest of a sound and prosperous economy for our country, this bill should be passed.

The increased authority to decrease or increase duties, which this bill also grants, we believe will be advantageous in the furtherance of the export business of the United States and helpful to world trade.

We hope that in the interest of our country and international cooperation you will lend your support by voting for the renewal of the Trade Agreements Act.

Yours very truly,

A. L. YOUNG,
Vice President and General Manager.

Reciprocal Trade Agreements

EXTENSION OF REMARKS

OF

HON. BEN F. JENSEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Saturday, May 26, 1945

Mr. JENSEN. Mr. Speaker, my speech on this bill will be short and sweet, as the saying goes. Here it is. Ever since the great spending New Dealers have been in power they have become so engrossed and proficient in the art of giving away that they have completely lost sight of the fact that unless we begin now to think and act for America's interests not only will we sink to the depths of want, misery, and strife in our great land but also the whole world will lose its one last bright ray of hope for a better world because of our inability to show the way.

Our first and greatest responsibility is to keep America strong in every sense so as to hold the respect which the great majority of the liberty-loving peoples of the world holds for us today. I would have voted to extend this reciprocal-trade treaty as is for another 2 years if section 2, which provides authority by the State Department to further reduce our tariffs an additional 50 percent, had been eliminated; but I shall certainly vote against the bill now since that section is left in the bill. During this debate it has been proven beyond any question of a doubt that to permit another 50 percent reduction in our tariffs on farm commodities will sooner or later bring about a greatly reduced farm income.

Mr. Speaker, we must bear in mind that for every dollar decrease in farm income we always suffer a $7 reduction in our national income. Our American farmers and our American laboring men cannot compete with two-bit land and two-bit labor and continue to live like Americans are entitled to live.

The Sugar Tariff

EXTENSION OF REMARKS

OF

HON. WILLIAM S. HILL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Saturday, May 26, 1945

Mr. HILL. Mr. Speaker, in opposition to H. R. 2652 we find not only many manufacturing, mining, and agricultural interests but, in the State of Colorado, labor organizations are almost unanimously opposed to the provision in the measure granting the Secretary of State authority and power to make direct tariff reductions as high as 50 percent.

I wish to place in the RECORD a letter from the Colorado State Federation of Labor, signed by its president, Mr. George Brayfield, and the following labor unions:

COLORADO STATE FEDERATION OF LABOR,
Denver, Colo., April 27, 1945.

Hon. WILLIAM S. HILL,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN HILL: Information has been directed to this office advising that a hearing will be held before a committee on H. R. 2652, which, if passed, would give the President and his administration the right to direct cuts in the tariff rates on various commodities. As much as 50 percent is being proposed on tariff rates in effect as of January 1, 1945.

I am particularly interested, which no doubt you would be, if this applies to sugar. If such would be the case, the State federation of labor is seeking your opposition and full cooperation in any further reduction in the tariff on sugar.

Our reasons being that we have been able to effect an almost 100-percent organization in our State and because of this have built up a continuous excellent labor and management relationship with a good standard of living for the sugar-refinery workers. Further, the largest consumers of sugar are the working people; therefore if a further reduced rate in the tariff on sugar is passed whereby Cuba, Peru, West Indies, and other countries could import their wares to the United States under this reduced rate, it would mean a wholesale lay-off of our sugar workers, a reduction in sugar-beet raising, which would mean a considerable loss to our farmers; and last but not least, the closing of plants with a great loss in taxes to our State treasury, which is a very important item. To think of such a thing is not only alarming but would end in disaster if such should happen.

A few figures I have before me show that under the reciprocal trade agreement entered into with Cuba in 1934, the duty on sugar

was reduced to 90 cents per hundred pounds. In 1941 there was a further reduction to 75 cents per hundred, and in July 1942, under a trade agreement with Peru and other countries, reduced the duty to 93¾ cents per hundred; this did not apply to Cuba.

In conclusion, again, I wish to call to your attention that the rates of pay of our own sugar-refinery workers so far exceeds our competitive workers of Cuba and elsewhere that a further tariff-rate reduction would be not only unstabilizing but unsound.

Thanking you for your consideration in this matter, and with kindest personal regards, I am,

Sincerely yours,

GEORGE W. BRAYFIELD,
President.

COLORADO STATE ASSOCIATION
OF JOURNEYMEN BARBERS,
HAIRDRESSERS, AND COSMETOLOGISTS, INTERNATIONAL
UNION OF AMERICA,
Denver, Colo., May 3, 1945.

Hon. WILLIAM S. HILL,
House Office Building,
Washington, D.C.

HONORABLE SIR: We, the barbers of the State of Colorado, wish to ask that you oppose House bill 2652 to the point of adding any proposal to lower tariff on sugar.

We request that the workers in the beet-sugar field be allowed to maintain their present standard of living and not be compelled to meet the competition of cheap labor of other countries.

With a minimum wage of approximately 65 cents per hour now being paid where the industry is organized by the beet-sugar industry, how can they maintain that standard of wages if they are forced to meet the competition of Cuba, Peru, and the West Indies, where the top wages are $1.10 per day to the highly skilled and as low as 25 cents per day to the average worker?

Trusting that you will keep this in mind when the measure comes up for consideration, we are,

Very truly yours,

C. R. HAMILTON,
Secretary-Treasurer.

BEET SUGAR REFINERY EMPLOYEES,
UNION NO. 21767,
Brighton, Colo.

Hon. WILLIAM S. HILL,
House of Representatives,
Washington, D. C.

DEAR SIR: We wish to call to your attention H. R. 2652, which has to do with foreign trade agreements.

Such an act has been in effect for some time and as you know it authorized a reduction of 50 percent in the tariff on imported sugar. However, if the present bill is allowed to pass it will authorize another reduction of 50 percent in sugar tariff. If the power sought to be granted by the pending act should be exercised, the tariff against Cuban sugar could be cut to 37½ cents and against other foreign sugars to a little over 46 cents a hundred pounds, which rates would for practical purposes amount to no tariff at all, if the proper level of a tariff is to be measured by the difference in cost of production because of higher living standards.

We earnestly request that sugar be exempt from the provisinos of this bill, for any further reduction in the tariff on sugar imported into the United States would tend to tear down the higher living standards which have been built up over a period of years through the efforts of the unions of this country.

We are appealing to you as our Representative in the Congress of the United States to do all in your power to have sugar exempted from H. R. 2652, thereby protecting the sugar industry in the United States.

Thanking you very kindly for your cooperation in this matter, we remain.

Yours very truly,

DANA E. WELLS,
Secretary.

BEET SUGAR REFINERY EMPLOYEES,
UNION NO. 23807,
Sterling, Colo., May 18, 1945.

Hon. WILLIAM S. HILL,
House of Representatives,
Washington, D. C.

DEAR SIR: We are under the impression that House bill 2652 extending the power of the Executive to enter into foreign trade agreements, for a period of 3 years from June 12, 1945, may authorize a further reduction of approximately 50 percent in tariffs existing January 1, 1945. We believe that the present law works undue hardship upon American industry and agriculture, but the conditions in House bill 2652 would be unbearable, particularly in the case of sugar.

You are probably aware of how we, in the sugar industry, have labored to produce, to the utmost of our capacity, the sugar so vitally needed in the economy of a Nation at war; this in spite of the most adverse conditions ever experienced in the industry. The problems of trying to raise beets in the face of inequalities in subsidies to other agricultural products—of manufacturing costs enormously increased, while sugar prices remain at near prewar levels; of obtaining sufficient labor for proper factory operation—have presented practically insurmountable obstacles, but we have been able to overcome these difficulties. We hear, however, that if the protection afforded by our tariff system is removed, it may well spell the doom of the domestic sugar industry and the economy of thousands of American citizens who depend upon the manufacture of sugar for their livelihood.

We earnestly urge you to use every means at your disposal to defeat House bill 2652.

Sincerely yours,

OLIVER SWANEY,
Secretary.

BEET SUGAR REFINERY EMPLOYEES
UNION, LOCAL NO. 22573,
Eaton, Colo., May 12, 1945.

The Honorable WILLIAM S. HILL,
House of Representatives,
Washington, D. C.

DEAR SIR: It has come to our attention that House bill No. 2652, which is now before the Congress of the United States, provides for a reduction of 50 percent in the tariff now existing on sugar imported into the United States.

It is interesting to note that sugar tariff in the past 10 years has been reduced from $2 per hundred pounds to 75 cents per hundred pounds on sugar imported from Cuba and on other foreign countries the tariff has been reduced from $2.50 per hundred pounds to 93¾ cents per hundred pounds.

It is needless to say that the living standards which have been built up in the United States as a result of higher wages will be torn down by the further reduction in tariff rates now existing on sugar imports from countries where sugar is produced at a much lower wage scale and by people whose living standards are much lower.

As you know, the sugar-beet industry is one of the most important agricultural industries in the State of Colorado. We wish to protest the provisions of House bill No. 2652, permitting the executives of our Government to grant a 50-percent reduction in the tariff now existing on sugar imported into the United States, and request that sugar be exempted from the provisions of House bill No. 2652.

Thanking you in advance for your consideration in this matter, we remain,

Very truly yours,

ROY E. BIDDLE,
President.

BEET SUGAR REFINERY EMPLOYEES
UNION, NO. 23637,
Ovid, Colo., May 12, 1945.

Hon. WILLIAM S. HILL,
Congressman, Washington, D. C.

SIR: The employees of sugar manufacturing are protesting House bill No. 2652 relative to tariff on imported sugar. This bill is before the House now for action.

If the tariff on imported sugar into the United States is reduced it will have a tendency to tear down the higher living standards which have been built up over a period of years through the efforts of the unions of this country.

American labor employed in factories today have a much higher standard of living, based on a much higher wage scale than the $1 to $1.10 per day for 8 hours work that was paid to Cuban sugar factory workers in the year 1938, and the proposed reduction in House bill 2652 would mean there would be practically no tariff at all on foreign sugars measured in the difference in the higher living standards of the American workers as compared to the standards of workers producing sugar that is imported into the United States.

Therefore the employees of American sugar manufacturing are asking you to do all you can to prevent this bill being passed.

Thanking you for your cooperation, I remain,

Fraternally yours,

FLOYD WHEELER,
Recording Secretary.

BEET SUGAR REFINERY EMPLOYEES,
A. F. OF L. LOCAL, NO. 22443,
Fort Morgan, Colo., May 11, 1945.

Senator EDWIN C. JOHNSON,
Senator EUGENE MILLIKIN,
United States Senate,
Washington, D. C.

HONORABLE SIRS: We are writing to you protesting against the authorization provided for in House bill 2652, which allows the executives of our Government to grant 50-percent reduction in the tariff existing on January 1, 1945, on sugar imported into the United States and also that sugar be exempted from the provisions of House bill 2652.

We wish to call to your attention that in the last 10 years the tariff on Cuban sugar has been reduced from $2 to $0.75 per hundred pounds. On other foreign sugar the tariff has been reduced from $2.50 to $0.9375 per hundred pounds.

We greatly fear that any further reduction in tariff would seriously endanger the higher standards of living which have been built up by the unions over a long period of time in this country. American labor has a much higher standard of living, based on a higher wage scale, than $1 to $1.10 per day labor, which was Cuban wage scale for 1938.

This bill is still in a committee hearing, we understand from the press, but we want to present our protest so you will be fully informed that we wish your support in removing sugar from the provisions of House bill 2652.

Very truly yours,

GEORGE L. SPENCE,
Secretary.

Copy to Representative WILLIAM S. HILL.

LOVELAND, COLO., *April 25, 1945.*

Hon. WILLIAM S. HILL,
Congressman, House Office Building,
Washington, D. C.

DEAR CONGRESSMAN HILL: We, as employees engaged in the refining of beet sugar, are deeply interested in any action the Congress may take concerning this industry.

Having noted in the press that the above bill is up for a hearing before a House committee, we wish to emphatically protect against any favorable action on this bill.

Inasmuch as the tariff has already been reduced by previous action from $2 to 75 cents per 100 pounds on Cuban sugar, and from $2.50 to 93¾ cents per 100 pounds on sugar from other foreign countries; and also realizing that this bill, if enacted into law, would make a further reduction to 37½ cents per 100 pounds on Cuban sugar, and to about 46 cents per 100 pounds on other foreign sugar—which would, in effect, be no tariff at all, we, as workers depending on this industry for our standard of living, find it difficult to see how we can maintain this high standard, and compete with labor in other countries which realizes $1 a day or less, for 8 hours' work, or more.

Very truly yours,

W. R. MOORE,
President, Local Beet Sugar Refinery Employees Union No. 23791.

BEET SUGAR REFINERY EMPLOYEES UNION, No. 23801,
Greeley, Colo., April 30, 1945.

Congressman WILLIAM S. HILL,
United States Congress,
Washington, D. C.

DEAR SIR AND CONGRESSMAN: The news of today is of great importance to us all, as the course taken on many matters will have direct effect on us individually; however, we look forward with confidence.

Just recently it has come to the attention of the sugar-factory workers at Greeley that the House bill 2652 would permit authorization of a 50-percent reduction in the tariffs existing January 1, 1945.

During the past 10 years the tariff on Cuban sugar has been reduced from $2 per 100 pounds to 75 cents per hundred pounds. In a trade agreement with Peru in 1942, other foreign imports of sugar were reduced to 93¾ cents, which formerly was $2.50 per 100 pounds. This reduction in the protective tariff has had direct effect on the beet-sugar industry without any doubt.

Any further reduction in the tariff on sugar would do even greater damage to the industry, as it would reduce the tariff down to where there would be hardly any tariff at all, when comparing costs of production with that of foreign markets. When considering the daily wage of $1 to $1.10 per day paid in Cuba to sugar-factory workers during 1938, to the American wage scale, it is no wonder that sugar can be imported at a cheaper price and the only protection given the beet-sugar refinery workers is the tariff on sugar imports.

All of the sugar-factory workers in our local union would not want to be forced to reduce our standard of living, which took the unions of the country so many years to build up, in order to compete with cheaper markets elsewhere.

The sugar-factory workers employed at the Greeley factory of the Great Western Sugar Co. implore you at this time to give us the protection we need at this time and do whatever you can possible to exempt sugar from the provisions of House bill 2652.

Thanking you for any personal consideration you may extend us regarding this important matter, and with the kindest personal regards, we remain,

Yours very respectfully,

ROBERT BRESNAHAN,
Vice President.
TED SADEK, *Secretary.*
FRED BROTHERS, *Trustee.*

BEET SUGAR REFINERY,
EMPLOYEES UNION NO. 22125,
Longmont, Colo., April 28, 1945.

Representative WILLIAM S. HILL,
Washington, D. C.

DEAR SIR: I am writing you at this time in behalf of the 365 members of the above union, to ask you to emphatically stress the exemption of sugar from the provisions of H. R. 2652.

In the last 10 years the tariff on Cuban sugar has been reduced from $2 per hundred pounds to 75 cents per hundred pounds, and on other foreign countries the tariff has been reduced from $2.50 per hundred pounds to 93¾ cents in a trade agreement with Peru in 1942.

We earnestly feel that any further reduction in tariff of imported sugar into the United States will have a tendency to tear down the higher living standards which have been built up over a period of years, through the efforts of the unions of this country.

I believe you will agree that American labor employed in sugar factories today have a much higher standard of living, based on a much higher wage scale than the $1 to $1.10 per 8-hour day that was paid to Cuban sugar factory workers in the year 1938, and that the proposed reduction in House bill 2652 would mean there would be practically no tariff at all on foreign sugars measured in the difference in the higher living standards of American workers as compared to the standards of workers producing sugar that is imported into the United States.

Therefore as good American citizens we earnestly appeal to you to use your good offices and vote against any further reduction in sugar tariff.

Thanking you for your cooperation and with best wishes, and kindest regard.

Yours truly,

WILLIAM M. HAMILTON,
President.
JESSE WRIGHT, *Secretary.*

Statement of Hon. Edward R. Stettinius, Jr., at San Francisco Conference

---

EXTENSION OF REMARKS
OF
HON. THOMAS S. GORDON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Saturday, May 26, 1945

Mr. GORDON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement made by Hon. Edward R. Stettinius, Jr., at the San Francisco Conference:

The provisions on human rights proposed by the four sponsoring governments for the Charter of the International Organization represent a long step toward the realization of social, economic, and political justice for the peoples of the world.

It is a far-reaching step because it would pledge the members of the world organization to cooperate effectively in promoting human rights and fundamental freedoms for all individuals and peoples, regardless of race, language, religion, or sex.

These provisions are essential if we are to build peace on the basis of justice and freedom for all. Never before have the destruction, the turmoil, and the hatreds of war affected the lives of so many people in all parts of the world. Millions of men, women, and children are homeless and destitute. Established customs and long-standing habits have been broken down. Racial tensions have been built up since the rise of Nazism and Fascism by systematic campaigns of hatred and prejudice. Every nation must overcome the severe dislocations of war in the transition to peace.

Nor are these the sole reasons why the provisions on human rights and freedoms are essential. From malnutrition, disease, ignorance, unemployment, low wages, bad housing, and racial and religious persecutions arise many of the conditions that lead to war.

The people of the world will not be satisfied simply to return to an order which offers them only worn out answers to their hopes. They rightly demand the active defense and promotion of basic human rights and fundamental freedoms. It is a matter of elementary justice that this demand be answered affirmatively.

That is the compelling purpose of the amendments on human rights which the four sponsoring governments propose.

These provisions are not mere general expressions in a preamble; they are woven through and through the document. Moreover they are closely tied to the all-important provisions on economic and social development.

There are four amendments on human rights. The first would establish the promotion of human rights and freedoms as one of the fundamental purposes of the organization stated in chapter I of the Dumbarton Oaks proposals.

From this amendment stem three other amendments. These provide the constitutional basis upon which the members of the world organization can build as they work toward translating these purposes into reality.

One of these amendments—in chapter V—would give the general assembly the power to assist in the realization of these rights and freedoms.

The other two amendments are in chapter IX, covering international, economic, and social cooperation. By these amendments the assembly's responsibility on human rights will be exercised through the economic and social council, which will, in turn, establish a commission for the promotion of human rights. This commission represents the heart of the matter.

The amendments on human rights and fundamental freedoms are closely linked with the amendments establishing equal rights and self-determination of peoples as one of the fundamental purposes of the organization. Both have a significant relationship to the legitimate hopes of peoples of dependent areas.

There can be no misunderstanding where the United States stands on this issue. As a Nation which has been devoted throughout its history to the cause of liberty, the United States will continue to exert its full influence in behalf of the right of all peoples to govern themselves according to their own desires whenever they are prepared and able to assume the responsibilities of freedom as well as to enjoy its rights.

We are proud of our own record in the Philippines, which have stood so valiantly beside us against the Japanese and are soon to become independent. This record is only one manifestation of the long-standing and frequently demonstrated policy of the United States.

We believe, furthermore, that it is a special obligation of the greater and more powerful nations to respect the right of self-government, not only in their relationship with the peoples of dependent areas, but in their relationship with the peoples of small na-

tions who are already independent and wish to remain so.

The provisions proposed for the Charter will not, of course, assure by themselves the realization of human rights and fundamental freedoms for all people. The provisions are not made enforceable by any international machinery. The responsibility rests with the member governments to carry them out. We can here make only a beginning, but I believe it is a good and substantial beginning.

Through the Charter we can place in the hands of the international organization both the possibility and the responsibility of using powers of report and recommendation with great potentialities for the benefit of humanity. Whether the opportunity is used effectively or not will depend, as it must, upon the governments of the member nations and upon the peoples who elect them to office.

The Bill of Rights was written into the Constitution of the United States over 150 years ago. It is not yet fully realized, but we have made good progress and its effect upon our history has been decisive.

The four sponsoring governments agreed that an enumeration of individual and collective human rights and fundamental freedoms in the charter could not be attempted at this conference. It would take much too long to obtain agreement upon such an enumeration among more than two score nations of differing social systems, environments, and traditions. I believe that when the organization is established the economic and social council, through the commission on human rights, should promptly undertake to prepare an international bill of rights which can be accepted by all the member nations as an integral part of their own systems of law, just as our Bill of Rights has been an integral part of our system of law.

The "four freedoms" stated by President Roosevelt—freedom of speech, freedom of religion, freedom from want, and freedom from fear—are, from the point of view of the United States, the fundamental freedoms which encompass all other rights and freedoms.

Freedom of speech, for example, encompasses freedom of the press, freedom of information, and freedom of communications.

Freedom from want encompasses the right to work, the right to social security, and the right to opportunity for advancement.

Freedom from fear encompasses the protection from persecution or discrimination of all men and women, regardless of race, language, religion, or sex, and the protection of their equal right to enjoy all other fundamental rights and freedoms.

The United States Government will work actively and tirelessly, both for its own people, and, through the international organization, for peoples generally, toward the protection and promotion of these rights and freedoms.

We must be eternally vigilant against assaults upon them. We must also act affirmatively to enlarge the scope of their protection and to nourish their growth. As long as rights and freedoms are denied to some, the rights and freedoms of all are endangered.

Everything possible must be done to bring to effective life not only the commission on human rights, but the other vital agencies and functions of the economic and social council.

I believe the charter and the structure and procedures of the world organization should and will provide the means for full consideration of the views and interests of all branches of organized labor, and of agriculture and business. Without such full consideration, effective performance by the organization in economic and social matters would obviously be impossible.

It is my conviction that the foundation which we are laying here for the economic and social collaboration of nations in the cause of fundamental human rights and freedoms may well prove to be the most important of all the things we do here for the peace and advancement of the peoples of the world.

Cooperatives, Taxation, and Small Business

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Saturday, May 26, 1945

Mr. VOORHIS of California. Mr. Speaker, under leave to extend my remarks, I include herewith correspondence between myself and Mr. John Carson, the Washington representative of the Cooperative League of the United States, dealing with a number of questions which are currently being asked regarding the relationship of cooperative business to the Government, to taxation, and to small business.

Mr. Carson was for many years the secretary of Senator James Couzens of Michigan, has had also many years' experience as a Washington newspaper correspondent, and at present Washington representative of the Cooperative League is unusually well qualified to discuss these questions:

APRIL 28, 1945.

Mr. JOHN CARSON,
The Cooperative League of the United States of America,
Washington, D. C.

DEAR MR. CARSON: I have received many letters from small-business men who express their concern over what they believe are special concessions and special tax treatment from the Government to cooperatives. I am much concerned for the welfare of the small-business man. I am sure that every intelligent man who believes in democracy must be interested in the welfare of small business. I also have been interested, as you know, in cooperatives and look on them as small business because they are organizations of individuals who contribute their little money to organize the small business. It seems to me that cooperatives and small business should be allies, and whether they know it or not, they are allies in fact against a common foe—monopoly.

I think I know something about cooperatives and their associations with Government, but in view of these letters, I am wondering whether I do. I think I am justified in asking you some questions, and even challenging you with them. That I am doing, and I would be happy to have your answer, an answer which I can make use of for any purpose I think it would serve. The questions are:

1. Have cooperative organizations been unfriendly to small business, or opposed to small business?

2. Have cooperatives done anything to injure small business?

3. What, if any, special tax concessions are given to cooperatives by the Government?

4. Many of the letters refer to the exemption given "consumer cooperatives." Is there any exemption of that kind?

5. Because some of the letters refer to "savings," I suspect the writers believe that what cooperatives refer to as "patronage returns" should be taxed, and perhaps that is why they refer to "exemptions" for "consumer cooperatives."

6. One criticism of the cooperatives is that—and I quote—"they are permitted to keep their profits and use them for buying other business, and they do not pay taxes on the profits they keep."

7. Many writers of letters inquire, "Where is the Government to get revenue if these exemptions are continued?"

8. What other concessions are accorded to cooperatives by the Government?

I shall be happy if you will answer these questions and permit me to make any use of your answers that I wish to make. I think I am entitled to make this request because of my interest in cooperatives, as well as in the small-business man.

Very truly yours,

JERRY VOORHIS.

THE COOPERATIVE LEAGUE OF THE UNITED STATES OF AMERICA,
Washington, D. C., May 10, 1945.

Hon. JERRY VOORHIS,
House Office Building,
Washington, D. C.

DEAR MR. CONGRESSMAN: Your request that I comment on the many letters you have had from small-business men who express their concern over what they believe are special concessions and special tax treatment from the Government to cooperatives comes as a challenge which our cooperative organizations could not ignore even if they wished to do so. And, I assure you, they would have no fear of any inquiry or challenge.

I am answering now, not as a representative of the Cooperative League of the United States of America, because I have not had the opportunity to present this to the league. I am answering as a member-owner of consumer cooperative enterprise. And to qualify myself as a witness, I recall to you that I spent more than a score of years writing on taxation and finance, that I initiated and directed an extensive inquiry into the administration of our tax laws for the United States Senate, that I proposed the establishment of the Joint Congressional Committee on Taxation and helped to organize the committee, that I was once an owner of small business and that I also was associated with big business for many years.

Every member-owner of cooperative enterprise will have interest in the welfare of the small-business man. He was, and is, a vital part of the community life in our country. He was, and is, a man of goodwill; in fact, his most important business asset was, and is, goodwill. He expressed the goodness of a decentralized society as contrasted against the steady encroachment of centralization and totalitarinism. Our cooperatives will applaud you for your interest in his welfare. And, incidentally, I shall gladly testify that you have always been fair to cooperative enterprise.

I am not concerned about the tax issues which are presented in this correspondence. The questions can be answered readily and no bona fide cooperative organization will worry what the decision will be. I am concerned, however, about the state of mind which is reflected in this propaganda. I am certain that very few of our small-business men are conscious of the forces which are at work and which threaten our democratic institutions. I should like to present that all-important phase of this correspondence some time, to show you the contribution to democracy the cooperatives are making and to demonstrate that all of us have an obligation to be interested in cooperatives.

Before I answer your questions, I would like to establish these general facts:

The small-business men who are writing to you are small merchants. But we must not forget the farmer, and the wage earner are also small-business men, that the cooperatives are the federations of these small-business men, and that the farmer and the wage-earner have always paid a far greater proportion of the tax burden than they would if we respected the rule of the "ability to bear the burden."

Your questions and the answers are as follows:

Question: Have cooperatives organized to injure small business, and do they operate to injure small business?

Answer. Cooperatives have never acted to injure any legitimate form of business. They are the uncompromising foes of monopoly. But monopoly is the enemy of the farmer and the wage-earner and of the small-business men of all kinds, so that the cooperative in attacking monopoly is aiding the small-business man who writes to you. And it is important, and true, that the only effective attack on monopoly in this country and in foreign countries is, and has been, made by cooperative organizations. That is why these attacks are being made now on cooperatives, and why I suspect that there is monopoly support for these attacks, and why the propaganda is directed at consumer cooperative organizations.

It is important also, and true, that in our country and in other countries cooperatives have helped to improve the business opportunities for small business. Our consumer cooperatives have operated to free the economy. They have done that in Sweden. They have done it in some of our States in this country. Through cooperative action they have strengthened the buying power of consumers and have helped to keep that buying power at home, rather than have it drained off to distant financial centers. The small merchant has been helped by this service from consumer cooperative organizations.

Question. Do cooperative organizations enjoy any special tax concession from Government?

Answer. The word "cooperative" embraces a wide expanse. There are many kinds of cooperative organizations. They develop to perform some particular service or function.

Insofar as the common good or public interest is concerned, cooperatives must be classified, broadly, according to the purpose they serve or the function they perform. We find them performing that function in the market place where they are either selling or buying. Thus the only sound classification of cooperatives is that of "marketing cooperatives" and "consumer cooperatives." The marketing cooperatives are owned, usually, by those who produce goods and hence they are called producer-marketing cooperatives. The consumer cooperatives reach into many fields of buying and sometimes they are called consumer-purchasing cooperatives. But the simple classification of "marketing cooperatives" and "consumer cooperatives" is sound. Incidentally, our labor unions are marketing cooperatives which are organized to help the workers market their raw labor just as the farm marketing cooperatives are organized to help the farmer market his labor in the form of vegetables and fruit, etc. Now, these broad classifications may be broken down as follows:

Producer-marketing cooperatives: Farm production-marketing cooperatives of many kinds, such as citrus fruit, tobacco, milk, grain, livestock, and other cooperatives. Organized labor.

Consumer-purchasing cooperatives: Grocery, oil, seed, feed, and other cooperatives in almost unlimited number. Credit cooperatives, such as credit unions, banks, etc. Insurance cooperatives, health cooperatives, burial cooperatives. Rural electric cooperatives, etc.

Many years ago Congress decided to assist our farmers. Agriculture was prostrate, its markets were disappearing, its credit lines were slashed. The welfare of the entire country was in jeopardy. Congress then became interested in helping the farmer to help himself through cooperative enterprise. I was a newspaper correspondent then and I covered the hearings before the House committee. I am confident that no one of us had an understanding of cooperatives. We thought only of cooperatives as agencies to market the goods of the farmer and cooperatives developed for that purpose. They have rendered excellent service.

Several years passed and then some very able farm leaders began to realize that they were not making any marked progress toward remedying the ills which were causing the farmers to suffer. They learned then that their marketing cooperatives were just one more agent in the market place where more powerful monopolistic agents competed with them. The farmers then learned they had to organize as buyers, or consumers, and gain ownership of the market place to make certain that it would be a free market. And the ablest of these farmers realized they could not restrict their operations to any class, to farmers or to city workers, if they wished to compete successfully with the monopolists who did not restrict their operations. These farmers organized Rochdale consumer cooperative organizations with membership open to everyone. They have had outstanding success. It is at these organizations that the monopolists are now striking.

There is a natural law in operation here. If we are to have a free economy, and free enterprise, and political freedom, we must have a free market. If we are to be assured of a free market, then the market must be owned by all who use it. It must be controlled and operated for the common good, and not for the profit or welfare or any particular class or individual. The consumer cooperative organizations assure us of free ownership of a free market, which is the common good.

We have revealed here, also, the inherent power in the consumer cooperatives. Their strength is not to be found in tax provisions. It is found in that they are built on the broadest of foundations, or the common interest of all people. They inspire individual responsibility to the common good. They offer the opportunity for class interests to serve the common good. Through their patronage return principle they assure the individual of just reward for his participation and he thus gains, materially, and spiritually.

We have had buying cooperatives organized by labor unions, and for the members of labor unions. But they also failed because they were restricted to a class. But we have many cooperatives organized in cities with membership open to overyone, to members of labor organizations, to white-collar workers, to farmers—and they have succeeded.

I know that Congressmen believe that bona fide cooperatives could not have income, and thus they wrote into the revenue laws a provision exempting farm cooperatives from income taxation. It was discovered later that cooperatives might have insignificant receipts of money which could be legally declared to be income but there is fact and reason behind the statement that the tax revenue from income taxes which might be levied against the little income cooperatives could have would not equal the cost of administering the law. You will find in the legislative history of this exemption complete justification for the statement that Congress recognized also that in extending this aid to agriculture, Congress was attempting to aid the entire Nation and all of the people.

Question. Many of the letters refer to the exemption given consumer cooperatives. Is there any exemption given to consumer cooperatives?

Answer. Yes. There are many cooperatives which are sometimes called farm cooperatives, which are buying cooperatives. Thus they are consumer cooperatives. That is their function, to buy in their own market. These consumer cooperatives may be exempt. There are however, many consumer cooperative organizations which are organized in urban areas and they have no exemption, whatsoever. I am confident that these urban organizations have paid to the Government large sums of tax money on receipts which were not income and that they have a legitimate claim for millions of dollars of refunds if they wish to press for the refunds.

Question. Because some of the letters refer to savings, I suspect the writers believe that cooperatives should be taxed, through the income-tax laws, on what cooperative organizations refer to as patronage returns. Perhaps that is why they refer to exemptions for consumer cooperatives.

Answer. I suspect that you are reaching the vital part of the discussion. I suspect that some of these small merchants have been misled into believing that cooperatives are granted, by law, some exemption when they are permitted to return money, or property, to the owners tax free. That is all the patronage return is—property or money returned by the trustees to the owners of the property.

The constitutional amendment provides for taxation of income. The word "income" has been defined and refined by the courts and as law is a living thing, it will continue to be defined and refined. But now, and henceforth, income will mean income. You cannot have taxable income unless you have an increase in wealth, wealth which you own and control.

Bona fide cooperatives do not have income. They do not have an increase in wealth which they own and control. There are two exceptions to this general statement and I shall refer to them later. But the general rule stands. Every cooperative has the natural and the legal right—and obligation—to return property to the owners. It is the obligation of trusteeship. There is no exemption involved in the patronage return.

The two exceptions to the general rule about income are as follows: Cooperatives may do business with nonmembers and it may be impossible to discover these nonmembers and return their property to them, although every cooperative endeavors to restore all property to the owners. If this property, receipts of money, or savings cannot be restored to the nonmembers, it may become income to the cooperative organization. Any exemption which applies to that income would involve insignificant sums of money. The second exception is related to the payment of a wage for money used as capital. Cooperative organizations usually are authorized by their charters to pay a certain wage for capital invested in the business. The cooperative has, therefore, ownership and control over that part of its receipts of money and that would become income. The amount is insignificant, however, and it is not going to affect the cooperative organization or its operations if a tax is paid on it.

The answer then is that no law can be written and supported under the Constitution which would permit the placement of an income tax on patronage returns or savings. The member-owners of a cooperative might have income through the operations of their cooperative, and they should and do pay income taxes on this income.

The further answer is that I am afraid some small merchants are being mulcted by some irresponsible higher-ups, if they are contributing money to an organization which is deluding them into believing that

an income tax can be applied against cooperative savings.

Question. One criticism of the cooperatives is that, and I quote: "They are permitted to keep their profits and use them for buying other businesses and they do not pay taxes on the profits they keep."

Answer. Cooperatives do not have profits, if they are bona fide cooperatives. A cooperative which retains some property it receives does so only when the member-owners of that property authorize the cooperative to do so. That does not produce a situation where the cooperative would have income. If the member-owners of cooperatives want to invest their savings, and I mean savings of all kinds and from any and all sources, in the purchase of property of any kind, there is no reason why they should not do so. If the small merchant wants to save his money and buy another business, the law does not prevent him from doing so.

You are touching here on another point on which you will hear much, if you have not already had letters on it. The point is summed up in the word "reserves." The argument often made is that a speculative profit corporation can retain the income of the corporation; that is, keep it in reserves, only after the corporation has paid a tax on those profits but that the cooperative corporation can keep its receipts of money in reserves and use them for any purpose without paying a tax on them.

That is a true statement, but it is an avoidance of fact. The speculative profit corporation takes property or money from others and owns and controls that money it has taken. That is "income." Obviously, as long as there is a corporation income-tax schedule, the profit corporation must pay an income tax on income. But the cooperative corporation takes nothing that it owns and controls. It does not have an "income."

I would have to admit that under certain conditions where a cooperative corporation might retain money or property over a long period, and even though it did so with the consent and under the direction of the member-owners of that property, the cooperative corporation might develop a situation where it had "income in reserves." There are rare situations where a cooperative might have "income" through retaining "reserves" but they are so rare we need not discuss that point unless someone raises another question.

Question. Many writers of letters inquire "where is the Government to get revenue if these exemptions are continued?"

Answer. I have stated that exemptions are given only to one class of cooperatives and that it will be found, on investigation, that the exemptions affect an insignificant amount of revenue. There is very little additional revenue the Government can get from cooperatives through any kind of an "income" tax which would be constitutional.

But there is an answer to your question, or rather the question submitted by your correspondents. It is as follows:

Through wiping out the exemptions from taxation given to powerful industrial interests, many of which are monopoly interests, the Government can get more than $1,000,000,000 of revenue each year. I refer to the exemptions, the subsidies, given oil-producing corporations, to other natural resources industries, to the owners of tax-exempt securities, to the charitable and educational trust funds, et cetera. I am curious, in fact, when the small merchant is silent when his national representatives incite him to attack cooperatives and when these same representatives are so considerate of the tax subsidies given the monopoly industries. Is it possible that these national representatives of small merchants are also overly friendly with monopoly interests?

Then we could and should reorganize our income-tax laws and provide that all corporate-income tax be abolished, but provide also that every dollar of net income of the corporation be taxed against the individual owners of the corporation. Under this plan, the Standard Oil Co. would be compelled to notify its owners that the net income of the corporation was so many millions of dollars and that the stockholder, who owned, let us say, 100 shares of stock was actually the owner of his part of that total net income of the corporation—let us say $10. The owner of a million shares of stock would be notified that his share of the net income was $100,000, let us say. Then the individual stockholder would be compelled to report his portion of the total net income in his individual income-tax report and he would pay taxes on it regardless of whether the corporation sent him his $10 or his $100,000.

Then we would have a system of income taxation whereby the profit and nonprofit corporations of all kinds would be classified alike for tax purposes.

The absentee managers of corporations, the powerful inside groups which assert arbitrary authority to manage and control the property of others, are opposed to this plan. Why? They know that if the stockholders of the corporations have to pay, directly, a tax on the earnings of the corporations, the stockholders will insist on having their portion of the earnings of the corporation. They will insist on a distribution of the corporate earnings.

By that act we shall contribute to the common good. We cannot maintain and develop our democracy unless we develop among our people that characteristic we know as responsibility. Our corporations are now organized and operated to discourage the development of responsibility on the part of the millions of investors in corporations. These investors are often called owners in the propaganda of the apologists for corporation practices but they are not owners because they cannot assume the responsibility of ownership. They merely lend their money to the corporation and then permit a few inside managers, or directors and managers, to use that money as they wish.

Through putting a direct tax on the individual's portion of the earnings in the corporation we will take one step toward encouraging the individual owners to assume responsibility for their investment in the corporation.

Incidentally, through minimizing the opportunity of the inside managers of corporations to use other people's money as they wish, and through compelling distribution of corporation funds, we will take one step toward discouraging the concentration of money or financial power in the hands of the inside managers of corporations. Thus we will discourage monopoly.

But there are other arguments against the corporation income-tax structure.

It is grossly unfair to the small stockholder. Where the corporation pays the tax, the income of the small stockholder is assessed at a rate exactly similar to the rate assessed against the millionaire stockholder. That violates the basic principle of the income-tax law.

It is grossly unfair to the consumer and the common good. The corporation endeavors to pass on to the consumer the tax burdens of the corporation and usually it succeeds in doing so. The result is the consumer pays the tax and pays it pyramided many times. Thus the powerful and wealthy inside managers of corporations favor the corporation tax instead of the individual income tax because they know they have every possibility of passing the tax on and thus escaping its burden. But if they had to pay an individual income tax they would have relatively little chance of passing it on.

Any tax imposed on the threshold of production is a deterrent to production. The corporation tax thus discourages full production and thus is antagonistic to the common good. If we would get rid of the corporation tax and provide for taxation of all income to individuals we would have an equitable base for our income taxation. Then we could adjust the rates of taxation to take just as much of the total national income as we needed to take.

Question. What concessions are accorded to cooperatives by the Government which might be referred to in the phrase "other concessions" which is common in these letters:

Answer. I have seen many of these letters and I shall try to list what are termed "concessions." They are as follows:

Robinson-Patman law: This law attempts to prevent large and powerful buyers from forcing, or inducing, the sellers of goods to give to them discriminatory prices. The purpose of the law is to prevent discrimination between the patrons of a seller of goods. The cooperatives do not and cannot discriminate between buyers. Cooperatives are open membership organizations. Their books are open books. There is nothing to hide. Moreover, if they did discriminate in any way they would be subject to the law, as they are not exempt from its application. The law merely states the obvious fact, a fact which cannot be denied, that patronage returns are not a violation of the law. There is no concession to cooperatives in this law.

Antitrust-law exemption: Some cooperative organizations, farm cooperatives, are granted exemption in the antitrust laws, but to qualify for exemption they must conform to rigid regulatory provisions of law which are more stringent in fact than are the antitrust regulations. Bona fide cooperatives operate to destroy trusts and monopolies. They cannot operate to constitute a monopoly. I cannot imagine any situation where this provision of the law is of any value or of any importance to a cooperative organization.

Farm Credit Administration: Through the Farm Credit Administration a credit system was established for agriculture because control of the credit system by the industrial-financial groups gave them power to destroy agriculture, and they used the power. The story of 1920–21 cannot be written out. A committee of the Congress has investigated the Farm Credit Administration recently. The facts are available to the Congress. It is certain that this credit machinery is in the public interest. It would be very interesting to compare any of the alleged benefits of this system to agriculture with the actual benefits given to other forms of business through our commercial banking systems which have had tremendous benefits from Government.

If there are any other questions you wish to present or which your constituents wish to present, I shall be happy to attempt to answer them. I repeat again that I would like to discuss with you the forces which are at work in our country, and throughout the world, and which are impairing our democracy. I am certain that our cooperative institutions are rendering tremendous service in preserving democracy.

Yours sincerely,

JOHN CARSON.

National Maritime Day

EXTENSION OF REMARKS

OF

HON. JAMES J. HEFFERNAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Saturday, May 26, 1945

Mr. HEFFERNAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address

delivered by Capt. John L. Beebe, superintendent, United States maritime training station, Sheepshead Bay, Brooklyn, N. Y., on National Maritime Day, May 22, 1945:

Today across this Nation, National Maritime Day ceremonies and tributes are being held in countless cities and towns in honor of America's merchant marine and the men who sail the ships.

This is our third National Maritime Day at Sheepshead Bay, and it is an occasion upon which we may pause to look back upon our accomplishments. This station has certificated more than 70,000 men for service on the freighters, tankers, and transports. They have carried the name of this, the largest training station for merchant seamen in the world, into every port where the tide of battle has made it necessary for our ships to go with all the supplies of combat. Many have been killed or listed as missing in action.

Our men, and all the men of the maritime service are serving valiantly and are adding new luster and honor to the high tradition of the merchant marine.

Merchant seamen as perhaps never before in history have formed a battle-front partnership with their brothers of the Army, Navy, Coast Guard, and Marines. They are not an armed force, but they have fought and died to get the goods delivered. The enemy has fought the merchant ships with all the weapons and fury at his command. Six thousand merchant seamen have been lost in action in the war. On this day we pay them honor, and avow our own renewed determination to carry on in that combat partnership.

We are especially honored that today the Army, Navy, and Coast Guard are represented here with us and will have assigned units of their men and women to march in this review with the officers and men of Sheepshead Bay.

We, in turn, take the Maritime Day to salute these other branches of the Government with whom we collaborate and whose enthusiastic aid has helped to ease our job. We hail the comradeship and recognize the interdependence of all.

We are together a team, a team that has been formed and tested in the greatest war in history. Each force in that team has shared with dignity and honor in the recently achieved victory in Europe. We are confident that the team will grow even stronger and gain even greater realization of our mutual interdependence, until our victorious forces march through Tokyo and our ships unload their cargoes on the docks of Kobe and Yokohama.

We salute on this day too, the workers in every shipyard of the country whose efforts have produced the ships. And we salute most of all the people at home whose steadfastness, faith, and support made all our achievements possible.

Expanding Social Security

EXTENSION OF REMARKS

OF

HON. THAD F. WASIELEWSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Saturday, May 26, 1945

Mr. WASIELEWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times of May 26, 1945:

EXPANDING SOCIAL SECURITY

Identical bills to expand and liberalize the social-security program have been offered in the Senate by Senators WAGNER, of New York, and MURRAY, of Montana; and in the House by Representative DINGELL, of Michigan. The measures would establish a national social insurance system consisting of prepaid personal health service; unemployment and temporary disability insurance benefits up to $30 a week on a uniform national basis; and retirement, survivors, and total disability insurance with more liberal benefits than in existing law. They would provide grants to States for expansion of health services, maternity, and child health, and welfare services. They would inaugurate a program of Federal grants and loans for construction and expansion of hospitals and health centers. They would extend the coverage of the social insurance system to an estimated 15,000,000 additional persons—farm and domestic workers, employees of nonprofit institutions, independent farmers, professional persons, and small businessmen.

It is a central aim of social progress to mitigate the hazards of unemployment, need, sickness, disability, and old age for the individual. Every step is to be welcomed by which this can be done without itself introducing equal or greater hazards. This indicates the questions to be asked of a proposal like the Wagner-Murray-Dingell bill. Will it provide relief where it is needed without producing it where it is not needed? Will it mitigate the penalties for failure or misfortune without weakening the incentives to production and success? Will it provide aid to individuals without making them politically dependent and without dangerously extending the power of the Central Government?

Under the bill as it stands it is more than doubtful whether these questions can be answered satisfactorily. Even under the present social-security program we face problems for which we have not yet produced adequate answers. Yet under the new bill vast new programs would be undertaken and existing programs would be tremendously "liberalized." Unemployment insurance, for example, would be taken out of the hands of the States and placed in that of the Federal Government. The Federal Government would pay unemployment benefits for 26 weeks (far beyond the average length of time for which such benefits are now paid by the States), and it is even provided that the duration of benefits may be extended to a maximum total of 52 weeks.

A schedule is provided, also, under which a worker making, when employed, an average of $40 a week could draw as high as $30 a week unemployment benefit. This schedule is also far above the average of what the States now pay. Would not such payments tempts the creation of the very unemployment they are designed to meet? If a man who can get $40 a week for working can draw $30 a week for not working, then so long as he is entitled to draw benefits he is in effect working for only $10 a week; that is the way many will naturally look at the matter when they are asked to take a job, or when they consider giving themselves a vacation at Government expense.

Again, old-age benefits under the new bill would be raised from a present maximum of $85 a month to $120. In many cases, in fact, workers who have received an average monthly wage of $100, would receive a larger monthly sum than that for retiring. Still again, the bill provides for differential grants to the States ranging from 25 percent of the total payments to the richer States to 75 percent of the total to the poorer. This differential treatment sets the stage for political jockeying among the States for formulas especially favorable to this one or that. In addition, it provides for large payments to individuals in States with a low per capita income, without considering whether this may accompany a proportionately lower State cost or standard of living.

A question must be raised about the total costs of this bill, which its sponsors seem to treat so lightly. An 8-percent tax on pay rolls (4 percent to be paid by workers and 4 percent by employers) is in itself an extremely high tax. It is a direct tax on employment. Hence it tends to discourage employment, the very thing upon which our whole welfare and prosperity, including the success of social-security plans, must depend. Yet there are strong reasons for thinking that the sponsors of this bill have greatly underestimated the cost of their measure, and that this 8-percent tax would not be nearly adequate, after a few years, for what they propose.

The tremendous financial commitment involved in the Wagner-Murray-Dingell bill ought to involve the most careful study, even in a period when the budget is balanced and on a relatively manageable level. To undertake it lightly at the present time, when the budget is already unbalanced to an unparalleled extent by war, and when the path back to balance and manageability is already far from clear, would be an assumption of obligations without considering how they are to be paid.

The Paper and Pulp Industry and the Proposed 50-Percent Reduction in Duty Provided in H. R. 2652

REMARKS

OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Saturday, May 26, 1945

Mr. MURRAY of Wisconsin. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Wisconsin?

There was no objection.

Mr. MURRAY of Wisconsin. Mr. Speaker, since becoming a Member of Congress I have made every effort to obtain the facts about this industry. The paper and pulp industry is an important industry in the United States, in Wisconsin and in the Seventh Congressional District of Wisconsin. Some of the unions in the paper mills have for many years indicated an interest in the duty and have felt an additional duty should be levied in order to protect the jobs of the American paper and pulp workmen.

The National Paper and Pulp Association presented the facts before the Ways and Means Committee. Among the points and facts they brought out were:

First. That the paper industry would be more adversely affected than any other major industry by a further reduction of 50 percent in the duty.

Second. That the United States paper industry is easily affected by duty changes because foreign methods of production are very similar to ours.

Third. That the wage rates of other countries are lower than in the United States as shown in the following table taken from their testimony:

APPENDIX A

Comparison of wages in European and American mills

[Average rates per hour on comparable machines]

Position	Norway	Sweden	United States	Canada
Machine tender	$0.41 to $0.44	$0.38¼	$1.16 to $1.37	Wage rates in mills average 10 to 12 percent below American wages.
Back tender	$0.31½ to $0.33¼	$0.33½	$0.98 to $1.16	
Third hand	$0.30½ to $0.32	$0.32½	$0.84 to $0.85	
Fourth hand	$0.30 to $0.31	$0.30¾	$0.64 to $0.68	
Oilers	$0.32	$0.31½	$0.54 to $0.66	
Head beaterman	$0.31¼	$0.31½ to $0.38¼	$0.68	
Electricians	$0.32¾		$0.60 to $0.77	
Acid maker	$0.36½	$0.35¼	$0.55 to $0.82	
Laborers	$0.31¾	$0.30¾	$0.62½ to $0.70	

Sources: Special committee of American Members of International Brotherhood of Pulp, Sulphite. and Paper Mill Workers. American Paper & Pulp Association. Averages include mills comparable to foreign mill in size and speeds of operations.

NOTE.—The union committee commenting on the relative cost of living in Scandinavia and the United States states that it takes the worker in Norway and Sweden 100 hours of work to buy what the American worker can purchase with 65 hours of work.

GENERAL NOTE.—The wage rates are those available in January 1940. Since that time American wages have risen materially, but there is no information on the results of the war on Scandinavian rates. No effort has been made to weight the wage rates given to compensate for any depreciations of currency.

Fourth. That the paper made in Japan, Norway, Sweden, Russia, Mexico, Canada, Great Britain, is made in exactly the same way as in the United States and of the same materials, same machinery, and by the same kind of employee, which employees must be familiar with paper processes.

Fifth. That paper machines require the same number of workers to operate them in any country.

Sixth. That the only advantage in cost of production of paper can have over another country is in wages. This means wages in the mill, in the cutting of the pulp, and other raw materials.

Seventh. That the country with the lowest wages and the lowest standard of living can easily be the lowest cost producer of paper.

Eighth. That when foreign mills, by subsidies in shipping or by lower wages in transportation, can deliver paper on our seaboard cheaper than the paper from prominent United States mills can be shipped to New York.

Ninth. The average freight rate for paper from Sweden to New York is between $5 and $6 per ton while the freight rate from Ohio and Wisconsin mills to New York is $8 to $9.50 per ton. The freight rate on wrapping paper from Michigan, Ohio, and Wisconsin to New York is $7.40 to $11.20 per ton.

Tenth. That the paper industry is not in favor of a high tariff. The industry evidently asks only a duty rate that will allow it to compete on even terms with other countries for the United States paper market.

Eleventh. The United States experimented with a one-way reciprocity in 1911 and many paper mills moved to Canada and newsprint in the United States has been practically abandoned although Canada never ratified the treaty.

Twelfth. That following this loss of the newsprint industry no further attempts to negotiate special treaties have been made until the ones of the present administration.

Thirteenth. That the United States paper industry, because of its experience in the 1911 newsprint reciprocity deal has opposed these so-called treaties since that time.

Fourteenth. That paper mills are located in 38 States and that if American labor is to be found jobs in paper and pulp plants the industry must have a certain amount of protection.

Fifteenth. That there are thousands of jobs incident to the paper and pulp industry in the United States and there is a capital investment of nearly $2,900,000,000 in the United States.

Sixteenth. That in 1939 there were 939 paper and pulp units in the 38 States.

Seventeenth. Approximately one-half the paper and pulp mills are in towns wholly or largely dependent on the business developed through these mills.

Eighteenth. That 58 percent of the Nation's mills are located in towns of less than 10,000 population.

Nineteenth. The export markets for paper is negligible due to the lower wage rates of other countries.

Twentieth. That the United States should not permit its paper industry to be so hamstrung by tariff concessions to other countries that the United States markets will become more and more reliant on foreign mills for the paper needs of our country.

Twenty-first. That the paper industry is an enterprise that must maintain a 75 percent of capacity production. The value of the output is about equal to the investment, a ratio smallest of any major industry.

Twenty-second. That labor is a controlling factor in the cost of producing paper. The paper industry leads all major industries in the amount of capital invested per employee.

Twenty-third. Every ton of paper imported deprives an American paper mill employee of 3 days' employment.

Twenty-fourth. A tabulation of tariff rates on many principal grades of paper are not only lower than those in effect in 1922, and some rates even below those fixed by the 1913 act.

Twenty-fifth. In 1938 imports of paper and pulp were over $185,000,000, approximately 25 percent more than the importation of coffee, the next largest commodity, and still a larger percentage above cane sugar, crude rubber, or raw silk, the three next largest importations, all of which are produced either in very small quantities or not at all in the United States.

Twenty-sixth. Paper and pulp imports were over twice as large as those of chemicals from 1930 to 1940.

These 26 statements are taken from the testimony before the Ways and Means Committee by the Paper and Pulp Association when they opposed a further reduction of the duty on paper and paper products.

Wisconsin is one of the leading paper and pulp States. Many large and successful mills are located in the Seventh Wisconsin District.

The following table shows the duties on various paper products and was also included in this testimony:

APPENDIX C

Duty rates on paper, 1913 to 1945

[Grades on which duty rates have been reduced by reciprocal trade agreements]

Grade	1913	1922	1930	Jan. 1, 1945	
				Actual rate	Equivalent to ad valorem computed on latest available statistics of actual importations
	Percent				
Printing	12	¼ cent per pound and 10 percent	½ cent per pound and 10 percent	⅛ cent per pound and 5 percent	10.8 to 12 percent.
Paperboard:					
Plain	5	10 percent	10 percent	10 percent (bound)	
Processed	25	30 percent	30 percent	$14.50 per ton, not less than 15 percent or more than 30 percent.	

Duty rates on paper, 1913 to 1945—Continued

[Grades on which duty have been reduced by reciprocal trade agreements]

Grade	1913	1922	1930	Jan. 1, 1945	
				Actual rate	Equivalent to ad valorem computed on latest available statistics of actual importations
	Percent				
Pulpboard in rolls for use in manufacture of wall board.	5	10 percent	10 percent	5 percent	
Same, processed	25	30 percent	30 percent	15 percent	
Tissue:					
Lightweight [1]	30	6 cents per pound and 15 percent	6 cents per pound and 20 percent	If valued at not over 15 cents, 3 cents per pound and 10 percent.	30 percent.
Heavyweight [1]	30	5 cents per pound and 15 percent	5 cents per pound and 15 percent	If valued at not over 15 cents, 2½ cents per pound and 7½ percent.	28.7 percent.
Stereo, carbon, pottery, light weight.[1]	30	6 cents per pound and 15 percent	6 cents per pound and 20 percent	If valued at more than 15 cents 4 cents per pound and 15 percent.	21.5 percent.
Same, heavyweight [1]	30	5 cents per pound and 15 percent	5 cents per pound and 15 percent	If valued at more than 15 cents, 4 cents per pound and 10 percent.	17 percent.
India Bible (over 10 pounds)	12	4 cents per pound and 15 percent	4 cents per pound and 15 percent	2 cents per pound and 10 percent	13.6 percent.
Crepe paper	30	6 cents per pound and 15 percent	6 cents per pound and 15 percent	3 cents per pound and 7½ percent	32.5 percent.
Simplex decalcomania	35	5 cents per pound	5 cents per pound and 10 percent	2½ cents per pound and 10 percent	22.1 percent.
Drawing paper	25	3 cents per pound and 15 percent	3 cents per pound and 15 percent	2 cents per pound and 10 percent, if over 40 cents per pound.	13.7 percent.
Hand-made paper	25	do	do	2 cents per pound and 10 percent, if valued at over 50 cents.	12.9 percent.
Bristolboard	25	do	do	2 cents per pound and 10 percent, if valued at not over 15 cents.	33.7 percent.
Hanging raw stock	12	10 percent	10 percent	7½ percent	
Filtering	30	5 cents per pound and 15 percent	5 cents per pound and 15 percent	2½ cents per pound and 7½ percent, if valued at 75 cents or more.	8.5 percent.
Blotting	30	30 percent	30 percent	15 percent	
Wrapping kraft	25	do	do	20 percent	
Wrapping, other	25	do	do	25 percent	
Vegetable parchment	25	3 cents per pound and 15 percent	3 cents per pound and 15 percent	2 cents per pound and 10 percent	29 percent.
Straw board and paper, less than 12-point, not less than 8-point.	5-25	10-30 percent	30 percent	15 percent	
Cigarette	50	60 percent	60 percent	45 percent	

[1] Lightweight refers to paper weighing not over 6 pounds per ream of 288,000 square inches. Heavyweight is paper 6 pounds or over, less than 10 pounds.

The following table was the one included in the testimony showing the tariff rates of the United States and the United Kingdom:

APPENDIX D

Comparative tariff rates—United States and United Kingdom

Grade	Actual rate	United States rate—equivalent ad valorem based on latest actual available import data	British rate
Printing	⅛ cent per pound and 5 percent	10.8 to 12 percent	20 percent.
Paperboard, plain	10 percent	10 percent	15 to 20 percent
Same, processed	$14.50 per ton not under 15 percent or over 30 percent.	15 to 30 percent	Do.
Pulpboard in rolls for manufacture of wallboard	5 percent	5 percent	20 percent.
Same, vat-lined	15 percent	15 percent	Do.
Sheathing paper	10 percent	10 percent	Do.
India and Bible	2 cents per pound and 10 percent	13.6 percent	Do.
Simplex decalcomania	2½ cents per pound and 10 percent	22.1 percent	Do.
Vegetable parchment	2 cents per pound and 10 percent	29 percent	16⅔ percent.
Tissue, lightweight	3 cents per pound and 10 percent	30 percent	Do.
Same, heavy	2½ cents per pound and 7½ percent	28.7 percent	20 percent.
Drawing paper, over 40 cents per pound	2 cents per pound and 10 percent	13.7 percent	Do.
Hand-made paper	do	12.9 percent	Do.
Bristolboard, not over 15 cents	do	33.7 percent	Do.
Wrapping:			
Kraft	20 percent	20 percent	16⅔ percent.
Other	25 percent	25 percent	20 to 25 percent.
Strawboard	15 percent	15 percent	15 to 20 percent.
Blotting paper	do	do	20 percent.
Filtering paper, if 75 cents or more	2½ cents per pound and 7½ percent	8.5 percent	Do.

The following table shows the amount of imports of paper products and the value thereof:

United States imports of paper base stocks and paper and paper manufactures

	1936	1937	1938	1939	1940
	Quantity				
Paper base stocks:					
Pulpwood (1,000 cords)	2,420	3,045	2,589	2,261	2,872
Wood pulp (1,000 short tons)	2,278	2,395	1,711	2,026	1,225
Other paper stock (1,000 short tons)	185	181	79	116	79
Paper and manufactures (1,000 short tons)	2,835	3,404	2,336	2,683	2,812
	Value (in thousands of dollars)				
Paper base stocks:					
Pulpwood	9,482	12,393	11,038	9,437	12,194
Wood pulp	82,837	98,269	72,778	75,892	60,194
Other paper stock	6,602	7,190	2,550	3,097	3,027
Paper and manufactures	110,113	137,071	112,975	126,783	132,611
Total	209,034	254,923	199,341	215,209	208,026

The exports of paper base stock and paper and paper manufactures had a dollar value of between forty and fifty million dollars although in 1940 these exports, due to foreign demands no doubt influenced by the war, rose to about $100,000,000 in value.

One can readily see that the exports of paper and its products is rather small in comparison to the imports of these items.

One of my Democratic colleagues said on the floor that the paper and pulp industry was presented as an industry that was subject to harm by further duty reductions, it was not an industry of much importance and not many people were affected. This is not a true picture. As shown in the testimony, the industry is a large industry, has a large number of

employees and should not be subjected to a cut in the duty rate at this time.

We hear about the 60,000,000 postwar jobs, but if we do not change our course and quit allowing a few people to have complete control over the pay rolls and the grocery bills of our citizens we may see the 60,000,000 jobs somewhere else than in the mills, factories, and manufacturing plants of the United States.

First. A vote in favor of this measure is a vote in favor of legislation by men instead of legislation by law.

Second. A vote in favor of this legislation is a vote that jeopardizes the jobs of millions of American employees.

Third. A vote in favor of this legislation is a vote to delegate additional legislative powers to the executive department of our Government.

Fourth. The American people want the Government given back to the people. They do not want to see any new schemes to give away their jobs.

Fifth. Five years before the war the United States did not even produce enough food to feed the people of the United States.

Sixth. If H. R. 2652 is put into operation the American people will not only have to depend on food produced in other countries to feed their families as they did for 5 years before the war, but the American people will be compelled to depend on people of foreign countries for more of their paper products as they do now for newsprint.

Seventh. Logrolling was supposed to have been in operation when tariff bills were presented to the Congress. This was not a scientific approach, that is sure. We now have sectional logrolling. Under the present administration's domestic and foreign commerce policy, we find embargoes placed on exports, near embargoes on imports, subsidies paid on exports, limited quotas of world markets provided American producers, the creation of import quotas, the domestic subsidy payment arrangements, and the price floors established for 2 years after the war and then we see the duty juggling, the sectional favoritism as practiced by the manipulators of the duty rates under the reciprocal treaties. Then I question whether or not the logrolling is a more offensive approach than the program of the treaties where they are honeycombed with deception and dripping with deception. This bill is a bill to create unemployment.

The Public Health

EXTENSION OF REMARKS

OF

HON. JOSIAH W. BAILEY

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, May 28 (legislative day of Thursday, May 24), 1945

Mr. BAILEY. Mr. President, I present and request unanimous consent for publication in the Appendix of the RECORD, an address on the public health delivered by the Governor of North Carolina, Hon. R. Gregg Cherry, at the dedication of the health center at Monroe, N. C., on May 14, 1945.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Every American, regardless of creed, color, or economic status, is entitled not only to life, liberty, and the pursuit of happiness, but also to good health, in order that he may properly enjoy these blessings—not as a matter of charity, but as his or her inherent right.

Health is the basis of human happiness; the cornerstone upon which rests not only the welfare of the individual, but of the Nation as well. I emphasized this principle in my platform when seeking the nomination for the office of Governor; also in my inaugural address. In each case, I urged the adoption of a program that would provide for the medical examination of and adequate care for all children in the State whose parents are not able to provide these. I pointed out then, and I reassert now, that such a program is in no sense intended to be a plan of socialized medicine; but it is my earnest conviction that where parents are unable to finance the cost of remedying physical defects among their children, the State should assume that cost. This is neither "federalized," "socialized," nor "State" medicine, but the fulfillment of a solemn human obligation.

Altogether too many of our young men have been turned down by draft boards because of physical defects which could have been remedied by proper medical care in childhood. Until this whole subject finally is reviewed, the question of our standing as to the percentage of rejectees will remain a debatable subject; but, whatever our rank in this matter, we should determine to give our children the best in the way of health opportunities, in order that they may be fitted for the tasks that lie ahead. We know that upon their shoulders will fall responsibilities unparalleled, perhaps, in human history, as they, taking our places—picking up where we left off—strive to build a world in which the barbarities of the immediate past can never be repeated.

If we are to get the most out of the millions we are investing in public education, we must make certain that our children are healthy. Education cannot reach its full fruition in the mind that is housed in a diseased body, or one that is impaired by defects. If these defects can be remedied, but are not, because of our indifference, then upon our shoulders the blame must rest.

It is as much the right of every man, woman, and child in North Carolina to enjoy the benefits of public health as it is to enjoy the benefits of public safety, public roads, public schools, and the many other things for which we pay, in taxes, and take as a matter of course.

We labor under no illusions of having received charity when we send our children to the public schools, when we ride along our highways, when we look about us and see policemen ready to protect us against the criminal element. Such services belong to us, as citizens.

Public health is simply mass protection. It in no way jeopardizes the livelihood of the private practitioner, who has invested his money in a medical education and has the right to expect a reasonable return therefor. In fact, it takes many burdens from his shoulders, enabling him to give his time to those who are able to and who should pay for his professional services. The average doctor cannot be expected to be responsible for mass protection against communicable diseases for which preventives have been discovered. That is a matter for the State, just as the State provides the legal machinery for guaranteeing all its citizens justice in the courts. But because such machiney has been provided for mass protection against crime and injustice, this does not mean that the private practitioner of law must go out of business. Not at all. His services are made to fit into those provided by the State.

The same is true of medical doctors, as to their relation to public health. In fact, in the early years of its existence, the North Carolina State Board of Health consisted of the entire State medical society, which acted through a committee, and today four of the nine members comprising the board are elected by and from the membership of the State medical society.

As most of us know, there are two branches of medicine—curative and preventive. These are so interdependent that the success or failure of one means the success or failure of the other. The line of demarcation is often very faint, perhaps, in the eyes of the laymen. It is, therefore, highly advisable that each person who is able to do so go to his private physician for periodic check-ups, in order to prevent the preventable while there is yet time. The Psalmist declared: "I am fearfully and wonderfully made; marvelous are thy works." The human body is a delicate piece of machinery, fashioned by the Great Architect of the Universe; and to the declaration of the Psalmist, St. Paul declared: "Your body is the temple of the Holy Ghost." This imposes upon man an added responsibility. He should protect his body against disease, not only because of its value as the instrument with which he must work and receive wages to care for himself and those dependent upon him for support, but also as the dwelling place of the highest ideals of life.

We hear much these days about the dignity of the individual, and to preserve that dignity millions, during the past five and a half years, have suffered and died. Unless we make their great loss our priceless gain, their blood will have been spilt in vain, and we can never hope for that final brotherhood of man toward which we look forward and for which we so earnestly pray. We have won great military victories; we have overcome enemies which appeared to be all but invulnerable, as they went up and down the world spreading death and destruction among innocent men, women, and children. But unless we translate these military victories into spiritual gains, we may well ask ourselves that searching question: "For what shall it profit a man if he gain the whole world and lose his own soul?"

Just over a month ago this Nation and the world suffered a staggering loss in the death of our late President, Franklin Delano Roosevelt, whose life was dedicated to the highest ideals of mankind, but more especially to helping the weak and the underprivileged. He was truly a friend of man, and he left us an incentive unparalleled, perhaps, in history. Though himself afflicted in body, his great mind towered into the blue skies of clear and sympathetic thinking, and "seeing the multitudes, he had compassion upon them."

Through the agencies at our disposal, it is possible for us to achieve much toward the uplift of humanity—and I know of no more important medium through which this can be accomplished than through the organization we know as public health, to which this building stands as a magnificent tribute—a tribute to our efforts in behalf of mass protection against preventable diseases.

We have in North Carolina a State health department which is regarded as one among the very best in the United States. This is borne out by the fact that in time of peace, when international travel is permitted, the North Carolina State Board of Health is visited by public health workers from all parts of the world, who come to study the methods we employ. Preceding the opening of hostilities that grew into World War II we had visitors from every continent—from

Turkey, Hungary, Great Britain, India, the Philippines, Hawaii, the West Indies, and many other places. During the past year, public health workers have come from the Argentine, Brazil, Ecuador, Chile, Mexico, Costa Rica, the Republic of Panama, and other South American and Central American countries. They came, for the most part, under the sponsorship of the Rockefeller Foundation, in whose eyes the North Carolina State Board of Health occupies an important place, not for any sentimental reason, to be sure, but because of its achievements.

Public health, as I have said, is dedicated to the prevention of disease; and, I might add, to the alleviation of suffering among the underprivileged.

Now, let us consider, briefly, some of the gains we have made in North Carolina that might be attributed to preventive medicine. I might stand here and talk for hours in general terms—I might make all sorts of claims, but unless these claims could be substantiated, there would be little profit or encouragement in what I might have to say.

During the year 1917, when we became an active belligerent in World War I, more than 14 out of every 1,000 persons in North Carolina died, many from diseases that could have been prevented. During the following year, that is, 1918, when we were visited by the great influenza epidemic, nearly 18 out of every 1,000 died. No one who survived that dreadful year will ever forget it. The plague struck in our homes, in our armed camps, here and overseas—everywhere people were dying by the thousands. On the platform of every railroad station coffin boxes containing the remains of influenza victims were piled high on trucks, awaiting shipment.

As compared with our general death rate of more than 14 per thousand in 1917 and nearly 18 in 1918. North Carolina's death rate last year was only 7.9 per 1,000 population, which was the lowest in the history of this State. We should do everything within our power to preserve that record—yes, to lower it.

In 1917, North Carolina's infant mortality rate was nearly 100 out of every thousand babies born. Last year it was just 44.7, the lowest in our history. Even that rate is entirely too high, but it shows that we have made gains. We still have a long way to go, and it is going to take much hard work and the spreading of much information among prospective mothers—but we can do it, if we set our hands and our hearts to the task.

Another encouraging achievement in North Carolina last year was the reduction of the maternal death rate to 2.9 for each thousand live births, which was also the lowest in the State's history. In 1917, 7.8 mothers died as the result of every 1,000 live births, as compared with less than three such deaths in 1944.

There are in North Carolina approximately 300 public-health maternity and infant clinics to which the indigent of all races go for examination and treatment, if they need it. Expectant mothers are supplied with the very best information that will help them over the period through which they are passing. These mothers and their babies are given the same treatment they would receive if they were able to pay for it.

In addition to all this, the North Carolina State Board of Health is the agency through which the Federal Government administers funds for carrying on the emergency maternity and infant care program in this State. This program provides for free maternity care for all women whose husbands are in the fourth, fifth, sixth, and seventh pay grades of the armed forces, and for free medical and hospital care for infants of men in these classes during their first year of life. At the present time, between 1,000 and 1,200 wives of servicemen are being delivered every month that passes. Through March of this fiscal year the United States Children's Bureau channeled through the North Carolina State Board of Health for the prosecution of this program the sum of $1,048,178—that is, from July 1, 1944, through March 31, 1945, making a grand total of $1,855,703 since the program got well under way about 2 years ago. Of this amount, the sum of $1,095,625 has actually been spent in North Carolina, under public-health supervision, for prenatal, obstetrical, and post partum care, and hospitalization for wives and babies of servicemen. Under this program, the families are allowed absolute freedom of choice in the matter of selecting their doctors and hospitals, who are paid out of the EMIC fund. However, there must be selected a cooperating hospital, as these were chosen because they measured up to the standard requirements and were willing to have a part in this work.

There has been a perceptible decline in both maternity and infant mortality since the inauguration of this program, which insures standard medical care at no cost to the beneficiaries.

We have, through immunization and sanitation, all but stamped out typhoid fever in North Carolina. Throughout last year, there were only 12 deaths from typhoid fever in our State, as compared with 19 in 1943, and—believe it or not—839 in 1914 and 129 as late as 1933.

We have gone for years without a single death from smallpox, but this does not mean we should relax our efforts, for it is through constant vigilance in our vaccination, immunization, and sanitation efforts that communicable diseases are eliminated or controlled. This was demonstrated in Canada several years ago, in a community that had neglected vaccination. A pullman porter developed the disease en route to one of the Canadian cities, where he made contacts on his way to a hospital. Shortly thereafter, a very serious epidemic broke out that resulted in numerous deaths. We must never let that happen in North Carolina.

North Carolina's death rate from tuberculosis in all forms dropped last year to a new low of 36.5 per 100,000 population, compared with 39.1 in 1943. Twenty years ago that same rate was approximately 100, while 30 years ago it was approximately 140. But we can never be safe from the spread of tuberculosis until all open cases are detected and segregated for treatment. We must separate the well from the sick if this dread disease is to be controlled.

The United States Government recently made available the sum of $10,000,000 to aid the States in a great case-finding program, and the North Carolina Legislature, at its 1945 session, appropriated approximately $40,000 with which to match Federal funds for the next biennium. In the meantime, however, approximately $19,000 has been made available by the Federal Government for work in North Carolina until July 1, this year, when State-appropriated funds will become available.

The continued downward trend in North Carolina's pneumonia death rate, as reflected in the 1944 vital statistics report, is also highly gratifying. During last year there were in North Carolina 1,555 deaths from pneumonia, with a death rate of 41.5 per 100,000 population, as compared with 1,692 deaths and a death rate of 45.7 per 100,000 during the preceding year of 1943. Thanks to the sulfa drugs and penicillin.

During the entire year of 1944 there were only 37 deaths from diphtheria in North Carolina, compared with 56 in 1943—but from now on there should be no such deaths, and diphtheria is a preventable disease and the law provides for the immunization of every North Carolina baby before it reaches the age of 1 year. Twenty years ago, the death rate from diphtheria in this State was nearly 12 for every 100,000 population. Now, it is just one.

Recently, we have heard much about efforts designed to conquer cancer, which continues to make terrific inroads into our population. It is hoped that all such efforts will continue and that this dread disease may some day be brought under control; but even now cancer deaths can be greatly reduced by early diagnosis, surgery, radium, and X-ray. North Carolina's cancer death rate last year was 61.4 per 100,000 inhabitants—too high, to be sure, and growing all the time; but, at that, the North Carolina cancer death rate is only about one-half of the national rate, which is around 122 per 100,000 population. Moreover, North Carolina has the lowest cancer death rate of any State in the South Atlantic group. While this is gratifying, it should cause no relaxation in our efforts to bring the disease under control, as our own cancer death rate has risen about 10 points in the past 10 years. Cancer is now fourth among the leading causes of death in this State, having passed tuberculosis, which has dropped to eighth place. As late as 1916, tuberculosis stood at the top of the list.

No State in the Union has made greater strides in the war against venereal diseases than North Carolina. For the control and final eradication of this form of pestilence, North Carolina has within its borders one-tenth of all the public-health clinics in the United States. In combatting venereal diseases and bringing them under control, our public-health officials have kept abreast of the times. With the aid of Federal, philanthropic, and State funds, the results have been definite. At the present rate of the decline of syphilis deaths—from 421 in 1940 to 241 in 1944—the disease undoubtedly, in the opinion of public-health officials, will appear as a minor cause of death 10 years from now. That would be the earliest date that death reports would reflect the true situation in regard to today's syphilis morbidity, which shows a reduction in late syphilis in the past 4 years of more than 50 percent.

I have given you some of the outstanding reductions in mortality rates in North Carolina in recent years, most of them in connection with preventable and controllable diseases. As I have previously told you, public health is chiefly concerned with preventive medicine. It has not, does not, and will not infringe upon the rights of the private practitioner of medicine. It will cooperate, but it will not seek to dictate. On the other hand, the private practitioner should give and has given public health a cooperation that is commendable and which emphasizes the interdependence of the two great branches of medicine.

This health center, which today we are dedicating in the progressive county of Union, stands as a tribute to preventive medicine, and its importance will be demonstrated to a greater degree with the passage of time.

This is one of seven such centers that have been erected in North Carolina defense areas with the aid of Federal funds provided by the Lanham Act. Whether there are more such centers will depend upon the passage of what is known as Senate bill 191, now pending in Congress, which would provide aid to States wishing to erect such centers, not only in defense areas but anywhere they are needed and counties will match funds. Hence the passage of this bill is of extreme importance to the public-health picture, as it would make available the sum of $110,000,000 for hopitals and health centers throughout the United States.

The Lanham Act was passed as an emergency measure. Senate bill 191 would provide a continuing fund for postwar construction of such centers as this and, under certain conditions, it could result in the erection of centers in many other counties where

they are so sorely needed in the promotion of public-health activities.

A public-health worker recently made this suggestion, which I pass on to you as food for thought. "What," he asked, "could be a finer monument to men in the armed services from any county who have made and will make the supreme sacrifice, than a health center?" Some communities are considering the erection of auditoriums, others playgrounds, and still others monuments, but what finer monument could be erected in any county than a health center dedicated to the saving of human life and the preaching of the gospel of disease prevention?"

You have only to consider the quarters in which your county health department formerly was housed to appreciate this magnificent plant, which stands out as a beacon of progress. It is not only a tribute to the advance of public health, but a civic asset, as well.

The plant we now dedicate not only symbolizes the dignity and importance of health, but the dignity of the individual, who, to be at his best, must be healthy.

North Carolina has come a long way down the path of material progress during the past two or three decades. We have kept abreast of the times, and in many instances we have blazed new trails. We have not achieved perfection, and we never will, because perfection is something that, at best, can only be approximated, but never reached. Yet we have many reasons to rejoice in our achievements, especially those reached through our desire to serve humanity.

Long ago, we realized we could not live in mud and ignorance, and we provided facilities for our emergence from both. We now know that we cannot make terms with any disease that can be prevented. We must, with the help of science, prevent the preventable. We intend to do just that. We have provided the means for universal education, and each of us looks forward to the day when not only more than 95 percent of our people—as is now the case—enjoy the benefits of organized public health, but 100 percent. What has been done here will go a long way toward furnishing an incentive for that goal.

The First Peace Issue

EXTENSION OF REMARKS

OF

HON. ALLEN J. ELLENDER

OF LOUISIANA

IN THE SENATE OF THE UNITED STATES

Monday, May 28 (legislative day of Thursday, May 24), 1945

Mr. ELLENDER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The First Peace Issue," published in the New York Times, May 28, 1945.

There being no objection, the editorial was ordered to be printed in the RECORD as follows:

THE FIRST PEACE ISSUE

At the end of a long and sharp debate, which culminated in a personal appeal by President Truman for favorable action, the House of Representatives has approved a bill which proposes to give the Government power to continue and expand the Hull program of reciprocal trade agreements. No more important legislation has come before Congress in many months than this first test of American policy toward the nature of the postwar peace. For at least three chief reasons a continuation of the Hull program is indispensable—so indispensable that the defeat of this legislation at this time would have been a major political calamity.

In the first place, it is evident that both public and private loans from the United States—loans made on a sound basis—will be necessary for the reconstruction of Europe, a task which needs to be undertaken as much in our own interest as in the interest of our European allies. Such loans cannot possibly be made on a sound basis unless there is reasonable hope of repayment. And since the only practicable method of repayment is in terms of goods, the whole problem of postwar reconstruction is tied up intimately with the problem of achieving reasonable reductions of barriers to trade.

In the second place, even more than in the years before the war, many American industries are now geared to a production which will require profitable foreign markets if the existing volume of domestic employment is to be maintained. Again we face the fact that, in the long run, and particularly since we have already acquired most of the world's gold, American goods can be bought abroad only with the proceeds of goods sold in our own markets, and bought there, because they represent good values at reasonable prices, by American consumers.

Finally, since the United States is admittedly the most powerful economic unit anywhere in the world today, it is obvious that our action will be the most important single influence in establishing the whole economic pattern of the postwar years, and in determining from the very start whether the trend will be—as it would certainly have been if the Hull program had been rejected—toward a narrow economic nationalism, with foreign trade largely in the hands of Government monopolies, or whether the trend will be—as there is now more reason to hope—toward a freer exchange of goods, a relaxation of governmental controls, a survival of the private enterprise system, and an era of economic good will which will lap a sound basis for the work of the new international peace organization which is now being established at San Fransico.

This is the first important international issue to come before Congress since the end of the war in Europe, and the vote on it must give cause for second thought to many of those who felt in the last election that it was safe to trust the Republican Party in Congress with the direction of international issues, on the ground that that party had turned over a new leaf and seen a new light since the days of its opposition to lend-lease, to repeal of the arms embargo, to Selective Service, and to the original grant of authority to Mr. Hull to negotiate his trade agreements. For, on the critical test which this new legislation met on Saturday—the question whether or not to kill the bill by recommitting it—only 7 Republicans could be found in the entire House of Representatives who were willing to give their support to continuing and expanding the Hull program. One hundred and sixty-seven Republicans—a majority of 23 Republicans to 1—voted to send the new bill back to committee.

Such a performance as this can profit the Republican Party, politically, only on one assumption: Only on the assumption that there is a swing-back of public sentiment in this country to the old days of political and economic isolation between the two World Wars. On any other assumption the House Republicans have taken a position and written a record that must be a heavy handicap to any Republican candidate for the Presidency in the next election.

It now remains to be seen what will happen in the Senate.

Reorganization of the Federal Government

EXTENSION OF REMARKS

OF

HON. HUGH BUTLER

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Monday, May 28 (legislative day of Thursday, May 24), 1945

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "Reorganization of the Federal Government," delivered by Mr. David A. Simmons, of Houston, Tex., president of the American Bar Association. The length of the address is a little in excess of the two pages allowed, and I have therefore attached an estimate from the Public Printer showing the cost of printing to be $156.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Last week, as one of its last acts before the Christmas recess, the Congress passed Senate Concurrent Resolution 23, known as the Maloney-Monroney resolution. It provided for a committee of 12, 6 Senators and 6 Congressmen, to study the organization and operation of the Congress and to recommend improvements with a view toward strengthening the Congress, simplifying its operations, improving its relationship with other branches of the Government, and enabling it better to meet its responsibilities under the Constitution. The appropriation for the committee, $10,000, is a mere pittance in these days of billion-dollar appropriation bills, but the announced function of the committee is one that is of special interest to us both as lawyers and as citizens.

Newspaper reports from Washington, in the pithy language of the press, said the purpose of the legislation is to lift Congress out of the "snuffbox and wig era" by improving its cumbersome machinery.

One Congressman, in urging the adoption of the resolution, said that he expected to submit a proposed constitutional amendment to provide that Congressmen and Senators should be prohibited from acting as messenger boys for their constituents and would be required to give their entire time to their legislative functions. He said he thought another Representative should be elected from each district to a second Congress, and the function of these officials would be to keep in touch with the executive departments and bureaus, run errands for constituents, and do that mass of detail which now takes 90 percent of the time of the present Congressmen and Senators. Of course, being a realist, he said they would have to provide that the new Representative errand boys should be prohibited from running for the Senate or Congress for a number of years, as obviously they would have a wonderful opportunity to cut the ground from under the statesmen, who thereafter would be functioning solely in the higher legislative atmosphere.

"Congressmen should be elected," this Member said, "on the basis of their grasp of national problems rather than their ability as errand boys and favor extractors. Personal demands on a Congressman's time should not be such as to prevent him from legislating intelligently. The present system is not fair to the majority of the people nor to the Congressmen. The executive branch has expanded to meet modern conditions and

so must the legislative branch. Most of our laws today do not originate in Congress. They come from the executive branch or elsewhere."

The last sentence is particularly intriguing. In a recent address Senator McCARRAN elaborated the same thought as follows:

"Only a few decades ago the Congress reprimanded most severely a Cabinet member who had the unprecedented temerity to send to the Senate the text of a bill which he wished to see enacted. Today this procedure not only is common practice, but is by no means confined to Cabinet members. If you list the major bills which have been enacted into law by the Congress in recent years, you will find that a substantial number of them originated, not in response to popular demand expressed through the duly elected representatives of the people, but in the brain of some one member of the executive branch of the Government, or some small group within that branch; and were drafted, not in the halls of Congress but in some administrative office, or executive conference room, or in the cubbyhole of some second assistant supervisor of auxiliary functions. Such a bill, however brilliantly written, cannot be an expression of the will of the people, but only a mirror of the ideas and ideals of its author and of the mood of his executive and administrative superiors."

When the new committee clears its deck for action, I think it will discover that, instead of wanting to escape from the "snuff box and wig era," it will be necessary to go back to the fundamental principles of government of the "snuff box and wig era" in order to accomplish the purposes it has in mind. It will also discover that legislative efficiency under our form of Government is no simple matter. The edicts of a powerful executive, be he emperor or what not, are much more efficient to formulate than the enactments of a Senate of 96 Senators and a House of Representatives of 435 Congressmen. Our form of Government has three branches, not for the purpose of promoting efficiency but, as Mr. Justice Brandeis said in the case of *Myers* v. *United States*, to preclude the exercise of arbitrary power. The founders were determined to save the people from autocracy.

Consequently, I hope the lawyers of our country will give serious thought to the functioning of this new committee on reorganization of the Government and will give the committee the benefit of their ideas as to the scope and extent of that reorganization. Obviously, we may leave to the committee the details of the functioning of Congress itself, that is, such matters as the consolidation of the committees of the two Houses and the legislative procedure in the enactment of a law. However, a reorganization of Government requires much more than that.

We are well aware that our form of Government, presumably much the same as it was in the beginning, has changed radically these last 50 years, due to what we now call "bureaucracy." Let us give a little thought and attention to the historical background of our form of Government to see if we can suggest something that may be helpful, not only in promoting efficiency but in preserving the checks and balances originally devised.

As a consequence of their knowledge of the history of the governments of the world, the men who founded this Nation decided upon a republican form of government, with checks and balances against the misuse of power. Recognizing that the legislative, executive and judicial were separate functions of government, they placed those powers in separate departments. There is no equivocation about the language. The Constitution provides that all legislative powers granted shall be vested in a Congress which is to consist of a Senate and a House of Representatives. All the executive powers are given to the President, and all judicial powers vested in a Supreme Court and in such inferior courts as the Congress may from time to time ordain and establish.

Notwithstanding the express mandate of the Constitution and the intent of the founders to vest all legislative power in the Congress, we now find that, of the multitude of regulations being issued in the name of the Federal Government, 90 percent are the product of executive bureaucracy and less than 10 percent are from acts of Congress. This administrative growth is due, at least in part, to the incessant demand by some for the regulation of others and to the belief that efficient regulation requires, in addition to punitive justice, more regulative and preventive justice than can be supplied readily by the injunctive process. Therefore our legislators, in their desire to please the executive or on demand from some bloc or pressure group, have taken it upon themselves to give away a large part of the power entrusted to them by our Constitution. Some of their power of regulation has been turned over to the Executive; a large part of it has gone to the more than a hundred bureaus and commissions set up as independent agencies and invested by the Congress with power to make laws, administer them, and try the alleged offenders.

Today the business of regulating the lives and conduct of the citizens is not only the largest, but the most important, activity in the country. It is not my purpose at this time to decry that fact. Let us forego name calling and leave to others the debate as to whether this bureau system is fascistic, communistic, or foisted upon us by naturalized citizens of European background who have never assimilated the theories of our Government but are familiar with the intermingling of all power in the same hands in the countries from which they came. Neither is it necessary to assert that the Executive, New Deal or old deal, is engaged in a conspiracy to strip the Congress and the courts of their power and reduce them to subordinate positions. Although I do not believe it, I shall admit for the sake of argument that all the laws passed, all the bureaus created, and all the people employed were necessary to correct abuses in the life of the national community.

My present purpose is to consider this matter of governmental organization, look at the abuses which have grown from the concentration of all powers in the same hands, and see if we can suggest a remedy for some of them.

From the standpoint of numbers and expense, the so-called equal and coordinate departments of government today are anything but equal. In the legislative branch we have 96 Senators, 435 Representatives, and a few thousand miscellaneous employees, mainly clerks and stenographers. The appropriation for the current year is approximately $13,900,000 for salaries and other expense. The judicial department consists of 255 judges, supreme and inferior, and a few thousand clerks, commissioners, stenographers, reporters, and bailiffs. The current appropriation for that department for salaries and expenses, including jurors' fees and expenses, is $13,618,000. With 136,000,000 people in this country, the cost of the finest judicial establishment in the world is 10 cents each. The cost of the congressional establishment is a fraction over 10 cents. The two combined cost 20 cents per person.

Since taxation, direct and indirect, now reaches from the cradle to the grave, it is safe to assume that you are paying some Federal taxes this year. Any amount you pay in excess of 20 cents goes to the executive department for either routine or war purposes. The last tabulation that came to my attention showed 3,016,000 civilian employees of the executive department with expenditures of six or eight billion dollars for their salaries and expenses. This does not include the military and naval personnel nor the direct war expenditures.

Let us be optimistic and assume that after the war the civilian personnel of the executive department will be reduced one-half. I think we may still hazard the assertion that there will be 10 times as many persons in the executive department and the so-called independent establishments and bureaus engaged in legislative research and drafting as there are in Congress itself. We may also safely assert that there will be 10 times as many people in the executive branch judging controversies between the citizens and the Government and hearing alleged violations of governmental regulations as there will be in the entire judicial department.

That this commingling of the three powers in the executive branch would produce abuses should have been apparent. That it was a violation of our tradition should have been a warning, for, after all, tradition is but the memory of past experience. Why is it that man learns but to forget and, forgetting, must relearn?

One could document at great length the specific instances of abuses. Zealots have legislated, investigated, prosecuted, tried, and judged in their own tight little bureaus, and the wails of those who have suffered therefrom have been heard in all parts of the land. To anyone who thinks that the right of trial by jury has remained inviolate in the present decade I suggest that he read the recent case of *Yakus* v. *United States* to see the device perfected to prevent those accused of crime not only from having the right of trial by jury on essential issues, but from even raising the question of the constitutionality of the very laws and regulations under which they are threatened with penitentiary sentence.

The National Government, by congressional action, Executive directives, judicial decisions, and administrative activity has abolished, to all intents and purposes, certain of the powers of the State legislatures, contrary to the founders' intention as expressed in the tenth amendment, and has drawn into the Federal vortex in Washington those powers which the people had reserved to themselves. Are these results necessary and inevitable in connection with the governmental process? If not, why do we have them, and what is the remedy?

The standard justification of the bureaucrats for withdrawing the legislative power from Congress and conferring it upon these ex-officio experts, as Dean Pound calls them, is that Congress simply has neither time nor experience, even if it has the capacity, to investigate, and legislate in detail on, all the multitude of matters with which bureaucracy concerns itself. As Robert H. Jackson, then Attorney General, said in 1941:

"Serious practical consequences wait upon the distribution of power between the President and the Congress. When the Court held that NIRA code making could not be delegated to the President and the executive agencies, it destroyed any possibility of the code technique in industry, for everybody recognized the impossibility of Congressional action on hundreds of codes."

In other words, the standard apology for the failure of Congress to act, and the justification for giving broad legislative powers to the executive department, is that Congress is so weighed down that most of the legislative functions must be performed by somebody else after Congress has granted in broad terms the general authority in a particular field. Personally, I think that is an afterthought. Because the bureaus now enact 10 times as much legislation as Congress, and because Congress itself is swamped with such legislation as it is enacting, it is easy to say that the impossibility of performing the task necessitated giving legislative powers to a hundred alphabetical agencies, even though NIRA code making fell by the wayside.

Someone may rise to say I have conceded that the increasing complexity of life in our society has made necessary vastly increased legislation. I am also familiar with the cases which, little by little, have justified the executive encroachment upon the powers of the legislative and judicial departments. In essence, the dictum of the bureaucrats has been accepted: that the legislative task is beyond the power of Congress and the judicial task beyond the power of the courts, at least in those lesser fields that now govern 90 percent of the activities of the people.

I deny this dictum and believe that Congress has unwittingly defaulted in its written duty and in its obligation to the people.

Does this have a strange sound? Everyone else is denouncing the Executive for grasping at power. Who created the agencies? The Congress. Who appropriated the money to finance them? The Congress. Who gave them the power to make laws governing the liberty and property of the citizens? The Congress. Who inserted in those laws that there should be no appeal in the average case from their bureaucratic courts? The Congress. Who provided that if there was any evidence to sustain the finding of the bureaucrat, the finding should be final and binding upon the courts? The Congress.

How was it possible in the greater republic in the world, dedicated to equal justice under law, that Congress set up agencies of Government not dedicated to the even-handed administration of the law but using all three powers of Government to whip into line those who did not eagerly embrace this latest offspring of paternalism? In days of governmental sanity who would have dreamed that a great governmental agency would be set up with the power almost of life and death in the matter of employment, its membership frankly composed of pressure blocs whose members seem to vote the views of their affiliated organizations?

The newspapers a little while ago published the demand of the leader of an independent union for equal representation on the War Labor Board with the CIO and the A. F. of L. There you have the key to bureaucracy. Special interests demand special representation and special treatment. This is true whether it be an independent union or any other group that wants legislation in the hands of its friends. We understand and may even sympathize with the aims of some or all of these groups, but how did it happen in a government of the people, by the people, for the people, that pressure groups were able to establish so many bureaus and agencies free of general control?

The groups and blocs securing enactment of the great variety of legislation setting up a hundred different bureaus to regulate a hundred different activities each wanted its pet law zealously enforced by its friends, without having their energies dissipated in other fields of endeavor. The natural result has been that every bureau and agency has felt that it must expand its jurisdiction and personnel in geometric proportion in order to justify the faith of its friends and lay a foundation for more and bigger appropriations to come. The blocs or groups lobbying these acts through Congress, some of whom were acting through and with the executive department, and some strictly on their own, also wanted and secured the power of legislation. Neither did they wish any control by the judiciary.

Their aims and views are perfectly understandable. What is not understandable is how Congress, as the representative of all the people of this great Nation ever permitted itself to be led into so altering the form of our government that it is now hardly recognizable. I say that it not only was not justifiable, it was not even necessary.

Is there a remedy? I think there are several. Some deal with attitudes, some with governmental organization, and some with fundamental principles. For instance, in the last category it would help if, as a people, we could formulate, approve, and observe certain reasonable and attainable personal ethical standards. A little more honesty and fair dealing in business might conceivably have obviated the necessity for several of the present bureaus and commissions. A little more honesty and fair dealing in the future may bring about a relaxation of some of the present restrictions.

Not long ago the Chairman of the Federal Trade Commission, commenting on the desire of businessmen for a more favorable Government attitude toward business in the postwar era, said that such an attitude was possible "if illegal price cutting, if misbranding, if misrepresentation are stopped; if large distributors are precluded from arbitrarily favoring certain customers; if there is an end to commercial bribery, inducing breach of contract, bogus independents, of 'lifting' and then advertising a competitor's product at greatly reduced prices to the injury of the product's reputation, exclusive sales and purchasing agreements, rebates, and preferential contracts; acquisition of exclusive or dominant control of machinery or raw materials used in manufacturing; if there is an end to stealing copyrights and patented articles, mergers to suppress competition, or interlocking directorates to create monopoly; and if there is an end to combinations in restraint of trade."

Just before the war, Reader's Digest published several articles reporting on Nationwide surveys of the repair and service trades and professions, particularly garages, radio repair shops, watchmakers, and one or two others, which indicates what they called "chiseling" or "over-reaching" in 49 to 64 percent of the places tested. This is a sad commentary on those trades, and a mass of indignant letters following the articles charged that the situation was little different in a multitude of other businesses. Such conditions cannot fail to bring about a demand for Government regulation and control of all such activities in the public interest.

I mentioned that a change of attitude by our people might help toward a solution of this problem. HATTON W. SUMNERS some time ago wrote an article entitled, "Don't Blame the Bureaucrat." He said bureaucracy was caused by the failure of the people to govern themselves at the city, county, and State level, and the demand of those people that the Federal Government intervene and attempt a solution of every problem, national or not. This attitude is well expressed by the saying, "Let George do it," instead of pitching in and solving our own and our community problems as they arise. The attitude that Mr. SUMNERS referred to is a fundamental cleavage in personal and political philosophy between those who politically believe in a strong central government and those who believe in local self-government and States' rights.

It is well for us to remember that these forces are similar to the centripetal and centrifugal forces in nature; and I think it is no accident in government that the centrifugal force, which trends outward, ends in the calm water of local self-government, while the centripetal force, drawing all things into the center, ends in a vortex of absolutism. I am not, however, concerned here with whether we should aline ourselves with either, but we can recognize the tremendous power of the centripetal force and perhaps prevent the vortex stage by vigilantly preserving the three channels into which it was directed by its founders. The power conferred upon or taken by the Federal Government has overflowed those three channels, and the Executive channel is tending to cut into the banks separating it from the legislative and judicial, and which were placed there for control purposes.

A philosophical analysis will easily demonstrate that the legislative, executive, and judicial are not one power which has been artificially divided into three parts, but are actually three separate functions which quite properly should be separatedly performed. A rearrangement of Federal power by congressional enactment could reestablish the checks and balances in our Government, and maintain them without in any respect detracting from the present enormous power of the central government.

How could this be done? First, let Congress recapture its legislative power by the creation of a bureau of legislation, under the immediate direction, supervision, and control of Congress and its committees, to investigate and draft all subordinate rules and regulations needed to supplement any acts of Congress. Take out of the executive departments and administrative agencies all the people, or as many as may be needed, who are engaged in composing, writing, and expertizing these minor laws. How many? I do not know. If there were 10,000 it would probably be a very minor fraction of those now presumably engaged in those functions. There would be this additional advantage: that the bureau, being under the direction, supervision and control of Congress and acting in its various divisions under the authority of congressional committees, would have a legislative esprit de corps and a broad general outlook on these problems distinct from that of administrative bureaucrats intent on expanding their authority. Certainly the draftsmanship of all rules and regulations would become more uniform and more consistent with the spirit of our laws and institutions.

Second. Create a system of petty Federal courts. Take out of the departments and administrative agencies all employees, or as many as are necessary and qualified, now exercising judicial functions, placing them under the courts as masters, commissioners and examiners, to become a part of the judicial establishment with the outlook, impartiality, and espirit de corps of the judge. Again I say, if there were 10,000 of these, that would be less than there are now. Localize them throughout the country in Federal courthouses to be available for the prompt hearing of complaints involving the thousands of minor governmental regulations.

Third. Create a department of Federal police headed by a Cabinet member, placing in it all the necessary police officers, experts, and investigators now scattered throughout all the departments and agencies. Let it be charged with the enforcement of all the Federal laws, rules, and regulations, just as our State and city police are charged with the enforcement of all State and local laws and regulations, instead of having, as now, one set of Federal police to investigate violations of liquor laws, another for narcotic laws, another dealing with counterfeit money, another with stolen automobiles and interstate crimes, another to serve court process, and others to trail aliens illegally within the country, smugglers, or writers of letters obscene or deceptive, and a multitude of inspectors for a long list of agencies dealing with everything from boilers on ships or trains to bugs coming over the borders. We would immediately eliminate tremendous duplication of effort, to say nothing of the traveling and other expenses of the limited and special sleuths who now roam the country from one end to the other searching for violators of their particular little laws and regulations. Localize the offices throughout the country so that citizens concerned with the enforcement of the laws, as well as those who are being investigated, may know where, how, and by whom the laws are being enforced. Need I add that this would bring the Federal power to the home locality where the citizen could represent himself or be represented by his home-town lawyer in his controversies with the Federal Government?

With their detective forces, their legislative powers, and their judges and magistrates stripped away and placed where they belong, the remaining functions of most of the agencies would be administrative, and we would then realize that such functions could well be performed by the great executive departments, with perhaps few and minor exceptions. One such change, urgently needed, is to put all the lawyers now engaged in agency enforcement work back under the supervision of the Federal district attorneys and the Department of Justice.

Slowly at first, then with ever-increasing momentum, our form of government would change back to the spirit, if not to the size and shape, envisioned by the founders. There would still be blocs and groups seeking regulation of their competitors and favors for themselves; but the laws, if enacted, would be written by the legislators or under their immediate control and supervision. The execution of the laws would be aided by an even-handed investigation and presentation of alleged violations. Most important of all, the accused citizen would have his day in court, in his own vicinity, before trained and impartial members of the judicial establishment.

You will recall Madison's warning against the encroachments by tyranny:

"In framing a government which is to be administered by men over men, the great difficulty lies in this: You must first enable the government to control the governed and, in the next place, oblige it to control itself; and it is of great importance in a republic not only to guard society against the oppression of its rulers, but to guard one part of the society against the injustice of the other part."

In a message to Congress on January 3, 1936, President Roosevelt said:

"In 34 months we have built up new instruments of public power. In the hands of a people's government this power is wholesome and proper. But in the hands of political puppets of an economic autocracy such power would provide shackles for the liberties of the people."

In other words, instruments have been forged which in the hands of philosophers will not injure the people, but in the hands of ambitious men will prove ruinous. Since when have men changed their character? Since when have men put away ambition and lust for power? Since when have men renounced selfishness?

In 1936 it was still reasonable to believe that we had become civilized and that no longer would men grasp for power and use it ruthlessly against their fellows; but our experience with centralized power in Europe and Asia these last 5 years is sufficient to indicate that ambitious men have not changed their ways, and that governmental power must be so checked and balanced that no one man or set of men can use that power to provide shackles for the liberties of either their own people or their neighbors. We must relearn what Jefferson said:

"In questions of power let no more be heard of confidence in man, but bind him down from mischief by the chains of the Constitution."

We have the greatest Nation in the world, the best labor, the best management, the best inventors and scientists, the greatest production, the highest standard of living, the most liberty, the finest administration of justice. We know the form of government under which these gains were made. Let us restrengthen the foundations while we preserve and magnify the superstructure of that Government. Let us rededicate ourselves to the cause of justice and liberty, and of their essence, reason. Let us accept the full responsibility of our position as lawyers and citizens. Then may we face the future with full confidence that we shall preserve the gains for which our forefathers fought and died, for they left us the noblest heritage that ever fell to the lot of man—a land rich in natural resources, rich in history, and rich in the form of government by and through which the people rule. Let us look with assurance down the corridors of time and envision the great nation of that day, with a material magnificence beyond our conception, with a people worthy of the sacrifices of their ancestors, and with a government based upon reason and the consent of the governed, opposed to force in whatever form it may manifest itself and true to the ancient American ideal of liberty under law. Then may we say with Rousseau: "These wonders are the work of law. It is to law alone that men owe justice and liberty."

The Presidential Succession

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 28, 1945

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the New York Herald Tribune of May 14, 1945:

THE PRESIDENTIAL SUCCESSION

Mr. James A. Farley suggests a special commission to study the question of the succession to the Presidency. He points out that when a Vice President becomes President he can name his own successor, who will be a nonelected official. The provision for the succession is first the Secretary of State, then the Secretary of the Treasury, and so on in appointed order through the Cabinet. Since Cabinet officers are most often from the President's party and know his policies and commitments, this seems fair enough—at least, as a temporary arrangement.

In any ordinary course the chance of a Cabinet member becoming President is slight. It hasn't happened in the country's history. However, it could happen. Back in 1844, in President Tyler's term, the Presidential party, including several of the Cabinet, boarded the war steamer *Princeton*. One of its new guns was fired in a salute. It exploded, killing the Secretaries of State and the Navy and several others. Had the others included the President—Tyler had succeeded President William Henry Harrison; so that there was no Vice President—and one or two more Cabinet members, the supply of successors would have been pretty well drained. A commission might recommend that provision be made for a special election should the succession of a nonelected official come, say, less than half-way through a 4-year term or should it go beyond, say, the Secretary of State.

Particularly well taken is Mr. Farley's point regarding the period between election and inauguration. Should something happen to both the President and Vice President-elect in the time between early November and January 20, the country could easily be without a President for some time. The choice would apparently devolve, Mr. Farley notes, upon the House of Representatives, and a deadlock there is not inconceivable. Provision for new conventions and another election in such a case would seem, definitely, to be called for.

Mr. Farley suggests a commission representing all three branches of Government to recommend legislation or a constitutional amendment, if that is necessary, which would establish a better and a better-safeguarded succession. The suggestion is a sound one.

Ten-Cent Piece Bearing Likeness of the Late Franklin Delano Roosevelt Will Soon Be Produced

EXTENSION OF REMARKS

OF

HON. JAMES H. MORRISON

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 28, 1945

Mr. MORRISON. Mr. Speaker, several weeks ago I had the pleasure of introducing a bill which provided for the coinage of a memorial 10-cent piece bearing the likeness of our late beloved President, Franklin Delano Roosevelt. My primary purpose in introducing such a measure was in creating a fitting tribute to the remarkable good accomplished by Mr. Roosevelt in establishing the annual March of Dimes, which so greatly benefited thousands upon thousands of youthful victims of infantile paralysis and which promises to contribute greatly to the eventual eradication of this dreadful affliction.

MORGENTHAU GIVES O. K.

As a result of introducing this bill, I have received widespread favorable comment, emanating from all sections of the United States and even from foreign countries, in regard to this measure. I am very happy to have been informed by the Honorable Henry Morgenthau, Jr., Secretary of the Treasury, that plans have been formulated by the Treasury to prepare a striking 10-cent piece bearing the likeness of Franklin Delano Roosevelt and to release the first consignment of the new issue at the beginning of 1946.

This also met with the approval of the Bureau of the Budget.

Some time ago the fact was brought to my attention that the presently circulated Mercury dime has more than completed its 25-year span of usage, as it was adopted in 1916. While this is one of our most beautiful coins, I feel confident that my able colleagues, as well as the millions of Americans who share my keen admiration for our late President, will agree that it should properly be replaced in tribute to one of our greatest leaders in all history.

Danger of Centralized Government

EXTENSION OF REMARKS

OF

HON. FRANK CARLSON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 28, 1945

Mr. CARLSON. Mr. Speaker, under leave to extend my remarks, I am including a letter written by a member of the United States Army following our victory in Germany. This letter points out the danger of centralized government. The writer traces the change of government in Germany from the local

communities to the central organization headed by Hitler. Our Nation might well give serious consideration to the ever increasing control and expansion of our national affairs from Washington. We can maintain a democracy only as long as we maintain our government in State, local, and municipal subdivisions.

It is often said that "it can't happen here" but it will happen here unless we continually oppose further bureaucratic control of our own Government.

The letter follows:

SOMEWHERE IN GERMANY,
April 30, 1945.

DEAR ———: I wrote a letter just the other day so I really haven't any news to tell, but I have been doing some thinking and I have a little spare time this evening so I'll just unload them on you (I mean my thoughts). You can use it as you see fit—it may be that coming from overseas as it is, it might carry a little more weight. Incidentally, I picked up a fancy German officer's dress sword the other day that I thought someone there might like for a souvenir. I'm sending it to you, hoping that you will like it; however, if you don't care for it, just pass it on to Sedgwick or someone else who might want it.

Now that most of the fighting on this front has been completed we have been taking time out to study a little of the background of the people that we have just defeated. We have had ample opportunity to make a hasty study of them, as they are today, during our battles and our advances across the greater part of Germany. In all our contacts so far, the common expression from all American soldiers is the same: "Why, they appear to be just like us. They live just like we do at home, their homes and their furnishings are as nice or nicer than ours are. What in the world are they fighting for?" I'll venture to say that I have heard essentially that same statement by a dozen different American soldiers around my headquarters. I don't know why they are fighting; I am not an advanced student of government. I know why we are fighting, and I think that every red-blooded American also knows why. But as to why the German people are fighting—I'll have to leave that question for some expert to answer.

The Allied Powers have decreed that Germany shall be occupied by a military force for an indefinite length of time so that the people will have become thoroughly imbued with the horrors and the inconvenience of waging war. In as much as we in the Army are the people who will do the actual occupying of this defeated nation, we feel that all unit commanders should be oriented as to the governmental background of the German communities in which their troops will be billeted. According to the best information that we can get, local government in Germany was very much decentralized until shortly after Hitler took over the power. Each city and county was pretty much its own boss as far as local matters were concerned. In fact, after the First World War most of them felt free to dabble into a number of businesses. All public utilities were taken over by the municipalities and then they branched into the theater business, the hospital business, and some others. It was easy to borrow money and they all went heavily into debt, thinking, apparently, that they would be able to repay the loans out of the profits of the enterprises.

The profits didn't materialize, though, in a lot of cases, and the Central Government in Berlin felt it necessary to put some kind of a control on the proceedings. It did the natural thing for a government to do—even if it was Hitler's government—it took from the counties and the cities the self-government that they were enjoying and in its place it substituted a very centralized government—with one-man rulers of each town and area who was acccountable only to those above him in the chain of command. The fact that the municipalities already owned a lot of the local business made it very convenient for the Hitler government in Berlin to gain control over the means of livelihood of a great many of the people in every locality. Either the people who were working for the municipally owned business evidenced loyalty for the Nazi Party or they were out of a job and also probably out of something else, too. Naturally, the schools were sifted carefully for nonparty instructors and officials. Everything was organized on a national basis—nothing was left to the discretion of the state or the counties and cities. Of course, they used the argument that the local government had failed and that the central government was the solution to all the troubles.

Now Germany is beaten. All of her industrial centers have been practically destroyed. Millions of people, both soldiers and civilians, have been killed, wounded, or forced from their homes. It is a common sight to see old men, women with babies, and small children trying to escape the horrors of war by moving along the roadside in rain and wind. They don't have cars and trucks to take them; just a very small percent of them even own a horse or an oxen. However, just before the war started their government, who controlled the automobile industry, promised every family an automobile—an automobile on which it had forced the industry to standardize. It looks like the first step we will have to do in occupying Germany will be to see that the government is decentralized back to the local cities and counties. I'm sure that the Allied Governments will insist on that—I hope they will go further and take those local governments out of business and complete the decentralization of power to the individual again.

Now that the heavy fighting is over in this theater for many of our troops, I suppose that we should experience a great feeling of relief. We do. But there is one little dark spot in the back of the minds of those of us who have been doing some thinking about the causes and effects of this horrible experience. In the first place we think that a condition should never be permitted to exist where it would be possible for one person to seize complete power of a nation. Those of us who are doing some thinking on this matter have been away from both government and business for a number of years so we think that we are not prejudiced either way. We think that there are two ways with which one man or a small group of men can seize power in a country. If monopolies and the merger of large corporations are allowed to go on unrestricted it is possible that the man who ultimately is in charge of the controlling interest may find himself in a position to wield complete power over the nation. We think that the administration of laws controlling those two developments will keep that threat well under control.

The other way with which an individual or small group of individuals can gain complete control is through a national socialistic arrangement such as Germany had before her defeat. It is an insidious thing. From the history of Germany it would appear that it begins with the local governments dabbling in business. As they take over the businesses from the individuals they find that it is expedient to take over another business, too. Until before long the local people all find that they are working for the local government for a living. Then something happens as it did in Germany and the local governments become unable to handle what they have started; but instead of turning them back to the individuals the central government takes them away from the local government and then all the people are working for one government—not the government working for the people, as all governments should.

We know that this all must sound like a lot of idle thinking to you. You are there all secure in the United States. Of course, it can't happen there. And we would be inclined to agree with you if we were sitting there as you are, secure from enemy bombings, secure in the thought that the American people are better educated and freer thinkers than those in Germany or any other country. But we are not sitting there where we can feel fully safe from enemy bombings and we are here among the Germans in the heart of Germany. We can see that these people are just as well educated as we are over there in the States. We can see that their living conditions before the war were almost exactly the same as ours. We can see that the German people look just like the American people. In fact we're wondering if we aren't doing them just a little injustice when we place the whole blame for this horrible war on their shoulders. We say that they should have refused to support the Hitler regime. Yes, that is true; but the Hitler regime owned a large part of the commercial enterprises and it very closely controlled all the others that it didn't own. How would they have been able to get food, clothing, and even shelter, in some cases, if they didn't support the Hitler regime? We are not defending the German people, we think they were to blame for this war, but they made their mistake years ago when they allowed their Government to step in and take over the railroads, the telephone and telegraph system, the power system, the theaters, and the dozens of other businesses that the Government absorbed.

The thing that worries us is the thought that while we are busily engaged in condemning the German people for allowing their Government to get them involved in this war, we may be overlooking the same tendencies on the part of our own Government back there at home. It would be a great disappointment, indeed, if, after seeing our buddies killed beside us on the battlefields here, we were to come home only to learn that our Government, both local and Federal, was stepping into the businesses that we left; only to see our own Government taking the same steps that Hitler's government took nearly 10 years ago. The American GI appreciates his Government's offer of assistance to him if he desires to go into business for himself. He also hopes that his Government will not go into business, too, to compete with him.

Respectfully,

———.

In Memoriam

EXTENSION OF REMARKS
OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 28, 1945

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following memorial speech delivered by me at Arlington Memorial Cemetery on May 27, 1945:

While the whole world is resounding with jubilation over VE-day, the nations have not forgotten the cost of this victory. Nations, as well as individuals, pay dearly for conflicts. Nations attempt retribution for damages incurred, but nothing can ever repay to nations or to individuals, the loss of prized manhood.

At the close of the Spanish-American War, shortly after the first nurse, Mrs. Anita Campos, was buried in Arlington Cemetery, this plot was set aside as a burial ground expressly for nurses. Three years later in memory of women who gave their lives as nurses during the conflict, a monument to Spanish War nurses was dedicated. Since that beginning, more than 150 nurses, 45 of them with Spanish-American War service, have been buried here. The others all have been Army or Navy nurses, and are commemorated by the fine monument dedicated in 1938. All of them, like nurses in military service today, served loyally in whatever jobs they were given. Many of them experienced adventures that set them apart from the rest of women. Still others attended to routine tasks, the unimportant, unglamorous nursing duties that have occupied the time of nurses but have attracted small interest compared with the dramatic services of the former group.

At the time of the Spanish-American War, although nurses were allowed to work with surgeons in the Army, they were not Army nurses. Contract nurses, they were called, and they did heroic work in Cuba, Puerto Rico, Hawaii, and the Philippine Islands. Thirteen of them died in the service. One of them had allowed herself to be infected in the interest of yellow-fever research, and died a martyr to science and humanity.

No one wishes to become maudlin or oversentimental in thinking of the dead. But it is fitting, when we gather in memory of nurses buried in this plot, that we reflect on those who have lost their lives in the present conflict. Our whole Nation felt the blow when it was announced that six nurses had been killed on the Anzio beachhead, when enemy shells and bombs fell in hospital areas there. People were reawakened to the sacrifices nurses are currently making when news was received of the death of Lt. Frances Y. Slanger, an Army nurse from my own State of Massachusetts. I saw her at the hospital at Liege in October. One evening later in October, she wrote a beautiful appreciation of the wounded which appeared in Stars and Stripes. She was killed the next morning when her hospital was bombed. Two other nurses also were killed as a result of enemy action in the European theater. Only recently we all were aghast at word of a suicide plane attack on one of our Army hospital ships in the Pacific Ocean area.

These are nurses whose deaths awakened Nation-wide interest and comment. Few of us consider that many others have given their lives in line of duty, while serving their country. They were mourned quietly by friends and relatives. No headlines, no editorials about their passing. They are the ones who succumbed quietly to the rigors of life in the Tropics, to the strain of enforced hardships, who were in jeep or automobile or plane accidents.

All of us gathered here today are interested in the military nursing services. Many of you are wearing the uniforms of the Navy or the Army nurse corps. Others, I am sure have sisters, cousins, or friends who are nurses. I myself am vitally interested in nurses and their work. My visit with nurses at every type of hospital installations, at the front line or in the rear European theaters of war strengthened my admiration for them. Everywhere I went, I heard the soldiers sing their praises. And by soldiers, I mean officers as well as enlisted men. Wounded men declare, "You nurses deserve a medal for coming up here to look after boys like us." And as we know, many of them have medals for service above and beyond the call of duty.

One surgeon from a clearing company across the road from a field hospital, in my hearing said to its commanding officer, "If our morale gets low, all we have to do is to look across the field and see your nurses slogging around in the mud. If they can take it, we certainly can."

And the nurses themselves? They do not care for praise. Most of them pooh-pooh the idea that they are heroic. The simplicities of life in a combat zone have brought them a certain contentment not to be found in civilian life. Many of them declare, we would not trade our jobs here for the highest-paid job back home. Sometimes you want to cry over them, but we are too busy for that. We asked for this job. There is sense to our work and we are staying here until it is finished.

Now, praise God, some of their work is slowing up. Later, we can welcome them back with our fighting heroes. They are fighting heroes, too, you know, for they have fought disease, slaughter, and death.

What of the other heroes, unsung, who have fought death and disease behind the lines? There are nurses, both Army and Navy, who have served for 4 or more years and never have seen service overseas. No indeed, they have not side stepped responsibilities. Many of them have undertaken increasing burdens in hospitals in the United States, thus lightening the loads of nurses in active zones. Many have chafed under enforced inactivity in small installations, only half realizing that all soldiers at sometime must endure a waiting war. None of these many thousands of nurses will wear a service ribbon, nor win an award for service, above and beyond the call of duty, but just as surely as the nurses who have endured shellfire, they have helped in our recent victory in Europe, and they will continue to serve long after VJ-day.

When we evaluate the price we shall have paid for a free world, we must not forget she has paid with her health, her life, her courage, and her love. We must never forget her.

So, on this day, while we are gathered in tribute to the service of the nurses now resting in this plot, we pay a tribute to the nurses who have given thir lives in World War II and we salute the living with a hearty, "Well done, and Godspeed."

Tangled Tapestry of Hate

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 28, 1945

Mr. DINGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Marquis Childs, from the Washington Post of May 28, 1945:

TANGLED TAPESTRY OF HATE

(By Marquis Childs)

It is hard for an American to understand the blood feuds of central Europe. While we have our own racial tensions within our country, they are not fed by the memory of centuries of conflict, war and pillage and conquest unending.

That is the framework of the present Polish dispute, it seems to me. To ignore the blood-stained background, to overlook the long history of horrors and hatreds, is to get a wrong perspective on what is not so much a political issue as it is another outbreak of the hatred between Russian and Pole that has flared up so often in the past. We can see now at this moment how it grows and feeds on itself. It is instructive to take a single example—the Pole whom Stalin personally denounced in his outburst of a week ago.

This is Gen. Leopold Okulicki, one of the 16 arrested at Moscow's orders. When I wrote about General Okulicki some time ago I said there was a suspicion he had collaborated with our common enemy, the Nazis. That was an injustice to General Okulicki, and I am sorry for it.

His record in this war is remarkably revealing. As a full colonel, he took part in the Polish-German campaign of 1939, when the Nazi blitzkrieg overwhelmed in a few weeks Poland's pitiful, romantic nineteenth century army. Not wanting to be taken by the Germans, General Okulicki gave himself up to the Russians in Lwow in the fall of 1939.

He was put in a GPU prison in Moscow. Anyone who has read Arthur Koestler's extraordinary Darkness at Noon will know what this meant. It appears that the Russians wanted Okulicki to head up Polish units within the Red army. He refused, and his refusal did not make his position any easier.

Released from prison in the summer of 1941 as a result of an agreement reached between the Soviet Ambassador in London and the Polish exile government, Okulicki went to work at once on the organization of the Polish army in Russia, although he was in very poor physical condition. At that time he became Chief of Staff to General Anders.

The following year the Polish forces were evacuated from Russia and Okulicki went with Anders to Italy, where the Second Polish Army Corps played an important part in the long, costly battle up the Italian Peninsula. Still a colonel, Okulicki was Anders' right-hand man during most of the Italian campaign.

Then, although he was 50 years old, he went through regular paratroop training, and in the summer of 1944 he was dropped from an Allied plane into German-occupied Poland. At the side of General Bor he took part in the Warsaw uprising. When Bor was arrested by the Germans he was made chief of the Polish underground army, with the rank of general. On August 29, 1944, that army was officially recognized by Britain and the United States as a full-fledged combatant force.

As the Poles see it, the Russian failure to come to the aid of this force amounted to betrayal. After a long and terrible siege in Warsaw, they were left to the mercy of the Germans.

All the time, of course, the Germans were exploiting these differences to the fullest extent in propaganda beamed to the Poles. With diabolical persistence and ingenuity, they have fanned the flames of these blood hatreds wherever they found them in Europe, as part of a calculated policy. Mere liberation has not overcome the consequences of this sinister business.

The story of General Okulicki could be repeated many, many times over, both out of contemporary history and out of the czarist past. Nor are the cruelty and injustice all on one side by any means. These are the bloody threads that make up the tapestry of reprisal and revenge.

Certainly we Americans cannot unweave this tangled tapestry of hate. We cannot make it come right. Even if we had physical power in that area, even if we were to go in, which is unthinkable, as conquerors, we could not undo the work of centuries.

What we can do, in my opinion, is to stand firm for what we believe to be right. We can work as mediator and friend, trying not to become involved in the quarrel as a partisan.

Above all, we must have patience. We must realize how deep are the roots of this feud. We must understand that it has little to do, really, with contemporary political forms and that its cure will not come overnight.

Some of our politicians would ignore the historical perspective. They would make us a party to this ancient quarrel. Down that path lies certain disaster.

Mr. Farley's Proposal

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 28, 1945

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the New York Sun of May 14, 1945:

MR. FARLEY'S PROPOSAL

Seven times in its history the United States has experienced the tragedy of the death of its President in office. In each instance for periods of time ranging from 1 month short of 4 years, in the case of Tyler's succession, to 18 months in that of Coolidge's succession, the country was without an elected successor to the incumbent in the White House. This has led James A. Farley to propose that a special commission be created not only to study this problem but to reexamine the question of succession if both a President-elect and Vice President-elect die between the time of their election and the date of inauguration. He would have this commission decide whether a constitutional amendment is desirable or whether it would be sufficient to change the present Act of Succession adopted in 1886, when the deaths of Lincoln and Garfield were fresh in the public mind.

Possibly a misguided sense of delicacy has prevented some action of this sort before now. Some are inclined to feel that debating such a problem can be construed as a reflection on the President and his Cabinet, members of which succeed him in order of the seniority of their departments when no Vice President is available. To prevent any such strained construction of the commission's purpose, Mr. Farley would have some of its members appointed by the President in addition to those designated by the Congress from among the Members of both Houses.

No question of personalities is involved in admitting that there are flaws in our present procedure or in setting up machinery designed to correct them. The matter has been discussed often in general conversation in recent weeks. Mr. Farley simply happens to be the first to have attracted general attention with a speech on the subject. There are many suggestions which present themselves, such as an amendment to provide for the election of a new Vice President within 90 days after that office shall have become vacant because of death. A commission would find no shortage of ideas and from them might advocate changes which would strengthen our constitutional structure.

Cooperation Versus Government Control

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Saturday, May 26, 1945

Mr. VOORHIS of California. Mr. Speaker, under leave to extend my remarks, I include herewith further correspondence between myself and Mr. John Carson, the Washington representative of the Cooperative League of the United States, dealing with the reasons for the current attack upon cooperatives as well as the function of the cooperative method of doing business in our country at the present time and in the future:

MAY 12, 1945.

Mr. JOHN CARSON,
The Cooperative League of the United States of America,
Washington, D. C.

DEAR MR. CARSON: I have your very interesting letter of May 10. Unless you have objection to making it public, I shall offer it for the CONGRESSIONAL RECORD and perhaps in doing so shall inspire some of my good friends among the small-business men to ask some questions which you might answer.

But I think in all fairness you should explain what you mean by "the hidden forces which are behind this attack on cooperatives." You agree that the small-business man is not consciously a part of this propaganda. You must believe then that they are unwitting victims of some force. What is it?

I think, for example, that we can all agree that a new world is developing, and I think that most of the small-business men would be interested in knowing what they can do about it. You have assumed to take a position, and I think you should help us to answer that question.

Now, I would like to ask you a question which is often put to me and which I think I might answer. But I would like your answer. It is, Why do not cooperatives develop more rapidly if they are so sound? The question is justified because if we are going to be subject to rapid change in our way of life, and if we have to depend somewhat at least on cooperatives, we should know why they develop so slowly. It seems to me my friends may ask why anything so sound as you say cooperatives are do not appeal more to our people.

One thing more. I am concerned about your reference to "class organizations." I do not know just what you mean and I fear others may not know what you mean.

Yours sincerely,

JERRY VOORHIS.

THE COOPERATIVE LEAGUE OF THE UNITED STATES OF AMERICA,
Washington, D. C., May 15, 1945.

Hon. JERRY VOORHIS,
House Office Building,
Washington, D. C.

DEAR MR. CONGRESSMAN: I am answering your letter of May 12, in which you suggest that "in all fairness" I should explain what I mean when I refer to "the forces" which are at work in the current attacks on cooperative organizations. I did not wish to burden you with this further discussion, but I sincerely believe that I am justified in doing so. Our democratic way of life is suffering now from terrific pressures, largely economic in character. The common good is being attacked in these attacks on cooperatives. I am happy, therefore, to answer your additional questions and any more that you might wish to ask.

You ask, firstly, "What are the hidden forces behind this attack on cooperatives?"

1. It is significant that the first rumor about a forthcoming attack on cooperatives was heard around the Congress some 3 years ago and that rumor was associated with one of the most powerful and aggressive of our monopolistic industrial groups.

2. It is significant that the anticooperative propaganda organization which calls itself the National Tax Equality Association is devoted much of its effort to attacks on consumer cooperatives. This organization, nevertheless, is building its propaganda on tax exemption granted to organizations by the Government. Consumer cooperatives are granted no tax exemption by the Government. Why then is NTEA attacking consumer cooperatives and distorting facts? The answer is that consumer cooperatives are, and always have been, the most effective defender of free enterprise and the most effective enemy of monopoly.

3. Is it not probable then that monopoly is the real force behind these attacks on cooperatives? We must remember that it was monopoly and cartels in Germany which, in hours of economic distress, fanned the flames of economic hatreds and race and class prejudices and thus developed the horrible state we know as nazism.

4. We are in a period of economic uncertainty and most of us are suffering from a state of mind which can be summed up in the word "insecurity." It is in these periods that evil forces make use of bigotry and prejudice and ill will to establish their power and put "men on horseback."

5. An entirely new economic order is going to evolve out of our economic necessities. We must have an "economy of abundance" if democracy is to survive. Monopolism and its "economy of scarcity" must go. As the conflicts and pressures develop, will we be able to hold fast to democratic principles and make the transition period one of peaceful, evolutionary change? Or will the monopolists and the beneficiaries of monopoly cause to be repeated in this country what was experienced in other countries? We are complacent in the belief that our freedom-loving people will make certain that democracy will survive. But is there not danger in the very fact that we are so tolerant of monopoly and so indifferent when others warn us about the menace of monopoly? We have been warned that "eternal vigilance is the price of freedom."

"You must believe then," you continue in another question, "that they—the small-business men—are unwitting victims of some force. What is it?"

I endeavored in my first letter to emphasize that the small merchant and the small manufacturer was, and is, a man of good will, that his primary business asset was and is good will. In those years before our industrial economy became so dominant, before power was concentrated in so few business and financial groups, the asset of "good will" was very influential in determining the success of the small-business man. But as the forces in that economy—which I shall continue to describe as the "speculative competitive profit economy"—influenced the concentration of power in fewer hands, the small merchant had to realize that his primary asset of good will was not powerful against the ruthless competitive forces which confronted him.

I think the small merchant might look at the story of newspaper advertising over the last few decades and discover where his enemy is to be found. He would be impressed by the constant increase in "national newspaper advertising" and the constant diminution of "local advertising copy." He would thus realize that an incessant appeal, dinned into the ears and through the eyes into the brain, was made to his customers to buy something manufactured in some distant city and by some monopoly organization. That should help him to realize what force it is behind this attack on cooperatives. That force is "monopoly."

You say, "I think we can all agree that a new world is being developed and I think that most of these small-business men would be interested in knowing what you think they can do about it."

Some years ago I heard you make a speech in which you said that "an old world is dying all around us," and that "it began to die in 1929," and that "it was sick long before that." Events have proved how factual was your statement.

Our "old world" began to expire rapidly after the last war because the debt load, public and private, was too much for the economy of scarcity to bear. The only escape offered to our people was that of inflation, installment selling, and bank-credit inflation. We had a joy ride which ended in 1929 with the first death rattle. This war is an extreme convulsion. The patient will linger for some time, and should if we are to avoid revolutionary surgery, but you were right—"an old world began to die in 1929."

You have presented many times and most effectively the national debt picture—a nation of people sinking in the quicksands of debt and sinking deeper as we struggle to escape. I think you have demonstrated that we will not free ourselves from this quicksand until we create a monetary system which will liquefy our commerce without creating more debt. It is encouraging now to notice that more Members of Congress are affirming what you have stated so many times.

We must then create an economy of plenty. We must produce wealth sufficient to maintain an adequate standard of living for all and also surplus wealth which we can use to retire the debt.

How can we create and compel an economy of plenty?

Experience should tell us that the economy we have, the speculative competitive profit economy, has forces inherent in it which compel an economy of scarcity.

It is dangerous to attempt to deal with this subject briefly, to be tempted by oversimplification, but cannot we think of this economy as a "selling economy"? We obtain profits—and I am using the word in its commonly accepted sense for this discussion—through selling something for more than it has cost us. Obviously the seller is intent upon making the articles for sale as scarce as is possible so that the buyer or consumer must pay a higher price for them. That exposition can be expanded almost indefinitely, I think, to prove that as long as we are interested in "selling something for a profit" we will have on economy of scarcity.

I know that some of our more enlightened businessmen are now urging that business must insist on a program of lower margins of profit and lower prices so that our national buying power will be increased. That is a step toward the goal we must achieve, the goal of economy of plenty, and these men must be commended for their enlightened interest. They may succeed—in fact they have to succeed if we are to have evolutionary changes in our national life instead of revolutionary changes. But how they will succeed in the degree necessary to preserve the speculative competitive profit system when it is "profit" which makes the wheels of the system go round, I do not know. It seems to me we must create machinery of production and distribution which invites and induces "abundance" if we are to have an economy of abundance.

If we are to have abundance, I think we must develop a "buying economy" or a "consumers economy." Then we will think of getting as much in goods as is possible for our dollars and the natural forces inherent in that system will influence the production of abundance.

I am pleading for peaceful, evolutionary processes of change. We have institutions and customs with roots established in great depth and over a long period of years. We cannot tear those roots out without doing great violence. Consumer cooperatives have established a business system which influences evolutionary changes. Incidentally, that system and the evolutionary features of it, are made possible by what we know as "the patronage return." And the enemies of cooperatives are now seeking to destroy "the patronage return" device. It seems to me that wisdom would dictate that they should assist us in making use of cooperatives while we yet have time rather than to court conditions where advocates of revolution and violence may sway our people. When I think of the stupidity, or cupidity, of the monopolists who would tear down the house if they cannot use it for their own selfish purposes, and who are now expressing their will through attacks on cooperatives, I become angry.

You ask me, or rather repeat a question which you are asked and which I am asked very often, and it is: "Why do not consumer cooperatives develop more rapidly if they are so good and so sound?"

The answer is, as I think you know better than I do, that cooperatives develop from voluntary action on the part of people. They cannot be imposed by fiat of government or of any group. They develop out of the hearts and minds of people and through an educational process.

It is only natural that you will find the fishermen of Nova Scotia who are member-owners of cooperatives to be the best educated of men. It is only natural that farmers in our country who participate in cooperatives are exceptionally well informed. Only recently, in one Midwestern State, representatives of organized labor participated in a cooperative educational course. Through consumer cooperative activity, our people are helped to apply instruction and theory to concrete problems and there is no better process of education.

Incidentally, I must inject here that it is only natural that in Nova Scotia, in one town, where some thousand and more persons used to parade on May day as members of a Communist organization, there is no parade of that kind today. Those men became interested in consumer cooperatives and they were no longer interested in revolutionary force. They became educated.

Then the development of cooperative enterprise is impeded by those of us—all of us, in fact—who are hesitant to change our way of life. The wage earner, the farmer, the professional man, the small merchant—all of us who have only our labor to sell—should know from the experience of 1929–39 that we cannot hope to enjoy success in an economy of scarcity which is controlled by monopoly. But, nevertheless, we cling to our "selling economy" and "bear the ills we have" rather than move into a new order and a new world. The monopolists make use of our infirmity also and use every device to prejudice us against change. I warn you against this propaganda campaign of the National Tax Equality Association again.

Now, you ask me to what I refer when I mention the development of class organizations.

The "selling economy" was, inherently, an economy which encouraged self-interest, sometimes sugar-coated with the word "individualism." It was an economy of force. It encouraged leaders to arise and to induce others with similar interests to become a part of a militant army. The first class group formed was probably the corporation, in which the owners of capital organized to improve their bargaining power. The immediate brunt of their attack fell on the wage earners and eventually they, or we, were compelled to struggle on, through blood and tears, to organize. The farmer was less interested in militant class organizations until about 1921, but he then organized. The small merchant is now organized. The professional men are organized, etc.

It was comparatively easy to organize capital or money into a class group. It was far more difficult to organize people, wage earners or farmers or professional men. The advantages had from that kind of economic development and class development will always be, over a long run of years, with those who have the most powerful weapons, and in a profit economy the most powerful weapon is the "dollar" or credit which has been controlled, and will be controlled in a selling economy by monopolists.

The conflicts between these groups becomes sharper as the volume of goods becomes less and an economy of scarcity incites us to greater degrees of selfishness and of militancy and eventually to destructive competitive warfare. It is then that interest in the common good becomes of less concern to all of us. It is then that we become a prey to intolerance and bigotry.

Now as the new era is being forced upon us, we find the greatest number of our people from all of these class groups interested in holding fast to that which they have and resenting change. That is true of the small merchant, the wage earner, and the farmer. It is true of all of us.

But there are two other groups of people who have the opportunity to become better informed as to impending change and they are active now to direct and control the processes of change. One group believes—and let us be charitable and agree that these people are sincere—that the force of political governments must be used to remove injustice and to compel an economy of abundance. They believe that men must exist for the State because only through the power of the State can men be compelled to be fair to their fellowmen. They believe in the policeman. Sometimes these people favor a plan which we know as "communism" and others, sometimes, favor a plan we know as "fascism."

It is difficult to discover wherein the ultimate objectives of these advocates of stateism will differ. Man is either going to be governed from within or without. Men who love freedom and who are willing to accord equal rights to their fellowmen, who love democracy, are going to be willing to govern themselves in fairness to their fellowmen. Men who have no faith in self-control will turn to the state and submit to force, or the policemen. One of the great philosophers once said that when a man becomes an imbecile his friends put him into an asylum but when a nation becomes bankrupt and imbecillic the people who make up the nation turn themselves over to the state.

Then there is always the little and much more powerful group which is assisted by the wealth it has accumulated and all the special pleaders who can be employed with that wealth. It is the monopolistic group. Those men are anxious to recover the power they feel slipping from them. They inspire men in the other groups to war. They employ propagandists to organize the war. They have long been dominant in our Government and in other governments and they wish to recover that position they onec held. As they become pressed by the economic changes which are now coming, they will become more desperate. They will also become interested in stateism if they can own and control the state.

There is the middle way out of these dangers. It is the cooperative way in which men are encouraged to become owners in a free society, in which they are permitted to assume responsibility and to grow as they exercise that responsibility. If man is to be a freeman, he must own and control the state and he can only be a freeman and own the state through cooperating with his fellowmen to make certain that his fellowman is granted every opportunity to express his personality and to obtain respect for his human dignity.

Our job is an educational job, then, if we would ward off these dangers and preserve democracy. Cooperatives are instruments of education. They cannot exist in a monopolistic state. They can only exist in a democracy. Their task is to oppose tyranny of all kinds, to expose and attack intolerance and bigotry, to provide an opportunity for class organizations to serve the common

good, and to make certain that they will serve the common good.

I am asked, often, what you will be asked, I am sure. That is, do I want the entire economy to become cooperative. Let us deal with the present. The cooperatives are educational and let us make use of every method of assisting our people to educate themselves. Presently, I think the cooperatives can be most effective in an economy where there will be public corporations and profit corporations and cooperative corporations. They can be the yardstick to influence evolutionary processes of change. As to the future, let us leave that to the people to decide and as their education advances, we need not fear what their choice will be.

Yours sincerely,

JOHN CARSON.

Presidential Succession

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 28, 1945

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the Boston Globe of May 12, 1945:

PRESIDENTIAL SUCCESSION

In the 156 years of the Presidency, all seven Vice Presidents whom death has elevated to the Nation's highest office fortunately have lived to complete their terms. Although this has consistently happened in the past, the American people have no guarantee of its unbroken continuance in any like emergencies the future years may bring. This fact gives weight to ex-Postmaster General Farley's proposal for creation of a special commission of Senate and House Members, perhaps amplified by an Associate Justice of the Supreme Court and other officers, to examine the need for a constitutional amendment covering all possible exigencies with relation to the Presidential succession.

To be sure, section 3 of the twentieth amendment to the Constitution empowers Congress to provide by law for successors, in case of the death or disqualification of both the President-elect and the Vice President-elect in the interim between their election and the January inauguration. But Congress could become involved in a protracted deadlock on this duty, a possibility that warrants further attention. And if a Vice President whom death has advanced to the Presidency should die, his appointee as Secretary of State (having no reference at all to the electorate) would carry on. These possibilities make the Farley suggestion one which deserves consideration.

Full Employment

EXTENSION OF REMARKS

OF

HON. ANDREW J. BIEMILLER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 28, 1945

Mr. BIEMILLER. Mr. Speaker, under leave to extend my remarks, I include in the Appendix of the RECORD a news article and an editorial on the subject of full employment published in the May 24 issue of Kenosha Labor, which is the official organ of the AFL and CIO unions of Kenosha, Wis.:

DRIVE FOR FULL EMPLOYMENT BILL STARTS UP—SPONSORED BY 60 IN CONGRESS—LABOR GROUPS PREPARE FOR SENATE HEARING

WASHINGTON.—A committee of "60 Congressmen for 60,000,000 jobs" was informally set up here this week by Representative WRIGHT PATMAN (Democrat) of Texas. The 60 Congressmen, all cosponsors of the pending full employment bill, will act as an unofficial steering committee when the legislation starts its way through Congress.

Hearings on the full employment bill will probably start late in June before the Senate Banking and Currency Committee. First, however, price control renewal and Bretton Woods ratification must be disposed of. House hearings on the full employment legislation are expected to start before the Committee on Executive Expenditures only after the Senate committee has finished.

JOINT EFFORT

Establishment of the committee of 60 Congressmen for 60,000,000 jobs was in great part the result of combined efforts on labor and farm leaders and the Union for Democratic Action whose top committee lists both AFL and CIO national leaders.

Meanwhile union groups continued to prepare their testimony. Scores of AFL, CIO, Railroad Brotherhood, and independent unions are planning statements to be submitted to the House and Senate committees. Senator WAGNER, one of the authors of the full employment legislation, has announced that the Senate committee hearings would be "a democratic forum."

GROWING CONCERN

Labor officials are becoming increasingly concerned about the full employment bill because of the reconversion mess and because they know that labor will have to put on a full dress fight over renewal of the Price Control Act.

The need for the swiftest possible passage of the full employment bill was pointed out by one union official who said that, "The antiunion forces have been planning their strategy against the full employment bill for months, and also for removal of price controls which would make possible more profit grabbing. If they win on the price-control bill it will encourage them to concentrate on the worst hatchet job on the full employment bill that Congress has seen since the war started.

KICKING LABOR IN THE PANTS

American war workers whose miracles of production made possible the defeat of Germany and Italy are about to be kicked in the pants. And already they are being told they had better like it. As war contracts are being terminated and cut back all over the country, newspapers and magazine writers and radio commentators stooging for corporations are ridiculing labor demands for full employment and maintenance of purchasing power.

Two typical attacks on the workers were those of the Hearst sycophant, Paul Mallon, in his column in Tuesday's Milwaukee Sentinel and of the Saturday Evening Post's Washington editor, Forrest Davis, in a recent issue of that magazine.

Mallon hit at the recommendation of the UAW-CIO, that basic wage rates be revised to provide the equivalent of 48 hours pay for 40 hours work. It is obvious that widespread cuts in take-home pay will have a seriously depressing effect on the whole economy but Mallon does not see that. He says, "How much good the wage increases will accomplish is subject to objective questioning." He says increases in basic wage rates would "necessitate great price increases" and would "sponsor further inflation."

Well, price increases and inflation would not necessarily follow maintenance of take-home wages, especially if price controls by the Government are not lifted.

But the true position of Hearst's man Mallon is told in this comment of his:

"Millions of war workers are inefficient, unskilled labor, which receive far more pay than their services were worth, but which is now determined to keep those overpaid jobs in preference to returning to their former lower paid work."

Mallon's column reveals him to be a despiser of the workers and an ignoramus in economics, but all of that is not unique in a Hearst paper. The purpose of noting his column here is to show the kind of attack being made on the American war worker these days.

The Saturday Evening Post article, entitled "The Sixty-Million-Job Myth," is a vicious effort to club down labor's demand for full employment in the postwar period.

The article is contemptible in motive and dishonest in its presentation. Its motive is to obstruct a national program for full employment. Its method of presentation is to make side cracks about Henry Wallace and Sidney Hillman, to tell half-lies and whole lies about the full employment program, and finally, to miss completely the point of the sixty-million-job slogan.

In his article Davis says that 60,000,000 jobs "became the slogan of a left-wing cult—a cult, energetically captained by Wallace and Hillman, determined to put job-finding at the center of a State-controlled economy and the wage worker in the national saddle. If democracy is government of the people, the Wallace-Hillman junta may be called a jobocracy."

In the above sentence Davis' object is to direct the fear and hatred of the middle-class readers of the Post against the workingman, to scare the reader into believing that grimy, overalled factory workers are going to run the Government and that such control, called jobocracy, is quite different from control by the people, which is democracy, and which apparently does not include the filthy workers.

A little later in the article Davis insinuates that this jobocracy or control by the workers is the same as nazism and that that is really what Henry Wallace is advocating. He says that when Wallace testified before the Senate Commerce Committee in January he advocated "jobs guaranteed to the worker, farms for the tenant, capital to the small businessman, homes, education and medical care for all flowing from the ever-bountiful Government—what more did the heralds of National Socialism offer?"

Dirty, isn't it?

It is also clear that the Saturday Evening Post is opposed to job opportunities and homes, education and medical care for everybody.

A sideswipe is taken in the article at the full employment bill of which Senator JAMES E. MURRAY is a sponsor. Davis says the bill "is surely the farthest north in the left-wing campaign for a planned economy here."

Of course, Davis does not tell what the provisions of the bill are. Nor does he tell what its purpose is.

The bill calls for an annual report by the President to the Congress on the total number of jobs which private enterprise can offer, and on the total number of job seekers, with recommendations on how the Government can assist private enterprise in providing more jobs and how Government can make up whatever deficit exists in the job budget in order to attain full employment. Clearly, the bill is a move to save private enterprise.

Davis, like other reactionaries, keeps on repeating the false argument that advocates of full employment want the Government to provide jobs for everybody. The truth is that they only want the Government to provide jobs for those whom private enterprise cannot employ. If private enterprise can provide full employment jobs for everybody, then hurray, Government will not have to do it.

Another below-the-belt blow in the article is the assertion that the CIO's main interest in full employment it its greed for dues. No kidding, here is what the writer says, "A mass labor movement such as the CIO needs an abundance of workers who can be levied on for cash and regimented at the polls."

The big point in the article is that nobody can tell how many jobs will be necessary for full employment in the postwar period but the figure of 60,000,000 is too high. Because, says the Post, there will not be that many workers.

Well, the point of labor's demand is that jobs be available for every person who can and wants to work. To bring about that situation there will have to be more jobs than workers. It is jobs that labor wants—jobs for workers. Not workers for jobs. If 60,000,000 is too many, if America can get full employment with 57,000,000 jobs, shall we say we have failed?

Soldiers' Deposits

EXTENSION OF REMARKS

OF

HON. ALBERT M. COLE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 28, 1945

Mr. COLE of Kansas. Mr. Speaker, everyone has a postwar plan. Supplemented by elaborate charts, graphs, and statistics, we are all preparing blueprints for reconversion. Our American GI's, however, have quietly formed their own plans for the future. From their meager salaries the doughboys have deposited $150,000,000 with the Treasury of the United States. They have invested additional millions in War bonds.

This is potent evidence that our fighting men realize their stake in the future, and are intelligently planning for it.

Today I introduced a bill which will permit the soldier, at his option, to leave his deposit with the Treasury, to be repaid in three or six equal monthly installments after his discharge.

Under the present law the entire deposit with the Treasury is repaid to him on the day of his discharge. Usually he has no immediate need for the money. If it can be paid to him after he returns home to familiar surroundings, he will be less subjected to the pressure of unwise expenditures—he will have an opportunity to orient himself—to adjust himself to civilian life before drawing upon his savings.

In other words, I have constructed a little asbestos lining for his pocket to prevent the money from "burning a hole in it." It will be his own decision, however, whether he needs it, or uses it.

Address by Hon. Andrew J. Higgins, Before the Academy of American History, New Orleans, La.

EXTENSION OF REMARKS

OF

HON. JAMES H. MORRISON

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 28, 1945

Mr. MORRISON. Mr. Speaker, the following is a speech by Hon. A. J. Higgins which is of tremendous interest to every American:

Thursday, April 12 will forever be remembered as one of the fateful moments in American history.

In the sudden death of President Roosevelt our grief-stricken Nation faced a crisis that tested both the character of our people and the new Chief Executive. There were possibilities for panic or worse in the loss of such a great personal leader as Mr. Roosevelt.

That the American people and Government never once faltered withal the intense grief and sense of personal loss is perhaps the highest tribute that can be paid to Harry S. Truman.

The midwesterner who neither sought nor desired the Vice Presidency squared his shoulders as he saw his chief lowered into the grave—and we, the people of the United States, figuratively squared our shoulders with him and said, "Harry, we're for you. So step in there and pitch."

My own estimate of President Truman was summed up in this statement issued after Mr. Roosevelt's death:

"President Truman comes to office ably prepared to do the job in a simple, sensible American way. He has the ability to designate authority. His knowledge of war activities, his position in the Senate—particularly as head of the Senate investigating committee that bore his name—and his ability to select sound advisers qualify him well. His fundamental Americanism causes us to have complete confidence in our new President.

"There should be no disturbance on the part of our allies as to our continued interest in world affairs. President Truman has said he will carry on the broad war and peace policies of his great predecessor."

The following morning in talking to him for half an hour or so at the White House, I was impressed by his confident and decisive manner and by his humility. There was a certain heroic quality in this man as he grasped the reins of government in the firm hands that had held a plow on the Missouri Valley plains, and the way he handled himself gave reassurance to those who saw him and to the stricken Nation.

When he went to Capitol Hill for conference he became the first President in at least two decades who had gone up the hill for such a meeting. Humbly and simply he told his congressional friends of both parties that he just wanted to assure them in person of his intense desire for cooperation.

His audience in the Senate has been described as "warmly sympathetic" and it was just that.

Here is how Time magazine describes his first few days in office:

"In a few breathless days the United States people got an idea of how their new President would carry on. Harry Truman was quick, decisive, seemed to have a talent for working hard without getting confused or losing his temper."

The past is prologue to the future. Let us look at the background and the character of Harry S. Truman, and there we may find evidence of the kind of President he will be.

Our thirty-third President was born in Lamar, Mo., May 8, 1884, but spent most of his early life on the family farm at Grandview, in Jackson County, near Kansas City.

His forebears, of Scottish and English stock, came to Missouri from Kentucky. His father was a farmer and horse trader, who had served in the Confederate Army. Perhaps that accounts in part that President Truman's viewpoint is more southern than midwestern, for the fact that on the walls in his Senate office hung the pictures of Robert E. Lee and Stonewall Jackson.

He grew up on a farm. His 91-year-old mother recalls that he could plow the straightest row of corn in the quarter. He knows well the struggle with the soil and the heartbreak and happiness of working on the land, both as a child and later as an adult partner with his father on their 600-acre farm.

Low family finances prevented college, so he went to work. His early jobs included wrapping papers in a newspaper circulation department, washing bottles in a drugstore, and clerking in a bank.

Few know it, but Truman was a decorated hero of the last war. He led his tough Kansas City outfit through heavy fighting at St. Mihiel and the Meuse-Argonne, winning a citation for calming a panicky company in action. One of his favorite souvenirs is indicative of the high regard his men felt for him. This is a 10-gallon loving cup purchased by the men of Battery D from the dice-game kitty on the troopship journey homeward.

After the war he started life anew by setting up, with a war buddy, a haberdashery in Kansas City. In the depression of 1921–22 it failed, as did many another small business at that time. Truman went into debt $20,000 but paid off every one of his creditors over a period of 15 years.

His business gone, he went back to the farm, where we find him approaching the age of 40 back at his boyhood job of plowing.

I have heard President Truman say—and his experience has special significance today as our boys begin to come home from World War II—that the starting point in his political career was his overseas military service. Mark it well that overseas military service started Harry Truman off in politics, because we will have its parallel many times again.

Because he was beloved by the men in his battery he was put forward by a group of these comrades for the office of judge of the Jackson County court. One of the loyal supporters in Battery D was Sgt. Jim Pendergast, nephew of Tom Pendergast, the Kansas City political boss. Jim Pendergast told his uncle that "the boys in Battery D want Harry Truman on the ticket."

Truman was elected. In 1926 he was made presiding judge. For the next 8 years he supervised public works, levying taxes, building highways, and directing the spending of impressive sums of money. He served in that capacity until a few months before his election to the Senate in 1934, dispensing more than $25,000,000 for road building without a shadow of a doubt ever having been cast on his honesty or integrity.

Paul Wooton, Washington correspondent for the Times-Picayune, who knows Truman intimately and likes and respect him, had this to say of his association with the Missouri organization:

"This was also true of Nicholas Longworth. It has been true of a large number of men who have made great contributions to public service. This is due to the fact corrupt bosses often select impeccable men

to hold jobs in the Nation's Capital where they necessarily live in a goldfish bowl. Insofar as President Truman is concerned, his private life and personal integrity are above the slightest suspicion."

After taking a seat in the Senate, Truman quickly won the respect of his colleagues by his quiet but efficient activity.

He played a leading part in the railroad finance investigation—an inquiry that resulted in the Transportation Act of 1940. He also helped plan the Civil Aeronautics Act.

Now we come to his most important contribution in the Senate—his work as chairman of the Senate War Investigating Committee, which became known by the work of its chairman, as the Truman committee.

I once gave Harry Truman a chuckle when I said the United States now has four branches of government—the executive, the legislative, the judicial, and the Truman committee, and although it was said in jest, it came close to the truth.

The history and conduct of the Truman committee are of interest to us because they afford the best yardstick by which to appraise the methods President Truman may use in administering the vastly greater problems which now face him.

Truman urged that it would be smarter, more efficient and more economical to do the investigation and checking up on this war at the same time the money was being spent.

He introduced a resolution setting up a special committee to investigate expenditures in the rapidly expanding defense program of 1940–41. The Senate voted him a $15,000 appropriation and the chairmanship of the committee.

The first thing he did was to name as committee counsel a brilliant young Midwestern lawyer, Hugh Fulton, who is responsible for much of the committee's good work. Fulton directed a small but exceedingly able staff of fact-finders. The committee's work began with an investigation of military camp construction, which resulted in an estimated saving of $200,000,000 in that activity alone. And here the Missouri Senator found his World War No. 1 military experiences of great help to the committee.

Truman's conduct at the committee investigations reveals a good deal of his political and administrative methods. He did not, as some other congressional figures, operate his committee as a one-man show for his own aggrandizement. He delegated responsibility to other committee members, notably Senator MEAD, of New York, who is now the committee's able chairman, and Senator KILGORE, of West Virginia. Senator FERGUSON, of Michigan, and Senators BURTON, BALL, and BREWSTER, among others. Yet with all this delegation of authority, when it came to decisions they were made by the chairman, or in accordance with his ideas.

Senator Truman, who in 1942 and 1943 had emerged as a national figure, was now well along his way for a date with destiny in the White House.

Anyone who knows Harry Truman knows that he neither sought nor desired the Vice Presidency of the United States. On June 4, 1944, about 6 weeks before the Democratic Convention in Chicago, it so happened that I made a talk there before a meeting of Rotary International. In this talk, I referred to the outstanding record of the Truman committee, and went on to say that Senator Truman's knowledge of the administration of government and American industry made him the best qualified man to be a strong right arm to Mr. Roosevelt in the conduct of the war and in the postwar diplomatic conferences to secure a workable and enduring peace.

A few days later I received a letter from Senator Truman. He said for me please not to run him for Vice President, that he had no ambition to be the Vice President. He added that, while it is a most honorable office and anyone ought to be honored to fill it, he liked his job as a United States Senator, and that is where he wanted to stay.

Truman not only did not seek the Vice Presidential nomination but he felt the President might not want him because of the slashing criticism of some phases of the administration made by the Truman committee.

Well, we all know what happened at the Chicago convention. Other candidates who were prominently mentioned were considered, for one reason or another, unacceptable to certain groups. Senator Truman was nominated as the outstanding man for that high office.

Vice President Truman made himself exceedingly useful to Mr. Roosevelt in matters concerning relations between the White House and the Senate. Many times in his 4 months as Vice President he helped to smooth over differences and to promote better understanding and more harmonious relations.

The Vice President of the United States occupies a rather peculiar office which is not exactly what it appears to be. In a business firm the vice president is an assistant to the president and relieves him of much of the burden and detail of running the company. Unfortunately, in the early days of our Nation, it seems that the Vice President had so little to do, besides presiding over the Senate, he spent most of his time representing the President at social functions. The tradition was set.

However, now that we find ourselves without a Vice President for one of the few times in American history, would it not be well for Congress to reexamine the duties and responsibilities of that office and enact legislation that would make him actually an Assistant President? Let the Senate elect its own Presiding Officer and have the Vice President at the White House where he belongs instead of listening daily to senatorial oratory which, interesting as it sometimes is, is not sufficiently important to claim all the working time of the No. 2 official of our Government.

From the background, character, and public acts of Mr. Truman we may draw certain conclusions as to what his policies will be as President. His greatest strength is his ability to work with different personalities with varying viewpoints.

He believes that Congress should share with the President in deciding important issues. His standing with Congress is high. As a Senator he had the friendship and respect of practically everyone on Capitol Hill. That he values his relationship with Congress is shown by his luncheon visit to Capitol Hill within 24 hours after taking the oath as President. This relationship will undoubtedly be of the greatest significance when the end of the war terminates the present congressional grant of extraordinary Presidental powers.

The increased influence of Congress has already been seen in the invitation extended by the President to Senator MCKELLAR, the Senate's new Presiding Officer, to sit in at Cabinet meetings. Mr. Truman's belief in a balanced constitutional government may be expected to have far-reaching changes. If other Allied Nations have had fears that Congress and the Senate would stand in the way of a permanent world peace organization and security treaties, they should take note of this relationship and find in it reassurance.

In the prosecution of the war there should be no important changes.

In the domestic management of our Government President Truman will expect and demand efficient, common sense operation of executive departments. If he does not get it, I predict that those at fault will feel the effect of the old Truman committee techniques in action. Offenders will be called to the White House and given a deadline to get right—or else. He brings into the executive department a desire for impartial investigation of governmental operations which do not meet these standards.

As to his political philosophy, let us turn to his own words on that subject. On February 22, in making a Washington Day address to the Jefferson City High School, he said, and I quote:

"I like to think of our State of Missouri as situated near the heart of America and politically—like its physical counterpart—just a little left of center."

He has described himself as a "common-sense liberal." His liberalism was born of struggle and experience. More so than perhaps any other President in history, he is the average American in heritage, in appearance, and in experience. The farmer's boy who plowed the straightest row in Jackson County, the war hero who fought bravely in his country's service; the merchant who failed during a great depression; the man who would not be licked.

Our new President is as much a symbol of the American people as Winston Churchill is of the British. He is of the people more than any President since Lincoln. He is impeccably honest, fair-minded, and loyal. He has a remarkable talent for making and keeping friends. He is a hard worker. His patriotism runs deep, and he has shown ability to rise to his responsibilities. He is cautious but he is also courageous. He meets issues squarely. He can be tough when he thinks the public interest is not being served. His humility and modesty is demonstrated by his remarks the morning after Mr. Roosevelt's death. Here is what he said:

"There have been few men in all history the equal of the man into whose shoes I am stepping. I pray God I can measure up to the task."

He is a clubbable person. He likes people, enjoys playing poker, spinning yarns, and taking an occasional drink. He is unassuming, quiet, and unspectacular. He has a desire for privacy and moderation to a greater extent than any public figure I know. He plays the piano for relaxation.

He is the holder of several "firsts." He is the first President from Missouri, the first war veteran to be President since Theodore Roosevelt.

In his dealings with the statesmen of other nations he will be a shrewd bargainer and quite likely unyielding on certain points. Events have already demonstrated that our State Department has toughened up in certain of its relations.

In recent months Mr. Truman has emphasized that the establishment of a permanent peace is his one major objective above all others and that he will put aside all other considerations to obtain it. There can be no question of his sincerity on this point.

His understanding of the average American—what he is and what he wants of life—may well make of Harry Truman a mighty leader for this Nation in the years just ahead.

In concluding these impressions of President Truman, let us recall the words President Roosevelt left behind. In a speech he had prepared only a few hours before his death, Mr. Roosevelt said: "The only limit to our realization of tomorrow will be our doubts of today. Let us move forward with strong and active faith."

And so I say to you, a great Captain of the Ship of State has passed on. Another now stands at the helm. The course is plotted, the chart prepared. The log records our victories on all the seas, in the air, and upon lands strange to us. There awaits but to

record our complete triumph in the final battles ahead and to bring permanent peace upon the world.

May I here paraphrase the immortal words of Longfellow:

Our Ship of State will sail on—a Union strong and great.
Humanity, with all its fears and hopes of future years,
May safely hang upon its fate.
And we vow to the new Captain of our Ship of State—
We will not fear to breast the sea;
Our hearts, our hopes, our prayers, our tears,
Our faith, triumphant o'er our fears,
Are all with thee—are all with thee.

Education Must Play a Vital Role in the Postwar World if Permanent Peace Is To Be More Than a Global Political Phrase

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Monday, May 28, 1945

Mr. MUNDT. Mr. Speaker, peace is a way of life which requires preparation and training just as training and preparation are required for war. The world must train itself to want and practice peace if the world is to enjoy it permanently.

The action taken by this House last Tuesday, May 22, when it voted its approval of my resolution (H. Res. 215) advocating the creation of an International Office of Educational and Cultural Affairs and the action of the Senate in approving a companion resolution the following Thursday are steps in the direction of creating a world desire and a world demand for peace. I am glad to report, Mr. Speaker, that word has just reached me from San Francisco that a wording committee representative of over 30 nations has agreed upon the wording of an amendment to the San Francisco charter which would incorporate the gist of the resolution which we approved last week as a part of the document to come out of the present United Nations Conference. This is another big step of progress in the direction of making possible a world consciousness which will understand and utilize the ways of peace.

Under leave granted me by the House, I am inserting in the RECORD at this point a recent editorial appearing in the Sioux Falls Daily Argus Leader, published in Sioux Falls, S. Dak. This editorial thoughtfully discusses some of the problems which will challenge the forces of education and statesmanship in the postwar world:

UNFORCED DEMOCRACY

You can't make people good by law, according to an old maxim, and a demonstrably true one. Neither can you browbeat or sandbag any people into accepting democracy as a form of government and way of life. This is especially true if, in their origins and traditions, they have known little of the spirit and practical application of democracy.

The Southern Congressman who is advocating that German prisoners of war be subjected to "forcible indoctrination" in democracy is indulging in sloppy thinking. True lovers of an enduring peace cannot afford the emotional luxury of endorsing such a viewpoint. Carried to its logical conclusion, that policy would refute, with deadly effectiveness, everything for which they now stand.

Imposition of any tenet or principle by force implies the use of authoritarian tactics, which is exactly the thing we want to avoid if we want to show our conquered enemies that our system is better than theirs. Teaching them democracy under duress would not be merely self-contradictory, it would only make the obdurate pupils ask, in all reason, just how democratic methods differ from the totalitarian ones they have always known.

The Christian Science Monitor soundly answers the "forcible indoctrination" proposal with this warning:

"Democracy is not just a body of doctrine, which can be taught by rote. It is a scale of values, a way of life, an attitude of thought, which can be learned by observation, by hearing or reading, what democrats think, and best of all, by experience. To compel a soldier trained in the Nazi climate to learn or even listen to mere words about democracy would confirm his belief that democracy is a sham."

The Army, which is as close to the problem as any agency could be, is taking a sensible and promising view. It is reported that prisoners showing a tendency to be open-minded and of flexible disposition are being encouraged to observe and inquire into the merits of democratic processes. Educational courses are being made available to them.

If this is "coddling," as might be thoughtlessly charged, then it is also "coddling" to teach American boys and girls, in the home and school, of the incomparable advantages of living under a republican form of government and accepting the responsibilities of good citizenship.

The present war has been correctly blamed by Representative KARL MUNDT, of South Dakota, on improper educational systems thriving in various parts of the world. German and Japanese teachers have been "on the wrong side of the ledger," MUNDT recently told the House of Representatives Foreign Affairs Committee.

Only by a positive approach can this dreadful mischief be undone. The task of reindoctrination will be hard enough without making it more complicated—and even downright futile—by our succumbing to an orgy of hate and hysteria.

For United States Courthouse in Civic Center

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, May 28, 1945

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the Brooklyn Eagle on May 24, 1945:

FOR UNITED STATES COURTHOUSE IN CIVIC CENTER

With the plans for a Brooklyn civic center rapidly approaching a state of assurance, the Eagle is delighted to learn of the possibility of the inclusion of still another important governmental building in the group planned for this area. We refer to a Federal courthouse.

At present the Federal courts are all housed in the so-called Post Office Building along with various other Federal offices. But the existing court accommodations are becoming more and more inadequate as the volume of business in them increases due to the numerous war-connected cases now coming before them. It is the belief of Federal officials—to which we subscribe—that the calendars of the Federal courts will increase constantly during the postwar era.

We were therefore glad to learn of the action of the Brooklyn Bar Association in appointing a committee to try to bring about the erection of a new and separate Federal courthouse and the endorsement of that move by Representative EUGENE KEOGH and Lewis C. Ryan, president of the New York State Bar Association.

Postmaster Frank J. Quayle also warmly approved this plan because the new courthouse would give more badly needed room to the Post Office Department. The area suggested for the new courthouse is the block bounded by Washington, Tillary, Adams, and Sands Streets.

It is well to remember that one of the most outstanding buildings in the Manhattan Civic Center is the striking Federal Courthouse. The situation of the court calendars here fully warrants such a structure in Brooklyn.

Albert Deutsch

EXTENSION OF REMARKS
OF
HON. ANDREW J. BIEMILLER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Monday, May 28, 1945

Mr. BIEMILLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to state that the people and press of the great State of Wisconsin are alarmed by the contempt charges voted by the Veterans' Committee against Albert Deutsch, reporter for the newspaper PM. Many people have written me, protesting what they believe is a serious violation of freedom of the press.

I personally concur in that view. I further believe it is high time that either the charges are formally revoked by the committee or are brought on the floor for immediate action.

As indicative of the attitude of the press of Wisconsin, I include two editorials, one from the Capitol Times, of Madison, Wis., and the other from the Milwaukee Journal:

[From the Capital Times of May 22, 1945]

FREEDOM OF PRESS IS AT STAKE IN THE PM CONTEMPT CASE

A real issue of freedom of the press has popped up in the Nation's Capital, the outcome of which may have far-reaching effects on the historic rights of newspapers and their correspondents.

The case involves Albert Deutsch of the Washington staff of the liberal New York daily, PM. Using information supplied to him in confidence by inmates and employees of veterans' hospitals, Deutsch published several articles critical of the administrative

policies of those institutions. He was called before the Veterans' Legislative Committee of the House of Representatives, ostensibly to testify concerning the charges made in the articles.

However, when Deutsch appeared before the committee there was no effort made to get at the subject matter of the articles. Instead, the committee, which is headed by the Mississippi medievalist and demagog, Representative JOHN RANKIN, sought to force him to divulge the names of those who had supplied the information. This Deutsch refused to do on the ground that it would constitute a violation of journalistic confidences.

RANKIN, who has carried on a malicious campaign of vilification against PM, sought and secured a citation of contempt of Congress against Deutsch. The swift action RANKIN was able to obtain against the representative of a liberal organization is in notable contrast to the hesitancy shown by congressional committees when the spokesmen for reactionary groups refuse to divulge information to official committees.

The reactionary propaganda organization, the Committee for Constitutional Government, one of whose high officials was sentenced to the penitentiary in the last war for collaborating with the German Government, is a good case in point. Summoned before a congressional committee last fall, spokesmen for this tory outfit bluntly and arrogantly refused to provide a list of its contributors. There was a lot of loud talk about contempt at the time, but no action was taken.

When a liberal organization like PM is involved, however, strutting Congressmen suddenly become aware of their majestic dignity.

The Capital Times believes that a newspaper has as much right to withhold confidential information as a lawyer or a doctor. This right is indispensable to one of the most vital functions performed by the press—the exposing of graft, corruption, and injustice. If this right can be nullified it will result in encouraging administrative officials to conduct their duties in their own interests rather than in the interests of the public.

If the House votes to hold Deutsch in contempt, it will have established a precedent fraught with danger for the future freedom of the American press.

[From the Milwaukee Journal of May 24, 1945]

THE "CONTEMPT" OF DEUTSCH

After committee members had twice refused Chairman RANKIN'S demand that they cite for contempt Albert Deutsch, representative of the New York newspaper PM, they were bullyragged into a vote of 13 to 5 for doing it. But before they met again, the committee members had decided that the matter should not go to the House. Now Congressman EDITH ROGERS, Republican, says the contempt charge is dead. A wise decision.

Mr. Deutsch, who had written a long series of articles on the care of veterans, including abuses, was called before the Veterans' Committee. There he offered to give them all the information he had. But Chairman RANKIN wanted to know where and from whom he got it. Mr. Deutsch was ready to give him all his sources, except the names of five physicians who had asked and been given his pledge of secrecy.

These five names RANKIN demanded and Deutsch refused. RANKIN wanted none of Deutsch's information. Apparently he wanted to drive Deutsch into a corner with his threat of contempt proceedings in the House, which could be punished by fine and imprisonment for 30 days.

That is Congressman RANKIN'S idea of a free press. The country was benefited by the revelations Deutsch made, but he proposed to keep his word. Everyone who knows anything about newspaper work knows that useful information is frequently obtained in this way. Government officials say many things off the record, with confidence that the source will not be revealed. A promise given physicians, presumably in the Veterans' Administration and afraid of reprisals, is just as much a promise.

Whether Mr. RANKIN had in mind persecuting doctors who had talked is not known. He certainly did not have in mind getting the best and fullest information for the use of his committee and the service of the public.

Twenty-two Groups Support Extension of OPA

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 28, 1945

Mr. CELLER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article from the New York Times of May 28, 1945:

TWENTY-TWO GROUPS SUPPORT EXTENSION OF OPA—INFLATION DANGER GREATER THAN EVER, SAY HEADS WHO URGE FIGHT ON AMENDMENTS—TAFT PROPOSAL ASSAILED—LEADER OF UNIVERSITY WOMEN FAVORS PRICE CEILINGS AND FLOORS FOR TWO MORE YEARS

WASHINGTON, May 27.—Heads of 22 national organizations today issued a call to their memberships to join in a Fight Inflation Week, June 10 to 17, in a move to support legislation to extend for 1 year the Price Control Act, which expires June 30. Their call to action declared:

"The danger of inflation is greater than ever before. There must be no negotiated peace with inflation. There must be no compromise with black markets. Rationing must continue to assure fair sharing and to enable us to prevent starvation of liberated peoples."

In a press conference, spokesmen for the organizations assailed two proposed amendments to the price-control bill—the Taft amendment and the Thomas amendment.

Both Paul Sifton, of the Union for Democratic Action, and Don Montgomery, of the CIO, asserted that the Taft amendment would end price control by compelling OPA to figure cost plus profit, item by item, putting an end to the price-freeze system which has thus far been used to control prices.

WANTS RIDERS TAKEN OFF

Mr. Montgomery defined the Thomas amendment as "a plan to make each industry show a profit, more profit than in peacetime." Once that got started, he said, it would soon become a profit-insurance law instead of a price-control law. He reported 300,000 unemployed in Detroit due to cutbacks, as a warning that inflation would add to other threatened economic ills. He continued:

"We want the riders taken off, such as were put on by the canners, preventing OPA from using the Government definition of quality to set prices, so that all grades were put at top ceiling."

Dr. Caroline Ware, of the American Association of University Women, declared:

"Remembering the last war, and the fact that the real inflation came after the cessation of hostilities, my organization favors price floors and ceilings for 2 years after the war is over. But Capitol Hill committees are wedded to the 1-year idea."

Representatives of the National Council of Catholic Women, the National Council of Jewish Women, and the League of Women Shoppers said they were certain their organizations would carry out intensive campaigns in Fight Inflation Week.

OFFICIALS SIGNING CALL

Officials signing the call for their organizations were:

Katharine Armatage, League of Women Shoppers, Inc.; Mary McLeod Bethune, National Council of Negro Women; Elisabeth Christman, National Women's Trade Union League; Nathan E. Cowan, Congress of Industrial Organizations; Ruth Craven, National Council of Catholic Women; Laura Essman, Ladies Auxiliaries, Railroad Labor Organization; Mrs. Herman Lowe, Women's Auxiliaries of Labor, A. F. of L.; Willard E. Givens, National Education Association; Mildred Gutwillig, National Federation of Settlements; Mrs. James W. Irwin, National Board, YWCA; Elizabeth McGee, National Consumers League; Kathryn McHale, American Association of University Women; Rev. Francis McPeek, Legislative Committee, Council for Social Action, Congregational Christian Churches; Lelia Massey, American Home Economics Association; James G. Patten, National Farmers Union; Leslie Perry, National Association for the Advancement of Colored People; Millard W. Rice, Disabled American Veterans; Mrs. Faye Stephenson, Congress of Women's Auxiliaries, CIO; Colston Warne, Consumers Union; Mrs. Joseph M. Welt, National Council of Jewish Women; A. F. Whitney, Brotherhood of Railroad Trainmen, and Mrs. Sifton, Union for Democratic Action.

Urgent Need for Investigation of Our Veterans' Hospitals

EXTENSION OF REMARKS

OF

HON. ORVILLE ZIMMERMAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, May 28, 1945

Mr. ZIMMERMAN. Mr. Speaker, the veterans of my home town, and all over the country for that matter, are deeply concerned over conditions reported to exist in our veterans' hospitals throughout the country. Our veterans' organizations, particulary the American Legion, feel that a speedy, thorough, and searching investigation should be made of the facilities now offered our wounded and disabled veterans by our veterans' hospitals and the policies and practices pursued by those in charge of these institutions.

I sincerely hope that the committee of Congress charged with this responsibility will go into these charges and reported conditions at the earlist possible date and make its report back to Congress so that remedial action may be promptly taken.

Mr. Speaker, these wounded and disabled veterans are entitled to the best facilities, treatment, and care that a grateful Nation can give them. Whatever is necessary to be done to insure them these benefits, care, and treatment, must be done and done speedily.

As a member of the Samuel T. Adams Post, No. 66, I know personally the fine group of veterans who adopted the resolution their commander mailed to me and

their deep concern for a thorough housecleaning if found necessary. The time has come when the country should know the facts.

Under the leave granted, I am inserting the letter of the commander of our post and resolution adopted by its members, which are as follows:

THE AMERICAN LEGION,
SAMUEL T. ADAMS POST, NO. 66,
Kennett, Mo., May 23, 1945.

Hon. ORVILLE ZIMMERMAN,
House of Representatives Building,
Washington, D. C.

DEAR SIR: I am herewith enclosing a resolution which was passed by Samuel T. Adams Post, No. 66, of the American Legion, relative to the reported conditions which are prevailing in a great many of our Government's veterans' hospitals.

There was approximately 90 members of our post present when this action was taken and the members of this post are deeply concerned about the future of our veterans' hospitals if these conditions which the newspapers and the magazines are relating are true.

We are quite sure that the present committee which Congress has set up to investigate this situation can depend 100 percent on every veteran and American Legion member to lend his full cooperation to the end that such conditions can be eliminated and remedied to a great extent.

We have full confidence in you to the end that you will exert every effort to give the needy veterans of World War I and II every consideration, and especially those who are in need of hospitalization.

Yours very truly,
HUGH R. CAWTHON,
Commander.

Whereas Samuel T. Adams Post, No. 66, of the American Legion at its regular meeting held on May 3, 1945, did, among other things, discuss the conditions relative to the veterans' hospitals operated by the Veterans' Administration; and

Whereas the said membership of the Samuel T. Adams Post, No. 66, was of the unanimous opinion that the United States Congress should make a thorough investigation of the conditions which are said to exist in the veterans' hospitals relative to the care and treatment of the veterans of World War I and II: Now, therefore, be it

Resolved by Samuel T. Adams Post, No. 66, of the American Legion, assembled at a regular meeting in the city of Kennett, Mo., respectfully requests, That the Congress of the United States require of its special committee appointed to investigate veterans' hospitals to make a thorough investigation of each and every veterans' hospital operated by the Veterans' Administration so that the American public may have a true and correct picture of the situation which prevails among said hospitals in regard to the treatment of disabled veterans; and

Resolved, That if the special committee appointed by Congress to make said investigation finds that the same have been operated in a careless, unskillful, and haphazard manner, then to reprimand, discharge, and relieve the present personnel of the Veterans' Administration from their duties in the operation of said hospitals and place the operation of said hospitals in safe and careful hands in order that disabled veterans shall have the proper care and treatment while patients in such institutions; and be it further

Resolved, That said committee shall and will make public its findings and facts and its recommendations to Congress so that the American public and the veterans of World War I and II will know that such conditions, if true, will at once be remedied and that the veterans will be supplied with the kind of medical treatment that Congress and the people of the United States have always intended for them to have.

That a copy of this resolution be sent to each of Missouri's United States Senators, our Congressmen, and the National and State headquarters of the American Legion with a request that they exert every effort to remedy the situation in order to stop what might soon be a national scandal.

Respectfully submitted.

HUGH R. CAWTHON,
GEORGE T. GILMORE,
ELBERT L. FORD,
Resolutions Committee.

Blessed Is the Peacemaker—Tribute to Franklin Delano Roosevelt by Fuller Warren

---

EXTENSION OF REMARKS
OF
HON. CLAUDE PEPPER
OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Monday, May 28 (legislative day of Thursday, May 24), 1945

Mr. PEPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very able and moving address entitled "Blessed Is the Peacemaker," by Fuller Warren, an eminent and beloved citizen of the State of Florida. The address is a eulogy of and tribute to President Franklin Delano Roosevelt.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

When President Roosevelt died yesterday, desolation laid its cold and numbing hand on the heart of humanity all over the world. With his body will be buried the brightest hopes for mankind's deepest yearning—permanent peace. He is gone, and no man can fill his place.

"I am one among the thousands who loved him, and I stand with the millions who lament his death." These tender, beautiful words, spoken a little more than 55 years ago of another great and good man who also died in Georgia, express my feelings about President Roosevelt.

No person in all the long and tragic history of the world ever meant so much to mankind. No man ever did so much for so many people. No man was ever needed so badly. No death ever left the world in such a lurch. No death was ever so universally mourned. No such man ever before lived. "He caught the heart of humanity in the fervid glow of his own, and sweeping from triumph unto triumph, died on yesterday the foremost statesman in all the world.

For thousands of cruel years mankind has groped in vain for peace. Billions, literally billions, of living, breathing, feeling human beings have been brutally slaughtered in the unending succession of wars which have ravaged the world. God's own son came down from heaven and tried to stop war, but He failed. Since the Saviour "walked and talked" with men, there has been an average of about one war every 13 years in some part of the world. Each succeeding war has become increasingly more destructive and ruinous. World War I killed something like 25,000,000 human beings. Nobody knows how many people have been slaughtered in World War II. It is estimated that the number of slain and starved is near 100,000,000—almost as many as the entire population of the United States. It is generally believed that one more world war will destroy the human race.

President Roosevelt was the one bright hope of humanity that another world war could be prevented. By common consent he was the world's ablest and most ardent apostle of peace. He created the good-neighbor policy for the western world, which was and is a practical demonstration that a large and important part of mankind can live together in peace, concord, and good will.

He had gone a long way toward extending the good-neighbor policy throughout all the civilized earth. His good will, genius for friendship, and great heart enabled him to harmonize the two most diverse and dissonant nations in the world—Russia and Great Britain. He had lifted up fallen France. He gave help and hope to charred and crushed China. He saved Italy from actual starvation.

President Roosevelt was the greatest unifying influence in the universe. He was, in fact, the only unifying influence in a bewildered world. I have seen his smiling picture alongside the pictures of Christ and the saints in the humble hovels of the poor and propertyless in Europe and Africa. Even in the islands of the sea, his name was uttered with affection—almost with reverence. In every land I have been, he was well beloved. Truly, he was the incarnate triumph of a heartful man.

The deep devotion that freedom-loving peoples of all lands felt for President Roosevelt, his marvelous gifts of mind and heart, and the almost universal belief that he more than any other man was responsible for defeating the most terrible assault ever made upon civilization, placed this brave and beloved man in the best position any person ever has been to make a peace that would prevent the wreck and ruin of another world war. President Roosevelt had dedicated, consecrated himself to the terrific task of eliminating war forever. Before death struck him down yesterday, he had already gone a long way toward doing it. He had avoided all the tragic mistakes President Wilson had made. He made isolationism a hissing in the ears of most Americans. He personally brought into being and named the great coalition known as the United Nations. His unrivaled genius for diplomacy guided the Grand Alliance through the crucial Conferences at Casablanca, Cairo, Tehran, and the Crimea. He watered the soil of international cooperation and planted in it the seeds of enduring peace for all peoples.

This marvelous, mighty man had prepared the blueprint of permanent peace. He was in a fair way to erect from it a lasting structure at San Francisco. He had already planned a message for that momentous meeting. Why he was not spared for that great and sorely needed service at San Francisco is something I can't understand. Inscrutable, indeed, are the dispensations of fate. No man ever had a better and brighter opportunity to bring the priceless blessing of lasting peace to a war-weary world. He was taken just when we needed him most. What will it profit us if we win this war and are forced to fight another one a few years from now—all because he could not be there to make the peace permanent?

No death was ever so untimely. No death was ever so fraught with terrible danger for all mankind. I cannot help fearing that President Roosevelt's death means that the earth will again run red with the blood of countless millions of innocent victims of another and infinitely more horrible world war.

The world never owed so much to any man. When the new barbarians of Germany set out to reduce civilization to ruins President Roosevelt was the first statesman to challenge the cruel killers. No friend of freedom

can ever forget the "quarantine speech" against aggressors which he made at Chicago in 1937. He clearly foresaw and foretold the brutal nature of the Nazis, and he took timely steps to repel the ruthless killers. But for President Roosevelt millions of Americans very likely would be in German concentration camps or in mass graves, and the cities of our country a charred pile of ruins. A hundred years from now people will kneel in gratitude to God that Roosevelt was here to lead America and the world in their darkest hour.

It is a cruel and bitter irony that he was not permitted to witness the great victory he did so much to bring about. But it is some consolation to the millions who loved and admired President Roosevelt that, like Moses who looked across Jordan to the Promised Land and then died, he was spared long enough to see ultimate victory not far off.

Out beyond the stars amid the amaranths that bloom perennially in the garden of the immortelles, may his great soul find the rest which was denied his weary body here on earth is the hope and prayer of one who loved him in life and mourns him in death.

Retrocession of South Tyrol to Austria

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Monday, May 28 (legislative day of Thursday, May 24), 1945

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the RECORD an address prepared by me for delivery in New York City which the business of the Senate prevented me from delivering.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Apart from Vienna, there is no geographical designation so characteristic of Austria as is the name of Tyrol. Though Tyrol is only one of Austria's provinces, it has left a deeper impression on the imagination of the world than almost any other European region. It has always stood for untouched nature, pinewoods, pastures, and a bewitchingly beautiful and majestic mountain landscape. It is a country of mighty mountain ranges, which, like Switzerland, have produced a hard-working, pious, stubborn, and freedom-loving people—the Tyrolese.

The favorable and protected position of their country has filled the Tyrolese with the love of freedom and democratic institutions which is unmatched even in the famous Swiss cantons. Indeed, the Tyrolese preceded Switzerland in their peasant democracy. While everywhere else in Europe, the farmers were mere serfs, the peasants of Tyrol were free and formed one of the sovereign provinces of the country. Their army, like that of the Swiss, was a people's army, and each Tyrolese jealously guarded the right to keep his own weapons in his home. This long tradition of uncompromising independence produced fighters, who, in 1809, guided by their peasant leader Andreas Hofer inflicted the first crushing defeat on Napoleon, at a time when even the powerful nations of Europe were unable to fight him.

Since 1919 the name of Tyrol has become synonymous with one of Europe's most aching questions—the problem of south Tyrol. The Treaty of St. Germain allocated to Italy half of Tyrol, placing 230,000 Austrian Tyrolese against their will under Italian rule, creating thereby a new minority problem hitherto unknown. To understand the tragic mistake one must realize that Tyrol, except for a short while at the time of the Napoleonic war, has never known foreign masters. Tyrol has been an individual state unit ever since the seventh century and the north had never been separated from the south. They had always remained loyal to Austria.

The annexation of south Tyrol was made in shocking violation of President Wilson's 14 points. Point 11, dealing with Italy's future border, reads: "A readjustment of the frontiers of Italy should be effected along clearly recognizable lines of nationality."

Lloyd George, writing about south Tyrol, says: "It must be admitted that the hacking off of essentially Tyrolese villages from the rest of Tyrol was incompatible with the principles of self-determination implicitly embodied in the original war aims of the Allied statesmen."

Colonel House writes: "I have often wondered just why Wilson consented to this (Brenner) line. Clemenceau, Lloyd George, and I discussed it during the armistice proceedings, and the three of us came to the conclusion that the Tyrolese should not be taken from Austria."

And Dr. Charles Seymour explains that President Wilson admitted that the injustice "has been due to insufficient study."

Even prominent democratic leaders in Italy are now sharing this view and are willing to return this border region to Austria as it does not represent a material or ideological value to Italy.

During the Fascist regime in Italy, south Tyrol—as neutral reports sent to the League of Nations show [1]—has suffered worse mistreatments than any other minority in Europe. The Italian attempt of denationalization included the prohibition of their language in schools and churches, and the word "Tyrol" was banned by law. Singing of Tyrolese songs was punished by jail sentences or even deportation. Even tombstones had to be Italianized. All towns and villages received Italian names. And the population was forced to accept all Italian institutions and were compelled to it by Fascist brutality. Finally part of the unyielding and heroic Tyrolese population was deported by force to Germany following an agreement reached between Hitler and Mussolini. For the first time in 12 centuries this highly civilized and profoundly democratic people had lost their freedom.

Now it is time to repair this miscarriage of justice as the Encyclopedia Brittanica calls the partition of Tyrol.

Under the guarantee of self-determination of nations and of the Atlantic Charter, south Tyrol must be permitted right now to rejoin northern Tyrol.

The first step ought to be to put southern Tyrol under Allied military government depending from the commander of the Allied occupational forces in Austria. South Tyrol, today liberated from Fascist tyranny, ought to be under the same administration as north Tyrol, liberated by American troops. Local Tyrolese administration should be reinstated and the Italian administration ought not to be permitted to function again in southern Tyrol.

The next step would be to give back to Austria and to its province of Tyrol the 100 percent Austrian part of southern Tyrol until Salurn. In the southern part then, more commonly known as the Trentino, a democratic plebiscite under Allied supervision ought to determine its future.

All liberal-minded and democratic Italians agree with Austrian liberals and democrats, that in the future the best possible relation must exist between Austria and Italy. This good relation can only exist if south Tyrol is returned to Austria in the forthcoming peace.

Mighty New Veterans' Organization Seen

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 28, 1945

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Bill Cunningham, from the Boston Herald of May 27, 1945:

MIGHTY NEW VETS' OGANIZATION SEEN—COULD EVEN BE INTERNATIONAL—MAIN FUNCTION TO END ALL WARS

(By Bill Cunningham)

WASHINGTON, May 26.—So far as the machinery of Congress is concerned, an investigation of the War Veterans' hospitals has provided most of the clanking and creaking this past fortnight. The distinguished Commonwealth of Massachusetts has been up front in this laudable effort to get at the facts. Representative PHILBIN has made the issue of veterans' hospitals a prime personal mission and Congresswoman EDITH NOURSE ROGERS is also prominent in the subject.

What will or will not come out of this investigation is vital, but it's only a part of the general war veteran subject, and that general subject is due to be a very important one for, at least, the next 20 years. It's coming freshly home to us because we're beginning to meet the real alumni of the battlefields now, and we're due soon to meet more by the hundreds of thousands. Personally, I've never seen finer nor more self-assured men.

THREE CLASSIFICATIONS

As of the moment, the veterans fall into three classifications. These are the able-bodied veterans, the disabled veterans, and a temporary category consisting of veterans who've had a long stretch as prisoners of war. We all know the case of the disabled veteran and are consecrated to the determination that he have every comfort and care.

It's his case that's been getting the attention in Congress. The charge, right or wrong, is that there has been laxity and negligence in the field of his hospitalization. Those friendly with the officials who have had it in charge are claiming that the agitation is more political than patriotic, but the facts will no doubt wash out eventually.

The veteran who's been a war prisoner, especially if he stood behind the wire for a string of endless months, may call for some sympathetic understanding for a while. Army officials, especially doctors, who've been processing these men toward their homes on the other side, send word that they may need a little help getting back into the swing of things.

"STIR CRAZY" IF HELD LONG ENOUGH

It's known that incarcerated people get what is known in the argot as "stir crazy" if held long enough, even if their time is kept occupied with work and recreation as it is in most of our modern penal systems. The everlasting monotony finally moves in on them to induce a mental lethargy they can't seem to shake. And these are people with something to do.

The war prisoner, on the other hand, frequently has nothing to do, unless he and

his fellow prisoners organize it themselves, and then they have pitifully little to work with. Day follows dreary day and month follows endless month with the same deadly and chloroformic monotony. Finally, in many cases, all sense of time is lost, ability to concentrate is temporarily impaired and, if the dose is especially long, the man may become something of an automaton.

The doctors abroad have reported, for instance, that some of the long-held prisoners find it extremely hard to concentrate. Something will appear to the man to be very important, but if some interruption breaks into the conversation or the thing he is doing, he will find it hard to get back to the subject. If it's something he's been talking about, he may not be able to remember what it was.

NEEDS TO BE UNDERSTOOD

They hasten to say that there's nothing about this that is serious, but the situation needs to be understood by those the men come home to. They simply need a little help to get things back into gear. There's but a limited number of these, however, and, given the right sort of help, they'll be as good as new in short order.

Those are the two categories of veterans who need special handling. There've been a lot of stuffed prophets and pseudo-scientific bilge peddlers who've tried to say that all veterans should be pasted with the billing, "Handle with care." Bearing down especially in the women's magazines and in some of the weepier radio programs, they've practically scared the women of this country into nervous wrecks. They've seemed to be trying to sell the idea that the mother or wife or sweetheart of a GI had best repair herself to the nearest academy of learning that boasts a course in psychology, and drink deeply from that font, lest she get walked out on, or get her everlovin' block knocked off.

This was undoubtedly one way to make money, but if it was anything else, that has yet to be proved.

DEVELOPMENT OF THE GI

All of us in this land have watched the GI grow up. I can remember the first awkward and bewildered group of him, gathered north, east, south, and west in those great raw cantonments in uniforms that didn't fit, trying to get the swing of a life that didn't either. We can remember them 4 years ago on the streets, in the hotel lobbies, the bars, and the cocktail lounges. Many of them were away from home for the first times in their lives. Many of them had money to spend for the first time in their lives—some even jobs, or at least, steady pay for the first time in their lives.

Many of them were noisy, silly, some even obnoxious. I haven't seen a dozen men in uniform really drunk in practically 5 years of compulsory service and in travels that have cruised from coast to coast, and all stations between. But in those early days, I saw quite a number who had smelled a few beers and then put on an act.

It's interesting to recall how rapidly those young men grew up. You could practically see discipline straighten the shoulders and pull up the chins. You could see the pride that came with those shoulder patches, and the dignity that came with those campaign ribbons.

THOUGHT IT SMART AT FIRST

Probably the whole story is best summed up in the words of the manager of a hotel that has a bar that, from the first, has been especially popular with the enlisted men of all services.

"We had a lot of trouble in the early days of the war," he said, "We got a lot of kids that obviously didn't know much about city life, and who seemed to think it was smart to get plastered and noisy. We tried to humor them along, but it mostly didn't work. We had trouble aplenty, none, fortunately, of serious trouble, but I never knew when it might get serious.

"Finally, I went to the shore and military police and told them that they'd better post men in our place. They said they didn't have the men. I told them then I'd have to go to the city police, as I couldn't risk a riot, or somebody getting killed. They asked me not to do that, and they finally assigned us a couple of men.

"Their presence cooled the place off a little, but I began to notice as the months went by that it was the customers, not the coppers, who were cooling the place off. Their services were just naturally turning these kids into men. They had a sense of responsibility, a pride in the uniform. They still took a drink or two but they handled it like gentlemen.

NOT NEEDED ONCE IN A YEAR

"We still have the representatives of the shore patrol and military police, but you know where they are now? I have a room for them up on the mezzanine floor. They come in every night about the time the place opens, have their dinner up there and sit around reading the newspapers and magazines. Not once in the past year have we ever called them downstairs. There's nothing for them to do. Those kids have grown up."

They have grown up and never mind the testimony of the proprietors of such metropolitan oases. They've grown up in more important ways. We're meeting them now, especially these homecoming veterans of Europe with the banks of gold slats on their sleeves. There's something in the faces of many of them that wasn't there before, something of maturity, of strain, of, in some cases, suffering, but there's certainly nothing that seems to call for anything but our appreciation and admiration. The very last thing needed unquestionably is a psychological approach. The very last thing these gentleman want is "to be understood," or to have anybody think that they need "to be understood."

Instead, it's pretty sure that they understand, and that they understand a lot of things that maybe we don't. For many of them, the war is not yet over. Japan is very much in business still and many of them will be in uniform in one capacity or another until the world is speaking of Hirohito in the past tense, too.

GOING TO ORGANIZE

It's pretty certain that when they get around to it, they're going to organize a mighty veterans' association, or perhaps move en masse into one of the existing veterans' associations and take it over. When they do they can be the most powerful organization of the Nation and perhaps of the world. Organized labor at the moment is said to have 13,000,000 members in the United States, but organized labor is split into two hostile camps.

The veterans, men, and women, including all who've been in and out, will practically equal that number, and if they stick together they'll outnumber all the rest. What they'll do then remains to be seen, but the guessing is that from their present poise and temper they'll be a more positive force in the postwar affairs of their Nation than organized veterans have ever been up to now.

The bidding for their membership is already active. Hundreds of thousands of them have already joined both the American Legion and the Veterans of Foreign Wars, and both these organizations are naturally hoping to perpetuate themselves with this new and mammoth membership. Both were hovering around that San Francisco Conference to see where, if anywhere, they could build for the future.

It seems more likely, however, that when it all shakes down the men of this war will have their own organization, working with the others, perhaps, along the lines of benefits and rehabilitation, but definitely breaking new ground from there.

SUBJECT ALIVE IN FRISCO

Reports at various times seemed to say that at least 100 starts, major and minor, have been made toward organizing the veterans, or their relatives, or both, into some sort of postwar unit. The subject was definitely alive at San Francisco, with at least two groups of this war's veterans publicly stating their plans while representatives of the existing organization watched them carefully from the sidelines.

If not the most articulate of the younger generation, the one that, at least, was getting the more publicity was still very near and very elastic in form, and it called itself the American Veterans Committee. One gathered that that is merely the name of the organizing group, and that the organization, if formed, would have a more typical name eventually.

The spokesman for this crowd was a young Dartmouth alumnus named Charles G. Bolte. His class, as I remember it, was 1940. Through the era of pacifistic excitement on many college campuses he campaigned vigorously in the college newspaper for all the get-ready issues of the time. To show that he had the courage of his convictions, he enlisted in the British Army as soon as he'd received his degree, and, as a member of the King's Rifles, he fought with Montgomery against Rommel in Africa, and lost his right leg at El Alamein.

CLEARING HOUSE OF VIEWS

Back in this country eventually and working for the OWI he found a group of serious-minded young veterans, and some soldiers who still were in action, who were exchanging letters constantly upon the subject of what the war meant to them, and what sort of world they hoped to see after it. He not only joined the correspondents, but, at length, he was the clearing house for it. He finally left the OWI to devote himself entirely to it, and now he is openly trying to promote this interest into the big new veterans' organization that will bind the men of these wars together.

Men of these wars may say it, too, if his plan goes all the way, because when I left San Francisco, he was thinking in terms of an international veterans' organization, an idea that is strictly new. Some young marines are out there, too, with some organizational ideas of their own. They and Bolte's crowd seemed to get this international idea at the same time, and there seemed to be some prospect that they might join forces.

Many men of this war have done some serious thinking, and one constructive idea expressed is that no organization of these new veterans will have the requisite appeal unless it devotes itself to something more serious than just keeping old memories alive. Those who feel that way say that's the chief weakness of the older organizations. Their original platforms were big, but they've really done little. Annual conventions and choral renditions of "Hinky Dinky Parley Voo" are scarcely enough.

GREAT RESEARCH SCHEME

This time, for example, if the new organization, or even, perhaps, if one of the existing organizations would set up and support a great foundation to research the causes of war, to spot them, and prescribe for them if they show up anywhere in the world, the appeal to the new veteran would possibly be strong. That is included in what the San Francisco Security Conference is striving to

achieve, of course, but there'd still be room for a great and serious laboratory.

Those enthusiastic about this plan think top experts in the various fields should be hired and paid salaries level with their status. They could work like the Truman committee, delving into the uncolored facts and giving their findings the fullest publicity. That or some other real excuse for being is necessary in the opinion of those who think in this fashion.

That, however, is looking ahead.

In terms of merely looking around, the veteran of this war is the fellow you said good-by to 3 or 4 years ago, broadened, matured, poised, and self-reliant. There'll be exceptions, of course, but the average amongst him is exactly the same stuff—hungry for home, for the folks, for things pretty much as they were, so far as the comforts and the good times go. Certainly he needs no understanding, nor any special handling, beyond a little common sense. The purveyors of all that bunk need to be especially handled themselves—preferably by a kick in the pants.

Bretton Woods in the Pulpit

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 28, 1945

Mr. SHAFER. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the Wall Street Journal:

BRETTON WOODS IN THE PULPIT

A special dispatch from this newspaper's Washington bureau opened with the words, "Bretton Woods will be preached from the pulpit" and proceeded to state that the Treasury Department was conducting "educational" sessions for clergymen on the subject of the Bretton Woods agreements, with the idea that they should in turn educate their congregations concerning the merits of these proposals and the importance of their ratification by the Congress. These sessions were held off the record in Federal offices—among others, in the State Department Building and the Senate Public Lands Committee room—and no official reports of their proceedings have been available. Our correspondent describes it as part of the general effort of the Treasury to "build a fire under Congress" and hasten its affirmative action.

Assuming the facts to be as reported [we have no doubts on the point], this sort of thing almost beggars comment. It is hard to decide whether effrontery or stupidity is the main characteristic of the idea of harnessing church pulpits to advocacy of a highly complex matter of international finance, upon which expert opinions differ widely and sharply, in order to influence the actions of Congress.

It is not that church pulpits have not been often used in the past for political propaganda. A few church preachers have always been found willing so to use them. But to the best of this newspaper's recollection, covering some two generations of time, this is the first time that a department of our Government has ever sought to bend them to its purposes. If individual churchmen are willing to misuse their office, that is their own private affair for them to settle with their own consciences and their congregations. Not so when the arm of the state attempts it.

Who started this thing this newspaper does not know. It might interest Congress to find out. But that it should stop is clear. It can do nothing but harm to both church and state.

The Place of Metal in Our National Economy

EXTENSION OF REMARKS

OF

HON. COMPTON I. WHITE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Saturday, May 26, 1945

Mr. WHITE. Mr. Speaker, the greatest factor in the advancement of our country to its present preeminent position among the powers of the earth has been the utilization of our metal and mineral resources.

It is my privilege to present for the consideration of my colleagues, the address of Frank Lilly, of Spokane, Wash., at the regional conference of the Committee for Economic Development:

POSTWAR PROSPECTS FOR THE BASE METALS AND BASE-METAL MINING

(By Frank Lilly, statistician, Mines Research Bureau, Spokane, Wash.)

In my discussion of the postwar prospects for the base metals and base-metal mining it is not my intention to "accentuate the positive, eliminate the negative, or mess with Mr. In-Between."

I am neither a producer of the base metals nor a manufacturer of base-metal products. My interest in the subject is technical and academic, for I am a statistician. I hope that this word will not disturb you too much, although I am well aware that it has been said that a statistician is a man who, given a few figures, can jump off into any body of water, go down deeper, stay down longer, and come up drier than a professional diver.

I promise to use only a few figures—just enough to give you the essential facts, which are both good and bad because this picture has both its lights and shadows.

What is a base metal? What are the base metals? Why is a discussion of their prospects pertinent to a conference of this Committee for Economic Development?

According to Webster the word "base" is applied to certain metals in distinction from the precious metals. However, in practice the nonprecious metal, iron, is not regarded as a base metal; nickel, tin, chromium, and others are classified as alloy metals and aluminum and magnesium as light metals.

The base metals are copper, lead, and zinc, which, although nonprecious in terms of weight price, are essential and precious in their usefulness to mankind. Man had gold, silver, and iron back in the stone age, but gold and silver were useless to him except as ornaments, and iron at best was only temporarily useful because it soon rusted away.

Bronze, an alloy of copper and tin, copper, lead, and/or zinc, provided man the first useful metal because it was nonferrous—not subject to rust—and had the required hardness, weight, and workability to provide the tools man needed. Thereafter, civilization grew apace and more or less in proportion as mankind learned to mine and to utilize the base metals.

Think for a moment what our position would be without the base metals. No practical use of electricity without copper; no self-starting automobiles, very little glass without lead; and a severely restricted use of iron without zinc galvanizing to protect it against rust. These are only a few of literally thousands of uses of the base metals, without which our modern industrial civilization would crumble almost overnight.

It is not too much to say that there would have been no VE-day except for the base-metal superiority over the Axis Powers provided by the production of the mines of North America and especially the United States. (Our iron and steel could not have functioned without the base metals.) We are also assured of VJ-day, and by proper economic development, distribution, and use of the base metals a permanent and prosperous world peace can be maintained.

Thus we see why a discussion of these metals is pertinent to the Committee for Economic Development. There are, however, two important supplementary reasons, which in a certain sense are paramount to us as businessmen and patriotic citizens.

First, the United States, and particularly the Pacific Northwest States, produce enormous tonnages of each of the base metals. And now I must cite you some of the figures you have been expecting, but I'll give them to you in sugar-coated round figures.

World production of the three base metals normally averages around 6,000,000 tons of which two-fifths is copper and three-tenths each is lead and zinc. Of the 6,000,000-ton world total the United States produces about one-third, of which five-twelfths is copper, one-fourth lead, and one-third zinc.

The States included in your Pacific Northwest Regional Conference, Idaho, Utah, Washington and Oregon produce one-fourth of the copper produced in the United States, nearly one-half of the lead and nearly one-fifth of the zinc. If to these States we add the output of another Northwest State, Montana, the proportion of the total output is one-third of the copper, over one-half of the lead and over one-fifth of the zinc. This in turn is one-tenth of the world production of copper, one-eighth of the lead and one-sixteenth of the zinc.

In other words, the production of the base metals in the United States is big business, the average annual yield for the United States approximating one-half billion dollars and for the Northwest States nearly $150,000,000.

And may I in passing call your attention to the fact this metal output is clean, new, permanent wealth that takes nothing from our soil, nothing out of another man's pocket even on a basis of a fair and square trade but, on the other hand, provides new wealth for this generation, and also by its permanency for the many generations to come.

The second supplementary reason why this matter of the base metals is pertinent to this Conference and your committee is the important relation it bears to the jobs it can and must provide for the boys in uniform. I do not need to tell you how important this matter of jobs is nor that now is the time to do something about it.

There has been a great deal talked and written about this matter, but most of it has dealt with businesses rather than jobs. Much of what I have heard and read was inane. One high Government official in an article in Colliers wrote mostly about how the boys would want to go into business as garage or service station owners. This emphasis upon business rather than jobs would disturb me except for the fact that I think the average returning soldier and sailor will not want a ready-made, hand-picked Government financed business but a decent paying job that will in due time provide him through his savings the necessary capital to establish a business of his own choosing and suited to his own capabilities.

Far be it from me to suggest that I have any sure-fire plan for providing the necessary jobs in connection with the production of the base metals or the manufacturing of base metal products. I do, however, contend that the base metals can and should provide far more jobs than ever before.

The consumption of the base metals in our war effort has practically exhausted our supply of these metals, and to a far larger extent than in any previous war, the metals have been utterly destroyed. From all indications the percentage of metal salvage will be very small as compared with the First World War, and much of this salvage will be needed and used in Europe before the war with Japan is finished. Salvage of metals from the Pacific area will probably be negligible because weather conditions will eat up much of it and also because it will be so widely scattered.

Meanwhile we are wearing out our manufactured metal products at home at a rate that is alarming in view of the continuing war in the Pacific and the rapid depletion of our mines. Few mining companies have been able, because of manpower shortage, to do any development work for the last 3 years, and nearly all of the mining companies have patriotically drawn most of their ores from their best ore bodies.

Therefore, we will face at the end of the war, what I predict will be an unprecedented demand for the base metals and base metal products on the one hand and a heavily depleted mine ore reserve on the other hand. At the same time, mining men fear that they will also be faced with continuing high taxes, high wages and, worst and most dangerous of all, bureaucratic regimentation, interference and control.

Right now mining men have another fear, and that is the possibility of a further lowering of the tariff on the base metals on the pretext of being a good neighbor. If this is done it will actually mean creating for foreign cheap labor jobs which by right belong to our boys who are winning the war. Personally, I doubt that President Truman, who comes from one of the largest lead-zinc producing States in the United States, is going to go along on any proposal to reduce the tariff—and jobs for Missouri boys—on these metals.

Singing the same tune as the good neighbor boys, but using different words, are the have-not lads, who argue that this country has reached a have-not stage in our mineral resources and that we should, therefore, conserve them by obtaining our metals from abroad. This, of course, is just another way of depriving our boys of jobs, because it goes without saying that the job we create abroad deprives one of our boys of a job.

There is one other thing that must be corrected if the base metals and base metal mining are to supply a maximum number of jobs. I refer now to the impossible restrictions placed upon the financing of mining ventures by the administration of our State laws and the national SEC law. The laws in themselves appear innocuous enough in the reading of them, but in practice and as administered they have all but eliminated prospecting. That "noble experiment" the prohibition law, created the bootlegger and corrupted our young people. Blue-sky and SEC restrictions are sidetracking and driving venture capital into slot machines and other gaming devices.

Looking at this audience consisting of a goodly number of 200-pounder "he men," it is at first thought hard to realize that they were ever little 9-pounders in three-cornered pants. By way of analogy, every one of our big mines was once a little prospect.

The fact that these prospects were developed into mines and that this country developed the greatest mining industry under procedures now outlawed and illegal should be proof enough that there was something fundamentally good in the old free-enterprise methods.

It is my judgment, based upon an intimate on-the-ground knowledge of the Northwest that its mineral resources have scarcely been scratched. This is particularly true of the State of Washington. No one can convince me that the mineral-bearing areas are marked off from Washington by the Canadian border on the north and the Idaho State line on the east. Nor can I believe that the mineral areas are marked off from Oregon by the California, Nevada, and Idaho State lines.

We have large developed mineral resources and still larger undeveloped indicated and potential resources. And we have and will have for a long time to come a big demand for the base metals. On the whole, therefore, the prospects are bright provided we turn from restrictive to constructive measures.

While I abhor war with every fiber of my being, my study of the world's history leads me to believe that some practical good can come out of war. Perhaps this Nation was getting a bit soft, but, be that as it may, our fighting men, one and all, are learning what work means—that it takes work to win. Facing and learning realities as they are, they are going to have little patience with platitudes, theories, and technicalities. They are entitled to jobs and they are not going to accept any excuses or explanations as to why they are not forthcoming. The base metals and base metal mining can and must provide its fair proportion of these jobs.

This is your job and mine and, as Barney Google's "yardbird" says, "time's awastin'."

What's Causing the Meat Shortage?

EXTENSION OF REMARKS

OF

HON. A. L. MILLER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 28, 1945

Mr. MILLER of Nebraska. Mr. Speaker, under leave to extend my remarks, I include an address I made over the Columbia Broadcasting System May 26:

Shortages are due to:

1. Government regulations.
2. Set-aside orders from the Army.
3. Lack of profit to the producer.
4. Black markets.

GOVERNMENT REGULATIONS

With 22 different Federal regulations in the past 2 years which affect the production of beef and pork, there is little wonder that we have a shortage. Some of these regulations are: Price ceilings, roll-backs, weight limitations, quotas for slaughter, subsidy programs, restrictions on selling and freezes on feed. Rules have been changed in the middle of the feed lot. The Government has not kept its promise to the raisers of hogs. Retail price ceilings are fictitious. To get meat the housewife must go to the black market. The ineffectiveness of meat price ceiling is a notorious failure. The bureaucrats should remember that we do not eat heads of cattle and hogs, but pounds of meat.

These New Dealers who have had charge of the meat program have consistently refused to take the considered judgment and advice of men who are in the meat producing and processing business. The answer of the Government to all their failures has been more subsidies. The recent subsidy of 50 cents which is now being offered to the cattle feeders is hardly a drop in the bucket.

It is interesting to note that the Government is breaking the OPA ceiling on live cattle when it has started to pay this 50-cent subsidy to the farmer. This will place the price on cattle above $18 at Chicago. For a packer to pay above the OPA level is a criminal offense and means inflation. Apparently the Government may exceed the price and they call it preventing inflation. The planners do a jig dance in trying to find a logical explanation. The Government would not think of letting the buyer pay the extra money by letting him have a price for meat that would warrant a profit. The planners must have lots of red tape and have the money pass through several hands before it actually gets to the feeder of cattle. They would not think of letting cattle reach their own level in a free market.

Packers, after June 4, may now collect up to $3.40 on the best grade of cattle. This will mean that $18 cattle will be selling for $21.40, and if we add the 50-cent subsidy to the producer, it makes a ceiling price of $21.90. Now, if these New Dealers would establish a ceiling price of $21.90 and forget about the subsidies, it would not take long for the feeder and the packer to supply all the necessary meat to the armed forces and our civilians. It would also eliminate the black market. Meat would flow through free channels to the public. At the present time there are no free channels. Government regulations and red tape made it possible for the black markets to flourish. It often seems that the OPA and WFA have had a desire for more power over the civilians. They know that if they can control the food supply they can control a nation.

SET-ASIDE ORDERS FROM THE ARMY

Set-aside orders for the military, lend-lease and other Government services is 60 percent, of the good, choice, and commercial beef. It is 80 percent of the cheaper grades and 50 percent on pork. This meat comes from federally inspected plants. Uninspected meat cannot cross State lines; hence, the shortages in centers of population. A recent estimate showed as high as 550 pounds of meat per soldier, either in Europe, or in the pipe lines to Europe. Slaughter quotas for uninspected plants may give the Government more meat but will create additional shortages in the cities.

In my humble judgment, the military has entirely too large a set-aside order of meat. When the war is over, this country may well find that it has a tremendous surplus of meat on hand.

LACK OF PROFIT TO THE PRODUCER

Hundreds of small packing plants have been forced to close because of slaughter quotas and inability to make a profit. Cattle feeders cannot, under present regulation, finish cattle and make a reasonable profit. The Government has been taking meat from the small packers, at less than cost. In doing this, OPA is violating its own regulations. Feeders and packing plants must have the cost of production plus a fair profit or face bankruptcy. The OPA has been trying to limit profits instead of encouraging production. Their downright destructive policy has reduced the supply of meat.

The OPA has tried to prove that the packers and feeders were making money. Their argument falls by its own weight because packers have had to quit by the hundreds. Feeders have not finished their cattle. If such enormous profits are being made, why do they pay additional subsidies? Certainly, the hand of the Government agencies has had a paralyzing influence upon the production of meat through so many unnecessary regulations. Rules, regulations, and charts do not produce meat. Certainly, Congress does not expect any one group to serve the war effort and serve the public at a loss.

Government agencies have failed to cooperate with each other. They have been at loggerheads, issuing bickering and contradictory statements. If this continues, additional "No meat" signs will appear over many counters in this country.

BLACK MARKETS

Bureaucratic arrogance, wrong guessing, ill-advised control, and general incompetence by the OPA and WFA have caused black markets to flourish. The housewife, if she gets meat, must pay black-market prices. Unless food is ample for the civilian population, rationing will be destroyed through black markets. There are only nine meals between man and revolution. People have money and will insist on getting food, regardless of price. When price control breaks, dangerous inflation is on our doorstep.

The only way to beat the black market is through ample production. Black markets pay no taxes. The housewife who must resort to black market prices in order to get meat for her family pays far more than the present fictitious price ceilings which the OPA is trying to maintain. The regulations will cause the legitimate operator to either work at a loss, go into bankruptcy, close his shop, or go into the black market. The OPA and the WFA cannot escape their responsibility in the present shortage of meat. To have production, there must be a reasonable profit. The food commodity must sell within the range of the cost of production plus a reasonable profit. Canada has not had a shortage of meat and they have fewer regulations than in this country. Under a free production, without ceiling prices, their meat costs are less than in the United States.

The uncontrolled, extensive and growing black market will produce a shortage of all kinds of food. Any Government regulation which discourages production and a reasonable profit leads to black markets.

I believe it is possible to write on a post card a few suggestions which, if put into effect, would be a remedy for the shortage of meat. They are as follows:

1. Permit a reasonable profit to the grower and the processor.
2. Remove all unnecessary Government controls.
3. Encourage production.
4. A coordinated food program under one individual with the responsibility and the authority over all other agencies now handling food, which includes production, distribution, rationing and price of food.
5. First priority on production of food with sufficient manpower and machinery to do the job.

In the matter of responsibility and authority, it is my earnest hope that our colleague, Mr. ANDERSON, who will undoubtedly be the Director of Agriculture and assume the responsibility of the War Food Administration, will have undivided authority to put into effect the recommendations he made to the House of Representatives. If there is a divided authority, then Mr. ANDERSON will have no more success than his predecessors, Mr. Wickard, Mr. Davis, and Mr. Jones.

Protest Federal Leasing of Submerged Lands

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 28, 1945

Mr. SHAFER. Mr. Speaker, under permission to extend my remarks, I include a resolution adopted by the Committee on Interstate Cooperation of the State of Michigan. A like resolution has been adopted by the Administrative Board of the State of Michigan:

Whereas information indicates that the United States Government is contemplating the granting of permits and issuance of leases for the development of oil upon certain tide and submerged lands lying off shore along States of the Union abutting upon the oceans and tributary waters thereof; and

Whereas such a policy, if engaged upon, would invade the rights of the States and ultimately might effect the State of Michigan by virtue of its proximity to international waters; and

Whereas by virtue of the sovereignty of the respective States, the States have heretofore been declared to be the absolute owners of all lands beneath navigable waters within their boundaries; and

Whereas the proposal of the United States Government to issue prospecting permits for oil and gas leases beneath tidewater and on lands beneath navigable waters, and in connection therewith the United States Government has asserted the United States to be the owner of such lands, thus creating clouds upon the titles of the true owners thereof; and

Whereas such a policy, if pursued, would work great harm to the people of the several States and would constitute an invasion of the sovereign rights of such States: Now, therefore, be it

Resolved by the Committee on Interstate Cooperation of the State of Michigan, That protest be entered against such a policy and that copies of this resolution be transmitted by the chairman of this committee forthwith to all members of the House of Representatives and the United States Senate representing the State of Michigan, urging them to use their best efforts in the Congress to prevent the Department of the Interior or any other agency of the United States Government from adopting or pursuing any such policy invading the rights of the State.

Why Destroy Our National Defense?

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 28, 1945

Mr. REED of New York. Mr. Speaker, under leave to extend, I am inserting a letter entitled "Protection at Home" by Otto Herres to the editor of the Wall Street Journal:

PROTECTION AT HOME

EDITOR, THE WALL STREET JOURNAL:

Perhaps an answer to your editorial, Trade Act Irrelevancies (April 26) is given in the succeeding editorial, Gifts Are Not Exports (April 27). However, when the observation was written that, "so far hearings before the House Ways and Means Committee on the bill to extend the life of the Reciprocal Trade Agreements Act and widen the President's authority to reduce tariff rates without reference to Congress have accomplished little more than a waste of time," only high officials of the administration supporting the bill had been heard.

No doubt it was a waste of time for administration proponents to assert that the depression in the thirties was caused by our tariff laws. Certainly Secretary Wallace was wasting time in saying that we must be able to cut our tariffs another 50 percent to avoid World War III.

The surest way to bring on World War III is to impair our capacity for effective self-defense and destroy our self-sufficiency. If we fail to protect our productive resources as a means of preparedness against foreign aggression, in whatever form, the aggressor will find his way into the Western Hemisphere and our War III will be on.

As to opponents of the bill, a showing has been made by representatives of the mining industry, for example, that tariff reductions caused a drastic curtailment of the domestic zinc industry not in the public interest and resulted in a very critical condition at the start of the war. Today there is a serious shortage of lead, and reserves of ore in sight and developed are limited. But under normal peacetime conditions the domestic production of lead and zinc is entirely adequate for all needs if given reasonable tariff protection. Cut the lead tariff another 50 percent and mineralized ground available for the development of new ore in the Rocky Mountain region after the war will stand idle while capital and technical skill move to Mexico, South America, Burma, or Africa to produce new wealth wherever they will be treated kindly.

It will be no waste of time if the committee learns that a bipartisan tariff commission and the Trade Agreements Act have not solved the tariff problem by permitting administrative officials to write regulations and manipulate schedules. Then perhaps Congress will decide it is time to take a hand in the game and protect the living standards of the people at home. It may be that destruction added to depression equals peace and prosperity, and that free trade, great public debt, and high taxes will give the Secretary of Commerce his 60,000,000 jobs, but somehow that does not seem to be the right answer. Congress might find that we can do more to help the world by keeping this country prosperous.

OTTO HERRES.

SALT LAKE CITY, UTAH.

Reciprocal Trade Agreements

EXTENSION OF REMARKS

OF

HON. A. L. MILLER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 28, 1945

Mr. MILLER of Nebraska. Mr. Speaker, under permission to extend my own remarks in the Appendix of the RECORD on the subject of roll call 89, which extended reciprocal trade agreements, I found it necessary on this roll call to pair my vote with the Honorable CLINTON ANDERSON of New Mexico. He voted for and I voted against the bill. Mr. ANDERSON and I paired our votes to keep a 6:15 appointment with the Columbia Broadcasting System to discuss the problem, "What's Causing the Meat Shortage?"

I voted against the reciprocal trade agreements, not because I do not believe in reciprocal trade, but because of the provision in the bill which would give the State Department the further right to cut our present tariffs as much as 50 percent. I honestly believe that, if this were done, we would find widespread unemployment in the United States because we would not be able to compete with the slave wages and low standard of living which exist in many countries with whom we would trade. I am a firm believer in trading with other countries but we should export those things of which we have a surplus and import those items which are not sufficient for our needs.

It is possible for parts of South America to raise their market beef cattle for as little as 4 cents a pound and realize a profit. It is not hard to realize what a treaty might do to the cattle business in this country if we were to permit this cheap beef to take our domestic markets.

Before the war with Japan and Germany, I had an opportunity to make a modest survey of the so-called variety stores in Nebraska. I found in these variety stores that about 75 percent of all the articles were marked "made in Japan" or "made in Germany." Many of them were cheap imitations of what we make in the United States. However, the fact that these goods dominated the shelves meant that someone in America was thrown out of a job because it was impossible to compete with the cheap material coming in from Japan and Germany.

If America is to remain strong and be able to help a weak world, then we must accept the first law of Nature and that is self-preservation. It is for that reason that I voted against the bill which would permit a further reduction in our tariff regulations.

Tribute to Dead and Missing Merchant Seamen

EXTENSION OF REMARKS
OF
HON. SCHUYLER OTIS BLAND
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Monday, May 28, 1945

Mr. BLAND. Mr. Speaker, under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I include the following address by Commissioner Thomas M. Woodward, United States Maritime Commission, at the National Maritime Union ceremony to pay tribute to dead and missing merchant seamen, and the memorial dedication of the Franklin Delano Roosevelt Hall in New York City on Maritime Day:

War is the most terrible thing in human experience. It can be justified only to preserve feedom and civilization. It brings to surface all the hideous passions and barbarities that civilized man thought had been put behind him. It also discloses the finest qualities in civilized man. All that a man hath will he give for his life, yet how many a man has held ideals and purposes worth more than life in this holocaust.

It is most fitting on this Maritime Day, 1945, that we pause for a moment in tribute to the men of the merchant marine who have laid down their lives in a holy cause. Words are so futile to express gratitude to those who gave their lives that we might live—the thousands who went bravely forth over the seven seas to meet the challenge of a ruthless enemy in the face often of almost certain death.

We have today the largest merchant marine in the world, more than four times as large as before the war. We hope to operate in domestic and foreign commerce more than 15,000,000 dead-weight tons. This depends, however, on our haying sufficient commerce to employ these ships. It depends upon national and international measures which will make for the free flow of commerce. It means that we cannot live to ourselves alone.

No group knows better than those assembled here that our merchant marine is made up of men as well as of ships and that however good the ships they can be no better than the men that run them. The Maritime Commission and the country know and are today recognizing what a magnificent job you men have done in this war. You brought the ships through. You delivered the tanks and guns, the food and supplies to the battle fronts in the four corners of the world and on practically every voyage you yourselves passed through battle fronts often more terrible than the very scene of conventional battle. Without your great performance the war of Europe would not have been won. These are not idle words. They are bald facts. The country will never forget that you fought a good fight, that you kept the faith, that you kept your no-strike pledge, that not a ship was delayed by you because of cessation of work. The men on the battlefields and the mothers, sisters, brothers, wives will be eternally grateful. You saved countless lives by your faithfulness and what a glorious record you wrote for the United States merchant marine.

Congress, in the Merchant Marine Act of 1936, laid out a clear long range policy for our merchant marine and established the Maritime Commission to administer the act.

It is significant that title III of this act is captioned "Merchant seamen." It recognizes a broader governmental obligation to these seamen. It directs the Commission to investigate employment and wage conditions aboard ships and to incorporate into operating differential subsidy agreements minimum manning scales, minimum wage scales, and minimum working conditions.

Almost immediately upon its organization in 1937, the Commission made an investigation pursuant to these provisions. It held hearings in various ports. It took many hundred pages of testimony. If I recall correctly, your long-time president was one of the witnesses. As a result of these hearings, the Commission drew up and incorporated minimum scales in its operating differential contracts. No one knows better than your president and some of the other officials what were the living and working conditions aboard many American ships 10 years ago. I, too, had some direct knowledge of these matters, for I conducted some of the hearings, and in their course went aboard about 80 ships, examining quarters and working conditions. The Commission set up a Crews Quarters Committee. This committee examined many ships. It made specific recommendations, which the Commission adopted. Certain definite improvements were brought about by the Commission's action but it was difficult to improve greatly old vessels that had been built with an antique concept of the minimum needs of Amemricans on board ship. It was in the new ships where substantial improvements were able to be made and today, generally speaking, our new ships, particularly the long-range ships, offer decent living conditions for Americans. The Crews Quarters Committee still operates and will continue to operate.

Collective bargaining has, of course, had a great part in improving conditions and compensation. Both the men and the operators have greatly profited by it. It has been a mutual educational process and few industries today would contemplate abandoning this method of dealing between employer and employee.

The act thus recognizes men as well as ships and provides that our ships be manned by American citizens. The obvious conclusion of this is that these Americans should be well housed, decently compensated, have all the rights of American citizens, and that, so far as practicable under differing conditions, compensation and living and working conditions comparable to shore-side standards. They have a right in reality and not in theory only to sufficient compensation to live decently and maintain a family and as much of a family life as seafaring will allow. Axiomatically, they should be secured in the four freedoms—freedom from want, freedom from fear, freedom of speech, and freedom of religion.

We have expended hundreds of thousands of live and hundreds of billions of dollars for these freedoms that are at our masthead. What we can do in war, we can do in peace if we are as determined in peace as we were in war. We have demonstrated that we do not regard democracy as an idle word but that we intend to translate it into realities. It is a sad thing that too often we have failed in instances to make democracy a reality even in our own Nation. We intend that this shall not be in the future. Labor unions and collective bargaining have come to stay.

All groups in the past, whether they be of management, of government, or of working men, have at times been shortsighted and frequently selfish. This is the price of all progress. But we have learned during this war the tremendous power of cooperative action. The intelligent cooperation of the government and of labor unions and of operators which has done such magnificent things in war, if continued in peace, and it must be, will make our merchant marine one of our greatest national assets to serve the country and the world and to approach more nearly the democracy we dream of, and the brotherhood of man.

"Sail, sail thy best ship of democracy. Of value is thy freight, 'tis not the present only, the past is also stored in thee."

Admission to the United States of Fiancees of American Soldiers and Sailors

EXTENSION OF REMARKS
OF
HON. HUBERT S. ELLIS
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Monday, May 28, 1945

Mr. ELLIS. Mr. Speaker, a few days ago I was attracted by a very interesting article appearing on the front page of the Times-Herald. It says: "Dan Cupid gets a lift—Government to cut red tape to bring GI's fiancees here."

The State Department proposes to facilitate the entrance into this country of the brides-to-be of American soldiers and sailors.

First. I question the wisdom of this action, and further, as a member of the Immigration and Naturalization Committee, I question the authority of the State Department to arbitrarily set aside any United States statute.

We now have about 70,000 wives of servicemen, married abroad, who await passage to America. This constitutes a serious problem which has not yet been solved. In the new proposal to facilitate the entrance of fiancees, I see possibilities of grave consequences. You are reminded that throughout Europe there are four or five women to every three men. Everyone, both men and women, are clamoring to come to America. If their entrance is made simple, there is a possibilty that we open the way for wholesale engagements—for convenience—and in the natural course of

events, marriage for convenience. If and when these marriages are consummated, then comes the hardship cases. We will find that the new wife from abroad is the only support of aged parents or the sole support of minor sisters and brothers. So eventually the whole crowd will clamor for admittance to America.

I want to tell every American soldier and sailor, in all parts of the world, that we have a fine American girl here waiting for him to come back home. Our girls are beautiful and healthy and want to live here in America, marry American men, and raise American families.

Let our boys get back and away from the strain and drama of war and they will want a girl just like the girl that married dear old dad. Our girls do not need a break. Just do not handicap them. Again, let us think of our own for a while.

Loans to Veterans

EXTENSION OF REMARKS

OF

HON. HUBERT S. ELLIS

OF WEST VIRGINIA

IN THE HOUSF OF REPRESENTATIVES

Monday, May 28, 1945

Mr. ELLIS. Mr. Speaker, according to the following news item, it seems that an article appearing in one of our leading weekly magazines a few days ago critical of the loan provision of the GI bill is to some extent in error.

Contrary to the article, Mr. Pitt H. Stark, vice president of the First National Bank of Ceredo, W. Va., states that his bank considers that the loans that it has made are good and sound and involve no great amount of paper work.

This bank is located in a town of about 1,300 inhabitants and leads the Nation in loans granted under the provisions of the G. I. bill:

GI LOANS MADE BY CEREDO BANK

Pitt H. Stark, vice president of the First National Bank of Ceredo, announced today that the bank has made 20 loans to veterans of World War II, all for buying homes, under provisions of the GI bill of rights.

Mr. Stark made his announcement following appearance of an article in the current issue of Collier's magazine, by Kyle Crichton, associate editor, contending that red tape and credit-standing requirements were defeating the purpose of the bill's loan provisions.

Mr. Crichton in the article said that only nine loans to veterans have been made nationally to date under the act, which insures 50 percent of such loans up to a maximum of $2,000.

The associate editor claimed that veterans, applying for such loans, must have gilt-edge credit ratings and must fill out forms a yard long before the applications are even considered by the Veterans' Administration.

Mr. Stark said his bank considered the loans it has made "good business and sound loans." He added the bank considers it a patriotic duty to give every consideration to applicants for the loans, and that making them involves no great amount of paper work.

Representatives of the Veterans' Administration here said that the First National Bank of Ceredo occupies first place in the Nation in number of GI loans granted. A Texas bank, with six loans, occupies second place.

The First Peace Issue

EXTENSION OF REMARKS

OF

HON. GEORGE E. OUTLAND

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 28, 1945

Mr. OUTLAND. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial:

At the end of a long and sharp debate, which culminated in a personal appeal by President Truman for favorable action, the House of Representatives has approved a bill which proposes to give the Government power to continue and expand the Hull program of reciprocal trade agreements. No more important legislation has come before Congress in many months than this first test of American policy toward the nature of the postwar peace. For at least three chief reasons a continuation of the Hull program is indispensable—so indispensable, that the defeat of this legislation at this time would have been a major political calamity.

In the first place, it is evident that both public and private loans from the United States, loans made on a sound basis, will be necessary for the reconstruction of Europe, a task which needs to be undertaken as much in our own interest as in the interest of our European allies. Such loans cannot possibly be made on a sound basis unless there is reasonable hope of repayment. And since the only practicable method of repayment is in terms of goods, the whole problem of postwar reconstruction is tied up intimately with the problem of achieving reasonable reductions of barriers to trade.

In the second place, even more than in the years before the war, many American industries are now geared to a production which will require profitable foreign markets if the existing volume of domestic employment is to be maintained. Again we face the fact that in the long run, and particularly since we have already acquired most of the world's gold, American goods can be bought abroad only with the proceeds of goods sold in our own markets, and bought there, because they represent good values at reasonable prices by American consumers.

Finally, since the United States is admittedly the most powerful economic unit anywhere in the world today, it is obvious that our action will be the most important single influence in establishing the whole economic pattern of the postwar years, and in determining from the very start whether the trend will be—as it would certainly have been if the Hull program had been rejected—toward a narrow economic nationalism, with foreign trade largely in the hands of Government monopolies, or whether the trend will be—as there is now more reason to hope—toward a freer exchange of goods, a relaxation of governmental controls, a survival of the private enterprise system and an era of economic good-will which will lay a sound basis for the work of the new international peace organization which is now being established at San Francisco.

This is the first important international issue to come before Congress since the end of the war in Europe, and the vote on it must give cause for second thought to many of those who felt, in the last election, that it was safe to trust the Republican Party in Congress with the direction of international issues, on the ground that that party had turned over a new leaf and seen a new light since the days of its opposition to lend-lease, to repeal of the arms embargo, to selective service and to the original grant of authority to Mr. Hull to negotiate his trade agreements. For, in the critical test which this new legislation met on Saturday—the question whether or not to kill the bill by recommitting it—only 7 Republicans could be found in the entire House of Representatives who were willing to give their support to continuing and expanding the Hull program. One hundred and sixty-seven Republicans—a majority of 23 Republicans to 1—voted to send the new bill back to committee.

Such a performance as this can profit the Republican Party, politically, only on one assumption: only on the assumption that there is a swing-back of public sentiment in this country to the old days of political and economic isolation between the two World Wars. On any other assumption the House Republicans have taken a position and written a record that must be a heavy handicap to any Republican candidate for the Presidency in the next election.

It now remains to be seen what will happen in the Senate.

The Golden Gate Bridge

EXTENSION OF REMARKS

OF

HON. RICHARD J. WELCH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 28, 1945

Mr. WELCH. Mr. Speaker, today is the anniversary of the opening of the Golden Gate Bridge on May 28, 1937. This majestic publicly owned bridge is one of the engineering marvels of all ages. Its magnitude and beauty are only surpassed by the supreme majesty of the Golden Gate itself—the world-famous marine highway which connects the great Bay of San Francisco with the Pacific Ocean—and whose shores it connects.

The Golden Gate Bridge had its official inception on November 12, 1918, when I introduced the following resolution as a member of the Board of Supervisors of the City and County of San Francisco, which I had prepared in collaboration with James H. Wilkins, longtime mayor of San Rafael:

Whereas the Board of Supervisors of the City and County of San Francisco has been impressed by the discussion relative to the construction of a bridge across the Golden Gate by the Federal Government; and

Whereas it is evident that the construction of such a bridge would be of incalculable value to San Francisco by connecting it directly with the northern and central counties of the State and with the transcontinental railroad system; and

Whereas such a bridge would add a feature to the Bay of San Francisco without parallel in the world; and

Whereas it is a necessary step to determine by expert examination whether the project involves insurmountable engineering difficulties or prohibitive costs: Now, therefore, be it

Resolved by the Board of Supervisors of the City and County of San Francisco, That our Senators and Representatives in Congress be urged to promote the necessary legislation providing for a preliminary survey and report with a view to determining

whether the projected bridge is practical or not.

Adopted: Board of supervisors, San Francisco, November 12, 1918.

Ayes: Supervisors Brandon, Deasy, Gallagher, Hayden, Hocks, Hynes, Kortick, Lahaney, McLeran, McSheehy, Mulvihill, Nelson, Schmitz, Suhr, Welch.

Absent: Supervisors Hilmer, Power, Wolfe.

J. S. DUNIGAN, *Clerk.*

Approved, San Francisco, November 13, 1918.

JAMES ROLPH, Jr., *Mayor.*

The passage of this resolution by the unanimous vote of the members present marked the beginning of a long uphill fight that tried the souls and patience of the men who pioneered the project. Differences of opinion arose as to the feasibility of the project. Encouraged by the selfish ferry interests, which held a monopoly on all bay transportation, these differences increased in magnitude so as to almost defeat the entire project.

Nevertheless, there were public-minded citizens who believed that the construction of the bridge was entirely feasible at reasonable cost. Supported in their position by such outstanding bridge engineers as Ralph Modjeski, O. H. Ammann, Leon F. Moisseiff, Joseph B. Strauss, and Gustave Lindenthal, they carried on the fight under the most trying circumstances. Those of us who supported the project recognized the urgent need for the construction of the bridge and we conducted a strenuous campaign to encourage public support in the counties of northern California. As a result of this campaign the Santa Rosa Chamber of Commerce, through its president, Frank P. Doyle, sponsored a meeting of citizens in 1923. To coordinate our efforts through organization, I introduced a resolution at this meeting providing for the appointment of a citizens committee of five. This committee, consisting of Joseph Hotchkiss, Frank L. Coombs, Capt. I. N. Hibbard, Frank P. Doyle, and myself, carried on the fight in the months that followed.

As a result of the work of this citizens committee, Hon. Frank L. Coombs sponsored legislation which was enacted by the State legislature, of which he was at the time a member, creating the Golden Gate Bridge and Highway District, composed of San Francisco, Marin, Napa, Sonoma, Mendocino, and Del Norte Counties. This action made the financing of construction of this great publicly owned bridge possible.

Another serious problem in connection with the construction of the bridge arose in the fact that Federal military reservations occupy each side of the Golden Gate. To construct the bridge it was necessary to secure a grant from the War Department, and to also secure the War Department's approval because the bridge was to cross navigable waters.

To facilitate this matter, I introduced the following resolution which was unanimously adopted by the Board of Supervisors of the City and County of San Francisco on September 7, 1923. At the time I was chairman of the committee on commercial development of streets and highways of the board of supervisors:

Whereas the commercial, financial, and economic development of the State of California, and particularly the cities and counties located on and adjacent to San Francisco Bay, would be accelerated by the establishment of modern and rapid transit facilities; and

Whereas tentative plans have been prepared by J. B. Strauss, of Chicago, and M. M. O'Shaughnessy, chief engineer of the city and county of San Francisco, for the construction of a bridge connecting the city and county of San Francisco and Marin County across the Golden Gate, which plans are both practical and economical: Now, therefore, be it

Resolved, That the War Department be respectfully petitioned to improve or correct, if necessary, the proposed plans for said bridge between the city and county of San Francisco and Marin County across the Golden Gate, and to order that a hearing be held in the near future, to determine whether or not said bridge would be a hindrance and obstruction to navigation in said waters.

Adopted: Board of supervisors, San Francisco, September 4, 1923.

Ayes: Supervisors Bath, Colman, Deasy, Hayden, Hynes, McGregor, McSheehy, Morgan, Mulvihill, Powers, Robb, Rossi, Schmitz, Scott, Shannon, Welch, Wetmore—17.

Absent: Supervisor McLeran—1.

J. S. DUNNIGAN, *Clerk.*

Approved, San Francisco, September 7, 1923.

JAMES ROLPH, Jr., *Mayor.*

The War Department conducted an exhaustive investigation. Hearings were held before the United States Army engineers in the city of San Francisco. The strategic importance of such a bridge in national defense plans was demonstrated at these hearings. It was pointed out that the large number of military and naval establishments in and around San Francisco at that time would be directly connected by the bridge and thus would be eliminated the use of the circuitous and antiquated ferry system, which required three-quarters of an hour as compared with less than 5 minutes by use of the bridge.

The important geographical and strategic location of San Francisco and the entire San Francisco Bay area to the security of this Government in the event of war in the Pacific and the fact that the bridge would bring the huge empire to the north of the Golden Gate into direct traffic communication with the great seaport city of San Francisco, were both emphasized. That high naval and military officials were aware of this importance is amply indicated by repeated testimony of these officials before congressional committees.

Finally, as chairman of the committee on commercial development, streets, and highways of the board of supervisors, I received the following grant from the Secretary of War, John W. Weeks, dated December 20, 1924:

CHAIRMAN, COMMERCIAL DEVELOPMENT AND TRANSBAY BRIDGE COMMITTEE, BOARD OF SUPERVISORS OF CITY AND COUNTY OF SAN FRANCISCO,

San Francisco, Calif.

DEAR SIR: Under date of March 31, 1924, you applied through the district engineer for approval of the plans of a bridge to be constructed across the Golden Gate, San Francisco Bay, in behalf of the city and county of San Francisco and the county of Marin of the State of California. Your application has received full consideration by the War Department, and I am pleased to inform you that the project as a whole meets with my approval, subject to the following comments:

Since this bridge connects two military reservations there was a military question involved which prevented it being handled in the ordinary manner and final action taken by the Chief of Engineers and the Secretary of War only, as would have been the case if the question of the interests of navigation alone had been the only one to consider. The objections to the bridge from the military point of view can be eliminated if the city of San Francisco and the counties interested in its construction will bear all the expense connected with the moving, rebuilding, and replacing of elements of the defensive and other military installations damaged by such construction; will bear the expense of construction and maintenance of approaches to the bridge; will give the United States complete control over the bridge in time of war; will permit Government traffic at all times free of charge; will make provision for wire and pipe lines on the bridge for War Department use free of charge; and will subject the construction of the bridge and its approaches, so far as such construction relates to the military defenses of the harbor and the military reservations affected, to the direction of the Secretary of War or his authorized representative, the district engineer, First San Francisco District.

It is understood that you will proceed with your plans and will submit applications for the definite permits necessary before actual construction can commence. These are:

1. Approval by the Chief of Engineers and the Secretary of War of detailed plans of the bridge;

2. Permits from the Secretary of War for rights-of-way across the military reservations, Fort Baker on the north and the Presidio, San Francisco, on the south;

3. A permit for the temporary occupancy of certain areas on the two military posts necessary for construction activities.

The application for the approval of the plans for the bridge should be submitted to the United States engineer office, First District, San Francisco. The other applications may be submitted directly to the Assistant Secretary of War. All applications should be for a definite and settled project, and it is suggested that the exact site of the bridge and location of approach roads must be determined, after consultation with the Commanding General of the Ninth Corps Area, before applications for the rights-of-way and the temporary use of land are submitted in order that the exact metes and bounds of the territory required may be given. When these applications are received they will be given immediate attention.

Very truly yours,

JOHN W. WEEKS,
Secretary of War.

Full justification of these early predictions are to be found in the fact that today San Francisco is one of the greatest ports of embarkation in this country, if not in the entire world, and that the San Francisco Bay area is a literal beehive of military and naval activity. Within that area are to be found some of the most important permanent military and naval establishments in the United States. I have referred to these establishments in detail in my statement before the House of Representatives in January 1945, concerning the need for adequate highway and bridge construction in defense areas.

With the enactment of the necessary State legislation creating the Golden Gate Bridge and Highway District and the grant of authority from the War Department, the construction of the Golden Gate Bridge was assured. An election was held under the laws of the State of California to provide for a bond issue of $35,000,000 to finance the project, which received more than the required two-thirds majority favorable vote.

Because of the interest taken in the project by Joseph B. Strauss, who gratuitously furnished his technical knowledge and service throughout the preliminary stages, a contract was entered into appointing him chief engineer. Associated with him at the express request of Wilmer P. Filmer, chairman of the bridge directorate, and myself, were Messrs. O. H. Ammann and Leon S. Moisseiff, world renowned bridge engineers, whose contributions were largely responsible for changing the design of the bridge from the ugly cantilever type originally proprosed, to the graceful suspension bridge now spanning the Golden Gate.

And in that connection, Mr. Speaker, I may be forgiven for my pardonable pride in having been directly associated with the Golden Gate Bridge from its inception, both as the member of the board of supervisors who introduced the original resolutions before that body, as a member of the original citizens committee of five, and officially as a director of the Golden Gate Bridge and Highway District from its creation to the present time.

The great importance of the Golden Gate Bridge to national defense is further demonstrated by the fact that practically all north and south troop and supply movements along the entire Pacific coast pass over the bridge, thus saving the valuable time that would be lost by the use of a long since outmoded privately owned ferry system. The value of this time-saving bridge would be incalculable in the event of an attempted invasion at any point along the Pacific coast.

I have already referred to this great structure as one of the engineering marvels of all time. It is the longest single clear-span bridge in the world, being 4,200 feet in length. It is 700 feet longer than the George Washington Memorial Bridge, which crosses the Hudson River. The towers, which support 36-inch cables, carry the full weight of the bridge span and are 746 feet above mean high water, or approximately 200 feet higher than the Washington Monument here in the Nation's Capital. These 36-inch cables contain approximately 80,000 miles of wire and were woven in place on the bridge at the rate of 173 tons of wire per day. The vertical load on each pier is 164,800,000 pounds, and they are sunk into bedrock. Their great size can probably be appreciated to some extent by a description of the south pier at the San Francisco end of the bridge. Its depth extends from 44 feet above to 100 feet below the water level; its base area is 80 feet by 160 feet, while its top area is 65 feet by 140 feet, and it contains 152,311 cubic yards of concrete.

This magnificent structure was built during the depth of the depression and without a single dollar of Government aid. It marks the triumph of public enterprise so well demonstrated by the city of San Francisco and her sister counties to the north. The inspiration of the Golden Gate Bridge prompted the late Hon. John Steven McGroarty, poet laureate of California and former Member of this House of Representatives, to write a poem, from which the following is taken:

THE BRIDGE

Dream of the years and ages past—
Now sky and sea are spanned at last,
The severed land is joined once more
As in the aeons gone before,
And once again, bright-winged of Fate,
The gods salute the Golden Gate.

Now shall we call from Time's dim maze
The mighty ghosts of other days,
Pontists and sailormen and all
Who saw the empires rise and fall,
They that in their hour and day,
A striving world set on its way,
Striking new milestones on the land,
Teaching new cunning for the hand
Of groping, stumbling man, that he
Might mark the trails and chart the sea.

Ghosts of old Pontists, dead and gone,
Who bridged the streams at Avignon,
Who wrought where tides of Tiber ran,
Who laid the stones of Isfahan.
Builders in Albion and Cathay—
Rennie, Abbas, and Benezet.
And he who in the new-born West
Put mill and furnace to his test.

* * * * *

Wraiths of the mariners who dared
The unknown tides and seas, and fared
To find in flame of sunset fire
The lotus shores of Heart's Desire,
A land that only dreams can make—
Puget, Cabrillo, and Francis Drake,
Viscaino and his ships in flight
Off Gaviota in the night.
And then the dearest of them all
That ever sailed a brig or yawl,
Swart Juan Ayala, crew and mate,
The first to win the Golden Gate
Steering from cypress-shored Carmel,
Prow of a Spanish caravel
Eager and bold, and on its lea
A shallop from a redwood tree.
Ghosts of builders and sailormen
Come from the dust and waves again!
Look on this wonder time has sped
On the dim way your visions led.

Here on the road the cable spans
Is ceaseless clamor of caravans,
Laden with spoils of plain and field,
Fruit of the vine and orchard's yield,
Gifts of the loom, meat for the mart,
Silver and gold from earth's deep heart,
Magic lamps for Aladdin's eyes,
And furnace flame in the midnight skies.

Gods of the trees, the vine, and stone,
Lord of the Covenant, does this atone
For burdens borne and the bitter load
That left its scars on the age-old road?
Is this reward for the stone and tree?
This mighty path o'er the mighty sea,
This sky-swung, dazzling dream, elate,
A starlit roof for the Golden Gate.

Man and his servant Time stand here,
Builder and toiler and engineer
Who, in the grime of their labor, smile
And go to their tents to rest awhile,
The kingly battle they waged is won,
The bridge is builded, the task is done,
The story told that was long to tell—
And God's in His Heaven and all is well.

Celebration of I Am an American Day at Chicopee, Mass.

EXTENSION OF REMARKS

OF

HON. CHARLES R. CLASON

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 28, 1945

Mr. CLASON. Mr. Speaker, in many cities and towns throughout the Nation I Am an American Day was observed on Sunday, May 20, when several hundred thousand men and women were formally welcomed into American citizenship. In the city of Chicopee, Mass., which I have the honor to represent in Congress, the Kiwanis Club sponsored the celebration, and through its president, Mr. John J. Korkosz, honored me by inviting me to deliver the principal address at the exercises.

Under leave to revise and extend my remarks, I wish to include the address which I delivered as follows:

Today in all parts of our vast Nation the hand of welcome is being extended to those who in the past 12 months have become citizens of the United States of America. Some have acquired citizenship through naturalization, others through reaching their majority during the past year.

We whose privilege it is to have been born Americans, and we who were equally privileged to achieve American citizenship in past years through naturalization, rejoice with you that you have joined the great company of those who call themselves Americans.

Today is I Am an American Day and all of us are tremendously proud that we are Americans. But on the particular I Am an American Day the pride which we feel is extraordinary. For less than 2 weeks ago the valiant men of our Army and Navy forced the unconditional surrender of a foe who threatened everything that being an American stands for and who would have destroyed all that we Americans hold dear.

Relentlessly, from the hot sands of Africa on to the hard-won beachheads of Italy and Normandy, and across France and into the German homeland itself our gallant young men drove our enemy before them and finally forced his capitulation. In the doing they brought liberation to the people whose lands had been overrun by the conqueror and whose liberty and freedom had been torn away by the oppressor.

Many of you who today make up this inspiring gathering of Americans came from those oppressed countries. By the taking of the oath of American citizenship you have proclaimed yourselves lovers of liberty and freedom, and so, in the victory of our arms you have especial cause to rejoice. The loved ones and friends you left behind in those countries have been saved because Americans were willing to fight for their freedom. Now as Americans yourselves, you have a rightful share in the satisfaction which all Americans feel in the heroic deeds of their fighting men.

The American, as you have doubtless discovered from living among your neighbors in this country, is not by nature a truculent individual. The American Nation has no dreams of conquest, no desire to take by force from other nations their territory or their trade. In the winning of his own freedom, the American came to have a great respect for it. Liberty was not easily acquired by America and like any possession which is secured through hardship, it is cherished.

What is this freedom which Americans throughout our glorious history have been willing to lay down their lives to obtain and to hold? What is this liberty, this democracy, which Americans have gone to war twice in the last 25 years to preserve?

This freedom, this liberty, is based upon a number of rights and privileges guaranteed to every person who is an American. These rights and privileges, which all of you here today acquired the moment you took the oath of citizenship or which you secured as your birthright, are the law of the land and no man or group of men can take them away from you.

First of all, you have the right to speak and write your thoughts and to assemble with your fellow Americans for the purpose of solving the problems which confront you as an individual or collectively as a group. If you have grievances, you are entitled to petition those in authority to remedy them.

You have the right to vote—to choose your public officers, who are, in fact, not your masters but your servants. When you believe that your elected representatives have not performed their duties as you would wish them to, you have the right to vote them out of office and replace them with others.

The right to choose your work, your profession, or your vocation is yours. Our national life is studded with men of great distinction in the arts and sciences, in business, and in the professions, who foresaw their opportunities and in the free society which is America were able to take advantage of them without interference from bureaucratic officials.

To be sure, the right to choose one's field of employment has been somewhat curtailed during the war, due to the necessity to divert labor into essential industries. But this restriction is only temporary and like all other controls which the exigencies of the national emergency have forced upon us, is being relaxed as conditions permit.

In this connection, may I quote from a recent address of the leader of the Government of our great neighbor and ally, Great Britain. In a speech before the annual conference of the Conservative Party of March 15, 1945, Winston Churchill said:

"If we are to recover from the measureless exertions of the war, it can only be by a large release from the necessary bonds which war conditions have imposed on us. No restriction upon the well-established liberties that is not proved indispensable to the prosecution of the war and the transition from war to peace can be tolerated.

"Control for control's sake is senseless. Controls under the pretext of war or its aftermath which are, in fact, designed to favor the accomplishment of totalitarian systems, however innocently designed or whatever guise they take, whatever liveries they wear, whatever slogans they mouth, are fraud which should be mercilessly exposed * * *."

As Americans, we have the right to speedy trial by jury if we are accused of a crime. Before the courts, every man is equal and there is the same justice under the law for the poor man as there is for the rich.

Another of the rights of Americans is the privilege to educate your children in the free public schools. No other nation in the world has finer schools and nowhere in the world are the educational opportunities so great. In this generation, the young American man or woman who does not possess at least a high-school education is the exception rather than the rule. Great numbers continue to study in the State universities or in other colleges and go on to become doctors, lawyers, clergymen, or specialists in the scientific and commercial fields.

The earliest immigrants to these shores came here to escape persecution for their religion. They came in order to worship God as they saw fit. And so, when the founding fathers met to frame the Constitution, which is the supreme law of our land, they wrote into it in unmistakable language a provision that there should be no interference with an American's right to worship his God according to the dictates of his own conscience. That is another and one of the most priceless privileges which is ours as Americans.

Now, all these rights and privileges are not without their responsibilities. If we are to enjoy liberty and freedom, we must be willing to accept certain obligations that are necessary to their preservation.

It has been said that "Obedience to law is liberty." Certainly the author of that statement did not mean that there is any freedom under political systems where the people are obliged to obey the edicts of dictators or tyrants. He was talking about America, where the laws are enacted by the chosen representatives of the people. In this country the people make their own laws. The laws are made not for oppression but for the protection and benefit of all citizens.

A learned judge once said, on addressing a group of newly naturalized citizens:

"You will miss the whole message of American democracy if you fail to apprehend the truth that our national way of life is founded on a broad and rational accommodation between unrestrained individual freedom on the one hand and the necessities of community living on the other. Washington and his collaborators in the molding of the Constitution publicly acknowledged and defended that adjustment, for it is a compromise of social living, not of conscience."

As an American, therefore, your first duty is to obey your country's laws.

Where the will of the people prevails, your Government seeks to reflect the will of its citizens. The way in which that will is expressed is through the ballot. It is, accordingly, your duty to vote and to keep yourself informed of the issues before your Government. It is your duty to judge the men who seek public office on the basis of their honesty, their ability, and their worth as public servants.

You have other duties as Americans. As you demand certain services of your Government you must be prepared to pay for them and you therefore have a duty to pay such taxes as are assessed by your Government for their cost. You have a duty to serve on a jury when called, so that any of your fellow citizens accused of a crime or involved in a civil process, may be fairly judged. You have, above all, the duty to defend your country if the need arises.

This year, on this I Am an American Day we are paying especial tribute to those who have answered the call of their country in its hour of greatest need. This day, which we here observe is dedicated to the more than 100,000 servicemen who have been naturalized since Pearl Harbor.

These are the men who, if called upon, are prepared to give their very lives that the rest of us may continue to enjoy the fruits of liberty and freedom in America. In dedicating this day to them, let us solemnly pledge that we will keep faith with them. Let us here resolve that we will ever be worthy of our American citizenship; that we will be mindful of the great sacrifices which the men and women of this and other wars have made that our lives, our liberties, and our right to the pursuit of happiness might be secure.

Although Germany has been beaten, there are still difficult days ahead of the Nation. A strong and fanatical foe still faces us in the Pacific. The fight to final victory will be a hard one. When that victory is achieved, the tremendous problems of building an enduring peace will be upon us. It will be a time when the leaders of ours and other nations will need all the wisdom and judgment they can command. It is such a time as inspired Josiah Gilbert Holland to write the immortal lines with which I will close.

"GOD GIVE US MEN

"God give us men. A time like this demands
Strong minds, great hearts, true faith, and ready hands.
Men whom the lust of office does not kill;
Men whom the spoils of office cannot buy;
Men who possess opinions and a will;
Men who have honor; men who will not lie;
Men who can stand before a demagogue
And damn his treacherous flatteries without winking;
Tall men, sun-crowned, who live above the fog
In public duty and in private thinking;
For while the rabble with their thumb-worn creeds;
Their large profession and their little deeds
Mingle in selfish strife, lo, freedom weeps.
Wrong rules the land, and waiting Justice sleeps."

Religion Must Be Free

EXTENSION OF REMARKS

OF

HON. FRED L. CRAWFORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 28, 1945

Mr. CRAWFORD. Mr. Speaker, the world must never have a repetition of the imprisonment of preachers in concentration camps for teaching the gospel, or of Gestapo spies sitting in the congregation of every church, or of churches becoming the propaganda agency for a totalitarian state.

The framers of the Constitution of the United States, who learned of freedom the hard way, forged a document which has withstood the storms and fires of time. In that document a free press, free speech, and free religion are guaranteed. The world has marveled as the United States became great and remained great under these principles of freedom. Even under wartime restrictions, these freedoms have been affected a minimum in this country.

As nations look and hope for a new world document that will bring peace on earth for a longer period than ever before in history, consideration must be given to the inclusion of these principles.

Churches are vitally interested in any document drawn in connection with the San Francisco Conference or any other world conference. Freedom of religion in all of its phases will play an important part in the world's future.

One of the documents handed to the delegates to the San Francisco Conference deals with this subject and is so thought provoking that I desire to have it read into the RECORD.

It follows:

Honorable delegates, you are not unaware that among the most prolific causes of war are efforts to repress and control the exercise of religion. Consequently, one of the chief contributions which can be made in bringing war to an end is to completely free religion, in its profession, its practice, its propagation. Freedom of worship is not enough. What is required is complete freedom of religion in all its phases.

God made man free. He imposed fetters on neither mind nor soul. Even the choice

of evil, of turning away from God, was not denied. He meant that freedom to continue. But men have ventured to impose restraints, to exercise coercion, where God conferred complete liberty. Freedom of belief has been denied; freedom of worship has been suppressed; freedom of religion has been refused. And out of these denials, suppressions, and refusals have issued many of the wars which have cursed mankind.

As a tortured world emerges from the intolerable agonies of war, the United Nations, upon whom now rests the responsibility of victory, have chosen representatives from among their sagest statesmen and entrusted to them the solemn responsibility of planning a world organization to safeguard and maintain peace and security. To this high station you have been called. We petition you to meet the lofty hopes of humanity by including among your actions one that will completely remove all shackles from religion and the exercise thereof.

Freedom of religion is a basic freedom. It affects all other human rights. It is more than religious toleration. It is more than freedom of worship. It goes far beyond these. It includes not alone the right of the individual to put into practice his conscientious religious convictions, but also his unrestricted right to change his religion. It includes freedom to rear and train children in their parents' faith, freedom to preach, teach, propagate, publish, and carry forward missionary activities, as well as freedom to organize with others, function as a church, and acquire and hold property for the inculcation, maintenance, and propagation of the faith.

The Seventh-day Adventists of the world join other Christian bodies in petitioning you to remove one of the chief causes of armed conflict by establishing as a part of the basic law of the proposed World Security Organization a provision guaranteeing complete religious liberty to the peoples of the earth. In this connection we venture to invite your consideration to what earnest, Christian people hope may be included. Your petitioners respectfully submit the following suggestion, not necessarily in its form, but in its impartiality, its inclusiveness, and its refusal to favor one religion above another.

Recognizing that the relations of the individual soul with its Creator should be free, and that repression and coercion in the field of religion are fertile sources of war, the powers signatory hereto agree that all nations admitted to membership in the World Security Organization shall give assurance that they will make no law, nor engage in any program which will place restraints on the free exercise of religion, either in worship, teaching, or propagation, and that they will in no way discriminate, either in law or in fact, against those who practice any particular creed, religion, or belief whose practices do not interfere with the equal rights of others.

In support of the foregoing principles we offer the following statements:

The Archbishop of York, in his analysis of conditions essential to the maintenance of a durable peace, said:

"First of all, there must be religious freedom. Without religious freedom it is impossible for the churches to act spontaneously and vigorously. Without religious freedom they will be suspected of being a mere department of the state. By religious freedom I mean that the churches should have freedom of worship, freedom of preaching and teaching, and freedom of determining their own organization, and that the individual should have freedom to worship or not to worship God, as his own conscience dictates. This freedom has been largely set back during the war. * * * I hope indeed that when the peace treaties are drawn up a very special care will be taken in seeing that religious freedom is secured as well as political freedom and economic freedom." (The Spiritual Issues of the War, No. 271, January 18, 1945, distributed by British Information Services, 30 Rockefeller Plaza, New York, N. Y.)

In the case of *United States* v. *Ballard et al.* (322 U. S. 86, 87; 64 S. Ct. 886, 887), decided by the United States Supreme Court on April 24, 1944, Mr. Justice Douglas, delivering the opinion of the Court, said:

"Men may believe what they cannot prove. * * * The fathers of the Constitution were not unaware of the varied and extreme views of religious sects, of the violence of disagreement among them, and of the lack of any one religious creed on which all men would agree. They fashioned a charter of government which envisaged the widest possible toleration of conflicting views. Man's relation to his God was made no concern of the state. He was granted the right to worship as he pleased and to answer to no man for the verity of his religious views. * * * The first amendment does not select any one group or any one type of religion for preferred treatment. It puts them all in that position."

In the case of *Jones* v. *City of Opelika* (316 U. S. 618, 621), decided by the United States Supreme Court on June 8, 1942, Mr. Justice Murphy, in a dissenting opinion, in which he was joined by Chief Justice Stone, Mr. Justice Black, and Mr. Justice Douglas, said:

"Freedom of speech, freedom of the press, and freedom of religion all have a double aspect—freedom of thought and freedom of action. Freedom to think is absolute of its own nature; the most tyrannical government is powerless to control the inward workings of the mind. But even an aggressive mind is of no missionary value unless there is freedom of action, freedom to communicate its message to others by speech and writing. * * * Important as free speech and a free press are to a free government and a free citizenry, there is a right even more dear to many individuals—the right to worship their Maker according to their needs and the dictates of their souls and to carry their message or their gospel to every living creature."

(NOTE.—The dissenting opinion in the *Jones* v. *Opelika* case became the majority opinion in 319 U. S. 103.)

Among the pledges made to the German people in the name of the Allied Nations, General Eisenhower, in a broadcast on December 7, 1944, promised complete religious liberty. Surely, if conquered nations can be guaranteed full religious liberty, the Allied nations, through their representatives meeting at San Francisco, will provide and guarantee nothing less for the people of all the world. We urgently request your cooperation in bringing to final realization this age-long hope of the world.

By official authorization of its World Executive Committee, we, with deep respect, subscribe our names in behalf of the Seventh-day Adventist denomination.

J. L. MCELHANY, *President.*
E. D. DICK, *Secretary.*

Resolution of Tri-State Housing Conference

EXTENSION OF REMARKS
OF
HON. CHARLES R. ROBERTSON
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Monday, May 28, 1945

Mr. ROBERTSON of North Dakota. Mr. Speaker, the constantly increasing lumber requirements in the Northwest States have reached a point where they border on the acute. This has been stimulated to some degree by information that has reached the country that it will be the policy of various agencies of our Government to process and send to devastated sections of Europe Federal housing. This in itself is not of far-reaching importance, but the idea has generally gotten into the community that vast amounts of lumber being denied to this territory is also going to Europe for other purposes. This country is badly in need of lumber for repair and for houses for returning soldiers.

As a result of this information there has been held in the Northwest what has been known as the Tri-State Lumber Conference.

Under unanimous consent to extend my remarks in the RECORD, I include herewith a copy of a resolution adopted by the conference:

ACUTE HOUSING SITUATION FACING RETURNING VETERANS

RECOMMENDATIONS OF TRI-STATE HOUSING CONFERENCE TO THE PRESIDENT OF THE UNITED STATES AND THE MEMBERS OF CONGRESS

On May 10, 1945, a tri-State housing conference was held in Fargo, N. Dak., at which there were delegates from North Dakota, western Minnesota, and northeastern South Dakota. This meeting was designed to bring together some of the top men representing Government and private business in the housing and building-materials field to consider first hand the acute housing situation existing in this area, and the serious social and psychological problems to be avoided as veterans now returning in increasing numbers are unable to find living quarters for themselves and their families.

Over 100 persons participated in the conference, including: William K. Divers, Chicago, regional manager, National Housing Agency; J. G. Skaaren, Minneapolis, regional manager, Lumber Division, War Production Board; Charles L. Freeman, Minneapolis, regional manager, Surplus Lumber Division, Reconstruction Finance Corporation; W. H. Badeaux, Minneapolis, secretary, Northwest Lumbermen's Association; F. A. Mapes, Chicago, regional manager, Surplus Materials Division, United States Department of Commerce; Ben B. Lawshe, Washington, D. C., manager, commercial organization department, Chamber of Commerce of the United States; C. A. Williams, Fargo, chairman, Fargo Chamber of Commerce Housing Committee and general chairman of the conference; Senator J. B. Bridston, Grand Forks, N. Dak., chairman, Grand Forks Civic and Commerce Association Housing Committee, and moderator of the conference discussion; R. A. H. Brandt, president, Minot Association of Commerce, and vice chairman of the conference.

Organizations represented at the conference included: Service-wives clubs, veterans' administration, chambers of commerce, municipal officials, builders, suppliers, and financial institutions.

The following resolutions were adopted at this conference:

"Resolution 1

"Whereas there is an acute shortage of building materials in the hands of distributors and retail outlets in this area; and

"Whereas the transportation rates and shipping facilities limit the purchase of lumber to mainly one source—the Pacific Northwest States; and

"Whereas the lumber material needs of the returning veterans must be met mainly from the Pacific Northwest States' supply; and

"Whereas AA3 priorities in this area do not secure from the Pacific Northwest mills the necessary building materials for the distributors and retail outlets:

"Therefore, the tri-State housing conference here assembled recommends to the President of the United States, and to Congress assembled: That:

"1. The existing priorities allocated by the National Housing Agency for returning veterans be raised above the AA3 rating in order to provide high enough priorities to secure materials in this or any other area where similar difficulties are being experienced.

"2. Civilian needs of the United States be given priority over civilian rehabilitation in other countries."

"Resolution 2

"Whereas war surplus building materials may, and probably will, become one of the important sources of materials to meet the existing crisis of housing shortage in this area; and

"Whereas there is a lack of national policy to insure equality in the geographic distribution of said war surplus building materials:

"Therefore, the Tri-State Housing Conference recommends to the President of the United States and to Congress, that necessary action be taken immediately to establish a national policy limiting to a minimum the number of agencies which will handle the sale of surplus property, and to incorporate into their programs recognition for the needs of the areas far removed from the location of the surplus materials.

"Duly passed and adopted this 10th day of May 1945."

R. H. BARRY, *Chairman, Fargo, N. Dak.,*
C. M. CARLSON, *Crookston, Minn.,*
GEORGE NYGAARD, *Watertown, S. Dak.,*
JOHN F. OLSON, *Jamestown, N. Dak.,*
JOHN SCHNOOVER, *Jamestown, N. Dak.,*
S. S. SHAW, *Watertown, S. Dak.,*
DEANE WILEY, *Crookston, Minn.,*
Resolutions Committee of Tri-State Housing Conference.

Information Service

EXTENSION OF REMARKS
OF
HON. A. S. MIKE MONRONEY
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES

Saturday, May 26, 1945

Mr. MONRONEY. Mr. Speaker, in order to correct any misunderstanding regarding testimony given before the Committee on the Organization of Congress, I would like to place in the RECORD a letter from Mr. Neil Dalton, director of the Domestic Branch of the OWI. The testimony in question is that of Mr. Malcolm Morrow, head of the Division of Public Inquiries, given to the committee Friday, May 25.

Mr. Morrow was invited to appear before the special committee, following an inspection made of the Division's facilities by Dr. George B. Galloway, staff director of the committee. The invitation was formally issued by the chairman of the committee, in an effort to determine whether any of the Division's present services might be useful to the Congress in expediting the work of Congress. Mr. Morrow, in appearing before our committee, was not volunteering additional new services to Congress, but sought to explain the available service for any use Members wished to make of it.

I want to call attention to the following letter from Mr. Dalton, which was sent to me, because I was acting chairman of the committee when the testimony was given:

Hon. A. S. MIKE MONRONEY,
Washington, D. C.

DEAR MR. MONRONEY: I am addressing this to you because you were temporary chairman at the time Mr. Malcolm Morrow, Chief of the Division of Public Inquiries of the Domestic Branch, Office of War Information, testified before the Joint Committee on the Organization of Congress on May 25.

Mr. Morrow's appearance before the committee was on invitation of its chairman, Senator ROBERT M. LA FOLLETTE, Jr., and followed a personal visit to the Division of Public Inquiries by the committee's staff director, Dr. George B. Galloway.

As you know, this particular Division has been in existence much longer than the Office of War Information. The Division of Public Inquiries dates from 1934 and has functioned as a central information service of the Federal Government in the sense that it answers questions about the Government which it receives by mail or telephone or in person. The functions of this Division were not changed when it was made a part of OWI; it performs today exactly as it did before there was an OWI. Whether any or all of these functions will be retained after OWI is dissolved is a matter for decision by the Congress and not by the Domestic Branch of OWI.

Mr. Morrow, at the committee's invitation, explained how this Division operated and, again at the committee's request, gave his opinion as to the potential service of this Division for the Congress. I want to emphasize that there will be no change whatsoever in the service which the Division of Public Inquiries renders the Congress unless the Congress directs it. There has been no thought in the minds of anyone connected with OWI to propose a new service for Congress or to expand any existing service for Congress.

Cordially,

NEIL DALTON,
Director, Domestic Branch.

Lend-Lease Report

EXTENSION OF REMARKS
OF
HON. PETE JARMAN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES

Monday, May 28, 1945

Mr. JARMAN. Mr. Speaker, pursuant to leave previously granted, I insert an interesting editorial from Saturday's Washington Post:

LEND-LEASE REPORT

Lend-lease, the secret weapon that welded the United Nations into a unity and gave them the overwhelming strength with which to crush Germany, is now to be turned full force against Japan. This is the keynote of the letter of transmittal accompanying the nineteenth lend-lease report to Congress—the first such letter to bear the signature of Harry S. Truman. "While the bulk of the United Nations forces were engaging the Nazis in Europe," he wrote, "Allied forces succeeded in piercing the perimeter of Japanese defenses and established the bases from which decisive offensives can be launched. Now all of the might and power of the United States, the British Empire, France, the Netherlands, and our other Allies can be brought to bear, together with the Chinese forces, against Japan."

Although lend-lease supplies thus far have been devoted principally to the war in Europe, they have been provided also, in such quantities as were available, to the Allied military and naval forces battling the Japanese. And these Allies, through reverse lend-lease, have significantly aided our troops in the Pacific, especially by supplying them with foodstuffs. Our shipping difficulties would have been enormously aggravated had it not been for this facet of the mutual-aid system. We have received from Australia, for example, a total of more than $720,600,000 worth of reverse lend-lease; from New Zealand, $171,400,000 worth; from India, $411,900,000 worth. French, Belgian, and Netherlands colonies made their contributions, too.

It was thought necessary in the nineteenth lend-lease report to refute a number of absurd and mischievous rumors to the effect that the civilian populations in Allied countries are being given all sorts of scarce supplies for peacetime purposes at the expense of civilians here. Lend-lease has had from its inception a single simple purpose—the effective utilization of the manpower and resources of all the United Nations. It has served us well. It would be tragic now to let it be beclouded by misconceptions, for it still has a great and vital task to perform.

War Prisoners—Send Them Back

EXTENSION OF REMARKS
OF
HON. SAMUEL A. WEISS
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, May 28, 1945

Mr. WEISS. Mr. Speaker, a storm of protest has flooded the Congress with regards to the coddling of German war prisoners. The disclosure of brutal and bestial actrocities in the German prison camps by a congressional committee sent to Germany at the request of Gen. Ike Eisenhower is certainly sufficient grounds for stern treatment of German war prisoners. Let us send these German war prisoners back to Germany, to reap with their German brethren the seeds of destruction they have sown.

As part of my remarks, I am happy to include an editorial that appeared in the May 21, 1945, issue of the Pittsburgh Post-Gazette, entitled "Feeding War Prisoners":

FEEDING WAR PRISONERS

Public opinion in England is fed up with the favored diet allowed German war prisoners as compared with British civilians. The prisoners get 2½ pounds of meat a week; the civilian three-fourths of a pound. There is little doubt that the cartoon reproduced herewith from the London Daily Mail struck a responsive chord with that paper's audience.

The campaign to grow more food need not concern the prisoners. As one reassures the other—"Don't worry Heinrich, it doesn't mean us; we just eat it."

In answer to criticism the British War Department gives the same reply as our own. We must abide by the Geneva Convention. Yes, but the Geneva Convention was drawn on the premise that war was a professional affair and that armies ate less well than civilian spectators. The civilians haven't

been spectators in this war—certainly not in London. Furthermore, there is ample evidence that American and British prisoners held by the Germans did not get the same food allowance as the Nazi soldiers. A couple of crusts of black bread, some cabbage soup, an occasional spread of grease and perhaps some ersatz coffee comprised the daily ration. Had it not been for Red Cross packages many would have starved.

Nobody suggests that enemy prisoners of war should be starved or maltreated in any way. But it doesn't make sense to stint our own people in order to give the prisoners more than our ration cards allow. If the Germans get 2½ pounds of meat per week in British camps, they probably get more here as the American Army eats better than the British. And the OPA now has admitted that red points allotted American families provide only about 1¼ pounds per week, or half what the German prisoner in England gets. And, of course, they must have their cigarettes and chocolate.

The sooner they are shipped back where they came from to share with other Germans the none too heavy fare which Allied authorities are scheduling for them, the better we will like it.

America's Role

EXTENSION OF REMARKS

OF

HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, May 28, 1945

Mrs. BOLTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Herald Tribune of May 18, 1945:

AMERICA'S ROLE

In a special dispatch from San Francisco yesterday our correspondent, Mr. Bert Andrews, was able to reveal something of the unpublished history of the Polish question, which has become, since the supposed settlement at Yalta, a source of so much alarm and disagreement among the great powers. From this account at least two salient facts emerge through the mystery and secrecy in which the whole matter is still so deeply clothed.

The first fact is that the Polish question cannot fairly be painted in those stark terms of black and white in which it has been consistently represented to the American people. At the time of his death President Roosevelt—who was one of the three men in full possession of the facts—believed that there was considerable merit in the Russian position regarding the reorganization of the Lublin government. Mr. Roosevelt, at least, did not think that the Russian attitude represented a flat violation of the Yalta agreements, and was working to compromise the difficulties which had subsequently arisen.

The second salient fact in this disclosure is that in the matter of Poland, and therefore, presumably, in the matter of European questions in general, Mr. Roosevelt did not conceive it to be the function of the United States to act as an appendage of either Russia or of Great Britain, but as a disinterested third power which could mediate in and mollify whatever differences might develop between our two great allies. For whatever reason—whether through fate, blunder, or design—this far-sighted policy has not been followed since Mr. Roosevelt's death. At San Francisco we allowed ourselves to become involved in the Polish matter in exactly that sort of Anglo-American "front" against Russia which Mr. Roosevelt had consistently striven to avoid; and compounded the mistake by also getting involved in what appeared to be a Western Hemisphere "front" directed both against Russia and against the idea of an effective general security organization.

That this second error was not intentional is shown by the rather frantic subsequent efforts to undo it. The fact remains that both developments tended to disqualify this country for the greatest service which it could now perform in world affairs—that of acting as the genuinely independent balance wheel in the mutual interorganization of the three greatest powers. It was long ago evident that the organization of peace in general had to begin with the organization of peace among the three or four major centers of effective military power. It is unfortunately evident now that this task has been very imperfectly performed as yet; that it will be a hard and complex task, and that it may prove impossible (as a somewhat similar task proved impossible after 1918) unless the United States can act as the understanding and more or less impartial and active friend of all other parties involved.

This country cannot fulfill such a role if the American public takes passionate stands on matters of vital interest to either of our allies which the American public itself only imperfectly understands. To avoid such stands, on the other hand, will clearly be difficult in the atmosphere of secrecy and suppression which now cloaks the whole of international affairs. The Russian position on Poland, eastern Europe, and many other questions has, to put it bluntly, been stated about as badly and incompetently in this country as it could have been stated. Perhaps the American position has been stated badly to the Russians; this newspaper does not know. It does know, however, that as long as the fate of western civilization remains dependent on rumors, gossip, partial facts, oppressive censorship, and the outgivings of propaganda officers, who have little understanding of the publics they are addressing, its destiny will be difficult in the extreme.

St. Lawrence Seaway Project—Address of Hon. Maurice P. Davidson, Trustee of the Power Authority of the State of New York

EXTENSION OF REMARKS

OF

HON. WILLIAM A. PITTENGER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Saturday, May 26, 1945

Mr. PITTENGER. Mr. Speaker, under permission granted me to extend my remarks in the RECORD, I include an address by the Honorable Maurice P. Davidson, one of the trustees of the Power Authority of the State of New York. This address was delivered before the Spectrum Club, at Albany, N. Y., on April 30, 1945. In it Mr. Davidson presents most ably facts and arguments pointing to the conclusion that the Government of the United States should take prompt action now to develop the power and navigation facilities in the St. Lawrence River. His address is not only informative but reviews in a very careful manner the history of efforts to secure favorable action on this project, and points out its great benefits to the American people. I commend it to every person who believes in doing something for America and for the American people. It is as follows:

DEVELOPMENT OF OUR NATIONAL WATER-POWER RESOURCES

In 1931 the New York State Legislature, by unanimous vote and with the approval of Gov. Franklin D. Roosevelt, declared that the international section of the St. Lawrence River was a natural resource of the State for the use and development of commerce and navigation in the interest of the people of this State and the United States, and for the creation and development of hydroelectric power in the interest of the people of this State. And they further settled the public power policy of the State by declaring that this natural resource shall always remain inalienable to, and ownership, possession, and control thereof shall always be vested in, the people of the State. The law embodying this policy constitutes chapter 772 of the laws of 1931 and is known as the Power Authority Act.

That policy has been reaffirmed on many occasions. It declares that that part of the St. Lawrence River within the boundaries of the State of New York is a natural resource of the State for the use and development of commerce and navigation in the interest of the people of this State and the United States, and for the creation and development of hydroelectric power in the interest of the people of this State. It further declares that such natural resources include the bed and waters of the river and are instrumentalities of commerce and navigation.

For the purpose of effectuating this policy, the Power Authority of the State of New York was directed to proceed in cooperation with the proper Canadian authorities and those of the United States to improve and develop the international rapids section of the St. Lawrence River (from Ogdensburg to the point where the St. Lawrence leaves the territory of the State—a distance of about 48 miles) for the aid and benefit of commerce and navigation and for the development of the hydroelectric power inherent therein. In other words, the Power Authority is the trustee or guardian of the St. Lawrence River and watershed and is the trustee of the State of New York for the purposes which I have stated.

Now it is interesting to note that the St. Lawrence seaway and power project is not a matter of political controversy. It is, however, a matter of sharp economic controversy. Volumes have been written and floods of oratory have been poured forth on the subject, but all this expenditure of verbal energy can be divided into two general classifications.

On the one hand, we have the unanimous, nonpolitical, nonpartisan endorsement of the project in its entirety by Presidents of the United States from Theodore Roosevelt down to, and including Franklin D. Roosevelt, and by Governors of the State of New York from Gov. Charles Evans Hughes to Gov. Thomas E. Dewey, supported by the urgent approval of every investigating body and committee—international, national, and State—over a period of many years. It was approved by the majority of the Rivers and Harbors Committee in 1941 and by a majority vote of the United States Senate in 1934, when the treaty with Canada failed to pass because the majority did not add up to two-thirds of the total vote of the Senate.

The other classification consists of the efforts of representatives of special interests to impede this development by propaganda, legislative obstruction, and the organization of minority groups.

As I have said, this is not a political issue. It is purely an economic proposition, centered upon two simple questions:

1. Shall we utilize the 2,200,000 horsepower of the St. Lawrence River to produce the lowest-cost electricity in the United States in the interest of abundant use by the consumer, or follow a policy of high rates, economic scarcity, and low consumption?

2. Shall the navigation facilities of the international section of the St. Lawrence River be improved so as to permit the passage of vessels with an increased draft of 13 feet? In other words, is it more sound economically to restrict transportation of freight from Ogdensburg to Montreal to ships with a draft of only 14 feet than to use ships of 27-foot draft?

It would seem that considerable ingenuity is required to support a negative position on these two points and we might well expect to witness the most exquisite torture of logic and facts. Failure to fully develop the power and transportation facilities of the St. Lawrence is the one blind spot in our industrial planning for the postwar era.

As we look across the country and witness the marvelous development of our natural water resources for navigation and power, involving the expenditure of billions of dollars, to which the State of New York has contributed so liberally, our attention is riveted upon the fact that in the roster of these great public developments the St. Lawrence is conspicuous by its absence. We have the Grand Coulee in Washington, Bonneville in Oregon, Shasta in California, Boulder in Nevada, Fort Peck in Montana, Big Tompson in Colorado, the TVA in the Southern States, and numerous other National and State projects in every section of the United States except the Northeast.

Among the great dreams and visions of national achievement none was dearer to the heart of Franklin D. Roosevelt during all the years when he was Governor of the State of New York and President of the United States than the development of the great natural resources of the St. Lawrence River in the interest of the people. As late as last December President Truman, then a Senator, voted in favor of the resolution presented by Senator AIKEN to amend the rivers and harbors bill by incorporating in it the Aiken bill providing for that development. And in his last annual message Governor Dewey affirmed the traditional policy of the State of New York for the development of the St. Lawrence seaway and power project when he said:

"After 20 years of discussion, the tremendous power potential of the St. Lawrence River still remains undeveloped. Its estimated 1,620,000 kilowatts would be the second largest project of its kind in this continent. Its beneficiaries would be the residents of this State and nearby areas.

"At the last session of the legislature, upon the recommendation of the State administration, resolutions were unanimously adopted declaring for the prompt development of the St. Lawrence River by measures which would provide low-cost power from these resources under the inalienable ownership of the people.

He further said:

"I recommend, therefore, that the State continue vigorously to assert its substantial rights and interests in the St. Lawrence development.

"For years I have advocated the completion of the St. Lawrence seaway and power project. During the past decade the means have been found and billions in Federal funds have been appropriated, to develop great rivers in other sections of the country, for power, navigation, flood control, irrigation, and like purposes. The incomparable resources of the St. Lawrence River should no longer be wasted. If the Federal Administration is unable or unwilling to proceed, then the State of New York itself should undertake to complete the project on a self-liquidating basis, in cooperation with the Dominion of Canada and the Province of Ontario.

And it should be remembered that the legislature of 1944, with the strong backing and support of Governor Dewey, adopted a concurrent resolution declaring: "It is the sense of the Legislature of the State of New York that prompt measures should be taken to provide for the development of the power resources of the St. Lawrence River, with adequate provisions to safeguard the rights and interests of the people of the State of New York in these resources under the inalienable ownership of the people." The authors of this resolution were Senator Rhoda Fox Graves and Assemblyman Grant F. Daniels.

In an interview on April 19, 1945, Mayor LaGuardia said, of the St. Lawrence seaway:

"I'm on record in favor of it (the seaway). I've favored it ever since it was first suggested. Seventeen years ago as a Member of the House of Representatives, I was for it.

"I always think of it as a power proposition. It would be a great benefit for the people of New York State.

"I have no fear, though, of New York City losing any of its shipping business."

Asked his opinion of the plan of Senator JAMES M. MEAD to develop only the power phase of the St. Lawrence program, Mayor LaGuardia disagreed.

"The plan may have some merits but I don't see why we don't do the whole thing."

What is the present status of the St. Lawrence seaway and power project? The actual plans, blueprints, surveys, and estimates, are complete in every detail, having been made by the United States Corps of Army Engineers over a period of 2 years from 1940 to 1942. This great engineering report embodies complete plans for the construction of the development. All that is lacking is the approval by Congress of the agreement entered into between the United States and Canada in March 1941, so that there is only one step to be taken before the final development of the project can be actually undertaken. At this point, the enemies of low-cost electric power and low-cost water transportation have thrown themselves with renewed energy into the desperate work of obstruction.

On April 20, 1944 the Honorable ROBERT F. WAGNER, senior Senator of the State of New York, said:

"I am happy to send you a statement of my views on the constructive plans now pending for the improvement of the St. Lawrence River.

"There is overwhelming sentiment for the earliest possible use of the power resources in the St. Lawrence River, resources essential for the postwar development of New York and the Nation. For half a century, the people of New York have carried on a ceaseless battle, first to prevent these resources from falling into private control and more recently since the Power Authority Act of 1931 passed in the administration of Gov. Franklin D. Roosevelt, to develop and distribute the power for the public good. This power project has had my fullest support throughout my service in the State legislature and the Congress.

"I am convinced that the enactment of the Aiken bill, S. 1385, furnishes the most direct means of achieving these public benefits and I am therefore giving that measure my active support."

The Honorable WILLIAM A. PITTENGER, Representative from Minnesota, called attention to the false economy in pouring hundreds of millions of dollars into the development of natural resources of other countries, while at the same time sidetracking and delaying the development of our own. He referred to the Shipshaw project in Quebec Province, for which over $100,000,000 was advanced to the Aluminum Company of Canada, Ltd., by the Metals Reserve Company of the RFC.

This enabled the Canadian aluminum monopoly to build the enormous Shipshaw power project on the Saguenay River in the wilds of the Province of Quebec. Representative PITTENGER has reintroduced his bill for the approval of the United States-Canadian agreement, known in the last Congress as the Aiken-Pittenger bill. His bill is now awaiting action.

There are twelve or thirteen billion kilowatt-hours of electricity going to waste in the St. Lawrence every year. Compared with Ontario rates charged right across the river, the difference in New York State alone is about $225,000,000.

The new and preferred technique for preventing the development of the St. Lawrence project is ostensibly to favor the power development but to object to the seaway. This brand of obstructionism is of the type of the Niagara Frontier Planning Board and Buffalo interests which strongly urged the adoption of the Graves-Daniels joint resolution passed unanimously by the State legislature in 1944. Previously, and afterward, opposed to power, as well as navigation, they went on record as endorsing the power project. What are the agencies of opposition? Also, it might be asked, who are the principals? The membership in all these agencies overlaps. They are largely the same people acting under new and varied titles. We have long had with us the Niagara Frontier Planning Board and the Niagara Frontier Planning Association, and we have the National St. Lawrence Project Conference, the Washington lobby. More recently, we have a new organization in the State of New York created by the same interests known as the New York State Conference in Opposition to the St. Lawrence seaway project.

It is a sad chapter in the history of our democracy that a minority group of entrenched corporate interests should have so long successfully defied the mandates of the State. It reminds me of the little group of willful men who opposed the entry of the United States into the League of Nations, thereby precipitating a Second World War. Now we have the spectacle of a little group of willful men bent upon preventing the development of our water-power resources, thus promoting an exodus of population and industry from the State. This will seriously hamper the postwar development of the State and curtail employment of our returning soldiers.

Among other techniques of the opposition is the claim that the power project could have been built long ago if the power authority did not insist on improving the waters of the St. Lawrence for navigation purposes. Let me analyze this a bit.

1. The law of the State directs the improvement of navigation in the international section from Ogdensburg to Massena.

2. Cargo boats with a draft of 25 feet now traverse all the Great Lakes and, thanks to the Welland Canal, can proceed over the Niagara escarpment from Lake Erie into the St. Lawrence River and proceed as far as Ogdensburg.

3. The building of the power dam at Massena across the St. Lawrence to Cornwall will deepen the channel of the river behind the dam. Navigation works will be needed in any event, and, this being an international stream, can only be undertaken in agreement with the Federal Government and the Dominion of Canada, which have a joint sovereign control over the navigation of the river.

4. The Congress of the United States, by concurrent resolution or by treaty, must approve the United States-Canadian agreement of March 19, 1941, or some other agreement between the two countries, to provide for the development of the power and the seaway project. But those members of Congress, who directly represent 50,000,000 people

in the Middle West, will hardly vote an approval which eliminates the navigational improvements so essential to their interests out of mere deference to a narrow sectional opposition. They will assuredly not consent to give New York State a great power project at the sacrifice of the vital interests of a score of States which are clamoring for an improved seaway to open the door to farm and industry.

5. If it were possible to separate the power from the seaway, it would damage the power project because this would add $75,000,000 to its cost, which amount would otherwise be allocated to the capital cost of the seaway to be borne by the Federal Government. General Robins, of the Corps of Army Engineers, says that it would be a crime not to develop the seaway, and thus increase the cost of the power project by $75,000,000.

6. Under the terms of the accord between the Federal Government and the State of New York, which was negotiated by the Power Authority, the costs of the seaway and the power project are to be divided so that the Power Authority would pay the cost of the power facilities in the State of New York plus one-quarter of the cost of the works common to navigation and power in the International Rapids section. The total of these costs to be assumed by the Power Authority on a self-liquidating basis would be $93,375,000, to be repaid over a period of 50 years at 3 percent interest.

Under the provisions of the Pittenger bill now pending in the House of Representatives, the State of New York, through the Power Authority, acting under the Power Authority Act of 1931, would enter into a specific agreement with the Federal Government for the protection of the interests of the State of New York in St. Lawrence power. The Power Authority has taken the position that quite aside from the question of constitutional rights, the national interest coincides with the interest of the people of New York State in dictating the acquisition of the proposed St. Lawrence development by the State. For reasons both of geography and of historical initiative in promoting the project, the State is an ideal region for a State public-power development, decentralized from Washington. There can be little doubt that the success of the Power Authority to date in establishing and maintaining the precedent of a Federal-State accord which recognizes the rights of New York State to the power resources of the St. Lawrence River is due primarily to past action by the State in the creation and administration of the Power Authority.

The philosophy of the obstruction technique of those who say, "It's O. K. for the power, but the seaway would be ruinous," is essentially designed to play off the East against the West, so that the effort of one would cancel the other. This would be amusing, and in fact our opponents probably find it a very diverting and entertaining performance, but playing with the lives and happiness and welfare of millions of people is a serious matter. When powerful minority groups seek to impose their ruthless, selfish purposes, whether foreign or domestic, they should be driven to unconditional surrender.

Something should be said on the basis of costs. In the bill introduced by Senator AIKEN in the last Congress, now reintroduced by Congressman PITTENGER in the House of Representatives, $93,375,000 is allocated to the power project. This compares with $133,000,000 which is the equivalent of one-half of the total cost of the development of the International Rapids section, where this power is located. On the basis of this $93,375,000 allocation to power, we have a total annual cost of $6,200,000 for producing this power, including operation and maintenance, fixed charges at 3 percent, provision for taxation, provisions for amortization over a period of 50 years, provision for the equivalent of taxes; and for this total annual cost of $6,200,000 we obtain 6,600,000,000 kilowatt-hours of energy. This represents an actual cost dealing with purely at-site power of between $7 to $8 per killowatt-year. That is extremely economical power. It means approximately 1 mill per kilowatt-hour. Magnesium and aluminum needs would be well served by a cost of from 3 to 4 mills per kilowatt-hour. Incidentally, it takes 10 kilowatt-hours of electricity to produce 1 pound of aluminum. At the present time, we are importing from Canada into New York State approximately 234,000 kilowatts of capacity because of lack of domestic power, and we have in general in the area of New York State very high electric rates, higher than in 25 of the 48 States. In terms of commercial rates, our rates for commercial light and power service are the highest in the country; in terms of industrial rates, with the exception of the power sold at Massena for aluminum production, the power sold directly to industry at Niagara Falls, and a few special cases, our industrial rates are higher than the rates in most of the States of the Nation.

On the general subject of costs, the estimated total costs to the United States to complete the Great Lakes-St. Lawrence seaway and power project under the pending agreement and the bill introduced by Congressman PITTENGER are $277,056,515. From this amount is to be deducted the cost of the power project to be paid by the power authority, amounting to approximately $93,000,000, so that the net cost to the United States will be above $184,000,000. As against the gross sum of $277,000,000, the United States cost, Canada will contribute an approximately equal amount. She has already expended approximately $135,000,000 in the construction of the Welland Canal, which is used by ships of the United States as well as Canada without toll charges.

We had our attention directed sharply to the coal shortage, the lack of transportation facilities, the consequent cutting down of electric power made from coal, the resultant brown-out, the 12 o'clock curfew, and all the inconveniences in light, heat, and power due to the coal shortage. Let us not forget, in this time of strain and stress upon transportation, that the 6,650,000,000 kilowatt-hours of electrical energy which we would have at our disposal if the water power of the St. Lawrence were developed, instead of wasted, is the equivalent of 4,950,000,000 pounds or 2,500,000 tons of coal. Reckoning 50 tons of coal to a car, it would require 50,000 cars to move coal sufficient to produce the electrical energy which the power project would develop. In terms of oil, the equivalent would be 3,300,000 pounds, and estimating 100,000 pounds of oil per tank car, it takes 33,000 tank cars of oil per year to produce the 6,600,000 kilowatt-hours of electrical energy now being wasted. Is there a better illustration of the necessity for the utilization of this St. Lawrence power?

The National Coal Association in the summer of 1934 referred to the TVA as a menace to the coal industry and talked about the "disastrous consequences of such displacement of coal by TVA electric power." How erroneous this prediction was has been demonstrated by the experience in the TVA area since 1933. In 1940, in the four TVA States of Alabama, Tennessee, Georgia, and Mississippi, 10½ times as much coal was used to make electricity as in 1933, and 4 times as much as in 1929. As against 334,000 tons of coal in these TVA States in 1929, the use is now 1,346,000 tons as of 1940.

Coal and hydro are not competitive but help each other. They are complementary sources of power supply. Coal consumption will be stimulated as a result of the St. Lawrence project, because the long-run industrial expansion in the St. Lawrence area resulting from the project will call for the use of more coal for locomotives in transporting raw materials to the industries and finished products to the markets. Also, these new industries will use coal for nonpower purposes such as heating. Our studies show that the St. Lawrence project will stimulate coal consumption and the TVA experience confirms this amply.

In a recent address on the St. Lawrence made before the Detroit Board of Commerce, Senator AIKEN, of Vermont, stressed the national importance of an expanding foreign trade as part of the postwar program of this country. He emphasized particularly the wisdom of developing this trade so as to conserve our exhaustible natural resources through the importation of raw materials offsetting the exportation of manufactured goods. Yet, paradoxically, some of the most bitter opposition to the St. Lawrence seaway comes from those who oppose its use as a means of conserving the country's supplies of coal, iron ore, and other natural resources. Thus the coal interests want to force New York State to burn coal for the sake of generating electricity instead of harnessing the water power of the St. Lawrence River, and thus the iron ore people, so far from urging that we encourage the importation of foreign ores during peacetime in order to reduce the drain on our own ore resources, and in order to help us tide over the period pending our ability to exploit low-grade ores at low costs, argue that we should shut out these ores either by a high tariff wall or else by a refusal to break down the natural barriers of the St. Lawrence rapids.

Senator AIKEN has recently called attention to official studies conducted by the Department of Commerce under Herbert Hoover and Jesse Jones, which indicated that the savings in transportation costs would be many times the annual overhead and operating expenses of the seaway. Studies of the power project by the Federal Power Commission and the New York State Power Authority similarly prove that the savings to the consumers of electricity will be more than ample to meet the cost of power and will save about $26,000,000 a year for the people of New York and adjacent territory. The Senator also called attention to the fact that Gov. Thomas E. Dewey recently proposed that New York and Ontario build the seaway and power project on a self-liquidating basis if the Federal Government fails to act.

Another objection is that the railroad lines would be endangered by the development of water transportation, but the total capacity of the proposed fully developed St. Lawrence seaway is 25,000,000 tons, of which nomally 9,000,000 tons already move on the existing 14-foot canals, which would give an additional capacity of another 16,000,000 tons of new traffic. How can 16,000,000 tons of water-borne traffic ruin railroads whose traffic is over 1,000,000,000 tons a year? Furthermore, the growth of our country has not ceased. The increase in population and industry will provide additional traffic growing out of commerce not now in existence.

Recently, the Commerce and Industry Association, of New York, in opposing the St. Lawrence seaway development, expressed fear that we cannot compete with foreign industry and that we would be overrun by foreign ships in the Great Lakes. They are afraid that raw materials and the products of manufacture from Europe would be delivered in European boats, if the St. Lawrence River is opened to world traffic, and they say that the inland ports of the Great Lakes must not be exposed to foreign goods or foreign ships. Why don't they advocate a national embargo against all foreign ships visiting the coast-wise ports of the United States to prevent competition with American ships? If the people of the coast cities are entitled to the benefits of foreign trade, then the people and the industries in the lake ports are equally entitled to these benefits; and if it is bad for the people of the lake ports to be in direct contact with foreign commerce transported in foreign ships, then it must be bad for the people of our

coastal cities to be exposed to that misfortune. Of course, these arguments are just silly. Closer relations with other countries on a reciprocal basis are necessary, and the economic exchange of goods and services is essential to our prosperity and an enduring peace.

Another technique of the opposition is to prevent a vote in Congress on the question of the approval of the United States-Canadian agreement. It is well known that a joint resolution would command the support of a majority of the House of Representatives and a majority of the Senate. For that reason, the Washington lobby, known as the National St. Lawrence Project Conference, is spearheading opposition to action by joint resolution, insisting that such approval must be evidenced by a treaty which would involve action by the Senate alone, and require a two-thirds instead of a majority vote. It takes only one-third plus one hostile vote in the Senate to defeat a treaty.

Buffalo refuses to be a full-fledged seaport, the first city in history to claim that distinction. Not so Albany. Albany is proud to be a seaport. Much money has been properly spent to open the port of Albany and its approaches for deep-draught vessels. Has New York City suffered because Albany is a port? Would New York City suffer if Buffalo were a port? The truth of the matter is that no great national development should be dependent upon narrow sectional advantage or prejudice. This development would be beneficial to the whole State and, indeed, the whole country, and all would share in the common benefits. This business of playing off one part of the country against the other, section against section, is the kind of thing that we are trying to escape in creating a permanent world order. We must think in terms of the prosperity and happiness of the State and the Nation. This State and National economy cannot be geared to the interests of one locality, even assuming that a certain locality might suffer, which is not the case here. It is surely reasonable to anticipate that at the end of the war industry will be attracted not only to the regions which have most fully developed their hydroelectric power resources but especially to those cities and industrial centers where the most reasonable rates are provided on the most secure basis, as inducements to industrial, commercial, and residential customers.

We are nearing a time of testing when millions of jobs will be at stake. Prosperity and well-being depend upon jobs. In order to keep faith with our returning servicemen, and to meet the supreme demand of employment, we must provide for the expansion of industry in the State of New York. Once the pioneer State for the establishment of the electrical industry and large-scale generation of hydroelectricity, New York has suffered a virtual stagnation in development of its water-power resources over a period of more than a decade.

Let us have the vision which involves only the use of common sense in developing those great natural resources which lie on our very doorstep to help build a better America.

Address of Claude Rains at Springfield, Mass.

EXTENSION OF REMARKS

OF

HON. CHARLES R. CLASON

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 28, 1945

Mr. CLASON. Mr. Speaker, under leave to revise and extend my remarks, I wish to include the following address delivered by the motion-picture actor, Mr. Claude Rains, at the I Am an American Day exercises at Springfield, Mass., on Sunday, May 20, under the auspices of the Springfield Adult Education Council.

Mr. Rains' address follows:

Today, for the sixth straight year, we are celebrating I Am an American Day. I have read a multigraphed sheet prepared by the Immigration and Naturalization Service of the United States Department of Justice which says that observance on this day "will be in honor of newly naturalized citizens and native-born citizens who have reached their majority." Well, since it is a privilege of American citizenship that one may with impunity disagree with a Government official, I rise to declare that whoever wrote that multigraphed material is wrong. I am a naturalized citizen, and I think I speak for all my fellows when I say that to us this is not a day on which we ask that others honor us. No—I Am-an-American Day is a day when by Presidential proclamation certain ceremonies, certain exercises, give us the opportunity to honor America under official auspices.

This day comes once a year—and once a year millions of us stand up in public and say: "I am an American." These words are spoken not just in this auditorium (or park) in Springfield, Mass. They are spoken also down among the tobacco and cotton fields of the South and the wheatfields of the Midwest and, yes, this year on the battlefields of the southwest Pacific, everywhere where anyone is privileged to say these words, he says them, proudly.

"I am an American."

Who says this? Whites? Nordics? Protestants? Yes, in many cases. But also blacks aand yellows and reds and Latins and Jews and Catholics, and I believe a considerable sprinkling of Mohammedans. For it is the particular glory of America that its children are not all cast in the same dreary mold. America's national religion is housed in meeting houses and temples, synagogues and cathedrals. American leaders are named Eisenhower, DiMaggio, Baruch, Joe Louis, Stettinius. America's national architecture is the Gothic and the Norman, the Georgian and the Spanish, the Colonial and the Baroque. America's national dishes are borscht and spaghetti, goulash, and corned beef and cabbage, chop suey and smorgasbord and Yorkshire pudding and chile con carne, and what to me is the best of them all, the hot dog.

You know, I have a personal definition of the word "America"—personal, but one which I'm sure you will find an echo in your hearts and minds. America, I often say, is the place where everyone may feel at home. That is really what I have been perhaps, clumsily saying up to now: America is the place where everyone may feel at home. And that is the theme, really, that I want to point up here this afternoon.

Oh, I am aware that there are injustices in American life—that sometimes the majority oppresses some minority, or that sometimes a financially fortunate minority tries to oppress the less fortunate majority. I often become as indignant over these oppressions as the most socially minded could wish. And since these things occur in other lands, too. Some may say, what, then, is the difference between America and any other country—except in terms of material wealth? Anti-Semitism, for example, was never confined to Germany. We have anti-Semitism here. But here we call anti-Semitism un-American. No one ever called it un-German. The difference between America and Germany, or between America and any other place, is that here the only alien is the man who hates his neighbor. Everyone else is right at home in America.

America, in short, is the only country that could have produced the Springfield plan.

You people of Springfield know more about that plan, of course, than I do. You have been able to see it in operation. You have been able to hear your children calling each other "Joe" and "Sam" and 'Pat" instead of "wop" and "kike" and "mick." You have been able to note their interest in the American cultural tradition, their dawning realization that that tradition stems from China as well as England, from Italy as well as Scandanavia, from Africa as well as Russia—and their growing pride in that tradition because it borrows the best from everywhere and overlays it with the creative efforts of our own energetic people.

And I imagine that two thoughts must frequently have occurred to you: first, that as you no less than your children learned more and more about Czechs and Chinese, Filipinos and Finns, Negroes and Newfoundlanders, you were in a real sense discovering America; and, second, you must have thought that only in America could this happen, that only in America could there be a Springfield Plan.

And I say, in defense of that definition of America that I gave a few moments ago, that only in a country where the Springfield plan is possible can everyone feel at home.

Any naturalized citizen knows what I mean. I think that most natural-born citizens must know what I mean, too—but on the assumption that there are some who do not, a word or two of autobiography may help.

When I was a boy of 10 I went to work after school hours. Very soon there were no school hours at all, and I found myself on my own, wandering the streets of Glasgow and London with no money in my pockets and large holes in my shoes. And throughout this time I was told that the upper classes were different, that I must mind "my betters." Now, here in America, no one can tell my 7-year-old daughter that.

I started in the theater with Sir Herbert Tree in London as a call boy, and though I rose to be first, prompter, then carpenter, then electrician, then property man, until finally I was company manager, I was always conscious of "my betters."

I first came to America in 1912, and was amazed to find that there were no "my betters" here. I liked that. I might have stayed here, but the First World War broke out and I went to join a Scottish regiment; and although by the time I was demobilized in 1919 I had become a commissioned officer, I found I still had to mind "my betters."

I went to work in London as a stage manager and small part actor—always with "my betters"—and I thought always of America.

When I returned to this country again in 1926, I discovered anew that here I could say and do as I wished and that here there were no "my betters."

It was in this country in 1928 that I met my wife. My wife is a typical American, which means that she is part Czech and part Jew, and that her father had got out of Europe because he wouldn't mind his "betters."

In 1935, I went back to England to work, but more important, to find out if there might still be some latent nostalgia, some feeling that my native land must remain my homeland. I walked up St. James Street in London, and the first thing that hit me were "my betters." I could tell who "my betters" were. I could tell by the way they looked at me and through me, by their reserve, which I could understand, and their disdain, which I could not forgive. And while I am a rather reserved person myself, I'd have given a good deal for an American greeting—the greeting an American gives that tells you how little he cares who you are provided you are a fellow being—"Hi ya,

Mac?" I could not get back to America fast enough. I could not become officially an American fast enough. And I've lived here since—not among "my betters," but among my equals.

Perhaps this recital gives you some idea as to why I call America the land where everyone may feel at home. Whether it be a Professor Einstein or a bewildered 10-year-old victim of the London blitz, everyone with any claim to respect or to human sympathy may feel at home in America. The American idea seems to be this: That if you put your arms about a weak person and support him, not only does he become stronger, but you become stronger too. And when we think of the careers of Senator Wagner, Steinmetz, Knudson, David Sarnoff, Justice Frankfurter, or a thousand others, we know that this American idea must be right.

That is why on I-Am-an-American-Day so many of us naturalized citizens wave little flags and speak the little words with the big meaning. I am an American, we say. But on 364 other days of the year, believe me, the flag is waving in our hearts and the words are singing in our minds. We are proud and grateful that we should be entitled to that flag and those words—proud and grateful that we are Americans.

Planting by Airplane

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Monday, May 28 (legislative day of Thursday, May 24), 1945

Mr. LANGER. Mr. President, I ask unanimous consent to insert in the RECORD an article Planting by Airplane, by Tom Ashley.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PLANTING BY AIRPLANE—TAKING HIS CUE FROM NATURE, THE ORIGINATOR OF AIR PICK-UP OFFERS INGENIOUS MEANS FOR UTILIZING AVIATION IN WIDESPREAD AGRICULTURAL OPERATIONS

(By Tom Ashley)

Dr. Lytle S. Adams, the Pennsylvania surgeon who fathered the pick-up device which made possible air service to more than a hundred United States cities and towns, has come up with another aeronautical development—planting large quantities of seed from the air at incredible speeds.

"I've gone Mother Nature one better by duplicating bird and animal droppings," says Dr. Adams, who has interested Secretary of the Interior Harold L. Ickes, several Congressmen, and many agriculturists in his latest undertaking. His first aviation contribution, the air pick-up device, was more difficult to "sell," he says, forecasting a speedier and wider application for his newest idea. Legislation has been introduced in Congress which would appropriate $2,500,000 for a Federal seeding program using aerial planting.

Heretofore, only rice has been successfully planted by airplane on a large scale, other seed being too light in weight and mass to be dropped in a satisfactory pattern, and subject to destruction by animals or the elements before germination. But Dr. Adams believes he has overcome such obstacles by two means: (1) Perfection of a seed pellet, and (2) sowing of pellets by a centrifugal machine attached to the bottom of the airplane.

TWO HUNDRED AND FORTY-ONE ACRES PLANTED PER MINUTE

The pellet consists of seed germ, from which the shell and chaff have been removed, coated by a mixture of soil containing growth-promoting vitamins and chemicals to repel insects an animals. Round in shape, the pellet has mass and weight sufficient to bury itself when dropped from the air onto soft ground, and planting is done immediately following a rain.

The centrifugal planter is a wheel, or impeller, of ¾-inch pipes, rotated at high speed by an electric motor. Pellets fed by gravity into the hub of the impeller are hurled from the spinning pipes in a circular pattern. The planting pattern can be varied by controlling the impeller's speed, the forward movement of the airplane, and its altitude.

Seed pellets, according to Dr. Adams, can be made inexpensively for almost every requirement. An average grass-seed pellet, used for revegetating the range, counts 1,920 to the pound. To plant an acre of range with 1 pellet per square foot requires 43,566 pellets, or 22.69 pounds. Airplane planting can be performed at the extremely fast rate of 241.66 acres per minute. Therefore, a large airplane is necessary because heavy loads of seed pellets must be carried (5,483 pounds can be planted per minute). But the airplane used for planting can be stripped of fuel and accessories, for the longest flight will be measured in minutes rather than hours. If a cargo airplane could carry 10 tons of seed pellets, it could plant 831.54 acres in only 3½ minutes.

"Planting by airplane, as we have arranged it, will be especially effective for revegetating lands in the public domain, in soil-conservation districts, and for reforestation," Dr. Adams says. "Protection of land values through proper grassing and with promotion of growth, together with the need of erosion and flood control, amounts to a gigantic undertaking in the West. In the United States and its possessions is an area of public lands embracing 750,000,000 acres. Because of its great natural wealth, such land is administered by Federal agencies to protect its value and resources. Secretary Ickes has said that approximately 130,000,000 acres of land administered by his Department is in such condition from past improper use or neglect that some remedial action is necessary.

"PROJECTILE" FOR REFORESTATION

"In the past, rehabilitation of the range has been attempted by patch planting, in which small areas here and there were cultivated and planted with grasses in the hope their growth would spread and eventually revegetate large areas. But what frequently happened was that animals, attracted to the small patches of new greenery in a vast expanse of dead growth, destroyed or prevented full growth of the new planting. In other cases both seed and loosened soil have been washed away by rains. One difficulty has been the neglect of inaccessible areas. The biggest problem, however, is in the hugeness of the task of revegetation—there are too many acres for so few hands and such little equipment and time as are available to the Federal agencies.

"Now let's consider how airplane planting could fit into this picture. The seed are mixed with pulverized soil and water, containing certain growth promoting and rodent and insect repellant chemicals. This mixing is speedily and inexpensively accomplished with a simple machine. It forms the seed pellets and dries them to prevent pre-germination, turning out about 50,000 pellets per minute. The size of the seed pellet is controlled to insure proper covering for the type of seed used, and to give the pellet sufficient mass to cause penetration when dropped by airplane. The amount of penetration is in turn controlled by the moisture content of the soil and the altitude from which the pellets are dropped.

"It can readily be seen that it is unnecessary to prepare the soil for such planting. Seed pellets will penetrate the barest spots when dropped following a rain. They will not be blown away or washed into the gullies and creeks by rain. They can be planted in areas where surface machinery could not be used, such as on slopes, high plateaus and the like."

Dr. Adams has a special pellet for reforestation in soil covered with mulch, such as leaves or pine needles. He uses a small, pointed, hollow metal projectile, in which the pellet is imbedden in the open top. The metal is perforated so moisture can reach the pellet. Dropped from the air, it penetrates the mulch cover and buries itself in the soil.

MINIATURE "BOMBS" USED

Suppose, we asked the inventor, the area to be planted does not receive enough moisture from a single rain, and rainfall is light and infrequent. His answer was that his seed pellets do not require as much moisture as ordinary seed, but if steps must be taken to "store" moisture before planting he can do that, too.

"I have a small explosive pellet which pocks the terrain, thus creating thousands of miniature craters," he explained. "With them I can prepare the soil just before the season when infrequent rains occur, and store moisture until it is sufficient for planting."

How about row crops? He has provided for that, too: "Just turn the centrifugal planter on its side and it will shoot the pellets downward in a controllable, straight line. Or, by using a bomb sight developed some years ago by Maj. Alexander P. de Seversky, the pilot can plant a curving row such as one following the contour of the terrain."

Dr. Adams said a company has been formed in San Deigo, Calif., to develop seed pellets not only for aerial planting but for farmers and gardeners using ordinary methods of planting. Experiments have proved, he said, that 90 percent of the pellets germinate and grow.

No airplane seeding has been done, he said, but plans call for planting several thousand acres of range lands in the Southwest this fall. He and his associates have been working lately with agricultural representatives of several colleges and universities.

The possibilities for airplane planting are almost unlimited, Dr. Adams believes. Russia is faced with tremendous revegetation problems, for example. He believes the Soviet Union could accomplish in a matter of days, using its military aircraft for aerial planting, what would require months and seasons to do with ordinary planting methods.

"One of the big problems, of course, will be seed production," he points out. "But it isn't as complex as it might appear. For example, public lands will largely require native plant seed, which can be gathered and processed much more expeditiously than food-producing seed. Wild plants are needed to halt erosion from wind and water, preserve irrigation and drainage canals by checking flowage across slopes and level lands, and to preserve moisture throughout our huge range areas. Once growth is started, it will lead to automatic reseeding by nature itself. Wildlife, finding new food and shelter, will thrive and renew nature's own marvelous cycle of plant and animal production. But to avoid future neglect and destruction aerial planting will be necessary about every 10 years, as experience has proved the disastrous results of allowing range lands and other areas to lie idle for longer periods."

Dr. Adams estimates the costs of airplane planting to be inexpensive when used on a

large scale. He won't quote figures, but points out the savings in time and labor would "more than pay the costs." Use of airplanes in dusting cotton has proved inexpensive in the South.

SUCCESS BASED ON NATURE

But there is another reason the former Pennsylvania surgeon believes his latest aeronautical development will succeed.

"Don't overlook the fact that it very nearly duplicates nature," he reminded us. "The idea occurred to me back in 1924 out on the fringe of the California desert. I was living on a ranch and used to spend much time studying the growth of cactus plants. In bare, infertile soil a clump of baby cacti would appear. As it grew, rabbits would nibble at it for moisture. Rabbit droppings thus were left close to its shelter, and soon other tiny plants would sprout. In a couple of seasons the growth would be considerable. I was fascinated and soon concluded that rabbit droppings not only contained seed germs, bereft of chaff and hard coating on which the animal had fed, but provided germination stimulant and insect and rodent repellent. Left in the shelter of a large plant, such as a cactus, these natural seed pellets utilized what little moisture was present, and, needing no long-period deterioration, quickly germinated and began to grow. Perhaps it is easier to understand, after that explanation, how we can almost duplicate nature's original method of processing seed germs into pellets.

"But we have done more. We have actually improved on Mother Nature by using the airplane for planting our seed pellets, and our centrifugal planter, combined with the airplane's speed and altitude, allows us to control the frequency and thoroughness of revegetation."

Federal Judges Pay Raise Bill

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 28, 1945

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following report to the American Bar Association by the committee on judicial salaries with reference to H. R. 2181 and S. 920:

REPORT TO THE AMERICAN BAR ASSOCIATION BY THE COMMITTEE ON JUDICIAL SALARIES ON H. R. 2181, INTRODUCED BY MR. HOBBS, AND S. 920, INTRODUCED BY SENATOR WAGNER, ENTITLED "A BILL TO FIX THE SALARIES OF CERTAIN JUDGES OF THE UNITED STATES"

The Hobbs bill (H. R. 2181, 79th Cong., 1st sess.) and the Wagner bill (S. 920) provide for an increase of $5,000 in the annual salary of each member of the Federal Judiciary.

PRESENT SALARIES

There has been no change in the salaries of the judicial officers of the United States since 1926, when the present salary schedules were established. Since that date there have been at least two fundamental changes in conditions affecting judicial salaries.

In the first place, the present salary schedules were established at a time when it was thought that Federal judicial salaries could not be subjected to Federal income taxes and at a time when Congress had no intention of attempting to apply the Federal income tax in reduction of those salaries. In 1932, however, Congress subjected the salaries to Federal income taxes and also since that time they have been made subject to State income taxes. The application of the Federal income taxes alone has resulted in a reduction in effective salaries of between 25 and 35 percent for the various members of the Federal judiciary.

The second substantial change of circumstances followed as a natural consequence of the first. Since 1932 there have been substantial increases not only in the tax rates but in the cost of living as well, so that we find that an Associate Justice of the Supreme Court with the same $20,000 salary that he received in 1932, just prior to the imposition of Federal taxes, now receives approximately $13,000 after Federal taxes. Giving effect to the increase in the cost of living of approximately 30 percent during the same period, we find that the $13,000 is equivalent to approximately $10,000 in 1932. In other words, the effective salary of Associate Justices of the Supreme Court has been cut approximately in half since 1932.

The Hobbs bill would restore, in part, the situation existing prior to the imposition of Federal taxes on judicial salaries. The effect of existing taxes and of the Hobbs bill are set forth in the following schedule:

	Present			Proposed by Hobbs bill			
	Salary	Federal tax [1]	Net salary	Salary	Federal tax	Net salary	Effective increase after taxes
Chief Justice of the United States	$20,500			$25,500			
Associate Justices of the Supreme Court	20,000	$7,035	$12,965	25,000	$9,985	$15,015	$2,050
Circuit Court of Appeals, U. S. Court of Appeals for the District of Columbia, Court of Customs and Patent Appeals, Court of Claims	12,500	3,365	9,135	17,500	5,695	11,805	2,670
Chief Justice, District Court for the District of Columbia	10,500			15,500			
District Courts and Customs Court	10,000	2,400	7,600	15,000	4,465	10,535	2,935

[1] It is assumed that each judge is married and has at least $500 of other deductions.

SALARIES OF ENGLISH AND STATE COURT JUDGES

England, and to some lesser extent the more populous States in this country, provide much more liberal compensation for their judges. In England the Lord Chancelor (who corresponds with the Chief Justice of the United States) receives in addition to £4,000 as Speaker of the House of Lords an additional £6,000 as Chancelor. The English equivalent of Associate Justices of our Supreme Court receive £6,000 per annum, as does the chief justice of the court comparable to our circuit court of appeals. Other judges equivalent to our circuit court judges receive £5,000 per annum. The chief justice of the trial court (equivalent to our district courts) receives £8,000 per annum and the other judges of that court receive £5,000 per annum. In other words, the salary schedule in the English courts is very considerably higher than in the Federal courts and substantially higher than the increased salaries proposed by the Hobbs bill.

In New York judges of the highest court receive $23,000 per annum and the chief justice $23,500. Judges of the intermediate appellate court receive between $18,000 and $29,500 per annum and judges of the trial court receive between $16,000 and $26,000 per annum. These salary schedules are also higher than those in the Federal courts and, except for the proposed Supreme Court salaries, higher than those set forth in the Hobbs bill.

The English and the New York salaries are considerably more realistic than those of the Federal courts, as they approximate the amount which a man fit to hold the office of judge would probably earn in private practice. The payment of such salaries should result in obtaining better judges as it enables the most capable members of the profession to accept judgeships without substantial financial loss.

Substantial judicial salaries are paid in most of the populous States where the judges are called upon to handle important litigation in quantities approaching those of the Federal courts. States paying their supreme court judges $10,000 per annum or more are:

New York [1]	$23,500
Pennsylvania [1]	20,000
New Jersey [2]	19,000
Massachusetts [2]	15,000
Illinois	15,000
California [2]	14,000
Louisiana	14,000
Connecticut [1]	12,500
Ohio [1]	12,500
Michigan	12,000
Maryland	$11,500
Rhode Island [2]	11,000
Delaware [1]	10,500
Wisconsin [1]	10,500
Indiana	10,000
West Virginia	10,000
Missouri	10,000

[1] $500 less for associate justices.
[2] $1,000 less for associate justices.

States paying judges of their intermediate courts $10,000 per annum or more are:

New York	$18,000 to $29,500
Pennsylvania	18,000 to 18,500
California	12,000
Ohio	8,000 to 12,000
Indiana	10,000

States paying trial court judges $10,000 per annum or more are (maximum salaries):

New York	$26,000
New Jersey	15,000
Pennsylvania	15,000
Illinois	15,000
Massachusetts	13,000
Connecticut	12,000
Maryland	10,250
California, Wisconsin, Indiana, and Louisiana	10,000

The following is a complete schedule of judicial salaries paid by all of the States:

Judicial salaries

State	Highest court	Intermediate appellate courts	Trial courts
Alabama	$7,000	$6,500	$5,000–$8,000
Arizona	8,500		4,000– 6,000
Arkansas	7,500		3,600– 6,000
California	13,000 [1] 14,000	12,000	4,750–10,000
Colorado	6,500		2,000– 6,000
Connecticut	12,000 [1] 12,500		[2] 12,000 [3] 9,000
Delaware [4]			
Federal	20,000 [1] 20,500	12,500	10,000
Florida	7,500		[5] 6,000
Georgia	9,000		[5] 6,000
Idaho	5,000		4,000
Illinois	15,000	[6] 8,000	8,000–15,000
Indiana	10,000	10,000	4,200–10,000
Iowa	7,500		6,000
Kansas	6,000		4,000
Kentucky	5,000		3,000–5,000
Louisiana	14,000	8,000	7,500–10,000
Maine	8,000 [1] 9,000		7,500
Maryland	11,500		8,500–10,250
Massachusetts [7]			
Michigan	12,000		6,000
Minnesota	8,500 [1] 9,000		6,000– 7,500
Mississippi	7,500		5,000
Missouri	10,000	8,500	6,000– 8,000
Montana	7,500		4,800
Nebraska	7,500		5,000
Nevada	7,500		4,500– 7,200
New Hampshire	7,000		7,000
New Jersey [8]			
New Mexico	8,000		6,000
New York	[9] 23,000 [1 9] 23,500	[9] 18,000–29,000 [9 10] 18,500–29,500	[9] 16,000–26,000
North Carolina	8,550		7,550
North Dakota	5,500		4,000
Ohio	12,000 [1] 12,500	8,000–12,000	[9] 3,500– 9,000
Oklahoma	7,500		4,000– 7,200
Oregon	7,500		5,000– 6,500
Pennsylvania	[9] 19,500 [1 9] 20,000	18,000 [10] 18,500	9,000–15,000
Rhode Island	10,000 [1] 11,000		9,500 [10] 10,000
South Carolina	6,750		6,750
South Dakota	5,400		4,900
Tennessee	7,500	6,500	5,000
Texas	8,000	6,500	5,000– 7,400
Utah	5,000		4,000
Vermont	6,000 [1] 6,500		5,000
Virginia	8,500 [1] 8,900		5,400– 8,400
Washington	8,500		6,500
West Virginia	10,000		5,000– 9,000
Wisconsin	10,000		[9] 8,000–10,000
Wyoming	7,000		6,500

[1] Chief justice.
[2] Superior.
[3] Common pleas.
[4] $10,500, chancelor and chief justice; $10,000, associate judges; $7,500, vice chancelor.
[5] And supplement.
[6] Plus $15 per day and expenses.
[7] Supreme judicial, $14,000 ($15,000 chief justice); superior, $12,000 ($13,000, chief justice); probate, $3,000–$9,000; land court, $10,000; municipal Boston, $9,000. ($10,000, chief justice); district, $1,200–$6,000 (part time); special justices, $5–$25 a day (part time).
[8] Court of errors and appeals: Chancelor, $19,000; chief justice, $19,000; justices, $18,000; lay judges, $40 per day (about $9,000 per year); vice chancelors $18,000; circuit judges, $16,000; common pleas, $15,000 down.
[9] Corrected to latest legislation.
[10] Probate judge.

THE TREND TOWARD INCREASED JUDICIAL SALARIES

In 29 of the 48 States action is being taken upon proposals to increase the salaries of judges and it is assumed that many if not most of these proposals will be adopted. Some of these proposed increases are very substantial whereas others are relatively modest. However, this is a recognition of the need for paying adequate salaries in order to obtain a competent judiciary.

In each of the States, as well as in the Federal Government, the cost of maintaining the judiciary is almost infinitesimal in comparison with the general expenses of government. Therefore, the proposed increases of State court salaries as well as the increase in Federal court salaries does not pose a real question of economy but merely a question of fair compensation.

NEED FOR INCREASED SALARIES

Members of the Federal judiciary occupy a position which requires the extraordinary legal talent of men of standing and integrity. As one of the three great coordinate departments of the Government, it is their responsibility to interpret and enforce the Constitution and the multitude of Federal laws which affect the welfare of the citizens and the conduct of our Government. Since 1926, and particularly since 1932 when the Federal tax laws were made applicable to judicial salaries and since which time the cost of living has consistently increased, there has been a vast expansion in both the quantity and importance of matters coming before the Federal courts for decision. Although at all times the importance of the service of Federal judges was second to none in the country, each year finds that the matters which by Congress have been left to the decision of the Federal courts have become increasingly of greater importance to the Nation than the matters customarily dealt with by the State courts. Yet, the salary schedule in the Federal courts is below that of certain States which have adopted the policy of attempting to obtain a competent judiciary by the payment of adequate salaries.

Federal judges should be chosen from the best members of the profession. Although there is no necessary constant relationship between ability and earnings, it is noteworthy that .0.5 percent of the lawyers in the country earn $9,000 or more per annum.[1] Assuming, as we certainly believe to be the fact, that the Federal judiciary generally is representative of the very top of the profession, it is clear that these men are being substantially less well compensated than if their abilities had not been devoted to public service. Any continuation of this disparity between compensation and ability must lead inevitably to a situation where judges will be drawn from among those with adequate private incomes or, the really able members of the profession not being able to afford to accept Federal judgships, relatively incompetent judges will be appointed; either of these events would be extremely unfortunate.

By virtue of his office, a Federal judge is a leading citizen in the community and his salary should permit him to comport himself with dignity consistent with his office and should take into account the obligations and expenses which necessarily and properly result from his public office. The present level of salaries is inadequate for that purpose.

No one disputes the necessity for increasing the salaries of judges sitting in districts located in the more populous areas of the country or where State court judges are more substantially rewarded than the judges of the Federal courts. There have been many suggestions, however, that increased Federal judicial salaries are unnecessary in those States where the local judges receive less than $10,000 per annum; in some States judges of the supreme court are paid only a $5,000 salary. To date, no fair method has been suggested for paying different salaries to different Federal district or circuit court judges, depending upon where they sit, whether the differences be based upon population or cost of living or the amount or importance of litigation in the district (as is done in many States), nor do we find any merit to suggestions that a base salary be set for Federal judges to be increased to equal the highest salaries paid to State court judges performing the same duties in the same district or circuit.

It has been the long-standing practice of Congress to provide uniform salaries for Federal judge regardless of where they sit; if the proposed salaries seem a bit high in relation to State court salaries in some localities, they will still be low in comparison with salaries paid to English judges and those of other State courts. The outstanding fact is that a Federal judge, wherever he sits, is as important and must be as competent as any State judge anywhere and the proper basis of comparison is with the salaries paid by those States having the most important litigation, such as New York, Pennsylvania, and Massachusetts.

COST OF PROPOSED LEGISLATION

There are in the United States only 284 Federal judges, so that the additional annual gross expenditure provided by the Hobbs bill, is only $1,420,000, or about 1 cent per capita. Of that amount a substantial portion would be returned to the Federal Treasury through taxes, and it is estimated that the entire additional expense, after Treasury recoveries, of a salary increase of $5,000 to each Federal judge, would be only approximately $817,290.

[1] See, E. F. Denison, Incomes in Selected Professions, pt. 2, Legal Service, 23 Survey of Current Business No. 8 (Department of Commerce, August 1943), 23 et seq.

CONCLUSION

The Hobbs bill would result in an effective salary increase for judges of the district courts and the Customs Court of approximately $535 over the salaries received in 1932 before they were subjected to Federal taxes. The salaries of all other Federal judges, after taxes based on the 1944 level, would still be less than they were between the time the present schedules were adopted in 1926 and the time when they were subjected to Federal taxes in 1932.

In view of all of the foregoing, the Hobbs bill is approved, subject to the following qualification as to section 3.

Salary increases for Federal judges are urgently needed today. Section 3 postpones the effective date of the Hobbs bill until the termination of the Stabilization Act of 1942. We are reluctant to suggest anything which might interfere with the Stabilization Act and we recognize that the effect upon that act of the immediate application of the Hobbs bill is not within our province. However, unless postponement of the effective date is really necessary, we believe that section 3 should be eliminated.

Respectfully submitted by the Committee on Judicial Salaries, American Bar Association:

Dumbarton Oaks

EXTENSION OF REMARKS
OF
HON. GEORGE H. MAHON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Monday, May 28, 1945

Mr. MAHON. Mr. Speaker, the Library of Congress, upon my request, has furnished me with some very interesting notes regarding the background of Dumbarton Oaks, the Georgetown estate here in Washington, D. C, which has come into international prominence by reason of the conference held there. The notes prepared by the Library of Congress are as follows:

It is a lovely old Georgetown estate located at 3101 R Street NW., Washington, D. C. It takes its name after the Rock of Dumbarton on the Clyde in Scotland, which was the place of origin of the first owner of the new world property, Ninian Beall. An inscription on the outside wall of the estate gives the history of its owner as follows:

In 1702 the Rock of Dumbarton was granted by Queen Anne to Col. Ninian Beall. In 1717 Col. George Beall, his son, added to his lands. In 1780, Thomas Beall, his son, sold the property to William Dorsey, and in 1801, William Hammond Dorsey built the house. In 1805 he sold it to James Bradshaw Beverly. James Edward Calhoun (brother of John C. Calhoun) bought the property in 1823.

In 1829 Brook Marshall purchased the land and sold it in 1846 to Edward Magruder Lithicum. He enlarged the house and garden, changed the name to Monteray, and bequeathed it in 1869 to Edward Lithicum Dent. In 1891 Henry Fitch Blount bought the property and named it The Oaks. His widow sold it to Mildred and Robers Woods Bliss who remodeled the house, added to the grounds, enlarged the gardens and rechristened the whole Dumbarton Oaks in 1920.

The 32-room Georgian mansion that lies behind the walls of Dumbarton Oaks has been greatly changed from its original style by a mansard roof and other alterations. It is set in a grove of trees, giving it the regal air of an eighteenth century chateau. The exterior of the mansion is adorned with carved stone ornaments, classic cornices, and crowning pediments. The former music and living room, added by Mr. and Mrs. Bliss, contains many fine works of art from abroad. It is a two-story room, renaissance in character, it has a painted, beamed ceiling from the chateau de Chimerly, arches of red Verona marble, and a seventeenth century chimney piece showing traces of polychromy taken from the castle of Theobon at Loubes Beraicin, France. It contains an Italian cassone of the fifteenth century with Pastigilia panels, and an immense two-bodied sacristy cupboard from a villa at Caprarola, near Rome. There are benches from the Cathedral of Zamora in Spain with the original heraldic velvet coverings.

The garden and grounds of Dumbarton Oaks are extensive. To the east lie formal garden terraces with a box walk, tennis courts, and a swimming pool, near which may be seen two of the oldest and largest of the Dumbarton Oaks.

Mr. Bliss, former Minister to Sweden and Ambassador to the Argentine Republic, and Mrs. Bliss, a student and collector of books and art, originally planned to leave the estate and appurtenances to Harvard University, but in 1940 decided to make the gift at once. They transferred 16 acres of land with the buildings including a research library of about 18,000 volumes. Under a succession of notable owners, the building has been the scene of many social gatherings. Lafayette is said to have been a guest there.

Sermon by the Most Reverend Michael J. Ready, D. D.

EXTENSION OF REMARKS
OF
HON. MARY T. NORTON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Monday, May 28, 1945

Mrs. NORTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following sermon at Memorial Military Field Mass, Arlington National Cemetery, Sunday, May 27, 1945, by the Most Reverend Michael J. Ready, D. D., bishop of Columbus:

We have laid our victorious flags on this altar of thanksgiving. Our prayerful voices speak for millions of men and women in a national act of reverence for the Nation's honored dead. The white crosses of Arlington stand in serried rows about us. They preach of the devotion and sacrifice offered by heroic citizens in defense of the institutions of this Republic. We bear the flags that others died for. We kneel in prayer on hallowed soil. The white crosses of Arlington must be more than symbols of sorrow. They must be seen in the skies of the universe proclaiming that in the sign of Christ's victory we must conquer the world for peace and justice.

This is Trinity Sunday. Throughout Christendom Christ's charter to His apostles is proclaimed: "Go ye into the whole world and preach the gospel to every creature." They, as leaders of Christ's society, the church, were to stand in defense of the truth which was to make men free. They were to preach the new commandment of the love of neighbor. They were to administer the strong help of Christ's grave in His sacraments. They were to protect and to aid the poor and to comfort the sorrowful. They were to encourage the weak, to bless those that strove for peace, and even to suffer persecution for justice' sake. They were to be the salt of the earth and the light of the world. History records their valor and their martyrdom. History also records the invincibility of the truths they preached. Other apostles fulfilled Christ's commission to be witnesses to Him in Judea and Samaria and to the utmost limits of the earth. Neither the power of emperors, nor the might of armies, nor the treachery of friends could repel the loyal army which went forth to preach truth and to do charity to all men. Down the ages against the fury of vicious persecution, the church spoke the strange doctrine of justice, of the dignity and liberty of men, and of the sanctity of the family. Her ministers emphasized their preaching by deeds of mercy and love and soon great nations were molded on a pattern which came to be called Christian civilization. At least western society took on a new form of civilization, even if all peoples did not follow the Christian principle underlying human dignity and social justice. Against the force of persecution and opposition the church kept preaching justice and charity and peace until the laws she fostered gave protection to the basic rights and dignities of individuals, families, and social institutions. In the ages of faith there was at least a recognized formula of social integration. Men as individuals and men as a society referred their lives and institutions to God. There was no place in that tradition for the present-day secularist notion that neither man nor society has any higher point of reference for law or rights or duties than the state or the government.

Throughout the years of long, difficult centuries, in times of glory or of persecution, the church kept before men and nations the ideas of justice, of human dignity and of charity, which is brotherhood. It was in the hope of progressing to a better and, indeed, to an ideal society, that nations wrote their covenants and treaties and established alliances and leagues. What awful defeats were suffered by men in their striving to follow the gospel of peace and justice. Yet, in every age, what inspiring nobility among men who, in the midst of voices that preached the gospel of hate and war, strove the mightier to build a society dedicated to human freedom, truth, and social justice.

If the church has not removed from men and nations the spirit of selfishness and the irrational cruelty of war, nevertheless she has kept true to her mission of preaching the gospel to a world which often reviled and persecuted her. The whole of man's outlook on ethics, politics, economics, and social relationships is governed by his answer to the essential question, What is man created for? His true freedom can be protected only if his last end is known and his attainment of it secure. In the darkest days of the present

world war, the words which brought courage and determination to conquered peoples were freedom and liberty and democracy. They were a challenge to the souls of men. They represented realities which made life precious and noble. They were a call to the spiritual, unconquerable forces of nations. The greatness of the Atlantic Charter rests on its principles of justice and honor—spiritual realities. The power of the "four freedoms" rises from the universal conviction that man's happiness is based in his spiritual character. Trust in justice and honor and decency kept brave men suffering and fighting in the terribly bleak days of defeat and exile. The religious tradition which informed men about his higher destiny and his final end was strong enough in the face of the world's most vicious persecution to defeat the power which claimed man merely as a creature of the state. The position of the church in relation to governments is here well defined. The church stands out as the great institution in human society which is too big for the rapacious grasp of the state. The church stands before men as a challenge to the claim of the state to direct and to order the whole of human activity and thus to be an end in itself. To the church falls the supreme duty of keeping before men their true and eternal destiny.

It is significant that the great Christmas pronouncements of the Holy Father for the past 5 years have been concerned with the political and social activities of men. The motif in all is the purpose and end of man. "By her very existence," Pius XII said last Christmas, 1944, "the church rises above the world as a shining beacon to remind us constantly of the divine order in life. Her history reflects her providential mission. The struggles which she had to sustain in defense of the liberty given to her by God were, at the same time, struggles for man's true liberty. The church's mission is to announce to the world, seeking for better and more perfect forms of democracy, the highest and most needed message that there can be: The message that men have great dignity and that they are called to be the sons of God."

The refusal to recognize man's relation to God contains in germ the greatest threat to human freedom. For, ultimately it means rule by force. Man can be sure of his freedom only when he recognizes the purposes and supremacy of God.

We have met on this solemn occasion and in this national shrine of honor to offer grateful tribute to men who fought and died for the principles and virtues which guard our heritage of freedom. Note well, my brethren, that I speak of our heritage of freedom. We who live to mourn the valiant dead must cherish and protect that freedom. Freedom must not be for us a sentimental patriotic slogan.

While we here consider the spiritual basis of a society dedicated to justice and liberty, distinguished representatives from more than 40 nations are convened in San Francisco to write a charter for a world organization to promote international security and peace. It is sobering for us, and for them especially, to consider that the war is ending with its most devastating weapons still in their technical infancy. It is not difficult to be either cynical or desolate as the awfulness of war is surveyed in all its harshness. It is not difficult to be thoroughly dismayed by so much death and so much destruction and so much famine. It is indeed very easy to view the future in catastrophic terms, with suffering populations compelled to choose between further bloodshed or acquiescence in the single-party tyranny of another ideology—the Communist, which like nazism, makes its first condition the overthrowing of traditional Christian society.

But we must not follow these easy paths to pessimism. In these days, now, we have the tremendous responsibility to stand with out fellowmen working for a proper recognition of human rights in whatever world organization will be established. If we really cherish freedom and justice, then we must be quick to join all peace-striving peoples in identifying the spurious democracy of totalitarian regimes and the travesties of democratic justice which enslave millions of yellow and brown and black men.

The United Nations agreement (in January 1942) pledged that the principles of the Atlantic Charter would be the basis of postwar world society. Those principles are clear. They outlaw international assault and robbery and grant to all peoples equal justice under the law. The citizens of the Nation recognize the hard problems which confront the distinguished conferees at San Francisco. They will be patient in the face of the known difficulties. But they will not be supine if the old international crimes of power politics, of deceit, and of injustice destroy the present God-given promise of a peaceful world.

As representatives of the organized forces of the Catholic laity, you must be conscious of your social responsibility in these historic days. Through the department of lay organizations, the bishops of the United States have offered to the men and women of the church an important and effective means of association and cooperation and comradeship in the National Catholic Welfare Conference. It is in times of crisis that men understand the power of unity. The challenge of peace is as great in its social consequences as the challenge of war. You and your sons and your daughters met the challenge of war. We are confident that the same loyal devotion to God and country will win the final victory—peace.

The men of Arlington are speaking. Their comrades in arms now suffering and dying in the Pacific are speaking. They dare us in decency and justice to live with our consciences if we fail to make the world secure from war; if we again permit hate and power and injustice to destroy liberty and freedom; if we allow aggression and tyranny again to destroy peoples and their rights and their happiness. From the tombs of the honored dead in this field of national honor, from the beaches of France and the South Pacific, from the bloody banks of the Rhine, from the deep mountain passes of China and Burma and from the depths of the seven seas, our sons cry to us, and the sons of all nations join their cry, to keep faith with them; to do for the little peoples what we promised to do and what they fought and died to make possible the doing. From Main Street, and Maple Street, and High Street in every village and city of this great land people hear that cry, "Keep faith with us." We must answer those cries. The justice and charity which are fundamental to all decent society must be so clearly written today in charters and pacts and treaties, that we of this generation shall have done our best duty to the brave men who gave their lives to America—so that America might live in honor and liberty to do its full share in establishing peace among men.

It's Your Merchant Marine

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 28, 1945

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Vice Admiral E. S. Land, United States Navy, retired, Chairman, United States Maritime Commission, and War Shipping Administration, at Propeller Club luncheon, Maritime Day, May 22, 1945, in Mobile, Ala.:

A hard and bloody year has passed since last we celebrated Maritime Day. During those 12 months we have completely dissipated the strength of our enemy in Europe. We have destroyed his power. Today some of us can turn our eyes from Europe to the Orient. I say some of us, but not all of us. We in shipping, which is the supply line both for military and the civilian in this war, still must keep our eyes on both the Atlantic and the Pacific.

The destruction of our enemy on the Continent and his unconditional surrender have not relieved the merchant fleet of any of its previous responsibilities. They have, in fact, increased them in a number of respects. Military cargoes must move to the Pacific in greater volume. There must be immediate and substantial increases in the movement of troops; there are wounded to be returned home; there are others to be redeployed, still others to be rotated between battle front and home. To expedite the solution of this enormous transportation problem, the Maritime Commission is converting 100 fast Victory ships for the carriage of military personnel. Use of these ships will reduce substantially the time it will take to bring a soldier home.

But in addition to this movement of men there are great amounts of food, clothing, materials for reconstruction, and essential imports and exports to be carried across the Atlantic to England, Scandinavia, and other areas. So you will understand what I mean when I say that within the next month or two we expect shipping to be tighter than at any time since the war began. It will continue in that status for an indefinite time.

It seems to me, however, that this is not the time for oratory, on my job at least. I gather from congressional hearings (which I have to attend), and correspondence, and from conversation that many people have many questions they want answered now. Sometimes I come to the end of a week feeling like an unhappy combination of Information Please and the Quiz Kids. And, as that other radio program has it, I can understand how It Pays To Be Ignorant—in peace of mind at least. However, I know that this Maritime Day is an appropriate occasion to try and answer a number of pertinent questions which have come to me recently. So I have decided to get a lot of the answers out of my system today and leave the oratorical embroidery to other people who will speak in many other places on this Maritime Day. Therefore, and hoping you will not object, we will have some questions and answers, beginning with this one which so many people are asking constantly:

Question. How much tonnage has the United States lost since the war began in Europe in 1939?

Answer. Approximately 6,500,000 deadweight tons, or considerably more than half our entire prewar merchant fleet.

Question. How much tonnage have we built in this country since the war began in 1939?

Answer. Approximately 56,000,000 deadweight tons.

Question. How many ships have we built in this same period?

Answer. Of all types the total runs to more than 7,100.

Question. What expansion of shipyard facilities was necessary to do this job?

Answer. We started with 10 private yards containing 46 ways and employing 60,000 workers. This had to be expanded to 81 yards containing 300 ways, with 1,300,000 employees.

Question. What types of ships were built or are building excluding those strictly for the military service?

Answer. More than 2,600 Liberty ships, more than 460 Victory ships, 24 of the big P–2 type, 288 C–2's, 156 C–1's, 133 C–3's, 84 C–4's, 641 tankers, 24 self-propelled concrete vessels, 53 concrete barges, 65 wooden barges, 300 coasters, 16 ore boats.

Add to the above list: Thirteen vessels of combination types, 13 of transport types, and 29 of special types, and you have the answer. You will note that there are in this list approximately 1,200 fast, modern ships in addition to the 641 tankers.

Question. What about the ships built by the Maritime Commission and assigned directly to what we call defense aids and the military services?

Answer. We built 895 of about 5,000,000 dead-weight tons. Of this total 221 are of combatant type.

Question. How is the merchant fleet operated?

Answer. It is operated through the War Shipping Administration by 114 private operators who act as general agents, subagents, and berth agents of WSA. They are paid a fee for the job, just as the builders in Maritime Commission yards are paid a fee for building ships.

Question. How many ships are under WSA control?

Answer. The number is now in excess of 4,000 ships of approximately 43,000,000 deadweight tons.

Question. How much seagoing personnel is required to operate these ships?

Answer. In 1939 the total was between 45,000–50,000. Last year it had been expanded to more than 175,000, and by the end of this year we expect to have over 242,000. And, I might add, that several million men have depended upon those few to deliver most of what it has taken to do the fighting job for which we give thanks today.

Question. How much cargo did this great supply fleet move in 1944?

Answer. The total of all shipments was 78,500,000 tons. Of this amount 65 percent was military, 27 percent lend-lease and rehabilitation, and 8 percent civilian.

Question. What are all these reports about a shortage of ships?

Answer. Personally, I am fed up with the eternal alibi that "a shortage of ships is responsible for all the difficulties of the war." There are in 1945, under the United States flag, four and a half times as many ships as there were in 1939. It is not a shortage of ships so much as it is temporary shortages of cargo at pierheads, delayed turnaround, shortage of ports, shortage of inland transportation, too extensive use of ships as floating storehouses, congestion of ports, selective discharge, shipping priorities, and a number of kindred ailments. They must bear their share in this shortage-of-ships disease.

Question. What about the postwar merchant fleet, particularly the one I spoke about of 15,000,000 to 20,000,000 deadweight tons?

Answer. I get that tonnage from the following components: 3,500,000 tons for the Great Lakes, 2,500,000 tons for the rivers, 3,800,000 tons coastal and intercoastal, 7,500,000 tons in foreign trade.

I would like to emphasize that the increase in our foreign trade merchant fleet should be supported primarily from trade formerly carried by the Axis Powers and, so far as we are concerned, primarily from Japan.

Question. What about our postwar foreign trade necessary to support a vigorous merchant fleet?

Answer. We talk and write very glibly about exports, but we do not seem to be as vocal in discussing imports—this, despite the fact that for every seller there must be a buyer. The Honorable James A. Farley recently said, "We hear a good deal about increasing our exports, but not so much about the necessity of imports. It is time for a considerable change in this emphasis if we are to take steps in the direction of making it possible to liquidate our prospective postwar loans." For that reason, I am very much in favor of the extension of our reciprocal trade agreements. I do not believe they should be a partisan political issue. I am a 50–50 guy and certainly believe in reciprocity.

Question. When can our merchant fleet return in substantial measure to its strictly commercial activities?

Answer. The answer to that one generally is to be found in what is known as The London Agreement of Principles. This provides for continuance of the Combined Shipping Adjustment Boards under which all United Nations merchant tonnage is operated until 6 months after the fall of Japan. This will keep the merchant shipping pools of the world under unified control, which in turn gives first call to military requirements while at the same time making the most equitable distribution possible with regard to the allocation of merchant tonnage for other purposes.

Question. What about the future of the German and Japan merchant fleets?

Answer. So far as I am concerned, they have none. There should be no oceangoing merchant fleets in either of these countries for many years to come. They used them before the war primarily to promote their military objectives and, in my opinion, thus forfeited their right to have them.

Question. Won't very heavy operating subsidies be necessary to support the expanded merchant fleet after the war?

Answer. The answer is "No." There are two kinds of subsidies, operating and construction. The construction subsidy goes to the shipyard—not to the operator. It permits the operator to buy American-built ships at approximately the same cost he would have to pay if they were built abroad. The operating subsidy is a parity payment pure and simple. It merely puts the American operator on a parity basis with his principal foreign competitor. Its major element is wages made necessary by our higher American standard of living. It goes as wages for seagoing personnel and to labor in our repair yards. It should be noted, however, that any excess in the operating subsidy is subject to recapture. When the uninformed talk as they do of huge operating subsidies, just remember this—if our 1939 merchant fleet were doubled, the maximum annual cost for both operating and construction subsidies would not be greater than 44 cents per capita per year, and that is less than the cost of a movie.

Question. What about employment in the shipyards?

Answer. The shipbuilding program is on a descending curve and it is apparent, as we have stated, that many now engaged in shipbuilding will be released during the present calendar year. Repair yards will need many of these employees, and we should maintain a proper nucleus of shipbuilders both for the merchant marine and the Navy, postwar. That is not only an economic necessity but a national-defense requirement as well. Some of the shipyards are being converted to repair yards now. Some conversion work will be available. Other employment may be found in ship-breaking, and some yards will continue building certain ships for postwar use such as passenger liners, small coastal types, custom-built types to suit special trade routes, and surely some Navy building to avoid an obsolescent Navy.

Question. What about postwar employment of our seagoing personnel?

Answer. Information now available indicates that there will be ample employment afloat for anywhere from 6 months to 3 years after the fall of Japan. As I said earlier, American-flag ships will be busy bringing troops home, rotating others, supplying occupied areas, returning the wounded and the prisoners of war, and carrying materials for rehabilitation, national programs, and meeting the requirements of UNRRA. Also, I trust they wil gradually be increasing their activity in foreign trade.

Question. What about the GI bill of rights for the merchant marine?

Answer. A suitable bill has already been introduced in the Congress. It is recommended that this bill, with any proper amendments which may be offered and accepted, should be enacted into law by the Congress, and the time to do that is now.

Question. What about uniforms for our merchant marine—postwar?

Answer. When first considered, the answer appeared to be in the negative for two reasons, mainly, regimentation and militarization.

Question. Do these objections still obtain?

Answer. To all intents and purposes it will always be a dungaree uniform aboard ship, but it may well be that a distinctive merchant marine uniform might be adopted without any idea of regimentation or militarization in this voluntary service.

Question. What about training, recruiting, and manning for the merchant fleet after the war?

Answer. Kings Point Academy, which is the Annapolis and West Point of the merchant marine, is a model institution and should continue to stand out as a beacon light for the merchant marine of the future. The same is true of Sheepshead Bay and our other training institutions. These institutions should continue in a qualitative manner with a quantitative reduction as may be required by the peacetime size of the American merchant marine. Great credit is due to our training and our recruitment and manning organizations for the splendid work they have accomplished during this war. It should be thoroughly understood that our major rivals in this work have been and are, naturally, the Army and the Navy, considering the definite distinction that ours is a voluntary service, while the military comes under the Selective Service Act. However, we have manned the ships; those ships have delivered the goods. That seems to me to be the answer.

Question. What about operations?

Answer. The shipbuilding program has been thoroughly recognized by the American people as well as by other nations in the world. However, the operators of this gigantic fleet, largely because of security reasons, have received relatively little publicity. But they have done their difficult part in delivering the goods, and done it well. As results are what count, possibly that is all the advertising necessary. Certainly they have done a job, and they have done it 24 hours a day, every day of these painful years.

Question. What about aviation and its effect on the merchant fleet after the war?

Answer. There is no doubt that postwar transocean aviation will probably skim the cream from the fast passenger trade. Nevertheless, there will be substantial passenger traffic across the oceans of the world carried by surface ships for a long time to come. Aviation, in my opinion, will not make any serious inroads from the cargo-carrying point of view. All that the shipping industry asks of Congress and the American people is that there be no inhibitions and no prohibitions, either by regulation or statute, to prevent the American merchant marine from supplementing its activities with aviation auxiliaries.

Question. What about this so-called ship-sales bill now before Congress?

Answer. As to policy, it attempts to follow in general the policy of the Merchant Marine Act of 1936, as amended. The last bill dis-

cussed was designed to establish a formula for the sale of surplus war-built tonnage—a formula to be written by the Congress. Cargo ships are to be offered at depreciated prewar foreign cost. Tankers are to be offered at depreciated prewar domestic cost. American citizens are to have first call on all the ships available under the bill for sale or charter. Foreigners are not permitted to charter. A floor is proposed for Liberty ships so that they will not be offered at less than 50 percent of their cost before depreciation. It should be noted that we are dealing with a surplus commodity and most of which, I might add, was built to be expendable in warfare, so we should determine a procedure as about half way between (a) scrapping of war-built surplus ships and (b) giving them away. It is an extremely difficult problem and any solution must be a compromise because it will always be impossible to satisfy all hands.

Question. What are we going to do with all these ships? This is the $64 question.

Answer. I have a little computation on that. Let us assume:

	Dead-weight tons
Completed wartime building program of	56,500,000
United States merchant marine, 1939	11,500,000
Total	68,000,000
Estimated losses	6,500,000
Assigned for military service	6,000,000
Scrap for old-age obsolete tonnage	7,000,000
We should sell (foreign)	10,000,000
We should operate	17,000,000
Total	46,500,000
National defense reserve ("in sanctuary" by statute)	21,500,000

I hope that this venture into the business of talking to myself, or answering my own questions, has at least provided you with a few facts. Information, accurate and objective, is vital to intelligent solution of many complicated problems of the postwar merchant fleet. There are many partisan prejudices, and uninformed views being circulated concerning your merchant marine and its future. I hope all of you here today will at least keep an open mind on this subject until you have satisfied yourself thoroughly as to what you honestly feel our merchant marine should be in the peace to come. It is of vital importance both to our foreign trade and to our national defense. As long as we have a strong Navy, we must have a strong merchant fleet. To maintain it in strength and efficiency, it is necessary to utilize it. I do not suggest that we hog the seas. I do believe, however, that we should carry a substantial share of our foreign trade in our own ships. I think we are entitled to that break and I know that the competition thus afforded would strengthen greatly our own operations and those of all of our maritime competitors.

In closing, I should like to quote the statements made during the past 30 days by two of our ablest leaders concerning their opinions as to what our merchant marine has done during this war.

Chief of Staff Gen. George C. Marshall, said: "America's merchant marine has carried out its war mission with great distinction and has demonstrated its ability to meet the challenge of redeploying our full power to the Pacific."

Fleet Admiral Ernest J. King said: "The armed forces, with the help of the merchant marine, have pushed the fighting 5,000 miles west. Together, they will go the rest of the way."

To those expressions, I say amen.

James Francis O'Connor

MEMORIAL ADDRESS

OF

HON. JOHN W. MURPHY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 23, 1945

On the life, character, and public service of Hon. JAMES FRANCIS O'CONNOR, late a Representative from the State of Montana

Mr. MURPHY. Mr. Speaker, it is an honor and a privilege for me to have this opportunity to say a few words about my very dear friend, the able and distinguished Congressman from Montana, the late JAMES F. O'CONNOR.

As a new Member of this Chamber, I was always pleased to hear the words of JIM O'CONNOR. He was a man of strong convictions, well informed on the affairs which were discussed in this great body.

At this time of year there always comes the gentle, blissful day when we feel how fine it would be to get into the outdoors. Often we wonder, on entering the catacombs where we work, what would happen if in sudden brash rebellion we should head for the open road. From there we would turn off into some deep woods where the trees were radiant in their new foilage, the grass soft underfoot, the air full of earthy fragrance. We would wander on forgetting the city, the irksome office or home tasks, the war, the peace problems, feeling completely free and irresponsible, and at the same time smugly virtuous in our proximity to Mother Nature. We would listen to the birds, spot an occasional wild flower, come unexpectedly upon a sparkling brook, perhaps sit on a grassy knoll and meditate on the futility of man's rush and strain, his slavery to clocks and conveniences.

There is that earthly paradise when all is calm and we have the opportunity for clear cool recollection, our thoughts would dwell on the many pleasant experiences we have had in our past lives.

I am sure were I to take that journey and so contemplate the past, one of my most refreshing recollections would be my having known the late JIM O'CONNOR. He is now gone. One of the most beautiful sentences, by way of prayer, I know to express my sentiments toward him, is:

Eternal rest grant unto him, O Lord, and may perpetual light shine upon him.

Nazi Horror Camp Atrocities

EXTENSION OF REMARKS

OF

HON. CARTER MANASCO

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 28, 1945

Mr. MANASCO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Northwest Alabamian of May 24, 1945:

MANASCO DESCRIBES NAZI HORROR CAMP ATROCITIES—CONGRESSMAN GIVES EYE WITNESS ACCOUNT OF HORRIBLE CRIMES AT BUCHENWALD AND INTERESTING OPINIONS

A detailed report of his recent visit to a German horror camp at the request of General Eisenhower was received this week from Congressman CARTER MANASCO.

Representative MANASCO described the sights as the most horrible and unbelievable he had ever seen.

Following a review of what he saw at the Buchenwald camp, the Seventh District Congressman outlined his views concerning the reeducation and reconstruction of Germany and declared that eternal vigilance on the part of the public is necessary to prevent future wars.

Congressman MANASCO's report:

"During the latter part of March arrangements were made for me to go to Europe for conferences with British, French, and American officials in an effort to find out what amendments to the Surplus Property Act were needed to effect the rapid disposal of war surpluses in those areas that were no longer needed by our armies.

"I arrived in London on the 21st day of April. Upon my arrival there was an invitation from General Eisenhower for Members of Congress to fly to Germany to inspect one of the political prison camps just liberated by our armies.

"Right here let me make it clear that these horror camps were for political prisoners and civilians and were not camps for prisoners of war. Some of our people have the mistaken idea that American soldiers were in these camps. This is an error.

"We left London Sunday, April 22, and arrived at Weimar, Germany, about noon. I had read about the camps and seen pictures of the inmates who had been tortured. Frankly I didn't believe all that I had read, and I don't believe anyone else did.

"We were driven to Buchenwald, about 3 miles outside the city of Weimar. The prison camp was surrounded by two barbed-wire fences, one of them charged with electricity, and a guard stationed every 20 feet. We were then taken to the barracks used to house the prisoners.

"When this camp was liberated there were 23,000 human beings in the camp, composed of Russians, Poles, French, Belgians, Dutch, 2,400 Jews, and 1,800 German civilians. The personnel was made up of doctors, scientists, businessmen, preachers, priests, and others who opposed the Nazi ideology.

"In each of the barracks 2,300 people were crowded into a space that would not comfortably house 100 people. Seven people were forced to sleep in a bunk, with the wooden floor being the only mattress. When I entered the first barracks the most unbelievable sight that I have ever seen was before my eyes. Hundreds of the inmates were unable to raise their hands. Huge eyes with a fixed stare protruded from nothing but a skull covered with dry human skin.

"They were so starved that their facial muscles could not smile. The stench was unbelievable. These people were given one thin slice of bread per day, and two cups of weak soup which a potato, carrot, or some other vegetable had been drawn through.

"This particular camp had a fixed quota of 400 deaths per day. Starvation and illness usually resulted in the deaths of over 300. The remainder were killed. The prisoner to be killed was given a choice of three methods of death.

"There were four hangman's nooses from which they could volunteer to jump. If the prisoner declined this method, he was offered a syringe containing a deadly poison that he could inject in his arm, and, refusing this, he was thrown down a 13-foot concrete chute into a room about 20 by 20 where there were 42 hooks on which to garrote the bodies until they choked to death.

"This was done by an SS guard. If the noise was too great, a machine was turned on to drown out the cries and gurgles of the poor unfortunates. After they were strangled to death, there was an elevator with a capacity of 18 bodies to take them up to the next floor, where 6 ovens were used to cremate them.

"These ovens had a capacity of 18 bodies per burning and a capacity of 400 bodies per 10-hour day. Some of the unburned bodies were still in the ovens when our troops arrived. A truck loaded with 80 skeletons who had just died and were awaiting cremation was also there when our troops arrived. While we were in the compound many of the unfortunates died.

"The Nazis conducted a scientific research study in this prison camp. They would inject typhus germs and tuberculosis germs into the bodies of the poor unfortunates to study the effect of the diseases on the different organs of the body. Of course, any person who submitted to one of these tests was told that he would be liberated upon the completion of the tests; but no man who submitted to these tests ever came out alive.

"The wife of the camp manager had a mania for lamp shades, ash trays, and other articles made from human skin. I saw these skins with my own eyes. The wife would select a design that suited her taste, and this design would be tattooed on the chest of the person from whom the skin was to be removed. Then the skin was removed, cured, and the lamp shade or whatever she wanted was made.

"The American medical officer in charge told us that of the 23,000 people still remaining in the camp, between 3,500 and 4,000 could never get well. Their digestive juices had been destroyed by lack of food. Some of the patients were being fed by intravenous injections. Of course, all of the 23,000 unfortunates can never be normal beings again.

"We were told that there were over 100 camps like this in Germany. It was estimated that over 15,000,000 human beings were liquidated in this manner.

"The sight of this horrible, cruel, inhuman treatment started me to thinking. The conclusions I reached might not coincide with the views of other people. I am firm in my belief that the young Nazi generation could in their own minds justify this inhuman method of liquidating their fellow man. While in the camp I saw some of the older German women weeping. At the same time, I saw girls between 20 and 30 smiling.

"Germany has been a great nation. She has contributed to the world such famous poets as Goethe and Schiller. She has contributed to the world such leading philosophers as Kant. She has contributed such great musicians as Wagner, Bach, and Beethoven. Germany has contributed Martin Luther, one of the great founders of the Protestant religion. She has contributed atabrine, a drug which has made it possible for us to defeat the Japs by keeping down malaria. The Germans discovered the sulfa drugs.

"They are far ahead of the rest of us in conservation of forests and other natural resources. Germany pioneered in social legislation. As far back as 1870 she was paying old-age pensions. The Germans pioneered in payment of unemployment insurance, care for children, hospitalization of the poor.

"They were far ahead of the rest of the world in the care and physical training program of the youth of their country. They pioneered in regulation of the flow of commerce. They had a very efficient, smoothly operated industrial economy. Why, then, could nazism get such a hold on the people that they would tolerate the liquidation of their fellow men?

"My conclusion is that they had so completely regimented their people that every segment of their economy was dependent on the central government for its livelihood. Big business could not operate without the consent of the central government.

"The pensions could not be paid, the health program could not be carried on, even the playgrounds could not be operated, without the blessings of the central government; and I might add, the Germans were far ahead of the rest of the world in organized playgrounds and organized sports. You saw no slums in Germany. Their people were well housed, well fed, and well clothed.

"Any person who becomes so dependent on his central government for a livelihood soon loses all independence of thought. Anyone who disagrees with the program of the central government or its political leaders immediately becomes an enemy of the individual, for the individual thinks that an obstructionist might push him away from the public trough. What is the result? Those individuals and industrialists collectively who were dependent on the government for their livelihood in their own minds can justify the elimination and liquidation of all opposition.

"Can it happen in America?

"I say 'Yes.' Unless we Americans slow down on our demands of the Federal Government to take care of us from the cradle to the grave, sooner or later anyone who voices disapproval of such a program or of any act in the Central Government, as the case may be, can be, and might be, placed in a concentration camp. What happened to the farmers in Russia when they resisted the taking of their farms by the central government? Many were sent to Siberia to work camps, and many were killed on their own farms.

"This danger to our country can only be averted by a strong public opinion. You and I must be more vigilant than we have ever been.

"The above is the dark side of the picture. In all I spent 9 days in Germany. I saw the result of the work done by your sons in conquering the beasts of nazism. I saw cities the size of Baltimore and St. Louis totally destroyed. Mannheim, a city larger than Birmingham, does not have a habitable building standing today. Cologne is razed. Every industrial city is destroyed.

"Germany can become a great peaceful nation. It will take years of education to remove the blight of nazism from the minds of the younger generation. Unless we want to have another war in which the children of our boys will have to give their lives, it is our responsibility to see that this menace to peace is removed.

"I firmly believe that this can be done by education and through religious missionary work. Christianity cannot survive in a totalitarian country. Neither can a totalitarian country exist where people are devout followers of the Christian religion.

"After seeing the destruction wrought by this war, I am convinced that with the advancement of scientific discoveries the next war could easily destroy our civilization. We have a grave responsibility, and I hope and pray that we do not shirk our duty.

"When I come home this summer, I hope to make a detailed report to the people of the district."

Subsidies to Manufacturers

EXTENSION OF REMARKS

OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Saturday, May 26, 1945

Mr. MURRAY of Wisconsin. Mr. Speaker, in view of the fact that the Reciprocal Trade Agreements Act will be considered by the other body in the near future, it is desirable that we have the benefit of the opinions of the people from all sections of the country.

Today I am pleased to submit to you a splendid editorial from the Wausau Daily Herald, published in Wausau, Wis. The statement is timely and interesting:

SUBSIDIES TO MANUFACTURERS

With the close of the European war there is a renewed effort to extend reciprocal trade treaties on the basis of the argument that if the United States is to export more it must import more and on the plea that if this Nation ever hopes for a repayment of loans to foreign nations it must open wide its doors to imports.

A statement by Matthew Woll, president of the American Wage Earners' Protective Conference, a tariff group of the American Federation of Labor, and who is also president of the union label trades department of the A. F. of L., appears in the May 7 CONGRESSIONAL RECORD, and points out that international rivalry grows to some extent, at least, out of competition for raw materials.

After carefully analyzing imports and exports since 1921, he said that the disastrous consequences of the reciprocal treaties would be partly overcome by payment of a subsidy to the men in control of those industries that would be adversely affected by the operation of the treaties, according to the latest proposals of those advocating the extension of these treaties. Woll said, "We feel that the tariff is the simplest method of protecting the job opportunities of our workers, and, therefore, the high level of employment that is conceded to be indispensable if we are to meet our tax burden and our public debt," he added.

"We find nothing in the American standard of living to apologize for to the rest of the world. On the contrary, we recommend that other countries follow our lead in establishing higher wages and shorter hours for their workers."

HUBERT S. ELLIS, Congressman from West Virginia, stated in the same issue of the RECORD, "When we import low-wage goods, we export jobs. The threat of foreign competition is greater today than it has ever been."

Penalty Mail

EXTENSION OF REMARKS

OF

HON. THOMAS G. BURCH

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 29, 1945

Mr. BURCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from Mr. J. J. Haggerty, comptroller, Bureau of Accounts, Post Office Department, with tabulation relative to penalty mail:

POST OFFICE DEPARTMENT,
BUREAU OF ACCOUNTS,
Washington, May 17, 1945.

Hon. THOMAS G. BURCH,
House of Representatives.

MY DEAR MR. BURCH: Attached hereto is a tabulation showing the number of envelopes, labels, and other penalty inscribed material on hand and on order June 30, 1944; the number of pieces procured during the September and December quarters, and the estimated cost to the Post Office Department of handling these mailings, by departments and agencies, for the quarters ended September 30 and December 31, 1944.

The 435,182,417 pieces of matter mailed free of postage under the penalty privilege during the quarter ended December 31, 1944, was a decrease of 81,803,057 pieces mailed during the corresponding period of the previous year.

During the period July 1 to December 31, 1944, there were 920,927,810 pieces of matter mailed free of postage under the penalty privilege, a decrease of 101,465,212 pieces mailed during the corresponding period of the previous fiscal year.

Inventories received in the Department indicate surplus stocks of penalty envelopes and labels in some of the departments and agencies. This matter has been brought to the attention of the Bureau of the Budget, with the suggestion that a bulletin be issued calling attention to the advantages of transferring this surplus stock from one department or agency to another.

Very truly yours,

J. J. HAGGERTY,
Comptroller.

Statement of penalty mail, Public Law 364, approved June 28, 1944—Adjusted to Dec. 31, 1944

A Second Look at Lend-Lease

EXTENSION OF REMARKS
OF

HON. JOHN M. VORYS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 29, 1945

Mr. VORYS of Ohio. Mr. Speaker, under leave to extend my remarks, I include in the CONGRESSIONAL RECORD an interview in which I participated on the Congressional Record of the Air program last night over Station WOL, Washington, and a number of other stations:

Mr. LEWIS. From Washington, D. C., you are about to hear the one-hundredth broadcast of Congressional Record on the Air. This public service feature presents each week a well-known Member of Congress in a discussion of national interest. Our guest this evening is a Member of the House of Representatives. He will be introduced to you now by Billy Repaid, the noted news commentator.

Mr. REPAID. Thank you, Charles Lewis, and good evening ladies and gentlemen. A few weeks ago for the second time in a generation, we have seen the might of America turn the tide of war in Europe into the channels of victory for the Allies. In this war that American might has been twofold. Into the fray went the might of millions of strong, virile American men. And into the fray, also, went the might of millions of weapons of war. Never before in all history has any nation produced materials of war in such astronomical quantities. United States labor and industry turned out billions of dollars' worth of tanks, guns, ships, planes, food, clothing, and countless other articles. Not all of this went to our own forces—much of it went to arm fellow members of the United Nations and to support their war effort. They received this material under a plan we call lend-lease. When the Lend-Lease Act was originally passed back in 1941 it was the subject of much debate. And tonight, as the war in Europe gives its last spasmodic gasp, lend-lease is again the subject of discussion. Where do we stand at this time on lend-lease. Should it be continued to the European nations? And if so, on what basis? Those are a few of the questions you will have answered for you on this one-hundredth broadcast of Congressional Record on the Air. Our guest for the occasion is a member of the House Foreign Affairs Committee, a recognized authority on lend-lease and one of the Nation's most capable legislators. We are glad indeed to have with us, Congressman JOHN M. VORYS, of Ohio, who in the next few minutes will give us some lend-lease background and then answer some questions. Congressman VORYS.

Congressman VORYS. First, let's see just where we are on lend-lease. Under the law lend-lease agreements can be carried out until July 1, 1940—4 years from now—if they are entered into before July 1, 1946.

When this year's extension came up before the Foreign Affairs Committee, it was obvious that we should continue lend-lease for mutual war aid, and just as obvious that there was no support in Congress for lend-lease as a postwar mechanism, although this was a possibility under the law. However, when I offered an amendment in committee to bar postwar lend-lease, it was defeated. About this time the French agreement was announced, involving two and one-half billions of possible postwar lend-lease. I again tried to secure in committee amendments barring postwar lend-lease, and was again defeated. Then five of us Republicans, on March 8, issued a minority report, arguing that Congress should not extend the lease-lend power, administration, and practices into the postwar period. Within 24 hours after this lend-lease officials got in touch with me and a compromise amendment was drafted in my office, which was later approved unanimously in our committee and adopted overwhelmingly in the House.

This amendment provided that nothing in the law should be construed to authorize the President to enter into or carry out any contract or agreement with a foreign government for postwar relief, rehabilitation, or reconstruction except that a lend-lease agreement in which we undertake to furnish to a foreign government defense articles, etc., "for use in the prosecution of the present war" and which provides for the sale of such defense articles "after the President determines they are no longer necessary for use by such government in promoting the defense of the United States" shall not be prohibited. The amendment had 2 parts: First, an absolute prohibition of postwar lend-lease; second, and exception, to take care of war-supply contracts during the transition from war to peace. The exception permitted the carrying out of contracts

for war supplies even after hostilities ended, provided the receiving country paid for the supplies. This exception permitted us to go full tilt to the end of the fighting, but provided an orderly and equitable way of taking care of supplies caught midway when the fighting stopped. This took care of the French agreement. Similar agreements were made with the Dutch for two hundred millions and the Belgians for three hundred and twenty-five millions before VE-day. No one knew when VE-day was coming when this amendment was passed or these agreements were made.

This exception was attacked in the House, and again in the Senate, where Senator TAFT's motion to strike out the exception and leave in only the straight prohibition of postwar lend-lease, was defeated by a vote of 39 to 39 and Vice President Truman cast his vote as Vice President to break the tie, in case of doubt. He signed this bill as Vice President, then signed it as President. No President ever understood the legislative intent of a bill better than President Truman did this one, for he heard it debated and voted on it. Opponents of the exception, such as Senator TAFT, said it furnished a loophole for the use of lend-lease in the postwar period. I agree on this possibility. I have said it was not airtight, not even machine-tool tight, if the Executive wanted to abuse the power given him by this exception. Supporters of the exception argued that it was necessary to cover the perplexing transition period, and assured everyone that it would not be abused.

The test of this law is now before us. President Truman has announced that the whole question of post-VE-day lend-lease is up for review and readjustment. It is a difficult problem. Announcement should be made soon. If the President uses this exception to furnish obvious postwar relief, rehabilitation and reconstruction supplies to France, Holland, Belgium, Britain, and Russia on the basis of some remote help they may be giving in our war against Japan, well, my face will be red, and Congress in general will have a good deal to say, and President Truman's next 3 years will be harder. The test words in the French and other agreements are these: "After a determination by the President, that any of the articles and services set forth, are no longer necessary to the prosecution of the war." Note that the test is not whether the stuff is convenient, or helpful, but necessary to the prosecution of the war. This must not be used as an excuse to bolster France's or Britain's economy. Such help must be on some other basis. This must not be used as a device for appeasing Russia.

A lot of countries will need to borrow some money from us. We should make it available, on mutually satisfactory terms, but we should stop lend-lease soon, altogether.

Mr. REPAID. Exactly, sir. And here is the first one. When the lend-lease act was written * * * was there any time limitation put upon it. I mean by that, was it passed for a certain number of years, or is it one of the wartime executive grants that can be continued until peace is declared?

Congressman VORYS. Well, it was passed in 1941 for 2 years, not as a war measure at all but as a peace measure. Remember, it meant three things: First, a prewar measure to keep us out of war. Second, a measure for mutual war aid between allies. Third, a postwar relief and reconstruction measure. As a prewar measure to keep us out of war by arming Britain and others, lend-lease was a bitterly controversial issue, to put it mildly. Of those who voted against it, 56 are no longer in Congress; of those who voted for it, 106 are no longer here; percentage-wise, 72 percent; of those who voted for prewar lend-lease and wanted to stay in Congress are still here, and 81 percent of those who opposed prewar lend-lease are still here. It was unsuccessful in keeping us out of war, and unpopular, according to these figures.

After Pearl Harbor, however, lend-lease as a mechanism for mutual war aid received overwhelming public support and has been extended three times by Congress, first in 1943, again in 1944, and this year in 1945.

Mr. REPAID. Now, why do we call this act lend-lease, Congressman VORYS? That is, When do we lend and when do we lease, and what is the difference between the two?

Congressman VORYS. Except for ships, which are leased, there is no lend-leasing at all. We keep title to all the stuff. What we will do with used gunpowder, food, etc., has never been explained. We actually sold $422,000,000 worth. This has a secret classification. Of the total lend-lease of 39 billions—from the last report released a few days ago—about 28 percent of our exports went to Russia, and although the total to the British Empire is concealed and subdivided, it is about 65 percent. The rest went to South America and others. We have gotten about 4.6 billion in reverse lend-lease.

Mr. REPAID. Now, how about this problem of lend-leasing to countries not actively at war with Japan?

Congressman VORYS. I believe that under the law nothing should go, or can go legally to countries not at war with Japan. This includes any country—Russia and other countries—not at war with Japan, because I don't see how we can spell out under the language in the law how our defense is involved in furnishing lend-lease to countries not at war. It might be convenient, but not necessary to our defense, to continue supplies to a country not at war.

Mr. REPAID. Now, that is the original wording of the law?

Congressman VORYS. No; it was not in the original law, but is now, and was written in the French agreement which became the standard after VE-day. And that is what President Truman and his associates are considering now, at this time.

Mr. REPAID. In your earlier talking about the history of the amendment barring lend-lease after the war—what about the opposition? What brought about this change?

Congressman VORYS. I can't tell exactly. It is rather interesting that although President Roosevelt last fall in November had said lend-lease and reverse lend-lease should end with the war, and although Crowley, Lend-Lease Administrator, said so, too, there were forces in the administration that caused the defeat of the amendment to forbid postwar lend-lease twice. Then something changed. The President was out of the country, also the Secretary of State. I don't know what caused the change, but obviously there were those who wanted to preserve the possibility of postwar lend-lease in opposition to those in the administration and in Congress who felt as I did.

Mr. REPAID. Thank you, indeed, Congressman JOHN M. VORYS of Ohio. For my part, and I am sure our listeners will agree, we all have a better appreciation now of this lend-lease problem.

Memorial Day, 1919—American Expeditionary Forces in France

REMARKS

OF

HON. GEORGE W. GILLIE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 29, 1945

Mr. GILLIE. Mr. Speaker, as we approach Memorial Day, 1945, I am glad to call to the attention of the Members of Congress the following story of the manner in which Memorial Day, 1919, was observed by the AEF in France. Mr. S. W. McGill, who arranged the AEF Memorial Day program and who wrote the story, is a prominent citizen of Fort Wayne, Ind., in the district I represent, and, I might add, the brother-in-law of my distinguished colleague, Congressman HOBBS:

ANOTHER MEMORIAL DAY—MCGILL RECALLS SELECTION OF AEF UNKNOWN SOLDIER

(By S. W. McGill)

As United States approaches its eightieth observance of Memorial Day, the ceremonies that marked the AEF Memorial Day in France in 1919 are recalled.

There for the first time after the armistice we were honoring the heroic dead of the AEF. The services were held at temporary military cemeteries. During the early part of 1919 it was my privilege to be attached to the Graves Registration Service with headquarters at Soisson.

For weeks we had been engaged in the most gruesome task of the war. This task was that of locating bodies buried where they had fallen. Then the bodies had been wrapped in heavy burlap, piled high on trucks and taken to the temporary military cemeteries for burial. The soldiers engaged in this task wore no army uniforms. There were no brass buttons on display. They were clad in blue overalls, wore rubber boots and rubber gloves. Their equipment consisted of spade or shovel and a long sharp-pointed stick. These members of the AEF covered every square yard of the combat territory. Where a grave had been marked, the task was simple. When a sunken piece of earth looked suspicious, but had no marking, the sharp-pointed stick was used. High tribute should be paid to the GRS of the AEF. By hard and skillful work they reduced the percentage of unknown American dead to less than 1 percent. No other nation made such a fine record.

The temporary cemeteries were located at Chateau-Thierry, Soisson, Juvigny, Missy-aux-Bois, and Vimy Ridge. For weeks doughboys had been busily engaged in digging what appeared to be a countless number of graves. They were left open, awaiting their precious cargo. Later these bodies were transferred to what we called permanent military cemeteries. Many times during World War II we have wondered what happened to these American cemeteries. We do know that at one time 30,405 American soldiers were buried in these cemeteries. Thirty were buried outside, in various places. Forty-six thousand two hundred and fourteen bodies were returned to the United States, and 3,432 were still missing.

The time was approaching for the observance of Memorial Day in 1919 at the five military cemeteries. Associated with me in all of this work were two American women, Miss Ethel Lyman Mackey and Miss Mary Hopkins Emerson of New York City. Together we had made our plans for the observance of the first Memorial Day observance for the AEF. Then arose complications which we had not expected.

Word came from the Bishop of Soisson, a dignitary to be respected, that he would be present to conduct the rites at the graves and to preach a sermon. Then word came from Dr. Henry Churchill King, located in Paris, and head of religious work with the AEF, under whose direction we were working aside from military authority. He said he would send Dr. Hugh Black, celebrated Scotch preacher, to preach the Memorial Day sermon. But our supply of speakers was not exhausted. Miss Anne Morgan, head of the Committee Americane for the devasted area, notified us that John Kendrick Bangs would be sent to make the address. By this time we had word from GHQ that General Pershing was to send Chaplain King of the First Division to conduct the Memorial Day services.

As most of the casualties were members of the First Division, this seemed a natural right. Finally, word came from General Mauldin of the French Army, who was really in charge of things, that he would be present. He said he would have French children decorate the graves with flowers and he would make the address. This complicated situation was reported to Captain Trigg. He ordered me out of his office. Told me that I had my orders and he wouldn't be bothered.

SERVICES 9 TO 5

On May 30 General Molandin of the Ninth Infantry of the French Army was present. He brought a detachment of the Thirtieth Artillery and the Thirty-first Engineers to do honor to the AEF dead. General Maisonrouge made an address in French, after which General Molandin presented a huge wreath of flowers with the First Division AEF emblem made of poppies. Miss Mackey sang "In Flanders Field." Hundreds of French children were present and dropped flowers on each grave. The Catholic bishop made a brief address. Both Dr. Black and Chaplain King spoke. The firing squad fired the last salute over the grave of Lt. Johnny Overton of Nashville, Tenn. The bugler sounded taps and the ceremony closed. The procession moved on to other cemeteries where similar rites were conducted, with slight change in the rotation of speakers. Services had begun at 9 a. m. and closed at 5 p. m.

It is appropriate at this time to recount the story of the selection and burial of America's Unknown Soldier. The burial in Arlington Cemetery occurred 24 years ago. Yet this is a story that should never be forgotten.

FOUR BODIES SELECTED

When the order was received in 1921 at headquarters of the Graves Registration Service in Paris to select, prepare, and return the body of an American Unknown Soldier, there were about 1,500 AEF dead who were still listed as unidentified. The list was carefully checked for any possible means of identification. At the final check up, four bodies were selected, one each from four widely separated cemeteries. These cemeteries were Bony, Romagne, Thiacourt, and Beilau.

The four bodies selected were shown by the forms to have had their faces blown away so that it was not possible to make even a tooth chart. The bodies themselves were carefully searched and prepared by specially trained groups of men, each group under the supervision of an officer. Each body was wrapped in a blanket and placed in a metal casket, which in turn was placed in a shipping box, but only after the box had been planed white to insure that no private identifying marks had been made.

On October 24, 1921, the bodies were sent to Chalons-Sur-Marne where they were carried from trucks to the Hotel De Ville by French soldiers. At Hotel De Ville the bodies were placed in a room that was decorated with the flags of the Allies. A guard of noncommissioned officers was placed over the bodies, with a guard of French soldiers in the outer room.

On the following day the officials who were to take part in the ceremony to select the one body to be sent to the United States gathered in the room in which reposed the four bodies.

HIS SELECTION MADE

After a brief prayer all left the room except one officer and a civilian worker. The windows were carefully covered so that no one might see in. The caskets were opened and the blanketed bodies laid on top of the caskets. The civilian worker then left the room, leaving only the officer. The door was locked and the bodies were changed and inter-changed by the single officer. The officer then left the room and another officer entered and performed the same duties so that by the time the officers had finished their work, any possible means of identifying the body, or the cemetery from which it came, had been destroyed. This was done so that any chance of identifying the cemetery and then tracing the troops which may have fought in that locality might be in vain.

The bodies were placed in the caskets on which they rested and the caskets closed. The doors were opened and Sgt. Younger of the Second Battalion, Fifty-ninth Infantry, who had been selected because of his excellent war record, was handed a spray of white roses by General Allen.

Passing the four coffins Sgt. Younger turned and passed again. Twice he made the turn more slowly, then pausing, he raised his hand and amid intense silence placed the roses on the casket to the right. The body was removed to another room and there placed in special casket on which was engraved "An unknown American soldier who gave his life in the Great War." An American flag was placed over the casket and the body was ready for the journey home.

Capitol Hill Goes Over the Top on Red Cross Drive

EXTENSION OF REMARKS

OF

HON. HAROLD C. HAGEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 28, 1945

Mr. HAGEN. Mr. Speaker, most of us had an opportunity to contribute to the Red Cross drive which was recently sponsored on the House side of Capitol Hill by the Congressional Secretaries Club.

As a charter member and former president of this club, I can appreciate the amount of effort that it took to bring this drive to so successful a conclusion.

It is significant to me that the House Members and their personnel contributed so generously that they were given a rating of 141.60 percent of the quota set by the national headquarters of the American Red Cross for the House of Representatives Office Building.

The following letter was received by Miss Antoinette Hart, who is general chairman of the drive:

I am most grateful for the excellent performance of the House and House Office Building in our 1945 Red Cross War Fund campaign, which has just come to its close. Your own leadership was partly responsible, I know, for the effective results in your own department. You helped so materially to make this war fund the most successful campaign in Washington in recent years.

You will be interested to know that we have now received $3,285,031.80. This record leads all the other large No. 1 chapters of the country in percent of accomplishment. The Government unit has raised $1,391,453.17, or 119.85 percent of its quota. Of this amount, the House and House Office Building contributed $3,259.10 or 141.60 percent of its quota.

I also wish to express my appreciation to the division chairman and other members of your department organization for whose fine cooperation we are so greatly indebted. However, I am keenly aware that the generous contributions and support of all our Government employees is due to their abiding faith in the great work of the Red Cross among our servicemen of the land, sea, and air, scattered all over the world.

Again thanking you and with all best wishes, I am,

Sincerely yours,

CHARLES B. HENDERSON,
Chairman, Government Unit.

In talking with Miss Hart a short time ago I was informed that she had appointed a chairman for each building. Mr. Russell C. Jones was chairman for the House Office Building, and he and his workers collected $1,194.75. Mr. Millard Carlisle was chairman of the New House Office Building, and his workers collected $1,615. The total collected in the two buildings amounts to $2,809.75. Miscellaneous donations amounting to $449.35 brought the total up to $3,259.10.

Following is a résumé of the report submitted by Miss Hart and the chairmen of the two Office Buildings:

Congressional Secretaries' Club 1945 Red Cross report, New and Old House Office Buildings

(House Office Building, Russell C. Jones, chairman, $1,194.75)

First floor:	
Betty Ickes	$79.50

Heroes

EXTENSION OF REMARKS

OF

HON. DEAN P. TAYLOR

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 28, 1945

Mr. TAYLOR. Mr. Speaker, Troy, N. Y., the very home of Uncle Sam—Samuel Wilson—on Sunday, May 27, 1945, again became a focal point for national interest when Under Secretary of War Patterson presented Congressional Medals of Honor to the widows of both Lt. Col. William J. O'Brien and Sgt. Thomas A. Baker, former residents of Troy, and members of the gallant Twenty-seventh Division.

A more heroic record has never been written in this or any other war than that contained in the citations which accompanied the presentation of the Congressional Medals. It is a record which every Member of this House should be made aware of, and for that reason I am placing it in the CONGRESSIONAL RECORD.

Trojans are immensely proud of the fact that there lived among them such sterling Americans as Lieutenant Colonel O'Brien and Sergeant Baker, and they are fully aware too of the fact that they are obligated to see to it that her heroes shall not have died in vain.

Lieutenant Colonel O'Brien and Sergeant Baker take their places among Troy's immortals. Their heroic deeds shall never be forgotten.

LT. COL. WILLIAM J. O'BRIEN—NEW YORK NATIONAL GUARD INFANTRY—ONE HUNDRED AND FIFTH INFANTRY, SAIPAN—POSTHUMOUS

Next of kin: Mrs. Mary O'Brien, widow, R. F. D. 2, North Troy, N. Y.

For conspicuous gallantry and intrepidity at the risk of his life above and beyond the call of duty at Saipan, Marianas Islands, from June 20 through July 7, 1944.

"When assault elements of his platoon were held up by intense enemy fire, Colonel O'Brien ordered three tanks to precede the assault companies in an attempt to knock out the strongpoint. Due to direct enemy fire the tanks' turrets were closed, causing the tanks to lose direction and to fire into our own troops. Colonel O'Brien, with complete disregard for his own safety, dashed into full view of the enemy and ran to the leader's tank, and pounded on the tank with his pistol butt to attract two of the tank's crew and mounting the tank fully exposed to enemy fire Colonel O'Brien personally directed the assault until the enemy strongpoint had been liquidated. On June 28, 1944, while his platoon was attempting to take a bitterly defended high ridge in the vicinity of Donnay, Colonel O'Brien arranged to capture the ridge by a double development movement of two large combat battalions. He personally took control of the maneuver. Colonel O'Brien crossed 1,200 yards of sniper-infested underbrush alone to arrive at a point where one of his platoons was being held up by the enemy. Leaving some men to contain the enemy he personally led four men into a narrow ravine behind, and killed or drove off all the Japanese manning that strongpoint. In this action he captured five machine guns and one 77-millimeter fieldpiece. Colonel O'Brien then organized the two platoons for night defense and against repeated counterattacks directed them. Meanwhile he managed to hold ground. On July 7, 1944, his battalion and another battalion were attacked by an overwhelming enemy force estimated at between 3,000 and 5,000 Japanese. With bloody hand-to-hand fighting in progress everywhere their forward positions were finally overrun by the sheer weight of the enemy numbers. With many casualties and ammunition running low, Colonel O'Brien refused to leave the front lines. Striding up and down the lines, he fired at the enemy with a pistol in each hand and his presence there bolstered the spirits of the men, encouraged them in their fight and sustained them in their heroic stand. Even after he was seriously wounded, Colonel O'Brien refused to be evacuated and after his pistol ammunition was exhausted, he manned a .50-caliber machine gun, mounted on a jeep, and continued firing. When last seen alive he was standing upright firing into the Jap hordes that were then enveloping him. Sometime later his body was found surrounded by enemy he had killed. His valor was consistent with the highest traditions of the Service."

Announced overseas March 14, 1945.

LT. GEN. ROBERT C. RICHARDSON,
Commanding Army Forces,
Pacific Ocean Area.

SGT. THOMAS A. BAKER—COMPANY A, ONE HUNDRED AND FIFTH INFANTRY—NEW YORK NATIONAL GUARD INFANTRY—POSTHUMOUS

Next to kin: Mrs. Constance Baker, widow, 145 Ferry St., Troy, N. Y.

For conspicuous gallantry and intrepidity at the risk of his life above and beyond the call of duty at Saipan, Marianas Islands, June 19 to July 7, 1944.

"When his entire company was held up by fire from automatic weapons and small arms fire from strongly fortified enemy positions that commanded the view of the company, Sergeant Baker voluntarily took a bazooka and dashed alone to within 100 yards of the enemy. Though heavy rifle- and machine-gun fire that was directed at him by the enemy, he knocked out the strong point, enabling his company to assault the ridge. Some days later while his company advanced across an open field flanked with obstructions and places of concealment for the enemy, Sergeant Baker again voluntarily took up a position in the rear to protect the company against surprise attack and came upon two heavily fortified enemy pockets manned by 2 officers and 10 enlisted men which had been bypassed. Without regard for such superior numbers, he unhesitatingly attacked and killed all of them. Five hundreds yards farther, he discovered six men of the enemy who had concealed themselves behind our lines and destroyed all of them. On July 7, 1944, the perimeter of which Sergeant Baker was a part was attacked from three sides by from 3,000 to 5,000 Japanese. During the early stages of this attack Sergeant Baker was seriously wounded but he insisted on remaining in the line and fired at the enemy at ranges sometimes as close as 5 yards until his ammunition ran out. Without ammunition and with his own weapon battered to uselessness from hand-to-hand combat, he was carried about 50 yards to the rear by a comrade, who was then himself wounded. At this point Sergeant Baker refused to be moved any farther stating that he preferred to be left to die rather than risk the lives of any more of his friends. A short time later, at his request, he was placed in a sitting position against a small tree. Another comrade withdrawing, offered assistance. Sergeant Baker refused, insisting that he be left alone and be given a soldier's pistol with its remaining eight rounds of ammunition. When last seen alive, Sergeant Baker was propped against a tree, pistol in hand, calmly facing the foe. Later Sergeant Baker's body was found in this same position, gun empty, with eight Japanese lying dead before him. His deeds were in keeping with the highest traditions of the United States Army.

Announced overseas March 14, 1945.

Lt. Gen. ROBERT C. RICHARDSON,
Commanding Army Forces,
Pacific Ocean Area.

Investigation of Raw Material Resources for Steel Production

EXTENSION OF REMARKS

OF

HON. CHARLES R. ROBERTSON

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 29, 1945

Mr. ROBERTSON of North Dakota. Mr. Speaker, perhaps no nation of the Allied group has contributed so greatly of its raw materials in this war as has the United States. This is particularly true on the question of steel. Such enormous inroads have been made of our stock piles of steel that we must now begin planning for the future welfare of ourselves by research and investigation in this field of steel and iron.

Fully appreciative of this fact, Budget estimates have been recommended to the Bureau of Mines. The House, in passing upon this legislation, has seen fit to materially reduce the Budget estimates.

With a full recognition of the importance of this situation in our national picture, I appeared before the Appropriations Committee of the United States Senate and made the following statement, dealing with the question of investigation of raw material resources for steel production.

Under leave to extend my remarks in the CONGRESSIONAL RECORD, I include my statement made before the Committee on Appropriations of the United States Senate on May 21, 1945:

Two important items have been decreased considerably by the House of Representatives below the Budget estimates, even though both of them already had been cut below the amounts appropriated for the current fiscal year. The work conducted under these two appropriations is of such vital importance to the national security that it would be more appropriate to increase them than to cut them.

I refer to "Investigation of raw material resources for steel production," on page 73 and "Investigation of deposits of critical and essential minerals in the United States and its possessions," on page 78. The former item was cut from the $3,250,000 that was appropriated last year to $1,000,000, a reduction of $2,250,000. The other item was cut from $2,900,000 to $2,000,000, a reduction of $900,000.

The Bureau of Mines has been conducting under these two appropriations a well integrated mineral resource development program. It has done an excellent job that is extremely important from the viewpoint of the national security. As the committee report so ably points out: "The Bureau of Mines has been engaged more actively in support of the war effort than any other agency in the department." It "has played a highly important role in locating new ore reserves so essential in the war as well as carrying on research and experimental work."

In spite of its excellent work, however, the mineral resources of the country have been seriously depleted during the war. We have been accustomed to consider this country to have rich, unlimited resources of all kinds of metals and minerals. Recently we have heard such of another philosophy, that we are fast becoming a have-not Nation in minerals; that we should import all our mineral raw materials.

Actually, the truth lies somewhere between the two viewpoints. It is true that the days of bonanzas are over, but it is not true that we shall soon be finished as a producer of metals and minerals. It is true that the ores we are now finding are lower grade and more difficult to treat than those we worked 50 years ago, but it is not true that we have lost our inventiveness nor our ability to make use of what we have.

It has been given as a reason for the reduction of these items that "the Bureau of Mines should begin to readjust itself for post-war operations." There can be no argument with that statement, but I cannot agree that our responsibility for national security will end with the European war nor with the Japanese war. It has been demonstrated during the wars that two of the most important factors in a nation's strength are its resources of minerals and its ability to use them effectively. If the United States is to be prepared for emergencies, it must know how to be largely self-sufficient when necessary.

The mineral production of the Nation is not something that can be turned on and off like a spigot. We cannot lock up all our minerals in the ground and save them for the future. If we attempt it, we shall not know how to use them when, in an emergency, we must depend upon them. Our smelters and refineries will know how to use only the higher grade, imported ores. If we are to be prepared for future emergencies, we must have a healthy, going mineral industry based upon our own resources.

A particular project which comes under the heading of the two items I mentioned above is one now being operated at the university of my State, located at Grand Forks, N. Dak. This pilot plant, primarily constructed for the gasification of lignite producing a high hydrogen gas for use in reducing ores from the iron ranges of Minnesota can be and will be of inestimable value in providing "know-how" for the future national security. I would like to point out at this time that the lignite coal in North Dakota has reserves estimated at more than 600,000,000,000 tons.

Perhaps it is true, as the promulgators of the have-not philosophy would have us believe, that private risk capital is now reluctant to take the long chances involved in financing the preliminary development of low-grade deposits and novel treatment processes. But is that sufficient reason for us to jeopardize the future security of the Nation? If that be true, it is all the more reason for the Bureau of Mines to continue its excellent work of mineral resource development.

Fortunately, we have in the Bureau of Mines an agency with an experienced, competent staff of engineers ready to find out how our domestic mineral resources can best be utilized for the national security. I should not like to believe that national security is to be of less vital interest to us, now that victory in Europe appears imminent, than it has been during the war. Rather than a cut-back in these two appropriations, an increase should be made.

I also wish to endorse the proposed 5-year exploratory and research program of the Bureau of Mines, which is being sponsored by the Subcommittee on Ship Design and Construction Materials which has as its chairman the Honorable FRANK W. BOYKIN. It is my belief that this proposed 5-year program will accomplish a great deal in providing for the future national security.

Addresses by Hon. Robert P. Patterson and Dr. Frank B. Jewett at the Eighth Annual American Design Awards Meeting

EXTENSION OF REMARKS
OF
HON. LEONARD W. HALL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 29, 1945

Mr. LEONARD W. HALL. Mr. Speaker, under the leave granted me to include in the RECORD, I am submitting addresses by the Honorable Robert P. Patterson, Under Secretary of War, and Dr. Frank B. Jewett, President of the National Academy of Sciences, in connection with the Eighth Annual American Design Awards Luncheon held at the Waldorf-Astoria Hotel in New York, on April 19, 1945, as follows:

ADDRESS OF HON. ROBERT P. PATTERSON, UNDER SECRETARY OF WAR

Seven days ago mankind lost a man of courage and of vision. America lost its President and Commander in Chief. The death of President Roosevelt is a tragedy which does not lend itself to the measure of the spoken word. For each of us that loss will be the object of inner reflection and quiet sorrow. For each of us that loss must effect a rededication to the remaining tasks of war and the establishment of a just and lasting peace. Hating war as he did, President Roosevelt recognized that its lessons, taught for a fee of human lives, of suffering, of sacrifice, and of incalculable expenditures in resources and energy, were lessons to be learned and remembered. The lessons learned and mastered with his counsel he would wish us to take as precepts for the future. It is well to make that our determined resolve.

We Americans have learned that the strength of our land and people, great as it is, is not alone sufficient to meet the challenge of modern warfare. The transition from peace to war is sudden and violent. The aggressor strikes swiftly, the pace of combat is furious, overnight the leisurely river of time becames a torrent. The Nation that cannot adjust to these swift demands is lost.

In the last 3 years we have learned that when a nation goes to war all its people must go to war. All its people, not merely its best and bravest young men. We have learned that survival depends upon a universal effort, a gathering together of all energies for a single purpose. We have learned that we need women no less than men. Management no less than labor, scientists no less than farmers. We have learned, in particular, that without the help of our best scientists and technicians our military engine will soon become little more than a museum piece. Science, the servant of peace, is the artisan in war, indispensable in either role.

Every aspect of our military effort reflects the skill and devotion of our scientific workers. They came willingly from the laboratories, workshops, and classrooms of industry and university and government to unite their effort in defense of their country. Laying aside their peacetime activities of increasing human knowledge and promoting human welfare, they took up the task of designing new weapons and equipment for our fighting men, of saving lives and healing the wounded, of safeguarding the welfare of our soldiers and sailors in every phase of their daily existence.

It is scarcely possible to list the examples of scientific ingenuity and inventiveness which have contributed to our military effort. When war came several of the raw materials most essential for production were cut off by our enemies. Where new sources were to be found our scientists found them; where substitutes were feasible our scientists made them; where rubber, drugs, plastics, new skills, new methods had to be created our scientists created them. So were achieved in the laboratories miracles and creation, duplicating in the space of months processes of nature that take hundreds of thousands of years.

In weapons and other military items scientific workers have given us inventions and developments which have radically altered the character of warfare. Electronics is one; jet propulsion another; new types of ammunition and rockets another. Never in history have armies gone into battle with vehicles in such quantity or of such diversity as those used by our men. Vehicles that can traverse every kind of terrain; vehicles that can carry troops where they are needed, care for the wounded, maintain an endless flow of weapons and supplies, batter down stone walls, move mountains of earth, build roads and airfields; vehicles that can swim, and run and fight; vehicles, in short, that can do almost everything a soldier can do except talk. Never before have the component parts of an army, widely separated, always on the move, been so closely knit together into a single organism by intricate machines and by networks of communication. Our men are better clothed, better fed, better housed, better cared for medically than we ever dared hope. These, all these, are the works of science.

In peace as in war science is a cooperative effort. Scientists are accustomed to work together, to share their knowledge, to contribute their effort to the solution of a common problem. But the mobilization of scientific talents for the national defense—a single problem in name only—entailed a prodigious effort. The conception was as massive as the achievement. For both, we are indebted to the leaders of science, the men and organizations we honor today.

Even before America entered the war President Roosevelt, unfailingly aware of the importance of science and scientific method, established the Office of Scientific Research and Development, an emergency agency designed to bring civilian scientists of the highest caliber into active participation on matters of military research. This civilian body, reporting directly to the President, was given power to support and initiate research on matters essential to the national defense. The program was supported by Congress with a grant of ample funds. Universities and research institutions of industry and Government were quickly mobilized by the Office of Scientific Research and Development in cooperation with the National Academy of Sciences and the National Research Council. Close working relationships of the highest importance were established with other civilian groups, such as the National Advisory Committee on Aeronautics.

The whole of the research machinery so created was linked up with the technical services and bureaus of the Army and Navy. This last achievement deserves special emphasis, because it is a tribute to the wisdom and organizing ability of the leaders of the Office of Scientific Research and Development and its cooperating groups, a tribute also to the entire body of scientific workers. The scientific advances that I have mentioned are the fruits of the working together of all scientists, regardless of organizational lines, in the laboratories, testing fields, and conference rooms. They are the finest proof of what freedom-loving men and women can achieve when all are pledged to a common cause. In the organization of research on a Nation-wide scale, in the execution of count-

less details of administration, in the successful establishment of a unified community of science, the leaders we honor today played a brilliant and tireless role. They have given us something that is at once a model and a foundation for cooperative scientific activities in the future, whether pointed toward national security or to the pursuits of peace. Despite the scale of their immediate duties, they have given thought to the establishment of a more permanent organization to carry on research and development programs for national security after the war is ended. Under the aegis of the National Academy of Sciences there has been created a research board for national security which will draw upon the support and counsel of the academy until Congress determines whether to establish an independent agency of Government for the advancement of science relative to the techniques of war. It is to be expected that the research board, with its distinguished civilian scientists and representatives of the Army and Navy, will build soundly on the foundations which have now been laid.

There is a final debt which we owe to science, its organizations, its leaders, its workers, a debt arising from their contribution to America's war effort, but continuing far beyond it. It is a debt which arises from the sweeping character of modern warfare. The responses of science to the terrible demands of war will in many ways be of lasting benefit. New developments in clothing, nutrition, transportation, aircraft, chemicals, plastics, metallurgy, electronics, and medicine will inure to the benefit of our people and the people of the entire world long after this bitter struggle is ended. These advances will contribute to our material welfare and to our economic stability by creating new products, new industries, and new jobs. Even in the ashes of war we may discern the promise of a brighter future.

It is a privilege to participate in the conferral of this award, a tribute alike to the scientists of America and to their leaders. In the fight for freedom science strikes its greatest blows and continues its honored traditions. It participates in the vindication of the life of decency and the life of reason.

ADDRESS OF DR. FRANK B. JEWETT, PRESIDENT, NATIONAL ACADEMY OF SCIENCES

Mr. Hoving and distinguished guests, as president of the National Academy of Sciences, I accept for it and through it for all American scientists the American design award for 1945 and the check which accompanies it and which is very tangible evidence of Lord & Taylor's appreciation of the services these men have rendered the Nation in this time of peril.

I can assure you that the Academy will expend this money for worthy purposes in the field of science. In line with your expressed hope, we will, so far as possible, administer it for the encouragement of research in those things which are deemed most likely to enhance the security of our country.

While the council of the Academy will make final determination of how the money can best be employed, the structure of the Academy and two of its operating agencies, the National Research Council and the National Science Fund, are such as to insure that any determination will be wisely carried out.

The scientists for whom we accept trusteeship of this award are many. They are both civilian and military. Many of them and much of what they have accomplished in these war years will never be generally known or acclaimed. It has been a labor of high patriotism freely given, performed anonymously, and mainly in surroundings which lack the glamor and appeal to human sympathy and emotion which surrounds the fighting front. But deprived of what they have contributed, our fighting forces would not have been able to accomplish what they have. In a very real sense scientists have been defenders of the Nation and, in addition, have reduced immeasurably the toll of human life and human suffering.

What they have shown themselves capable of doing cooperatively in war is a happy augury for the days of peace, not only for a more decent postwar world but likewise for a greater security of the Nation should it and its cherished way of life again be threatened.

We value the evidence of appreciation which the American design award conveys and more the confidence of us in the future which you, sir, have expressed in making it.

Letter of Elmer W. Hanak, of Kenosha, Wis.

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 29, 1945

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am submitting herewith copy of a letter addressed to the Honorable Henry A. Wallace, as Secretary of Commerce, by a friend and constituent.

Mr. Speaker, the subject matter of this lette: is to the point and clearly raises issues that must be met in the days ahead. If we are to have full employment, so-called in the postwar period, then it is imperative that sniping against businessmen cease. We must enter upon a new era of relations between capital and labor and only by an honest spirit of cooperation will our employment objectives be reached. Some progress has been made in this direction; however, not sufficient to meet the goals we have chosen. In spite of all the false propaganda that has been sponsored by New Deal bureaucrats this Nation still enjoys the highest standards of living in the world and this has been possible because of the courage, initiative, and foresight of men who have been willing to create business organizations in the United States.

Mr. Speaker, the letter I am submitting states more forcefully than I can the thoughts I have been attempting to convey:

KENOSHA, WIS., *May 18, 1945.*

Hon. HENRY A. WALLACE,
Secretary of Commerce, United States Department of Commerce, Washington, D. C.

DEAR SIR: I have carefully read, and with much interest, your article entitled "Planning for Freedom," appearing in the May issue of Reader's Digest.

It is easy for me to agree with you that Abraham Lincoln did much good for the world and belongs to the ages. I also agree with you that the Republican Party did much good for the American people. Many people throughout the world know and have known of the good work done by Herbert Hoover. All of this, of course, is not exactly a new discovery. History has written many pages since it recorded these facts.

It is encouraging to learn that you support the bill introduced by Senator TAFT, from Ohio, to aid and assist small business, even though the Senator "strongly fears your tendency toward humanitarian governmental dreams."

In your article there are some principles and policies cited that measure up to the highest ideals and purposes of the majority of the American people. I shall hereafter only deal with the subjects on which I would appreciate having more light.

You stated that the company you organized and served as president has plants in the States of Iowa, Illinois, Indiana, and Ohio; that you sell $4,000,000 worth of seed corn a year.

What would your opinion be if your company, in addition to the plants in the four States mentioned, had plants in, let's say, four more States—perhaps, Minnesota, Kansas, Nebraska, and Wyoming? Then if your products served the people of these eight States satisfactorily and fulfilled a required need, would you be opposed to establishing plants in Nevada, Maine, Alabama, and Alaska, so the people of those States would realize the benefits enjoyed by the people of the States already being served by your plants?

What would your opinion be if your firm, by expanding to the 8 other States specified, increased its sales to $12,000,000 and later on, if your company expanded further and had plants in 48 States, your sales increased to $48,000,000 annually? What if you served all the people of the world and increased your sales to a billion dollars a year?

What I want to know is—How far can one go in doing good by promoting trade and commerce before becoming damned as some sort of an evil creature?

When and how does one become a common man? When and how does one become something other than a common man?

In the various plants operated by your company, what happens to an individual—rich or poor, common man or otherwise—who is industrious and endeavors to do the most good for himself and for the most people?

What happens to an individual—rich or poor, common man or otherwise—who makes no effort to help himself or anybody else?

Why are some families—whom you term "eastern wage earners" who migrated into "being western independent property owners," who under the Homestead Act settled on 160 acres of land and after 5 years of work—perhaps, good old-fashioned hard work—could have the land (you say "free"—did they not have to work 5 years in order to possess the land?). Why are some of them owners of businesses selling $4,000,000 or more of their products annually, some of them good, self-reliant, and cooperative American farmers, merchants, or employees, and others totally irresponsible citizens, or the equivalent? Is it not all somehow related to freedom? Did not all the western property owners you refer to secure 160 acres of land for 5 years' work? Did the Homestead Act, approved by Lincoln, specify or guarantee that all settlers forever would only have or always have 160 acres of land? Or did each settler, in addition to the Homestead Act, have the additional privileges and freedom granted to all American citizens by the Constitution of the United States, which Lincoln also approved and labored under such great difficulties to keep inviolate?

In the so-called new plans or scheme of things, where do these fundamental principles, objectives and factors stand or rate: Individualism, intelligence, research, science, self-reliance, honesty, work, sacrifice, courage, common sense, intelligent thrift, patience, constructive cooperation, love, faith, liberty, human leadership?

WITH MALICE TOWARD NONE?

And what ratings do these elements carry: Fuehrers, dictators, fanatics, mythopoets, pied prophets, hatred, jealousy, waste, red tape, tinkering, the philosophy which tells people "Do not utilize your talents and

abilities—let somebody else do your thinking, chores and duties for you," insane totalitarianism?

WITH MALICE TOWARD SOME?

It is a big universe. It a big world. Why should we fear big sales, big production, big consumption, big men, big industries? All legitimate American industries and businesses—large or small—should be encouraged to grow, to make improvements and to better serve the people.

The American people deserve good leadership and, ultimately, always go out and secure it. We owe much to many American citizens and we owe much to American industry. Who established the first industrial research laboratory and developed many new and useful products? Who produced and transported goods in volume at low cost? What country has the highest standard of living for most of its citizens and the greatest hope and prospects for the future?

No one should disseminate too much nonsense to the gullible. It is not good for them or the world at large.

Above all, let's promote and practice sound American citizenship and forever strive for improvement. We need not be fanatically anti or pro anything. Let's just be men and good Americans.

Respectfully yours,

ELMER W. HANAK.

Protection of Workers

EXTENSION OF REMARKS

OF

HON. ALVIN F. WEICHEL

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Saturday, May 26, 1945

Mr. WEICHEL. Mr. Speaker, the name "reciprocal trade agreements" is a misnomer. It only works one way and that is against America, by authorizing reduction of protective tariff as much as 75 percent on low-paid labor goods coming into the United States.

American industry and labor prospered when America was protected against low-paid foreign labor.

Everyone knows that America pays the highest wages in the world. Yet there are those who want to reduce wages by inviting cheaply paid foreign-made goods to the United States by cutting protective tariff as much as 75 percent.

Such tariff reduction can only lower American wages.

The glass industry and its workers would have to again compete with 15-cent-per-hour wages of Czechoslovakia, while the average wage in the glass industry here in America is 80 cents per hour.

It not only cuts the hourly rate, but would cut the worker's time to only several days per week.

The workers of the United States are entitled to American wages and American standards of living, and must not be brought down to the foreign low-wage scale.

In the glass industry alone the cut in tariff on this bill would affect more than a million people, and it would hurt every worker if he is made to take less wages to meet low foreign pay envelopes.

I believe the American worker should be protected against foreign labor, and not be forced to compete for his job with cheaply paid foreign labor.

Overexcitement About Racial Prejudice

EXTENSION OF REMARKS

OF

HON. BUTLER B. HARE

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 29, 1945

Mr. HARE. Mr. Speaker, many political pressure groups, including groups interested in social development, mistake an expressed instinct to preserve racial integrity for racial prejudice, intolerance, or racial bigotry. Much criticism continues against the attitude of white people in the South toward the colored race. My observation is that much of the overzealous interest in overmagnifying the situation serves a perfect illustration of a situation referred to in Holy Writ as those who "have a zeal but not according to knowledge." The people of the South know they are not prejudiced against the colored race and know they are not intolerant, and they also know they are anxious to maintain their racial integrity and that most of the colored people are equally anxious to retain theirs. Simply because white people refuse to associate socially or fraternize with colored people is not because they are prejudiced or guilty of racial bigotry. A similar situation prevails in many of our religious groups, but they do not refer to it as religious prejudice.

Frequently we hear leaders in these groups proclaiming to high heaven about racial prejudice, but at the same time they fail or refuse to fraternize or join in with those who happen to have a different religious creed. They do not call that prejudice or bigotry. Yet they criticize the white people of the South because they insist upon having separate schools, separate churches, and labor standards that provide for separation or segregation of the races under certain conditions. Here they call it racial prejudice or racial bigotry, and say it violates every code of religious ethics. I could just as easily and with as much justification charge these critics with religious prejudice or religious bigotry, because they have separate churches, separate schools, and discriminate in employment against each other, which, in the last analysis, is simply prejudice or discrimination against another on account of creed instead of color. They are just as determined in maintaining their religious integrity as we are in maintaining our racial integrity, but they rise in holy protest if we charge them with being prejudiced, intolerant, or being guilty of religious bigotry. I do not charge them with religious bigotry or prejudice for I do not think they are prejudiced, even though there is a point beyond which neither will go to fraternize with the other. They maintain separate schools and seminaries. They have their separate churches. In fact, they have very little to do with each other in many respects, not because there is real prejudice, but because they are endeavoring to maintain the integrity of their faith or their creed. Nevertheless, their attitude is the same spirit that prevails among white people of the South toward the colored race. We are not prejudiced; we are simply anxious to maintain our racial and social integrity.

I know that some of the groups referred to criticize us for discriminating against the colored race in employment. We do to some extent and for the reasons I have given. Simply because we are endeavoring to maintain our racial integrity by practicing a degree of isolation these groups are endeavoring to stir up strife by alleging that it is all due to prejudice and racial bigotry when, in fact, these same trouble makers and critics are, as we have observed, guilty of the same offense, if it be an offense, when they undertake to establish and maintain their religious faith, religious creed, or religious integrity. I am making these observations to suggest that in all fairness and sincerity, without the spirit of criticism, it is probably time for such critics and fault finders to make an inventory of their own cherished virtues and adopt a policy or attitude that he who is without fault should cast the first stone. "Why beholdest thou the mote that is in thy brother's eye, but perceivest not the beam that is in thine own eye?"

Some are now emphasizing this racial prejudice or racial bigotry idea with the hope that the sentiment created may be reflected a little later when the proposed FEPC bill comes up for consideration in the Congress. It is not my purpose to discuss that matter at this time further than to suggest to some of the groups I have referred to that if the FEPC proposal should become a law some of their chickens may come home to roost, particularly when a person of another religious faith or creed presents himself or herself for employment.

Solomon, a man who had the reputation of being wiser than these critics, refers to ants as "little people." That is what he calls them. They are of different races or different colors, some being red, some brown, some black, and others white. They gather their meat in summer from the same field or the same source, but they do not cooperate or affiliate with each other. They preserve their identity and their tribal instincts. I do not know that they are prejudiced toward each other, but they do not fraternize or associate with each other. They do not visit each other, they do not tolerate social equality but, on the contrary, they work and strive to preserve their own identities, because God created them with different characteristics, gave them different missions to perform, and charged them with the responsibility of preserving their racial integrity. A similar purpose or design appears to have been in the mind of the Creator when the honey bee was created. They are of different colors, not on account of anything that man has done, but are the

unmistakable product of the hand of creation. They work in the same field, they gather honey from the same tree, sip nectar from the same leaf, and collect food from the same flower but in each case carry the products of their labor to their own storehouse. They do not cooperate or affiliate with others but persist in the preservation of their own separate tribes. There is no prejudice or intolerance toward each other, but there is a fighting instinct that enables them to preserve their tribal integrity.

I have not found anyone able to prove or to show conclusively the Creator did not have the same purpose in mind when He created man in different colors, with different instincts, different capacities, different purposes, and different missions, but created them with an instinct that would enable them to preserve their racial purity, and I have an idea these racial problems could be solved more easily and more nearly in accordance with Nature's law if the zeal of critics and would-be reformers were exercised in accordance with knowledge.

Returning Veterans and the Point System

EXTENSION OF REMARKS

OF

HON. HADWEN C. FULLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 28, 1945

Mr. FULLER. Mr. Speaker, during the next few months thousands of American veterans of World War II will be returning to their homes under the Army point system. I have received many inquiries about this program, and recently was interviewed on the air by Bob Evans, of C. B. S., Washington correspondent of radio station WFBL, Syracuse, N. Y., on this question. With the permission of the House, I will include this interview in my remarks, as follows:

Mr. EVANS. Congressman HAD FULLER, who represents Oneida and Oswego Counties, is our guest this evening, and Mr. FULLER is going to talk about returning veterans and the point system.

Congressman FULLER. Yes, Bob. I want to discuss some of the problems of the returning veteran. I don't mean his problems. I mean our problems, our duty toward him to see that he gets a square deal. But first, as is your custom, let's hear your 2 minutes of news in Washington this week, and then we'll go along to our discussion.

Mr. EVANS. All right, Had. This is the week to which the Army fixed 40 years as the age at which enlisted men may apply for discharge, a drop from the previous age of 42, and the Army also promised that when the military situation permits, a further reduction in age limit will be made. President Truman pinned a Congressional Medal of Honor on Technical Sgt. Jake Lindsey before a joint session of Congress, and the President also announced those awaited Cabinet changes. Changes which saw Attorney General Biddle resign to be replaced by Assistant Attorney General Tom Clark; Claude Wickard leaves Agriculture to be succeeded by Representative CLINTON ANDERSON of New Mexico, while Mr. Wickard was nominated to be head of the Rural Electrification Administration. And Frances Perkins ends more than 12 years as Secretary of Labor to make way for Judge Lewis B. Schwellenbach, of Spokane, a former member of the Senate. Judge Marvin Jones resigned as War Food Administrator to return to the Court of Claims. President Truman also disclosed that Harry Hopkins was on his way to Moscow on a special mission, a talk with Premier Stalin, and that Joseph Davies was bound for London to see Prime Minister Churchill for the President. Mr. Davies arrived there today. This is the week, too, in which the Army and Navy reported that Japanese long-range balloons have been making sporadic attacks on the western part of North America for the last several months. But, so far, the joint announcement said, there has been no damage to property. There's only about one chance in several million of anybody getting hurt, but to eliminate that one chance as much as possible, the warning was issued so that people might be on the lookout and not touch unfamiliar objects. Selective Service also announced a policy of indefinite deferments for men who have reached their thirtieth birthday and who are engaged in useful work. Useful work was defined as work that contributes to national health, safety, and interest. But the Army's need for younger men was again reemphasized. And this week President Truman and the FEA said there will be substantial reductions in Allied war production now that Germany has been defeated. Some of that substance became evident yesterday when the WPB gave automobile manufacturers a green light to make 200,000 cars for civilian consumption this year. And now Congressman HADWEN C. FULLER and our discussion on the returning veteran.

Congressman FULLER. Bob, we know, of course, that everybody in this country is concentrating with all his might on the punch which will knock out Japan; but, at the same time, it is unwise and unfair if we do not appreciate the fact that thousands of Americans who have fought on battlefields abroad are returning to their homes to pick up the threads of civilian life.

Mr. EVANS. The point is, Had, that they are returning right now. Many of us think that they are going to start coming home some time in the near but undefinable future. But the fact is, that boatloads are getting back as of today. Why, only yesterday some 7,000 landed in the port of New York alone.

Congressman FULLER. And that's why we've got to get busy right now. These men, who have fought in north Africa, Italy, France, Germany, yes, and in the Pacific area, are being released from the service under the so-called Army point system. They will appear among us briefly in their uniforms, with their gloriously won service stripes and campaign ribbons, and then, quickly, they will be back in civilian clothes.

Mr. EVANS. And thinking about getting back on the old job or a new one, ready to do their part in the war plants to back up their pals who still are slugging it out against the Japs.

Congressman FULLER. Right; and it is important that we do not forget what they have done. It is vital that they do not become lost in the shuffle, while the front pages and the radio news programs are still filled with the Pacific war. Let's keep our eyes on the returning serviceman. Let's see that he gets fair play.

Mr. EVANS. Well, Had, I think everybody wants the returning serviceman to get a square shake.

Congressman FULLER. Certainly; that is true for the great majority, Bob; but, unfortunately, it isn't true in every case, and this is the thing we must guard against. Here is an example: The Veterans' Administration tells of a veteran who paid $250 down on a farm, with the assumption that he would be granted a loan to purchase the farm. But the loan was turned down because the price of the farm was found to be excessively high. So the veteran lost his $250 in down payment when the owner refused to refund it to him because there was no clause in the option specifying it was contingent on the GI loan.

Mr. EVANS. Had, it seems incomprehensible to me that there are people like that. I know that sounds a little naive coming from an old newspaperman, but putting it on a practical basis a lot of people have made money out of this war, including the smart operators, so why can't they leave the returning serviceman alone?

Congressman FULLER. We have got to face it. Some people are going to try to take advantage of the veteran. And so, I'm appealing to Americans in my district to inform me speedily of instances where sharp and dishonest practices are injuring the veteran. I will see to it that these cases are properly dealt with insofar as the law provides. All you have to do is drop me a line here in Washington at the House of Representatives Office Building, and I'll see to it that an investigation is made promptly.

Mr. EVANS. I hope every Congressman does the same thing.

Congressman FULLER. They will, Bob, when they are told the facts. But to take up the matter of the Army point system for release of men with long service. This system was set up after a poll had been made among the soldiers themselves. More than 90 percent of the men interviewed said they thought the first to draw releases should be those who have been overseas longest and in combat longest and those with children. Thus, in expressing their views these soldiers upheld the finest traditions of fair play. They are all weary of war and eager to return to their homes, but they showed, as they have repeatedly, their unselfishness in regard to their comrades.

Mr. EVANS. They have. But at this point, Had, I want to tell you a little story I saw on the wires the other day about soldiers and points. It's true, too. The OPA down in Stamford, Conn., had a telephone call from a housewife. She said she wanted some points. And the OPA said, "Yes; what for?" And she replied, "My son writes me from the Pacific that he wants to come home, but he hasn't enough points. Will you please give me some so I can send them to him." And so the OPA man explained the difference between soldier's points and ration points, but when she hung up in disappointment they gathered that she still hadn't figured out the difference.

Congressman FULLER. I know, Bob, and that is why we have to emphasize that even if a man does have the 85 points necessary for release it is by no means certain that he will be released. Although this has all been explained before, I've had several letters on the subject, so I'll explain it again. The War Department announced that in cases where a man is considered important to the continuation of the war against Japan, that man will remain in the service regardless of his points, until he has been replaced by a qualified man. The exception applies particularly to men with special skills, and men in units which will be moved so swiftly into the Pacific area, that no time will be given for replacements.

Mr. EVANS. There's one other thing, however, Had. General Eisenhower has made it plain that no man who served both in Africa and in Europe, too, should go to the Pacific. The War Department has concurred in this.

Congressman FULLER. That's right, Bob. Now, in this brief talk it is impossible to go into the many details which involve the point system. However, in answer to the families and friends of servicemen who have written me about the point system, I will say this. I am sending you a copy of the

War Department demobilization plan. This answers every question that could be asked about the plan. I will also be glad to send it along to any of our listeners in upper New York State. All they need to do is write me here in Washington.

Mr. EVANS. I think we have time enough, Had, to go over the system in a few words.

Congressman FULLER. All right, Bob. In a few words, each man gets a point for each month of service since September 16, 1940. He also gets one point for each month served overseas since that date. He will get 5 points for each combat award and major campaign, and 12 points for each child under 18 years of age, up to 3 children.

Mr. EVANS. And then when all this adds up to 85 points or over, the man will be returned home. He'll be released from the Army unless his skill is such that it is vitally needed in the Pacific.

Congressman FULLER. And that's the system in a nutshell. I know that parents and wives with sons and husbands in the service are wondering how this point system is going to work out. Well, the War Department assures me that all but 2 percent of the men to be released will be men who have served overseas. Of course, we will see how this picture is working out first hand, when demobilization is in full swing.

Mr. EVANS. One thing more, Had. The War Department has not fixed the 85 points as an arbitrary minimum figure. Once the Army knows the score, knows how many servicemen are eligible for discharge under this rate, there is a strong possibility that it will be lowered. That men with even fewer points than 85 will start coming home to stay.

Congressmen FULLER. That's correct, Bob. And now in conclusion I just want to say this. During the war I have edited a news letter which has been sent to several hundred boys and girls in the service who come from my home community of Parish. Since World War I, I have been active in American Legion affairs, and have served as county commander and in other capacities. There is no problem closer to my heart than that of the veteran, and during my service in Congress my voice and my vote will be dedicated to his welfare, which, of course, is the welfare of the American people as a whole.

Mr. EVANS. Thank you, HADWEN C. FULLER.

Postwar Program of Alabama Bankers Association

EXTENSION OF REMARKS

OF

HON. GEORGE W. ANDREWS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 29, 1945

Mr. ANDREWS of Alabama. Mr. Speaker, under leave to extend my remarks in the RECORD, I take this opportunity to set forth the address delivered by Mr. A. B. Hope, of Notasulga, Ala., upon his elevation to the presidency of the Alabama Bankers Association. Mr. Hope's address, I think, details well the plans and program of the Alabama Bankers Association to work with Alabama farmers and returning war veterans to achieve a bright postwar standard of living in Alabama. Mr. Hope's address:

Being elevated to the highest office of our association is a recognition and honor of which anyone should be proud. Certainly I do appreciate it sincerely and only trust I may merit the praise of you and of all my coworkers as has been true of my predecessors.

I am sorry that Federal restrictions made it necessary to streamline the convention into a mere business session, or a meeting limited practically to the executive council. Remarks by the retiring president, Mr. Gordon Palmer, were so appropriate, so timely, and so brimfull of sound banking information, advice, and inspiration that every member of the association should have the benefit of it. Furthermore, it would have been a treat to the association for Gordon to preside over its large convention. Among other accomplishments during his administration Gordon referred to having won the war with Germany. Now he will at least expect me to whip Japan. In passing, he stated that there is hardly anything quite so certain and so inevitable as change itself.

In the changes that come, banking, and the things that influence the public with reference to it, are by no means exceptions. This is even more true during emergencies caused by war.

PUBLIC RELATIONS—GI LOANS—WAR-BOND DRIVES

In every bankers' meeting I have attended since the passage of the GI bill of rights, it has provoked serious discussion. It has almost always been the consensus of opinion expressed that the provisions of the act are so generally misunderstood by the veterans themselves until it is often difficult to make them understand that it is not a bonus nor a gift of any kind. Therefore, banks are being cautioned against any part of indifference upon their own part and further urged to give the veteran every consideration with the hope of being able to meet any and all of his reasonable expectations in business. And, by all means, to give the veteran a sympathetic hearing and the full benefit of information he should have and through which he should benefit greatly by having.

It has been pointed out in a recent discussion that successful administration of GI loans by banks is a major postwar problem, much more serious than at present. It involves public relations fundamentally. Potentially 16,000,000 veterans will influence four times that many persons—mostly bank customers and voters. So it might be added that we cannot too strongly caution against the pitfalls of failure to cooperate. Apparently it is recognized by those giving this most study that banks have more perils to dread from misunderstandings, misinformation, and lack of manifestation of a sincere desire to assist than they can hope to have benefits from a standpoint of direct, profitable patronage. As a matter of fact, most discussions conclude with the assumption that, aside from the value in public relations, this will cost banks much more than they can hope to get out of it.

Alabama, it is claimed, has established unique leadership records in war loans up to date. It has the distinction of having raised its full quota in every county in every drive. This has been made possible largely through the tireless effort of the banks of the State—even though our good bankers (meaning all so far as we know) do not seek publicity and credit for this excellent service. The urge is that we "keep on keeping on" in this and kindred duties toward helping the war effort.

CLOSE COOPERATION WITH AGRICULTURAL INTERESTS—CERTIFICATES OF AWARD

We have a very strong, capable, and conscientious agricultural committee, which is but typical of the committees serving in this capacity for years in the past. Perhaps this committee is one of if not the very most important single committee serving the association. It has more contacts and more potential avenues for real service in our State, which is mainly agricultural, than any other arm of the association. The group chairmen are urged to take active leadership in all matters pertinent to the welfare of the banks. The agricultural committee will have the assistance of the group chairmen and also have the county key bankers throughout the State. All are especially urged to give the agricultural committee fullest cooperation in carrying forward the very excellent work in cooperation with the soil conservation department and other agencies as regards the project of extending certificates of award to farmers doing outstanding work in conservation—especially conservation of the soil. This project has been under way for more than a year and has the approval and encouragement of the agencies and departments (State and Federal) most vitally interested in agriculture and conservation.

SERVICE THROUGH SECRETARY'S OFFICE

We acknowledge gratitude to Roland Adams for his alertness to the needs of our members—a tireless worker and an efficient officer. Through his excellent service and the enthusiastic, conscientious cooperation of group chairmen, committees, and key bankers, we ought to continue to make distinct progress this year. I pledge you my best effort toward making this possible. I thank you.

Ellison DuRant Smith

MEMORIAL ADDRESS

OF

HON. BUTLER B. HARE

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 23, 1945

On the life, character, and public service of Hon. ELLISON DURANT SMITH, late a Senator from the State of South Carolina

Mr. HARE. Mr. Speaker, no people become great and remain great who fail to honor their heroes and pay tribute to their leaders. It is appropriate, therefore, that the Congress has set aside and dedicated this day when we may pay appropriate tribute to the life and character of our deceased colleagues.

The distinction of being a United States Senator is second only to that of being President of the United States, and to have the distinction of having been elected to serve six consecutive terms and to have the further distinction of having served in the Senate longer than any other Member is a coveted honor and that distinction goes today to the Honorable ELLISON D. SMITH, of South Carolina, who died November 17, 1944, lacking only 1 month, 16 days, of completing a continuous service of 36 years.

There may be many who disagree with the philosophy of a political leader, and he may have many pronounced political enemies, but when faced with the fact that, regardless of the political party to which he belongs or the State from which he comes, any man chosen by the people and living to serve longer than any other as a Member of the United States Senate is entitled to be classed as one of the Nation's great leaders and a man of many coveted virtues and outstanding qualities.

Senator SMITH came from a family strongly dedicated to fundamentals found only in American life; he was brought up in a home consecrated to the Christian religion emphasized by that great leader and founder of the Metho-

dist Church, John Wesley; his father was a minister; and his brother, Dr. Coke Smith, was honored as a bishop of the Methodist Church for many years; he was a graduate of Wofford College, one of the oldest and most outstanding liberal arts colleges of South Carolina, he was a student of history, literature, and affairs of State; he had pronounced convictions as to the purposes and functions of our National and State Governments and never permitted himself to waver in the discharge of his obligations and responsibilities to both.

It was my privilege and pleasure to know Senator SMITH personally for 40 years and to enjoy the associations with him here during my 14 years of service in the Congress. He was always approachable, cooperative, and took pleasure in counseling with Members of Congress from his home State.

I recall Senator SMITH's first campaign in the Democratic primary for nomination to the Senate. He was opposed by six of the most able debaters of his State. Under the rules of the State Democratic executive committee they were required to speak at least once in each county of the State in joint debate at a time and place fixed by the committee. Mr. SMITH had been a member of the State legislature and was in his prime, both physically and otherwise. Although his opponents were all eloquent and experienced debaters he proved to be a fluent, eloquent, and convincing orator and there is little doubt but that his masterful oratory determined the result of the election in his favor. This was in 1908. He was again elected in 1914, 1920, 1926, 1932, and 1938, but he was never elected without opposition. His service in the Senate is a matter of record, which I could not undertake to present in this short address.

Senator SMITH owned and operated one of the largest and best farms in South Carolina, and it was here he devoted his entire life when not engaged in the discharge of his official duties. At home and abroad he was looked upon as the farmer's friend and was probably better advised of the economic problems incident to agriculture than any other man in the Senate at the time of his death, and his memory will long be cherished by his many farmer friends throughout the State and Nation.

His unquestioned loyalty and devotion to the institutions of his country will be a lesson to the youth of the State he loved so dearly, and serve as an inspiration to them and those who may follow him for years to come. His reverence and love for the Constitution of the United States may be likened to the loyalty and devotion of a dutiful child to its mother, which devotion increased with maturing years, until a few years preceding his death he became greatly alarmed as to the possibility of its defeat. Like Calhoun, the guiding star of his political life, he feared the interpreters of this great instrument may exert a greater influence in determining the institutions and the future life of the American people than the framers of the instrument itself.

America—Something to Ponder

EXTENSION OF REMARKS

OF

HON. WALT HORAN

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 29, 1945

Mr. HORAN. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I am pleased to include a column by Dick Neuberger entitled "This Is America" from this morning's Washington Post.

Here in a land nearly 18,000 miles in boundary circumference and 3,000 miles from sea to sea we have achieved a unity of purpose that somehow has brought peace and progress and, yes, brotherhood.

As this scarred old world now searches for the basis for some peaceful unification of the men and women of the world this column is well worth reading and pondering over:

THIS IS AMERICA—A COMMUNICATION

In the bright sunlit morning the train rolled down the Feather River Canyon and stopped on a siding near a grove of Ponderosa pines. I walked up the track with the tall delegate from Yugoslavia. He inhaled the mountain air and looked off toward the distant peaks.

"America is the so great country, captain," he said. "We travel now, day after day, night after night, and still the land is America. We have never seen anything like this before. In Europe we would have crossed many nations, many boundaries, many customs, and, oh, so many passports. Now we realize what America is. Now when we say 'America' we shall know exactly what we mean. We shall mean this so great country across which a train can go for so many days and nights."

Some people think that the late President Roosevelt selected San Francisco as the scene of the United Nations Conference in the deliberate hope that the delegates would see the United States—not merely New York or Washington or San Francisco itself, but the whole United States—spread out in a 3,000-mile panorama from coast to coast.

This wish would have been in keeping with Mr. Roosevelt's ideas. Once a visitor asked him how to know and understand the United States. Go out to the Pacific seaboard by the southern route, the President said. Then return by the northern route. See the mountains and plains and forests and rivers and plateaus and valleys, he advised. Then, he concluded, the wayfarer would have some notion of what America was all about.

In conformance with this counsel of Mr. Roosevelt, the delegates to the United Nations Conference are seeing America as surely as if the late President himself were on hand to plan their itineraries. Don Watson, in charge of transportation for the State Department, selected routes which would afford a bona fide glimpse of the continent.

The trains bringing the foreign diplomats and their staffs spanned the Nation by numerous lines. Some of the visitors experienced the thrill of the Royal George. Others saw the Wyoming Rockies. Still others rolled across Arizona's mesas and tablelands. All of them pressed their faces against the windows, as the varying landscape twisted and passed. "My country has no deeper canyon than that," said a Norwegian secretary, as the chasm of the Green River in Utah yawned in the middle distance.

The delegates did not glimpse the heterogeneous American scene—prairie by day, snowy mountains that night—without knowing something about it. On each special train the Library of Congress placed 125 selected volumes. These included the WPA Guides to each State crossed by that particular train. They also included such informal geographic books as Gertrude Atherton's Golden Gate County, Lanks' Highway to Alaska, and Vestal's The Missouri. I saw a Belgian delegate with a WPA map in his lap, following the progress of the train along Lake Utah and into the outskirts of Salt Lake City.

The multiplicity and magnitude of America's geographic features astounded the delegates. Lord Halifax said he never ceased to be amazed by the vast expanse of the Great Plains. A Frenchman, awed by the Rockies, watched in wonder as the train struggled with a second range, the Wasatch. And when the Sierra Nevada, faint and far on the horizon, came into view, he gasped.

Even a visitor like Molotov, so busy that all long trips had to be negotiated by plane, has glimpsed something of the diversity and resources of this Nation. He motored to the Kaiser shipyards on a Saturday afternoon and saw steel cargo ships being built in assembly-line fashion. And on the following Sunday morning, walking along a path in the cathedral-like silence of the John Muir redwoods, I came upon Molotov and his bodyguards, gazing up in wonder at the needled giants towering more than 300 feet into the California sky.

All the foreigners have an intense curiosity about America in general and the far West in particular. A story appeared in a local newspaper about the Shasta Dam reclamation project in the nearby Central Valley. Immediately delegates from four nations with irrigation problems, India and China and Australia and Saudi-Arabia, made arrangements to visit the great dam themselves. Marshal Smuts, heroic warrior-statesman of the Union of South Africa, read of Yosemite's plumed waterfalls and then rose at 4 in the morning to drive the 250 miles to the famous Granite Valley.

Many of the delegates have been amazed by the extent of America's natural resources.

"All of us have read about the great American continent," said a Frenchman, "yet this reading then seemed mere abstractions. Now we see these things for ourselves."

Franklin D. Roosevelt constantly urged all visitors from abroad to see the sundown side of the continent. One is sure that our late President would approve heartily could he see Molotov strolling in Muir Woods, Marshal Smuts gazing up at Nevada Falls, a Yugoslav examining the forests of the Feather River. Norwegians exclaiming at the beauties of the California seacoast, and Chinese admirals watching Liberty ships putting out through the Golden Gate.

RICHARD L. NEUBERGER.

SAN FRANCISCO, *May 24.*

Secretary Stettinius' Speech on Progress Made at San Francisco Conference

EXTENSION OF REMARKS

OF

HON. LUTHER A. JOHNSON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 30, 1945

Mr. LUTHER A. JOHNSON. Mr. Speaker, the eyes of the Nation and of the world have been upon the United Nations Conference on International Organization which has been in session at

San Francisco for more than 5 weeks, and which is expected to adjourn on June 6.

The Honorable Edward R. Stettinius, Jr., Secretary of State and chairman of the United States delegation to the Conference, made a speech last Monday evening with reference to achievements at the Conference thus far, and outlining what was hoped to be done before adjournment, and it is an able report of the proceedings of this important Conference, and under leave granted same is submitted herewith.

The United Nations Conference on international organization is now in its fifth week. I feel that the time has come for me, as Secretary of State and chairman of the United States delegation, to report to the American people and to our armed forces throughout the world on the progress we have made here in San Francisco.

You will recall that last fall, at Dumbarton Oaks, conversations between the United States, Great Britain, the Soviet Union, and China resulted in proposals for an international organization to maintain peace, which later were supplemented at the Crimea Conference.

The Dumbarton Oaks proposals were submitted to all the United Nations, and their representatives were invited to come to San Francisco to prepare a charter based upon them.

When this charter—or constitution—is completed, it will be submitted for ratification to the member nations. Once the required number of member nations have ratified the charter, the world organization will come into being.

Gathered here in San Francisco are delegates from almost 50 nations—men and women of different races and religions, accustomed to different political forms, influenced by different geographical environments. Yet we have come together with the same great purpose in view—to form a permanent organization to preserve peace throughout the world.

After years of war, the sound of open debate in a world assembly on the issues of peace has an unaccustomed ring. But we are working for a peace which must be democratic as well as strong, and it can be developed only in the give and take of frank and vigorous discussion.

After 1 month of work, I can now report to you my confidence that we will succeed in writing a strong and democratic charter solidly based on the Dumbarton Oaks proposals with which we started.

It will be strong in the power to prevent aggression and to develop the economic and social conditions which will reduce the causes of war.

It will be democratic in the encouragement which it will give to nations and to peoples everywhere to extend the application of equal justice in the world and to promote and protect human rights and freedoms.

At the very outset of our work, we were confronted with a number of urgent problems. There was the question of seating the Byelo Russian and Ukrainian Republics and the Argentine and the further problem of how Poland could be represented. These questions involved important issues affecting both the Conference and United States foreign policy.

At the Crimea Conference the Soviet Union directed our attention to the grievous injuries sustained by the Byelo Russian and Ukrainian peoples in their long and gallant struggle against the common enemy, and requested that these two republics be given membership in the proposed world organization. President Roosevelt and Prime Minister Churchill agreed to support this request. The United States delegation fulfilled this pledge in the opening days of the Conference.

The Conference also voted to admit Argentina. I wish to make clear that the vote of the United States in favor of seating Argentina did not constitute a blanket endorsement of the policies of the Argentine Government. On the contrary, with many of these policies, both the Government and the people of the United States have no sympathy.

We have in no way abandoned the principles for which this country has always stood. We steadfastly adhere to those principles of morality and decency which were the basis of our foreign policy under the leadership of Franklin Roosevelt and Cordell Hull. During the war the paramount aim of our policy in this hemisphere has been to eliminate Axis penetration and unite all the Americas in the struggle against the evil forces which have attempted to destroy liberty and free institutions throughout the world.

We recognize that the people of Argentina have been traditionally democratic in their ideals and good friends of the people of the United States. The Mexico City Conference last March opened the way for Argentina to return to her traditional policies and restore the unity of the Americas.

After the conference Argentina took the first steps in this direction. She declared war on the Axis and committed herself to the democratic and peaceful policies of cooperation agreed upon at Mexico City by signing the final act of that conference. As a further step in this process the American republics felt that Argentina should be admitted to the San Francisco Conference.

By voting to admit Argentina in these circumstances, the United States, however, has by no means changed its position that Argentina is expected to carry out effectively all of her commitments under the Mexico City declaration. On the contrary, we consider that her admission to the San Francisco Conference increases her obligation to do so. We expect the Argentine Nation to see that this obligation is fulfilled.

The Soviet Union requested that Poland be represented at the conference by the provisional government in Warsaw, which is not recognized by a majority of the United Nations, including the United States.

It is a matter of deep regret to the United States that the people of Poland, who have suffered so terribly and fought so bravely during the war, are not represented in our deliberations. Poland is a United Nation and should be here. But there are two Polish Governments—the London Government and the Warsaw Provisional Government.

Last February it was agreed at Yalta that the provisional government now functioning in Warsaw should be reorganized on a broader democratic basis with the inclusion of democratic leaders from Poland itself and from Poles abroad. This new government, it was agreed, should then be called the Polish Provisional Government of National Unity. The Yalta agreement on this matter has not yet been carried out. The United States took the position that Poland could be represented only by a Polish Government formed in accordance with that agreement, and the Warsaw Provisional Government was not admitted to the conference.

The negotiations for reorganization of the Warsaw Provisional Government have been disappointing. It is the intention of the United States to exert all its influence, in collaboration with the Soviet Union and Great Britain, toward fulfillment of the Yalta agreement on Poland.

I wish to make it absolutely clear that the primary objective of the United States foreign policy is to continue and strengthen in the period of peace that wartime solidarity which has made possible the defeat of Germany. This is as true of our relations with the Soviet Union as it is of our relations with Great Britain, China, and France. There have been differences between us. There will continue to be differences. But the effectiveness of our wartime collaborations has demonstrated that our differences can be adjusted.

It is our purpose to seek constantly to broaden the scope of our agreement and to reach common understanding on those matters where it does not yet exist. We have the right to expect the same spirit and the same approach on the part of our great allies.

Let me give you an example of our collaboration at the San Francisco Conference.

When Mr. Molotov came to the United States, he planned to stay only a few days because of the heavy burden of his responsibilities in Moscow. He stayed here for over 2 weeks.

The reason Mr. Molotov stayed longer than he had planned was this. The United States delegation wanted to make some important changes and additions to the Dumbarton Oaks proposals at San Francisco. The changes we had in mind reflected not only the views of the United States delegation but those which had been expressed before the Conference by other United Nations, particularly some of the smaller powers. We felt that if we were able to submit these as the unanimously agreed amendments of the four sponsoring nations, not just as our own, they would have an important, indeed a decisive, effect on the whole work of the Conference and the speed with which agreement on a charter could be reached.

So Mr. Molotov stayed on and worked with Mr. Eden, Dr. Soong, and myself on the United States proposals. They had important contributions of their own to make. I regard it as a great achievement and a good omen for the future that agreement was reached on the exact text of these important amendments by all four nations within a very few days.

When Mr. Molotov came to me to tell me that his government agreed with us on the text of the last two remaining amendments he expressed again the importance which his government attached to the successful establishment of the world organization and his satisfaction with the results of our collaboration toward making the charter of the organization better and stronger than it otherwise would have been. It was only after this agreement had been made complete that he said he felt it was appropriate for him to return to the important work which was awaiting him in Moscow.

The unanimity of the sponsoring powers on these amendments has had the decisive effect we expected it would have on the work of the Conference. They have met with general approval among other nations at the Conference, and have greatly eased and speeded the task of the working committees.

After submission of the joint amendments of the four sponsoring powers, together with the amendments submitted by other United Nations, the Conference entered its working committee stage.

One of the first committee decisions was formerly to extend to France that fifth permanent seat on the Security Council which had been contemplated for her at Dumbarton Oaks. I am happy to say that France now sits in the Conference committee of five with four sponsoring nations. The United States welcomes this important step in the return of France to her rightful place in world affairs.

During the past fortnight, general agreement has been reached on a number of other important points. Taken together with changes previously agreed upon, these form the basis of proposals which are now being drafted, section by section, into the charter.

I wish to point out what I consider to be the most significant of these changes.

The Security Council would be given additional powers to settle a dispute in its early stages and to stop preparations for war long before war actually begins.

The relationship to the world organization of regional security arrangements like that contemplated in the Act of Chapultepec for the Western Hemisphere has been clarified by another provision.

The United States shared in the desire of the other American Republics to maintain the inter-American system within the framework of the world organization. We also agreed that the world organization must be supreme in matters of enforcement. World peace is indivisible. The world organization must therefore have the right and the power to prevent or suppress aggression anywhere and at any time. This conviction was embodied in the proposal put forward.

At the same time that proposal strengthens the role of regional organizations in peaceful settlement of disputes. It reemphasizes the inherent right of a self-defense and extends that right to a group of nations whenever an armed attack against one of them can rightfully be regarded as an attack against all of them until the world organization has taken effective action to restore peace.

The inter-American system is thus brought within the larger framework of the world organization. The United States intends to negotiate in the near future a treaty with its American neighbors which will put the Act of Chapultepec on a permanent basis in harmony with the world charter.

The steps by which a final solution of this problem was achieved offer a good example of the advantages of effective collaboration. The original United States proposal was partly based on separate amendments previously proposed by France and Australia. It was submitted simultaneously to the five large powers and to the other American Republics. Mr. Eden and his British colleagues offered opinions which strengthened and clarified its meaning. A later suggestion from the Soviet Union resulted in a further improvement. Because many nations collaborated on this problem we have emerged with a far better solution than any nation produced alone.

Another amendment reaffirms that the responsibility for standing guard over the enemy powers shall be carried by the nations which defeated them. But for the first time it specifically opens the way for the world organization itself to assume this responsibility later on. In the meantime the automatic operation of treaties directed against a renewal of aggression by enemy states is permitted.

This is in accord with the aims of the United States toward Germany, as affirmed in the Crimea declaration. It is our intention to continue collaboration to the fullest extent with our allies in order to achieve, first, the utter destruction of German militarism and nazism, and second, the absolute assurance that Germany shall never again be able to threaten its neighbors or disturb the peace of the world.

Our policy toward Japan is directed to the same end. Before leaving the discussion of the Security Council I want to refer to the question of voting procedure in the Council. The Conference has not yet taken final action on this matter. The Crimea proposals require that the five permanent members must agree to any enforcement action. There would be a similar requirement on action for the peaceful settlement of disputes, except that a party to a dispute must refrain from voting. This requirement, however, does not apply to the right of any nation to bring a dispute before the Council and to full discussion of the merits of its case. It applies only when the Council makes a decision involving positive action.

This provision has been criticized both here and elsewhere as giving a privileged position to the large nations.

This criticism is not justified. It is not a question of privilege, but of using the present distribution of military and industrial power in the world for the maintenance of peace.

The Security Council is the enforcement agency of the world organization, and hence must be the repository of its power to prevent aggression.

The five permanent members of the Security Council have at their disposal an overwhelming proportion of the men and material necessary to enforce peace. Their permanent membership in the Security Council therefore becomes essential, for without their strength and their unanimous will to peace, the Council would be helpless to enforce its decisions. And it must be remembered that any action taken by the Council toward settling a dispute may ultimately lead to the necessity for enforcement action if peaceful methods fail.

But, it is objected, what happens if one of the five permanent members embarks upon a course of aggression and refuses to recognize the machinery of the world organization? How can the aggressor be restrained if his own contrary vote prevents the Council from invoking force against him? In such an event, the answer is simple. Another world war has come, vote or no vote, and the world organization has failed.

But I think we should not be too deeply concerned with the kind of question Franklin Roosevelt always characterized as "iffy." The five great nations have come here with the other United Nations to form an organization for peace—not to conspire for war.

Twice in the last 30 years they have fought side by side as allies—not as enemies. Their intentions are honorable and their necessities for peace are fully as urgent as those of any other nation, large or small. To assume that they seek to violate pledges rather than to enforce them is to oppose the existence of any organization for peace, and to resign the world to an endless succession of wars.

Another important matter before the conference has been the establishment of a trusteeship system under which dependent areas may be placed by later agreements.

This subject was not discussed during the Dumbarton Oaks conversations. The United States Government felt that it was of the utmost importance that such a system be provided for in the charter. We therefore took the initiative in discussions to that effect with the other sponsoring governments even before the conference began.

I think I can now say with assurance that, as a result of this American initiative, the charter will provide for an effective trusteeship system. It will not be all that we desire but it will offer real opportunity for progress to de endent peoples.

In all the discussions on trusteeship the United States has continued to stand fast for provisions which will fully safeguard the control by the United States—within the trusteeship system, but on conditions satisfactory to us—of those strategic points in the Pacific which are necessary for the defense of the United States and for world security.

And we have stood with equal firmness for a trusteeship system that will foster progress toward higher standards of living and the realization of human rights and freedoms for dependent peoples, including the right to independence or another form of self-government such as federation—whichever the people of the area may choose—when they are prepared and able to assume the responsibilities of national freedom as well as to enjoy its rights.

The United States has demonstrated this long standing policy in the Philippines. It looks forward to the time when many other now dependent peoples may achieve the same goal.

I regard the provisions which are being made in the Charter for the advancement of dependent peoples, and for the promotion of human rights and freedoms, as of the greatest importance. Together with measures to strengthen the Economic and Social Council, they will help to bring the world organization closer to the needs of the peoples of the world. They will provide the means by which nations can work more effectively together for that economic and social development without which lasting peace is impossible.

We must realize that our most important task in the next decade is not likely to be the enforcement of peace, but to prepare the economic and social basis for peace. If the work of the economic and social council is well done, we will have gone far toward eliminating in advance the causes of another World War a generation hence.

This is the objective of the second group of new proposals put forward at San Francisco.

These new proposals state clearly that justice and international law, together with equal rights and self-determination of peoples, shall be guiding principles of the new world organization. They embody a complete statute of a new permanent court of international justice.

They stipulate that international cooperation in the protection and promotion of individual human rights and freedoms for all, without distinction as to race, language, religion, or sex as a fundamental purpose of the world organization.

They give the assembly of the world organization sweeping power to recommend measures for the adjustment of any situation which is likely to impair the general welfare—and this includes violations of the purposes and principles of the organization.

They provide for a commission on human rights which will have the powe to work out an international bill of rights which can be accepted by member nations as part of their fundamental law, just as we in the United States have a Bill of Rights in our Constitution.

The "four freedoms" stated by our great President Franklin D. Roosevelt—freedom of speech, freedom of religion, freedom from want, and freedom from fear—are, from the point of view of the United States, the fundamental freedoms which encompass all other rights and freedoms.

Freedom of speech, for example, encompasses freedom of the press, freedom of information, and freedom of communications.

Freedom from want encompasses the right to work, the right to social security, and the right to opportunity for advancement.

Freedom from fear encompasses the protection from persecution and discrimination of all men and women, and the protection of their equal right to enjoy all other fundamental rights and freedoms.

The United States Government will work actively and tirelessly, both for its own people, and—through the international organization—for peoples generally, toward promoting respect for and observance of these rights and freedoms.

The charter will also be strengthened by naming the economic and social council along with the general assembly and the security council as principal organs of the world organization.

We have provided that the views of nongovernmental international organizations in agriculture, labor, business, education, and related fields can be made available to the council.

We have conferred upon the Economic and Social Council the power to promote cultural and educational cooperation among the nations and made more specific its function in coordinating the activities of specialized intergovernmental organizations dealing

with labor, agriculture, finance, trade, and other matters—all of them having as their ultimate objective higher living standards and full employment.

I must emphasize, however, that the Economic and Social Council is essentially a coordinating and recommendatory agency. It cannot interfere with the domestic affairs of any member nation. Its hope for success lies in the cooperation of the member nations—in their willingness to participate effectively in those organizations which will be affiliated with it.

There are, I am sorry to say, people who seem to think that our American economy can function in a vacuum, completely without relation to other national economies; and that by some miracle we can hope to achieve prosperity for ourselves without taking into account the economic condition of our neighbors.

After the defeat of Japan, millions of young men and women will return home to take their proper places in agriculture and in our enormously expanded productive system. We shall not be able to provide jobs for them if we have not helped, through the Economic and Social Council, to create those world-wide conditions under which other nations are able to purchase much greater quantities of our goods than ever before, and we are able to buy more from them.

We must choose between a constantly expanding economy throughout the world, or mass unemployment in our own country. Full participation in the economic and social council provides us with our greatest opportunity to break, once and for all, the vicious circle of isolationism, depression, and war.

I look upon this charter as, in the deepest sense, a compact between peoples, reached through their governments. Certainly the American delegation's part in the work of this Conference has been carried out in the closest possible relationship with the American people. We have been in constant touch with the consultants representing 42 nongovernmental organizations widely representative of American life. Through their suggestions they have made valuable contributions to the charter. I hope and believe that we can build upon this experience in the future.

I want also to say a few words about the American delegation.

This delegation has carried out all its work in a splendid spirit of nonpartisan cooperation. Each member has borne, with high distinction, a full share of the grave responsibility which is upon us all. Each has been guided only by the higher interests of our country as an inseparable part of the world community.

The delegation includes four outstanding Members of Congress, two from each party, Senator TOM CONNALLY, of Texas; Senator ARTHUR VANDENBERG, of Michigan; Representative SOL BLOOM, of New York, and Representative CHARLES EATON, of New Jersey. The delegation also includes two representatives of the public, Dean Virginia Gildersleeve and Commander Harold Stassen, who is on leave from active duty in the Navy.

Our senior delegate, Cordell Hull, has unfortunately been unable to attend the Conference. But we have been in daily communication with him and have leaned heavily upon his wise counsel and guidance. It was Cordell Hull's achievement at Moscow in 1943 which made this Conference possible.

The charter which is written at this Conference must be ratified by a two-thirds vote of the Senate, and must be wholeheartedly approved by the American people if the world organization is to succeed. The important part played by our widely representative and nonpartisan American delegation should assure the kind of charter that will win this approval. We have carried one step further here the policy of close cooperation with Congress which was initiated by Mr. Roosevelt and Mr. Hull. Our purpose is to provide that continuity and strength of foreign policy which has been so difficult to achieve in the past history of our country.

Finally, I wish to report that we have been in daily communications with President Truman. He has been fully informed of every step in the work of this Conference. As Chief Executive of the United States he has guided our course. His leadership has been essential to our progress.

Our remaining work here at San Francisco moves ahead steadily. Since the committees have already approved most of the important provisions of the charter, we shall be principally occupied during the next few days with drafting those provisions into charter language. The various drafts will then go to the four commissions for approval, and finally to the planary session of the whole Conference. Our work will then be concluded. I hope we shall finish during the early part of June.

I have no doubt that the final charter prepared here will offer great hope of lasting peace. But I cannot speak so surely when I try to answer the question: Will it work? Will it keep the peace? For that depends upon the will to peace with which the nations of the world support the charter and build strength into the world organization. We can do no more at San Francisco than to establish the constitutional basis upon which the world can live without war—if it will.

Our own foreign policy will play a great part in determining the achievements of these ends. What, then, are the major considerations which must govern our foreign policy?

First. We must carry the second phase of the war to final victory and see to it that Germany and Japan are never able to wage war again.

Second. We must maintain and extend the collaboration and community of purpose now existing among the great nations which have fought this war together. The interests of the United States extend to the whole world. We must maintain those interests in our relations with the other great powers and we must mediate between them when their interests conflict among themselves. In both cases our own interests, as well as theirs, require that agreement be achieved and the solidarity of the great nations be preserved.

Third. We must seek constantly to make our full contribution toward the establishment in practice of the supremacy of justice and of fair dealing for all peoples and states, large and small. The power that happens to be in the hands of certain nations must never be used for any purpose which is not in accordance with justice. And the formulation of international law to embody justice must be speeded.

Fourth. Those social and economic conditions which create a climate for peace must be advanced. The beginnings we shall make through the Economic and Social Council and its related agencies must be constantly developed.

Finally, we must realize that we live in a world where the sovereignty of no nation, not even the most powerful, is absolute. There is no such thing as complete freedom of decision for any nations. It was not the action of our Congress but a decision of the Japanese high command to bomb Pearl Harbor which put the United States into this war.

We in America can never again turn our backs upon the world. For we are not only a part of it—we are one of its most important parts. If we do not assume our new responsibilities willingly, then we shall be compelled to assume them by the brutal necessities of self-preservation. There is no possibility of retreat.

Let us, instead, with God's help, march forward in the cause of peace, with a greatness worthy of our heritage and of the men who gave lives on distant battle grounds.

Westerners for Cabinet Posts

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 21, 1945

Mr. DOYLE. Mr. Speaker, under leave to extend my remarks in the RECORD, I make these few remarks and include an editorial appearing May 24, 1945, in the Press-Telegram and Long Beach Sun, published in my home city of Long Beach, Calif. I respectfully inform you and the Members of this legislative body that I believe this editorial is clearly indicative and expresses the thinking of the vast number of citizens of this great Nation who might appropriately be termed "westerners."

During the last several weeks it has been my pleasure to introduce in the CONGRESSIONAL RECORD my own remarks emphasizing the advantages and progress, as well as the problems of the west coast and my native State of California, as will more clearly appear in the Appendix of the RECORD, on page A2098, and in the April 5, 1945, issue of the RECORD, on page 3134.

The last paragraph of this important editorial, "there is a western revival in National Government," is most encouraging, I am sure, to us Congressmen from the western seaboard. It expresses the opinion of the folks on the west coast as a result of the appointments by our great President Truman of the distinguished gentlemen from the Western States who are named in the editorial. It follows:

WESTERNERS FOR CABINET POSTS

By his appointments in the first big reorganization move since he took office, President Truman has effected a desirable rectifying of the lack of geographical balance that has existed in the top level of national government for years. The west is signally recognized by appointment of three westerners, counting Texas as western as well as southern, to the Cabinet.

Young, energetic, and capable Tom C. Clark, of Texas, Assistant Attorney General, is promoted to the head of the Justice Department, succeeding Attorney General Francis Biddle. The appointment appears to be well-earned promotion for Clark. Biddle's resignation, probably submitted under Presidential prodding, removes the Cabinet's most glaring misfit.

United States Judge Lewis B. Schwellenbach, former United States Senator, succeeds Secretary of Labor Frances Perkins, who might well have been permitted long ago to gratify her desire to retire to private life. Under her, the Labor Department has been deprived of functions, transferred to various Federal agencies, and has lost prestige. Secretary Schwellenbach gives the Pacific coast representation in the Cabinet for the first time since the Hoover administration.

Appointment of Representative CLINTON P. ANDERSON, of New Mexico, to succeed Secretary of Agriculture Claude R. Wickard is significant, not only because he completes the trio of westerners going into the Truman Cabinet, but also because it indicates probability of a new plan as well as personnel in food administration. ANDERSON, as chairman of the House Food Investigating Committee, has severely criticized the Government's food policy and demanded a new coordinated at-

tack on the problem of shortage. He also is slated to take Judge Marvin Jones' place as War Food Administrator, so will have all the reins in his hands and possess ample authority to try out the ideas he has voiced as critic of the Food Administration.

Consolidation of the offices of Secretary of Agriculture and War Food Administrator is in line with reports of the President's reported determination to tighten up and simplify the sprawling organization of Federal agencies.

It will be recalled that one of President Truman's first appointments was the naming of Edwin W. Pauley, of California, to the War Reparations Commission, while the first Truman appointment to the Cabinet was that of Robert E. Hannegan, of Missouri, to be Postmaster General, thus recognizing the Pacific coast and a State west of the Mississippi River, in marked departure from the long-established custom of picking Cabinet officers mostly from the eastern third of the United States, often from the Atlantic seaboard.

There is a western revival in National Government.

Assisting the Returning Vet

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 21, 1945

Mr. DOYLE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the Long Beach Labor News published in my home city of Long Beach, Calif. Labor News is the official publication of the A. F. of L. in that area. This appropriate and significant editorial emphasizes to the attention of all people that the millions of sons reared in the working-people families of this great Nation are also in the armed forces in uniform.

Mr. Speaker, I believe this editorial bespeaks the same dedication of purpose of which I have often heretofore read and spoken on the part of the responsible leaders of the Labor Union Act of this great Nation of ours, which is that the labor organizations themselves will do their full duty and will welcome with open arms their distinguished sons who take off the uniform of armed battle and put on the civilian attire of peace and neighborliness.

Furthermore, this editorial clearly identifies the fact that the labor organizations themselves have been forward looking and soundly taking necessary and efficient steps toward establishing relationships with other community agencies to the end that the GI's coming home shall have the maximum of prompt courteous service and cooperation in the interest of the earliest possible return to gainful employment and to the end that all the community resources shall be helpful to these distinguished and returning men tc most ably and promptly reallocate their employment desires and needs. With pleasure I include this significant editorial in this forward-looking publication:

ASSISTING THE RETURNING VET

More than 1,500,000 A. F. of L. members are in the armed forces. It is doubtful if there are any of our families not affected by one or more members entering the service.

At its last meeting, the A. F. of L. executive council called upon the 900 Central Labor bodies in the United States to set up committees to assist returning veterans to find jobs.

A returning veteran who is a union member will naturally look to his labor organization for assistance in getting his job back. He will also expect help for many of his personal problems. A discharged serviceman who is not a union member will likewise appreciate assistance in getting work in one of the organized trades.

There is no solution to the problem of work for veterans short of full employment. Soldiers in hospitals, in separation centers, on the battlefields—all want a job when they are released. They know there will not be an oasis of security in a desert of unemployment.

The A. F. of L.'s Labor League for Human Rights has established strong working relationships with councils of social agencies, community chests, the American Red Cross, and other community organizations.

Because of this, it is able to offer sound advice and practical assistance to central labor body veterans' committees. Regional directors of the Labor League will furnish material on veterans' programs to these committees, and thereby help them establish proper contacts with all organizations engaged in assisting servicemen.

Many central bodies may choose to designate their local labor league committees to assist newly returned veterans. If so, they will be ready to assume the new responsibilities. There are 500 of these committees throughout the country. A wartime record of outstanding service testifies to their willingness, their capability.

Regardless of the type of committee CLU's establish to assist veterans, the A. F. of L.'s Labor League will cooperate with a single objective: To help returning veterans successfully readjust themselves.

It's a wide chasm from war service to civilian life.

Help the vet across.

Americanism

EXTENSION OF REMARKS

OF

HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 30, 1945

Mr. MILLER of California. Mr. Speaker, Mrs. Sarah Berman, of Oakland, Calif., a wholesome, motherly woman whose interest in humanity is known beyond the limits of my State, has written a poem she has dedicated to Americanism.

Mrs. Berman's philanthropies are well known in Oakland where she has worked unceasingly in behalf of the sick and underprivileged, dedicating both time and money to this work. She has asked me to present a copy of this poem to the House of Representatives. Under leave to extend my remarks, I include the poem in the RECORD at this point:

AMERICANISM

A new day is dawning!
Many projects being planned—
Still in the workshop,
Where new designs are in formation;
Fashioned best for "our glorious Nation."
We are building better roads,
Than we have traveled on before,
To make America "the land of the free!"
And the "home of the brave!"

A land of peace, love and real democracy,
Where civilization may yet achieve
A way of life where none shall grieve,
Where persecution shall not exist
Nor barbaric methods tabulated
On our ways and means list.
"We Americans want to be
Kind, true, and orderly!"

We shall always our future plan
Through the night and through the day,
A program whereby each of us can
Proudly proclaim and say:
I am glad, yes very glad
"I am an American!"

—*Sarah Berman.*

Half-Truths Are Dangerous

EXTENSION OF REMARKS

OF

HON. MAX SCHWABE

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 30, 1945

Mr. SCHWABE of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial appearing in the Tri-County Truth of Hartsburg, Mo.:

HALF-TRUTHS ARE DANGEROUS

The greatest evil that can possibly be done either an individual or a cause can be accomplished by the use of half-truths or the favorite partial quotation method employed by some reporters, newspapers, and politicians.

If any person connected with either the press or public life wants to destroy confidence in his opponent or the opposition, there is no better way than by the use of half-truths or partial quotations; but it should also be remembered that the use of such methods eventually is revealed to the public with a resulting destruction of confidence in the reliability of the erring reporter.

It is notable that the men who are winning praise as war correspondents are not the men who are setting themselves to the task of interpreting the news as they see it, but the men who are giving factual reports of what they see and experience. These are not half-truths nor elaborated stories but simple direct statements that have the ring of truth in them.

The same tendency which inspires men to encourage prejudice through personal interpretation of news or of statements made and half quoted, occurs in state as well as in national and international reporting. It is a policy which should be shunned but is shamelessly employed to divert the reading public's mind from the true facts in the case. Eventually the true facts may emerge, but usually the damage which was willfully intended has caused sufficient damage to make the results seem worthy of the method employed. Thus, this policy of half-truths and partial quotation works toward the ultimate destruction of faith in news reporting.

The use of half-truths, interpretive news reporting, and partial quotation which leaves much to the imagination can easily become a Frankenstein that will destroy its master.

Although the pen is considered mightier than the sword, we believe that, injudiciously and indiscriminately used, the pen is also a more dangerous weapon than the sword.

Recalling a journalistic code which our revered forbears in newspaper editing passed on to us, this newspaper shall follow the

practice of publishing statements either in full or sufficiently complete so that their meaning cannot be misinterpreted; then if our personal opinion clashes with the statement made, the exception to the statement can be made with the reader having ample opportunity to weigh both sides of the question and come to his own conclusions.

We believe in formulating and in expressing opinions, but we do not believe in attempting to gain either a political or prejudicial victory by printing either half-truths or partial quotations leading toward misinterpretation. This may be stuffy journalism, and old-fashioned ethics, but it is far less dangerous, in our opinion, and more soul satisfying, than creating attacks upon persons in public life by giving false impressions or selling the public short with interpretative writing or reporting.

We may not agree, but we will give every man his right to make his statement in full and base our opposition fairly and fully upon the facts as they stand, not as we interpret them. Fair play and half-truths simply cannot keep company, and we believe that this newspaper and its readers will be best served by strictly adhering to the facts, and expressing our opinions as either supporting or opposing those facts. That, to our mind, is journalistic honesty, and honesty still remains the best policy.

I Am an American Day

EXTENSION OF REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 30, 1945

Mr. McDONOUGH. Mr. Speaker, 70,000 people, on Sunday, May 20, 1945, assembled in the Los Angeles Coliseum to celebrate I Am an American Day. The meeting was held under a resolution passed by Congress and signed by the President of the United States.

Similar meetings were held in various parts of the country, but one of the largest was held in my own city of Los Angeles.

These meetings should be encouraged and emphasis laid upon the importance of having our people assemble on various occasions to recall the rich traditions and the grand heritage that Americans enjoy.

The Army and the Navy participated in an unusual parade with high-ranking officers present. Mayor Fletcher Bowron presided and the motion-picture industry, as usual, contributed to the success of this event. Among those participating were Eddie Cantor, Frances Langford, Barry Fitzgerald, Richard Dix, Lauritz Melchior, Margaret O'Brien, Marilyn Maxwell, Peggy Ann Garner, Arthur Lake, and Dick Haymes.

Under leave to extend my remarks, I include in the RECORD the remarks of Hon. J. F. T. O'Connor, formerly United States Comptroller of the Currency and former Vice Chairman of the FDIC:

We are gathered here pursuant to a resolution passed by the Congress of the United States and a proclamation issued by the President to commemorate I Am an American Day. This vast throng, numbering many thousands, in this coliseum, the largest in our land, is at once a spontaneous expression of patriotism and a challenge to those who would impair or destroy our way of life.

Two groups are especially honored today—the recently naturalized citizens and the native-born who have reached their majority. During the fiscal year of 1944, 435,483 aliens were admitted to citizenship, and of this number 17,448 were admitted in southern California. While the quota allowed all countries was, in 1944, 153,879, only 6 percent of the quota was used. On December 17, 1943, the many years of injustice to China was corrected and that peace-loving country and gallant ally was given a quota of 105, but only 19 Chinese came to us last year under the quota.

One of the first laws passed by Congress to admit aliens to citizenship was enacted in 1790 in conformity with section VIII of article I of the Constitution. Since then hundreds of thousands have broken family ties, renounced allegiance to their native lands and pledged allegiance to our Constitution and laws. Valuable contributions have been made by these men and women to our country, in science, literature, the arts, government, as well as industry. Their strong arms have helped build our railroads, our highways, our harbors, our cities—and turned prairie into golden fields of grain, and dotted the landscape with farm homes and the lonely plateau with trees. Here new horizons, new fields of opportunity, new freedoms undreamed of in the lands beyond the sea; here for their children unlimited possibilities; schools and churches, and no door closed because of race or creed. This was and is America.

President Calvin Coolidge said: "Whether one traces his Americanism back three centuries to the Mayflower or 3 years to the steerage is not half so important as whether his Americanism of today is real and genuine." And President Woodrow Wilson said: "This is the only country in the world which experiences this constant and repeated rebirth. Other countries depend upon the multiplication of their own native people. This country is constantly drinking strength out of new sources by the voluntary association with it of great bodies of strong men and forward-looking women out of other lands. And so by the gift of the free will of independent people it is being constantly renewed from generation to generation by the same process by which it was originally created." During the past year 2,000,000 native Americans have reached their majority. Assuming responsibility of participation in our elections, this day is set aside to emphasize the importance of this civic obligation and the duty to exercise this high privilege. The greater the number of citizens voting, the greater is the assurance that democratic processes will be preserved.

The importance of the transition from boyhood to manhood was celebrated by a religious ceremony with many tribes. Many tests were imposed and even torture inflicted as part of this ceremony. The young brave was taught the customs, ritual, and tribal history. He was impressed with his new status, no longer a boy, but a man, who shared the responsibilities and privileges of the tribe with a new name, and a new robe. At the conclusion of the ceremony the tribe danced and sang and rejoiced. There is no ceremony, and, in fact, in the past no emphasis has been placed on the attaining of majority in our country. The youth exercises the highest privilege of citizenship by merely coming of age. The alien is required to read the Declaration of Independence and the Constitution of the United States and swear allegiance. He must swear to support and defend the Constitution and laws of the United States. No such requirement is exacted from the native-born. Would it be too great a hardship to impose the same conditions on the first voter?

For nearly 6 years a war more terrible than any in history in loss of life and property has devastated the greater part of the earth. At one time it was the savage who made war—now it is the so-called civilized man. Not in our lifetime will the destruction be repaired—not in many generations will the fires of hatred have burned out. One enemy has been crushed; another as ruthless and barbaric still continues his senseless bloodshed. One cry arises from every hamlet and city in America: "Unconditional surrender." To accept less would break faith with the men who died on the beaches of the far-away islands. To all our gallant men and women who fell fighting in the cause of freemen—to all those in our armed forces under whatever sky who face the grim reaper—to all the soldiers and sailors under the flags of the United Nations—you have our support, our encouragement, our praise and prayers—may God speed you in victory and bring you back to enjoy the fruits of your labors and your sacrifice.

Responsibility of OPA for Food Shortage

EXTENSION OF REMARKS

OF

HON. WILLIAM A. PITTENGER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 30, 1945

Mr. PITTENGER. Mr. Speaker, we do not want to lose sight of the fact that the OPA is the one Government agency that started out to solve our food problems and maintain a system of price controls. In my opinion, this agency has done neither of these things. I was amazed the other day from a statement that was made on the floor of the House to the effect that the OPA has done fine work. Of course, I do not agree with that. It is not true. It sounded to me like a political statement and it is high time that these folks who are afraid to admit mistakes, because it might hurt them politically reverse the direction in which they are traveling. It does not help the situation any to make bad matters worse. OPA, to be charitable, has been a grand and glorious mistake. It is an agency that ought to be abolished and a food administrator put in charge of the whole food situation. In fact that should have been done a long time ago. As matters stand now, the OPA can pass the buck to WFA, and WFA can pass the buck to OPA. That might be a good way to get physical exercise but while the braintrusters are doing that it is hard on the American people.

I have just received a letter from one of my constituents which tells me its own story and indicates that the administration leaders in this House ought to get busy. Promises and delay and continued inefficiencies will never solve the question. This letter reads as follows:

MAY 26, 1945.

Hon. WILLIAM A. PITTENGER,
House of Representatives,
Washington, D. C.

DEAR MR. PITTENGER: The meat situation in Duluth and vicinity is getting steadily worse. For the past several weeks meat, except processed loaves and various types of sausage, has been virtually nonexistent in retail shops. Then what there is in the way

of red meat is at such high point value that only families with several small children could ever have ration books enough to get a piece of meat once a week. Just imagine, if you can, our best food stores displaying great trays of lungs and brains in otherwise empty meat cases on Saturday—no chickens, no beef, no veal, lamb, or mutton, or hamburger even.

I predict that if no relief comes in the meat situation there will be food riots in Duluth within a very short time. I have overheard men who are working hard declare that they will start something if they can't get any meat. You know the climate up here—it is still as cold as in midwinter in other places, cold and damp, and a little sandwich meat doesn't satisfy hard-working men and women. I work in a shipyard first-aid station, and I have plenty of opportunity to hear what is going on.

A week ago, May 19, I was in a store when a middle-aged woman asked the clerk at the "once-was" meat counter about one of the processed loaves—there was nothing else—and he said that would be 6 points. She burst into tears and said: "But I haven't points left and my husband works hard and has to carry a lunch and it's almost 2 weeks until I get any more points." There were at least a dozen persons in that store who heard her, and there was an ominous growl audible from a number of those people. I heard one man say: "And they tell us not to patronize black markets. I wish I knew where there was one." Within the past week I have heard several responsible, respectable men declare that they will not question whether or not there is a black market if this keeps up.

And in the face of this, OPA tacks 10 points onto all fats instead of giving some relief. For instance, I get 50 points a month. I surely need one-quarter pound of butter a week, a pound a month. That's 24 points. A pound of beef is from 10 to 12 points. No matter how closely one figures it, about one-half pound of meat is all any adult can get a week if one uses any butter at all, and people up here are meat eaters. Sure, there is fish at 65 to 80 cents a pound, but one has to have fat to fry it in so the point saving doesn't help much. (Today I saw carp in one of the best stores at 38 cents a pound—something that people up here used to seine out as rough fish and throw away.)

We know there is plenty of meat in Canada. Just why can't the Government import meat from there? Is there an international law or something that prevents such importation? A few years ago when beef and pork was selling at $3 or $4 a hundred (what the farmer got), and the market was choked, all food stores were flooded with meat from Argentina and Uruguay and Paraguay. I know, because I saw it; cases stacked high in small stores in small towns in Iowa, where I was working then. But now it seems that it must be a law against getting meat from across the border. One would think Canadians were Japs or something instead of our allies. After all, Canada should be as close to us as Argentina. Another thing, when people at Detroit go to Windsor for meat they have to furnish points when they come back to Detroit. Is there any sense to that? If people are able to go somewhere to get meat to ease up the situation in the home town, why should they be penalized by the OPA?

And last spring, 1944, when the Government clamped down on the feeds, millions of baby chicks were destroyed. Hatcheries killed them in 50,000 lots since they couldn't sell them. Who was responsible for a bright stunt like that? There hasn't been a chicken for sale in the open market here for weeks.

A serious shortage of grain labor is tieing up the grain boats in Duluth and Superior. Men refuse to go to work without meat. Give out the word that every man who goes to work shoveling grain will get a 4-pound roast and I believe that there would be enough help to care for 10 times the grain tonnage now stuck.

We know you are not responsible for this. But maybe if you hear how some of the people feel, and can tell it where it will do the most good, it might help some. And if something can be done to humanize the OPA, a real victory will have been won.

Very truly yours.

It is not any wonder, Mr. Speaker, that the President of the United States found it necessary to request Herbert Hoover, former President of the United States, to come to his office the other day. Someone must have tipped off President Truman and really told him the truth, otherwise Mr. Hoover would have been called to the White House long, long ago because he handled food problems in World War I and the American people had no shortage in food and there was food enough to send to Europe to help the people who faced famine and suffering in the war-torn lands. I want to conclude these remarks by repeating that OPA ought to be abolished.

Armies of Occupation Should Be Made Up of Volunteers

EXTENSION OF REMARKS
OF
HON. WALTER C. PLOESER
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 30, 1945

Mr. PLOESER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

TWELFTH WARD REPUBLICAN
PRECINCT ORGANIZATION,
St. Louis, Mo., May 24, 1945.

WALTER C. PLOESER,
Congressman, Twelfth District of Missouri, House Office Building, Washington, D. C.

DEAR WALTER: At a meeting of the Twelfth Ward Republican precinct organization on May 22, 1945, the following resolution was introduced and unanimously adopted. The organization has been instructed by unanimous vote to forward this resolution to you:

"Resolution

"Be it resolved by this organization, That we believe that, insofar as is possible, the armies of occupation should be made up of volunteers. We believe that with better compensation paid to the soldiers who are to occupy these places it would be possible to secure men who are in a position to spend some time in other lands.

"We are of the opinion that the drafted soldiers should be returned home as soon as possible so that they may return promptly to their regular vocations . We feel that this is very vital to the well-being of the Nation.

"Be it resolved, That the chairman of this organization be instructed to send a copy of this resolution to Hon. WALTER C. PLOESER, our Representative in Congress, and Hon. FORREST C. DONNELL, United States Senator from Missouri."

We believe that this resolution fairly reflects the attitude of all the people in our ward.

Yours for an early victory,
L. S. WOODCOCK, *Chairman.*

Save Our Free Enterprise System

EXTENSION OF REMARKS
OF
HON. LUTHER PATRICK
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 30, 1945

Mr. PATRICK. Mr. Speaker, this permission was secured to allow me to place in the CONGRESSIONAL RECORD a letter I received from a student in Birmingham, Ala. While I cannot agree with this fine youngster that we can so maintain a government that it will stand free from competition with any of its citizens, it is wholesome and profitable to find youth coming forward with well expressed ideas.

Also, this young James Holmquist is here with a subject our people as a whole must engage.

BIRMINGHAM, ALA., *March 15, 1945.*

Hon. LUTHER PATRICK,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN PATRICK: Our boys and girls today over land and sea are fighting for the same principles upon which our Nation was founded—freedom of the individual.

It is apparent that a new conception of democracy is being born which will disrupt our existing democratic institutions and ideals, the present tendency to break down our individual free-enterprise system.

The individual is the basic unit of the free-enterprise system. The fundamental rights of capital and labor must be guaranteed and protected, but there must be no oppressive and unreasonable bureaucratic control of either by government. Government can and should accomplish these objectives by constructive regulations. If we accept the declaration that all men are created equal and that they are endowed by their Creator with certain rights, such as life, liberty, and the pursuit of happiness, we also revert to the original philosophy that, "government derives its powers from the consent of the governed."

The best example of free enterprise is found in the small-business man who wants to be in business for himself. He helps to keep the markets active, creates jobs, controls his own livelihood, and represents true economic freedom.

Deficit financing by the Federal Government tends to destroy individual free enterprise. If corporate savings are paid out to cover deficit financing by the Federal Government during good times final destruction of the individual free-enterprise system will result. Adequate reserves should be allowed to take up the shock of business cycles and enable business to continue, and pay taxes during bad times. Small business and new corporations especially need favorable consideration, in taxing the very source of new capital, so vital to expansion and diversification. There should be excepted, corporate savings which are to be converted into needed plant and equipment which will provide more employment, contribute to business stability.

Any reallocation of the Federal tax system should give consideration to the preservation of the incentives to go into business. This review should be taken to encourage risk capital to go into business and thereby provide greater production and broader employment opportunities.

When our loved ones come home, they will want a chance to work in a country where their enterprise will be rewarded according to their efforts. It is our responsibility to see

that they get what they are fighting for—freedom. Our boys want protection against any tendency toward socialistic atmosphere. Pensions, demobilization, bonus, free training and such are Government benefits of an emergency nature. Such benefits cannot suffice. They want a chance to go int business for themselves. Bureaucratic regimentation will destroy initiative and our free-enterprise system. It can survive only with hard work, courage, honesty, and initiative. The things that have made our country great will continue to do so, as long as we are free from depressing bureaucratic control. Our boys can take it on the chin. They will not want to return to a society of weaklings with politicians directing their every more, but to run this Government through representatives elected by them and other citizens.

As power-mad dictators amassed great strength in facilitating prosecution of the war, we, as free people, have given more power to the executive branch of our Government. This transfer of power was temporarily bestowed upon individuals until total victory is achieved. We realize there is danger in unwise use of power in unrestrained and prolonged use of directives. There exists the responsibility of returning this power to the democracy we hold in trust.

For the past several years we have seen a steady retreat from democratic ideals in the form of Government we love. Our democracy is on the defensive. Democracy, the dream that men can govern themselves, has been the dream of a road from slavery to freedom, where we can make our laws for ourselves and obey them. The fight for democracy will be won in battle, but will it be won in peace?

"Freedom from want" is a fair objective in our postwar plans. Any attempt to provide social security "from the cradle to the grave" by the surrender of our freedom will destroy not only private free enterprise, but also constitutional government. How can we have this freedom? "Full employment" is the answer. We cannot have social security with our workers without jobs. This can only be attained by prosperity in American industry. All breadwinners must be provided with adequate employment—not relief doles. All phases of business should be encouraged to help solve this problem. Government can help in times of need, to fill the gaps. But the real employment problem is up to business to furnish the jobs. Industrial activity is the source of good living and security for workers. Good management and good workers have put this country ahead. Congress should do all in its power to encourage private free enterprise and industrial progress.

Freedom from want is attained by freedom to work unhampered by burdensome bureaucratic restrictives. History records nation after nation whose governments had so ordered the lives of their people that self-reliance, initiative, and individual responsibility were destroyed.

Lack of interest in the preservation of the free enterprise system as represented in business, labor—both organized and unorganized—agriculture, and the professions will result in its loss. Congress is beset by small minority groups with strong fronts ready to wage war for special interests. What is needed to overcome this evil is to arouse everyone to a greater sense of duty to country as a whole rather than allow it to be run by small vociferous groups who ask for special favors which when granted react against our democratic system. Government must be reestablished to serve the interests of all the people, not used to exploit certain groups.

Our people are so absorbed in their own problems they are likely to put aside the very thing that made prosperity possible. Lack of interest in our free enterprise system is "killing the goose that laid the golden egg." There should be the closest cooperation and understanding between the citizens and Congress for the preservation of free enterprise. This is necessary to protect the future of democracy, and its expansion will be accelerated by the education of the public. With bureaucracy there will be no freedom, and no enterprise. Already there is a distinct tendency toward socialism. Too many theorists talk of Government ownership of this and that industry on the assumption that an inexperienced individual with Government authority can run a business more intelligently than one whose very existence depends on his success or failure.

Coordination applied to industries can make them powerful in maintaining a prosperous peace just as they have been cooperating with the Government in winning the war. In cooperating with Congress industry can keep the working forces of America producing things everybody wants. Any activity by Government in competition with any of her citizens should not be tolerated.

There is great need for better understanding between the citizens of this country and its elected Congress. The farmer, businessman, and workingman have much to fear in controls, restrictions, and socialistic ventures by our Government. The system of free enterprise is cooperating toward a solution of the momentous problem of full employment in the face of unnecessary laws of restraint, restriction, and direct competition by our Government.

Cooperation of Government and business is imperative. Our citizens cannot fight our Government. They cannot be governed by fear, unnecessary restraint, and needless limitations. Free enterprise must be released for service. The time is at hand when those we elect to represent us should speak up for the same free-enterprise system that has made America great. Let our Congress protect and defend the individual free-enterprise system as the job-producing system, that will give self-respecting jobs to freemen and preserve freedom to all individuals, as guaranteed them by the Declaration of Independence and the Constitution.

Sincerely yours,

JAMES P. HOLMQUIST.

Reconversion and Full Employment

EXTENSION OF REMARKS

OF

HON. ALLEN J. ELLENDER

OF LOUISIANA

IN THE SENATE OF THE UNITED STATES

Thursday, May 31, 1945

Mr. ELLENDER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by the Senator from Montana [Mr. MURRAY] before the Chicago Reconversion Conference, at the Palmer House, Chicago, Ill., May 24, 1945.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman and gentlemen of the conference, about a year and a half ago, as a result of the successful progress of the war, considerable anxiety developed in business circles because of the uncertainty and confusion bound to develop at the end of the war. Business demanded an effective system for the prompt and equitable settlement of claims on terminated war contracts. They faced the danger of interminable delays—through the existing legal procedures—review by the Comptroller General—through disputes between prime contractors and subcontractors, and through long drawn-out controversies in the courts. At the time World War II broke out in Europe, unsettled claims were still pending from the last war. In view of the magnitude of war contracts in this war, delays in settlement would threaten widespread bankruptcy and confusion in industry.

This problem was presented for solution to a Subcommittee of the Military Affairs Committee, composed of the former Senator from Missouri, President Harry S. Truman, the Senator from West Virginia, Mr. REVERCOMB, and myself as chairman. We held extensive hearings and received the testimony of hundreds of war contractors, large and small. We conferred with every contracting agency of the Government. We had the advice of both the Comptroller General and the United States Attorney General. Every phase of the problem was thoroughly explored. Scores of expert accountants and legal representatives of American manufacturers were called in to aid in formulating vitally important legislation.

Our committee finally reported the Contract Settlement Act. It was enacted by an overwhelming vote in the Senate and in the House. That act had the general approval of American business and is regarded as one of the most effective pieces of legislation recently passed by the Congress.

The unconditional surrender of the German Army has already brought America into the first stage of conversion from war to peace. As a result of VE cut-backs, according to War Manpower estimates, from 4 to 5 million workers will be released from war production. The plans for demobilization of the armed forces already contemplate returning 2,000,000 men to civilian life during the coming year. This limited conversion already presents a serious problem.

But the second and final stage of reconversion will begin when Japan is defeated. We must then be prepared for war production cut-backs that will displace at least 5,000,000 workers. We must also be prepared for the release of probably 5,000,000 men from the armed forces during the very first year of demobilization.

Last December President Truman and myself submitted to the Senate a report which contained the following statement relating to the gigantic war economy which had been built up in this country. I quote:

"Almost half of the framework supporting this giant structure consists of war contracts. When war contracts are withdrawn, the danger is that the entire edifice will topple over. * * *

"Unless an economic substitute is found for war contracts, mass unemployment will become a serious threat and the number of unemployed men and women in this country might easily surpass the tragic conditions of unemployment during the last depression."

Earlier this year, Senator WAGNER, Senator THOMAS of Utah, Senator O'MAHONEY, Representative PATMAN and myself introduced a bill which undertook to meet this problem and protect our economy in the years ahead.

This bill, known as the full-employment bill, recognizes that the Federal Government has the responsibility, in cooperation with its citizens and the various economic groups and with State and local governments, of assuring job opportunities for all citizens who are able and willing to work. To carry out this responsibility, under this bill, the President is called upon to submit to the Congress every year a statement of economic requirements, in terms of the number of people who will be seeking work, the total amount of goods and services they would produce, and the total demand necessary to absorb those goods and services. The President would also submit an appraisal of current economic trends, which may or may not be moving in the right direction, and his proposed plans for administrative action and recommendations for legislative action to meet the requirements for full employment and full production.

The President's program would then be studied by a joint congressional committee. It would be amended or modified, if necessary, and reported to the Congress in the form of a joint resolution. It would then be subject to full debate in both Houses. When agreed upon, with whatever changes might be made, the joint resolution would serve as a guide to Congress in enacting specific legislation on taxes, expenditures, measures for the stimulation of business and industry, or other programs which might be expected to produce the desired results.

It will be seen that this legislation leaves the basic decisions entirely up to the Congress. When times are prosperous the Congress might desire to collect more revenue than it authorizes to be spent. If conditions are unfavorable, it might provide incentives for business through lower taxes and increased Government expenditures to stimulate industry. In other words, the Congress would scrutinize business trends and undertake to maintain a balanced economy, preventing serious unemployment, on the one hand, or the threat of inflation, on the other.

In short, the bill establishes a national policy based on the Government's responsibilities toward full production, employment, and economic stability, and it provides a method whereby the Executive and the Congress can work together in carrying out this policy.

It is charged by some in our country that while American business is willing to cooperate on policies which work in its favor, business is not entirely willing to cooperate in mapping out a postwar policy and program for the maintenance of full employment.

This, of course, is not true.

American business is fully alive to the need for a full-production policy and a full-employment program. Every businessman knows that a man on a pay roll is a better customer than a man on relief. American business realizes that another depression such as we experienced in the 1930's might well mean the end of capitalism in America.

Naturally there are many differences of opinion in the business world as to exactly what objectives we should seek and what responsibilities the Federal Government should assume toward those objectives.

Let me illustrate with a few quotations from letters by businessmen on the full-employment bill.

Here is one quotation from a prominent retail executive who favors the bill. I quote:

"It is the basic responsibility of government to see to it that private business is given opportunity to provide jobs which will enable those who are able and want to work, to maintain a decent standard of living and undertake to improve upon it. When private industry fails in this purpose, it should be the function of government to fill the employment gap.

"The full-employment bill should be enacted, because only two courses of action remain. Either to let things take their course or commit the Nation to some form of planned economy."

Now, let me call attention to another businessman who opposes the full-employment bill. I quote:

"We feel that private competitive capitalism requires a floating number of unemployed. * * * For this reason we do not feel that Senate bill 380 would be desirable legislation."

In my opinion, the first quotation I have given you symbolizes the realistic view. It is the kind of practical, businesslike attitude that America needs from business and that business should and can give to America.

The second quotation is evidently from a man who sincerely feels that full employment is not compatible with our system of capitalistic enterprise. He expresses the view that private enterprise needs a sizable reserve of unemployed workers in order to operate to the better advantage of business.

Let me ask you to think this over very carefully. I believe you will reach the conclusion, as I have, that if business leadership adopts this latter position, namely, that business needs and wants a standing army of unemployed, it will carry us into another depression which we cannot afford to risk. The last depression which we went through should be a warning.

Our American way of life, as we know it, cannot survive unless the men who employ labor, the men who manage industries, the men who invest capital, the men who risk their capital in marketing a new product or developing a new idea adopt the goal of jobs for all workers who are able and willing to work.

But this goal is an idle dream unless with care, with patience, and with a lot of hard work, we develop a method and a procedure whereby business, labor, agriculture, State governments, local governments, and the Federal Government, can work in reasonable harmony year in and year out in achieving and maintaining full production and full employment.

There are some who believe that we can sit back and let business follow its natural course. They believe that we are heading into a postwar boom which will come after a short period of dislocation following the defeat of Japan. They anticipate 2, 3, 4, or 5 years of highly prosperous conditions. They point to the tremendous backlogs of demand for automobiles, washing machines, and other products of modern industry. They point to demands for new business plants and equipment, for housing, for needed highways and other public works; they point to large export demands to rebuild the new world and to industrialize China, Russia, South America, and other areas. All these things, they contend, spell boom.

All this may be true. But these conditions may also spell disaster. Every one of these factors operated in the years following World War I. They will run their course again in the coming period, as they did in the 1920's.

It seems entirely probable that we will have a period of boom based on these undoubted needs and on the accumulated purchasing power of wartime savings. We may even see a period of serious inflationary conditions. To cope with these dangers and maintain a balance, we will need the broad policy framework of the full-employment bill.

After the period of inflation which we anticipate has run its course, we will have collapse as we did in 1929 unless we do something to prevent another depression.

The full-employment bill is intended to provide a method and a procedure for meeting these dangers within the framework of our free-enterprise tradition.

There has been too much misunderstanding about free enterprise.

I want to make it perfectly clear that when I talk about free enterprise, I mean the kind of a free enterprise that the American people are prepared to fight for.

I want to see American enterprise free from unfair, unreasonable, or monopolistic restrictions by irresponsible private groups, whoever they may be.

I want to see enterprise free from all unnecessary Government controls and restraints, likewise. This does not mean freedom from the operation of laws enacted for the welfare of the people.

This is the kind of free enterprise that the sponsors of the full-employment bill had in mind in the provisions of section 2 (a) of the bill—and I quote—"It is the policy of the United States to foster free competitive enterprise and the investment of private capital in trade and commerce and in the development of the natural resources of the United States."

The sponsors of the full-employment bill recognize that it requires a full and careful study before it is enacted. If it can be improved upon in any respect, we welcome suggestions for clarification or for constructive amendment. We have been in conference with many businessmen with a view toward obtaining their advice and assistance. We solicit your advice and assistance. If you believe the bill is so hopeless that it cannot be perfected, then we ask: "What alternatives do you suggest?" It seems incredible that any businessman could ignore the dangers that are bound to threaten our country in the postwar period.

In the near future public hearings will be held on the full-employment bill before the Senate Committee on Banking and Currency to obtain the views of all who have anything to contribute on the provisions of the bill or on the general problem of maintaining full employment and production.

It is the intention of the sponsors to handle this full-employment bill in precisely the same manner in which we handled the contract-termination legislation last year. Businessmen representing all sectors of the American economy participated in the formulation of the Contract Settlement Act. In the same way full business participation is needed in the formulation of a full-employment bill.

It is my belief that in considering this momentous question businessmen will not be content with repeating the ready-made phrases handed down from earlier decades when life was a good deal simpler than it is now. In the last 40 years greater changes have taken place in our economic system than in all the years that preceded. These changes have been clearly recognized by leading economists and editorial writers in recent years. Let me quote from a Fortune magazine editorial which appeared in that magazine in 1938:

"Every businessman who is not kidding himself knows that he does not know how to guarantee, without Government intervention, the markets with which alone his free competitive capitalism can function. Every businessman who is not kidding himself knows that, if left to its own devices, business would sooner or later run headlong into another 1930."

It is the hope of the sponsors of the full-employment bill that as a result of the coming hearings, with the help of American business, we will develop a concrete national policy that will assure prosperity for business and for workers, a policy that will strengthen our American system of competitive enterprise and preserve our democratic form of government.

Whisky Holiday

REMARKS

OF

HON. CLIFFORD R. HOPE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 31, 1945

Mr. HOPE. Mr. Speaker, I have today introduced a resolution providing for an investigation of the action of the War Production Board providing for a whisky holiday during the month of July. If this order goes into effect there will be diverted to the manufacture of whisky millions of bushels of valuable grain which will be needed within the next few months as food for our armed forces, for our civilian population, and

to relieve hunger among the starving people of the devastated countries of Europe. Part of this grain will be needed for human food, part of it for livestock feed to produce dairy products, poultry, and meat, of which we are now so woefully short.

It seems to me an astounding thing that such an order should be issued at the beginning of what is likely to be the most critical food year in our history. Our supplies of grain at this time are fairly large as compared with consumptive needs during normal times but no one can contend that they are large or even adequate when we consider the demands which will be made upon this country in order to meet our commitments for the coming year. The amount of meat, poultry, and dairy products which can be produced is dependent upon the amount of grain which may be available for feed. The demands for grain for human food will tax our utmost ability in the way of production. No one can safely predict at this time what our crops will be. Winter wheat prospects are daily declining. A cold, wet season in the Corn Belt has seriously interfered with the preparation of the soil and the planting of corn. This means a late crop and a reduced acreage. Prospects for other feed grains are none too good.

We have been lucky in our weather during the past 6 years. We have had bumper crops but we cannot count upon continued good fortune in this respect. The law of averages is still functioning. A poor crop is past overdue. Severe drought conditions in the Southern Hemisphere have resulted in short grain crops both in South America and Australia. Under these circumstances the issuance of this order constitutes a reckless and wanton disregard of our requirements for food.

The farmers of this country have done a heroic job in food production. Both old and young have worked early and late in storm and sunshine and in the face of shortages of labor, machinery and transportation because they have been told that such strenuous efforts were necessary to win the war and to feed a starving world. I am satisfied that they have not undergone these hardships for the purpose of making possible a whisky holiday.

The First Peace Issue

EXTENSION OF REMARKS

OF

HON. ANDREW J. BIEMILLER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 31, 1945

Mr. BIEMILLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I desire to include an editorial which appeared in the New York Times on May 28, 1945, entitled "The First Peace Issue":

THE FIRST PEACE ISSUE

At the end of a long and sharp debate, which culminated in a personal appeal by President Truman for favorable action, the House of Representatives has approved a bill which proposes to give the Government power to continue and expand the Hull program of reciprocal trade agreements. No more important legislation has come before Congress in many months than this first test of American policy toward the nature of the postwar peace. For at least three chief reasons a continuation of the Hull program is indispensable—so indispensable, that the defeat of this legislation at this time would have been a major political calamity.

In the first place, it is evident that both public and private loans from the United States, loans made on a sound basis, will be necessary for the reconstruction of Europe, a task which needs to be undertaken as much in our own interest as in the interest of our European allies. Such loans cannot possibly be made on a sound basis unless there is reasonable hope of repayment. And since the only practicable method of repayment is in terms of goods, the whole problem of postwar reconstruction is tied up intimately with the problem of achieving reasonable reductions of barriers to trade.

In the second place, even more than in the years before the war, many American industries are now geared to a production which will require profitable foreign markets if the existing volume of domestic employment is to be maintained. Again we face the fact that, in the long run, and particularly since we have already acquired most of the world's gold, American goods can be bought abroad only with the proceeds of goods sold in our own markets, and bought there, because they represent good values at reasonable prices, by American consumers.

Finally, since the United States is admittedly the most powerful economic unit anywhere in the world today, it is obvious that our action will be the most important single influence in establishing the whole economic pattern of the postwar years, and in determining from the very start whether the trend will be—as it would certainly have been, if the Hull program had been rejected—toward a narrow economic nationalism, with foreign trade largely in the hands of Government monopolies, or whether the trend will be—as there is now reason to hope—toward a freer exchange of goods, a relaxation of governmental controls, a survival of the private enterprise system, and an era of economic good will which will lay a sound basis for the work of the new international peace organization which is now being established at San Francisco.

This is the first important international issue to come before Congress since the end of the war in Europe, and the vote on it must give cause for second thought to many of those who felt, in the last election, that it was safe to trust the Republican Party in Congress with the direction of international issues, on the ground that that party had turned over a new leaf and seen a new light since the days of its opposition to lend-lease, to repeal of the arms embargo, to selective service, and to the original grant of authority to Mr. Hull to negotiate his trade agreements. For, on the critical test which this new legislation met on Saturday—the question whether or not to kill the bill by recommitting it—only seven Republicans could be found in the entire House of Representatives who were willing to give their support to continuing and expanding the Hull program. One hundred and sixty-seven Republicans—a majority of 23 Republicans to 1—voted to send the new bill back to committee.

Such a performance as this can profit the Republican Party, politically, only on one assumption: Only on the assumption that there is a swing back of public sentiment in this country to the old days of political and economic isolation between the two World Wars. On any other assumption the House Republicans have taken a position and written a record that must be a heavy handicap to any Republican candidate for the Presidency in the next election.

It now remains to be seen what will happen in the Senate.

America and World Communism

EXTENSION OF REMARKS

OF

HON. CLARE BOOTHE LUCE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 31, 1945

Mrs. LUCE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address delivered by me over the Blue Network Tuesday, May 29, 1945:

The other day I saw a reporter-friend just returned from the San Francisco Conference. "Day and night," he said, "there was only one topic: Soviet Russia. Sometimes I wondered if Russia's strength or ideas really merit so much attention."

Of course he knew the answer: They do.

Russia's physical strength has been proven in many mighty battles. We know that America's factories have sent Russia 12,850 combat vehicles, including tanks, approximately 175,000 guns, and unknown quantities of ships. Altogether American industrial workers and taxpayers have sent $8,000,000,000 of lend-lease material to our Russian allies. Even so, Russia's own great industry, fine generalship, and rich manpower have played a decisive part in the defeat of Germany.

And now the German war machine is destroyed and German industrial strength all but obliterated. This leaves Russia immeasurably the strongest military and industrial power in Europe.

Russia has a fresh, untried, and powerful army in Asia. Because it is to Soviet Russia's own national interests to get into the Pacific war, that army is certain to be used against the Japanese before the final kill. When the Japanese are at last beaten to the ground, their Army destroyed, and their factories pulverized, Russia will emerge as the strongest military and industrial power also in Asia.

There is no question that Russian physical strength—her iron muscles and machine brawn—make her the world's No. 2 power, the military and industrial Titan of Eurasia. And this certainly merits the attention it has received from the men who seek peace in our time at San Francisco.

As for Red Russia's ideas—well, at this hour every government in central Europe is either controlled directly or indirectly by Moscow-minded rulers. This has been and is being accomplished by a three-point policy: (1) By a policy of fraternization with the conquered peoples. (2) By the liquidation of all anti-Communists. This means that if people resist communism, whether they are Fascists, Monarchists, Socialists, Democrats, or Liberals, they are shot, imprisoned, or deported by the tens, and, if necessary, by the hundreds of thousands. (3) By a policy of putting guns, money, and food, which is to say, political power, into the hands of all discontented minority groups which will agree to adopt the Soviet programs, regardless of those groups' previous political convictions.

In Greece and in Italy the groundwork is laid for the Communist or so-called Partisan, Patriot, Free Democratic, or Liberation elements to take over as Anglo-American armies leave.

There are already strong clamorous Communist Parties in Belgium, Holland, France,

and Spain. In the Near East there is much Communist fire.

The young despairing intellectuals of India are increasingly looking toward their near and mighty neighbor, the Soviet Union, for guidance in the technique of revolution. They get it, increasingly.

We all know that there is a powerful Chinese Communist Party, oriented toward Moscow, whose great opportunity will come when Red Russian armies move against Japan and offer to "liberate" Manchuria.

Mexico, Central America, and South America are all well provided with strong Communist groups. I need remind no one that we have our own Earl Browder.

In view of these facts, we must say that Red Russia's ideas merit all the attention they get from the fascinated statesmen of many nations at San Francisco.

Naturally we must ask ourselves: Is this rising world tide of Moscow-controlling communism a good or evil thing for the world? Upon the individual American's answer to this question will depend the fate of all the peoples of Europe and Asia in the very immediate years ahead, and the ultimate destiny of America 20 years from now.

But before we answer that question let us talk for a moment about words—the words, for example, "good" and "evil."

Do these words have any meaning to you? Of course they do. They are the words men have used since the most ancient times—indeed, since speech itself was born. Now, these words, when applied to fundamental political policies and actions, have about the same meaning to all average Americans. But do they mean the same to us as they do to Communist leaders in Europe or Asia or South America or North America today? The appalling fact is that good and evil not only don't have the same meaning for them—they sometimes have no meaning at all.

Let me give you an example. Do we not as sane men agree that murder is evil? I think we do. When a Nazi SS man seizes a Jew, without due process of law, and throws him into a concentration camp, where he is tortured or starved to death, we say that deed is murder. No Nazi nonsense about racism or international Jewish plots or the security of the Reich can change that judgment in the eyes of man or God.

When a Communist OGPU agent strips a Russian of his small farm and few pigs, without due process of law, and then allows him to starve to death, or sends him to a slave camp in Siberia, that deed is murder, too. And no Communist twaddle about implementing the peoples' revolution, international capitalistic plots, or the security of the proletariat should change that judgment in the eyes of man, or can change it in the eyes of God.

The imposed death or imprisonment of any individual who has not been tried by a free jury of his peers under laws which have been framed by the will of the people are, we say again, evil things called murder, called slavery. They were evil when the Nazis practiced them. They are evil when the Communists practice them as they do today on a wholesale scale in all of Russia and in central Europe.

Let us get down to three fundamental political tenets, which all Americans hold to be right, good, and just.

We believe in a free press, free speech, and free worship. The Communists, wherever you find them in America, Mexico, China, or Europe, believe that the press should be precensored and controlled; that men should refrain from criticizing their leaders under pain of death; and that any religion not subject to state control should be liquidated. In short, we and the Communists are exactly 180 degrees apart on our most fundamental political concepts. Moreover, the very words "right," "good," and "just" mean exactly what Stalin says they mean—but only on Monday morning. For on Tuesday morning he may change his mind. If so, the Russian people are required and every Communist leader in the world is required, under pain of death or exile, to change their minds accordingly before Wednesday. For truth to a Communist and Moscow leader is never an absolute. Truth is exactly what suits the Communist leaders' political policy or purposes, or even personal whims, at any given moment.

I expect at this point you will say that in principle you agree with everything I have said. But, you say, that's the way the Communists see things. They have the right, haven't they, to see things and do things the way they choose?

If the Moscow Communist leaders and their agents and puppets outside of Russia have the right to communize all of Europe—and then all of Asia—by liquidating all non-Communists; if they have the right to work within all other countries to overthrow their systems of government by force and murder; and if they have the right to plead that this international technique of terrorization and subversion is morally justified by the need of security for the Soviet Union or the welfare of the masses, then, my friends, should it not logically follow that every other nation had or has that same right?

Well, we never thought the Nazis had this right yesterday. Logically then, we must agree that the Communist dictators don't have it today, either. It is hard to have to display this troublesome moral consistency in our great hour of military victory in Europe, and when our gratitude is so very, very great to the heroic people of Russia, who helped us gain that victory. But a decent respect for the opinions of mankind requires that we examine the immoral nature of this communism that is sweeping Europe. And we know that millions upon millions of individual souls there and in Asia are yearning for freedom—the freedom to talk, to speak, to worship, to work at that which lies to their hands or appeals to their minds. Yes, the Russians, too, this valorous and imaginative people—even they are yearning for freedom. Have we any proof of that? We have.

Let me ask you: In this war, did any large group of Americans, any American generals, ever desert American forces to fight with the Japanese or Germans? Never. And yet almost to the end, Russian soldiers by the thousands, and Russian generals by the dozens, deserted Red Russia, fled Stalinism, escaped from communism, and fought willingly beside the Nazis.

They were, of course, deceived in their search for freedom, just as deceived as the German soldiers who deserted to Stalin. Today in the Balkans over 300,000 Russian soldiers have deserted victorious Russian armies to seek a better, richer, happier way of life. Their search becomes every day more fruitless, because the hand of Stalin reaches out for them, reaches over the Balkans.

Of course, millions of Russians put up a hard fight for their homeland. So did millions of Nazis. So do millions of Japanese. Only Communists would have you believe that the hard fight millions of Russians put up proves that communism is, therefore, justified. And 180,000,000 Russians are today incarcerated behind a towering wall of censorship. They are unaware that there is a world in which the words "law and justice, charity and freedom" have a sweet and real and personal meaning for great masses of men. Like the Nazis, they have been subjected to years of propaganda and terrorization, or death, if they would not swallow the propaganda. The fate that has overtaken the wonderful Russian people is now about to overtake almost all the peoples of Europe and Asia.

I know what you are thinking now; I can hear your thought.

And what shall we Americans do about it? What can we do about it?

First, we can get our own thinking straight. We can, as individuals, write a balance sheet—a strictly moral balance sheet on communism as it has been revealed in Europe, versus parliamentary and constitutional forms of government. When we have made that balance sheet, we can decide where we each, as individuals, stand. I think morally we will find communism in the red—blood red. And then when we've got that balance sheet clear in our minds, we can as individuals help our Government to act abroad.

And what should our Government do abroad?

First and foremost, use our great diplomatic power and vast military prestige—now—to help all Asiatic and European statesmen and officeholders—Frenchman, Poles, Italians, Greeks, Belgians, Dutch, Germans, Austrians, who are not either Fascists or Communists, to stay in power providing—and only providing—they are willing to form, and do form, true representative parliaments and congresses, and grant constitutions, which guarantee the people freedom of press, speech, religion, and assembly, and other essential legal rights natural to freeman. Such governments, however imperfect at the beginning, will tend increasingly to respond to the real will of the people.

It is a heartbreaking pity that the heroic but enslaved Russia people—the common men of Russia—are not free to aid us in an effort to enlarge the area of human freedom. But we must understand that the plain people of Russia live in a vast concentration camp, the prisoners of their own leaders. When we remember this, we will never act or speak as some people do, as though the great Russian people were our enemies. The Russian people are and must continue to be our friends, for the peace of the world depends on that friendship. We are the two most powerful peoples on earth, and all our national good will and international diplomatic efforts must be directed toward cementing our friendship. No American wants war again in our generation. But surely in this last decade we have learned in blood and toil and tears and sweat that appeasement is the road to war. If we want to stay out of war with communism we must not appease communism. And we dare not appease communism. This cannot long remain two worlds, as it is today—the world of totalitarianism and the world of liberty. Indeed, as our conflict with Nazi totalitarianism proved, these two worlds are doomed to come into conflict. It must, and will be one world sooner or later.

Shall it be one world in which all mankind crawls and cringes in the darkness of slavery? Or shall it be one world in which all the great nations of mankind love and live in the light of freedom?

My Day

EXTENSION OF REMARKS

OF

HON. MARY T. NORTON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 31, 1945

Mrs. NORTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Mrs. Eleanor Roosevelt from the Washington Daily News of May 30, 1945:

MY DAY—F. D. WOULD HAVE WISHED TO REST IN SOIL WHERE HE FELL

(By Eleanor Roosevelt)

HYDE PARK, Tuesday.—Tomorrow will be Memorial Day, and all over this country people will be going to our cemeteries and placing

flags and wreaths on the graves of the men who died for their country in this and other wars in our past history. The graves of others, too, will not be neglected.

But it is not of those who have died that I am primarily thinking today. During the past weeks I have been able to go to my husband's grave in the quiet and beautiful hedge-enclosed garden. Delegations from many foreign nations have come to pay their respects, and they have gone away apparently with a renewed strength of spirit. I believe this always comes when we think of the courageous people who bear their burdens in life without fear and, like Lincoln, never troubled about their detractors but did the best they knew how from day to day, trusting in the strength of a greater power than their own.

Each time that I talk to people who seem to leave here with a little more courage than they came, I cannot help thinking of the many women who have written me during the days when I lived in the White House, begging to be allowed to bring home from overseas the fathers, husbands, or brothers who lie buried far away. Always I had to answer that when the war was over the question would be sympathetically considered by the various departments, but that for the present people must lie where they fall.

I talked about it with my husband, who always said: "If I die at sea, I want to be buried at sea just like any sailor;" and I am sure that had he died on foreign soil he would have wanted to be buried in the place where he died, much as he loved his own land and the little patch of ground which was particularly his.

One wonders, nevertheless, when there is no tangible grave to be visited, how these people can get comfort not only on Memorial Day but on all the other days of the year. They would still get it, of course, from the man who gave them courage and care and love on earth, if they could feel his spirit. Everyone who leaves this world must want to give those left behind that lift of the spirit which he left in his home in the morning and brought back when he returned.

Perhaps if the women who have no grave to visit could go to some place that together they had known and loved in the past, and think not of the body of a man but of his mind and soul and heart, they might then be able to feel some of that sense of nearness which is, I think, at the root of the craving people have to know and visit the spot where someone they have loved and depended upon is laid to rest. Perhaps if, day by day, they try to carry out some wish or some interest which was close to the man's heart, they may find themselves sharing more intimately in the actual things which moved him. This will give them comfort and courage to face the future with a "head that is bloody but unbowed."

Reducing the Gold Reserve

EXTENSION OF REMARKS

OF

HON. ELLSWORTH B. BUCK

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 31, 1945

Mr. BUCK. Mr. Speaker, on voice vote, for protest purposes, I voted against H. R. 3000, the bill to reduce gold reserves. I wish there had been a recorded vote. In my opinion, our country is following a topsy-turvy financial policy which I would expect to find only in Alice in Wonderland.

On the one hand, we are told that gold reserves must be reduced because our country is experiencing continuous losses of gold through gold exports. On the other hand, our gold mines have been closed for 2½ years and there is as yet no indication as to when they will be reopened. On the one hand, we are told that H. R. 3000 is necessary to the financing of the war. On the other hand, the Congress, day after day, appropriates extravagantly for the peacetime activities of the Government with no thought whatever to the achievement postwar of a balanced budget.

Our financial disease cannot be cured by soothing sirup. Cure requires a major operation and that major operation is the elimination of every unnecessary job and every unnecessary expenditure so that Budget balance, with the end of the Japanese war, can actually be achieved. There would then be no necessity for reducing gold reserves, and confidence in our currency would be correspondingly strengthened.

Franklin Delano Roosevelt

EXTENSION OF REMARKS

OF

HON. RAY J. MADDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 31, 1945

Mr. MADDEN. Mr. Speaker, I wish to present to the Congress the resolution adopted by the Independent Hungarian Political Club of Gary, Ind., on the passing of our late President.

This organization, through the leadership of Julius J. Danch and George J. Domonkos, over the last 13 years, has been untiring in its loyalty to our departed President. It has, without exception, during this period, supported his great program for the uplift of humanity and the rights of the common man.

The resolution follows:

THE INDEPENDENT HUNGARIAN
POLITICAL CLUB,
Gary, Ind., April 29, 1945.

To Whom It May Concern:

At our regular meeting, April 29, 1945, upon recommendation of the officers and our board of directors, the following resolution was offered and accepted:

"Whereas all nationality groups, in particular American Hungarians, by naturalization, and/or descent, feel that we have lost a friend, indeed, and wish to pay our respects also to our friend and benefactor, Franklin Delano Roosevelt; and

"Whereas that in the course of human events the hand of God touched upon the souls of nations, meting out punishments upon them, punishments far reaching in scope, in severity, and in justice. Men lost sight of His destiny, the right to life, liberty, and the pursuit of happiness, the inalienable right to worship God regardless of race, creed, or color. That out of this chaos God has provided this Nation with a leader who was given the great and far-reaching ability and foresight to look far into the future and plan the rebirth of democracy in its true sense, not only in these great United States of America but also in the United Nations of the world, as evidenced by the San Francisco Conference: Therefore be it

"*Resolved*, That in memory of this great national humanitarian we pray Congress will see fit to establish a national shrine; we further

"*Resolve*, That our sympathy, together with the sympathy of Congress, be extended to the bereaved. The memory of Franklin Delano Roosevelt will live for time immemorial in the halls of fame and the annals of history."

Submitted and accepted by the members of the Independent Hungarian Political Club in regular meeting assembled this 29th day of April 1945.

JULIUS J. DANCH,
President.

Attested:

GEORGE J. DOMONKOS,
Honorary President.
FRANK DOBROSZI,
Recording Secretary.
LOUIS BRUSZ, *Director.*

Angleworms and Rattlesnakes

EXTENSION OF REMARKS

OF

HON. ROBERT K. HENRY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 31, 1945

Mr. HENRY. Mr. Speaker, under leave to extend my remarks, I desire to have printed in the Appendix of the RECORD an editorial entitled "Angleworms and Rattlesnakes," which appeared in the Jefferson County Union of Fort Atkinson, Wis., under date of May 24, 1945:

ANGLEWORMS AND RATTLESNAKES

Unless the OPA speedily mends its ways it is headed toward the same tragic fate which caught up with the noble experiment, prohibition, a dozen years ago.

Unlike the noble experiment, which had only a scant mathematical approval, the OPA was launched with a practically unanimous endorsement of manufacturers, retailers, and customers. The principles of OPA still have that endorsement, but the public rapidly grows weary of its elephantine and thick-skulled gyrations.

The first grave error of OPA was the maze of red tape in which it tangled itself, red tape which reached the ultimate of confusion in the recent regulation No. 580. An official high in OPA circles recently confessed privately that he doubted if the best advices of the larger Chicago and Milwaukee stores could comply technically and absolutely with regulation No. 580, and he was positive that the average small-town merchant couldn't comply. A program which could have been made simple and easy was made complex and difficult. Red tape was the first sin of OPA.

But, worse still, have been the failure of OPA to stop black-marketing activities at their source in the high places on the one hand, while they persecuted technical violators with good intentions on the other. With considerable flourish the OPA has penalized a few farmers for selling poultry over ceiling prices. They have penalized a few frozen locker owners, they have nipped a handful of motorists for gasoline rationing violations, they have pointed the finger of shame at a few harassed businessmen, but the scandalous black markets in the metropolitan areas have successfully thumbed their collective noses at them. The OPA has chopped the heads off angleworms while the rattlesnakes have gone their merry way.

The OPA should have read in the history of prohibition that these tactics would soon forfeit public approval and respect. Certainly the OPA cannot fail to recognize the handwriting on the wall at this moment. A few weeks ago George Greene, of the Waupun Leader-News, one of Wisconsin's ablest newspapers, told the OPA bluntly to go to hell. That was on the occasion of the OPA breaking its word to the housewives by invalidating ration points before expiration. No one recognizes the necessity for sensible price control more than does Mr. Greene, but the high-handed antics of the OPA have irked Mr. Greene as they have the rest of us. In the fort we have been unusually fortunate, OPA regulations have been left in the hands of an intelligent and cooperative local committee, with the exception of one regrettable incident. As a result, we have had few offenses and few complaints. Just how fortunate we have been is indicated in a bitter story of OPA persecution visited upon our neighboring city, Whitewater, last week. The Whitewater Register is ably edited by a family whose capable idealism and devotion to duty are respected all over Wisconsin. Here is no crackpot weekly speaking, but the voice of an intelligent, thoughtful publication, driven to distraction by invaders who prefer to pounce upon well-meaning midgets while malicious giants run at large in the land:

"That scourge, known as the OPA investigator, visited our city this week. There were two of them. They went into most of our grocery stores, checked the prices, jotted down errors, and at the bottom of the record stated the amount they, as dictators, elected to assess the culprits. Dierfeld's, Hackett's, and the I. G. A. were all found to be run by criminals.

"These overpowered investigators, whose methods are making good Americans blush, are not specializing in the shyster, crooked merchant. No, they are after anybody with stock on their shelves who, because of the rush of business with an understaffed force failed to check an item in the almost daily change of prices and rewrite the price tag under that commodity on the shelf.

"At Hackett's, for instance, there were 11 items found wrong, 10 for 1 cent, 1 for 2. The gravest offense was the discovery of a few cans of grated tuna in with the higher priced light meat cans. The fine for that covered the price of tuna sales for a year.

"No dishonest merchant can last long in a town this size. The public weeds out all such and so, when the Government is behind this practice of heavily penalizing the honest ones for honest mistakes while working under terrific handicaps, the Government suffers.

"The OPA is helpless in its contest with the black marketeers but honest mistakes by honest merchants are easy to spot, so it has turned to that field to get the cash returns which would seem, in Washington, to justify its existence.

"As a taxpayer, the Registerman wishes heartily that it were possible to use city funds to fight, in court, this cancer on our democratic form of government."

Harry Truman Is the Seventh Vice President To Become Chief Executive

EXTENSION OF REMARKS

OF

HON. HATTON W. SUMNERS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 31, 1945

Mr. SUMNERS of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article and poem from the McKinney (Tex.) Courier-Gazette:

HARRY TRUMAN IS THE SEVENTH VICE PRESIDENT TO BECOME CHIEF EXECUTIVE

As the Nation and the world paused to pay tribute to Franklin Delano Roosevelt in prayer and praise, President Harry Truman took over the duties as the Chief Executive of these United States with prospects of unusual close cooperation between the White House and Congress. Truman took oath of office as the President of the United States at 7:09 p. m. last Thursday, a scant few hours after the death of Franklin Roosevelt at Warm Springs, where he had been for several weeks undergoing treatment. Mr. Truman was the seventh Vice President in history to be elevated to the office of President by reason of death.

Though Mr. Truman acted alertly to maintain the essential continuity of government during these first few days of his responsibility he is remaining deliberately in the background as a sorrowful Nation pays tribute to the first President to die in office since President Harding in 1923.

In taking up the reigns of government, President Truman has promised a continuance of the program started by our late President. No changes have been made and no intentions of changes has been announced in the President's Cabinet. Unconditional surrender of the enemy and the establishment of a lasting peace, the goals set by Mr. Roosevelt, will be the chief aims of our present Commander in Chief.

Even though Mr. Roosevelt did not live to see the ultimate victory of the Allies and the peace he so often dreamed of, yet he saw this victory and peace many times during this war. He saw it after Pearl Harbor, when our Nation reeled under the cowardly attack of barbarous Japan. He saw it at Casablanca and at Yalta and in the meetings that followed with the Allied chiefs. He knew as no other man knew that there was only one end to this present conflict—ultimate and complete victory for the Allies.

HE IS NOT GONE

Did some one say, he has passed on?
Did some one says, he is no more?
'Tis not so, for his light gleams on,
While his great soul walks Eternity's shore.

Can ye not see his trenchant blade,
Still leading the ranks of men?
Can ye not hear his golden voice?
The voice of a helper and friend.

Then say ye not that he is gone,
His flag still waves o'er sacred sod,
Still he leads embattled hosts,
On to victory and to God!

—*W. M. Pierson.*

DALLAS, TEX.

Regional and Valley Authorities

EXTENSION OF REMARKS

OF

HON. JOHN W. GWYNNE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 31, 1945

Mr. GWYNNE of Iowa. Mr. Speaker, in view of the position taken by the National Farmers Union in the matter of regional and valley authorities, it is interesting to note that Flint Creek Local, No. 522, of Hall, Mont., has adopted a resolution opposing Senate bills 460 and 555 and H. R. 1824.

In accordance with permission heretofore granted, copy of the resolution is hereto attached and made a part of these remarks:

Whereas Senate bill 460, introduced by Mr. MITCHELL, Senate bill 555, introduced by Mr. MURRAY, and House bill 1824, introduced by Mr. RANKIN, as well as other bills of a like kind pertaining to regional or valley authorities, have been introduced in the Congress of the United States; and

Whereas such legislation would give a group of three directors control over the destinies of the areas covered, thereby depriving such areas of their long-recognized rights to carry on their own development; and

Whereas such authorities would exercise the right of public domain and take from citizens in the community their homes and property and would eliminate said assets from taxation; and

Whereas we already have agencies and authority, passed by the last Congress, to complete such work; and

Whereas we fully realize that in these arid areas water should have its first use for domestic consumption and the growing of crops and further recognize that on the use of this water depends our economic life and the establishment of homes; and

Whereas we feel that such legislation would take from us our long-recognized rights: Now, therefore, be it

Resolved, That we, the Flint Creek Local, No. 522 of the National Farmers Union, after studying discussions of these matters, voice our strong opposition to such legislation and recommend that it do not pass; be it further

Resolved, That copies of this resolution shall be sent to our congressional delegation for the State of Montana, and to other organizations who agree with our beliefs, and in addition that a copy be spread upon the minutes of this organization.

FLINT CREEK LOCAL, NO. 522, HALL, MONT.,
WALTER WICKBERG, *President*,
MRS. LOUIS ORMESHA, *Secretary*.

Plenty of Fat Cattle But No Steaks

EXTENSION OF REMARKS

OF

HON. GEORGE B. SCHWABE

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 31, 1945

Mr. SCHWABE of Oklahoma. Mr. Speaker, the OPA has us in another jam. I am in receipt of a telegram dated May 30 from Mr. C. W. Cotton, chairman of the agriculture department of the Tulsa (Okla.) Chamber of Commerce, which reads:

We are confronted here with one of the most serious livestock marketing and food situations in the history of our livestock industry. There exists in this important farming area largest number of food livestock on the hoof in history. As you are aware the normal marketing period for grass-fat cattle is just beginning and will continue until middle of October. Present Government restrictions prevent local packers from slaughtering more than very limited number of these cattle. Therefore they are entirely helpless to care for normal offerings. Our local stockyards are daily refusing acceptance many hundreds of head of cattle and large percentage are being returned to ranches and farms because these cattle are brought into stockyards in small numbers by hundreds of farmers who have no other available market.

Many other localities in southwest are also confronted with this very serious problem. When cattle are fat and there is no market it naturally causes economic loss to producer as well as food loss to public. At large meeting business and professional men at Tulsa Chamber of Commerce today resolution was passed respectfully asking agriculture committee to request you to provide means of immediate relief and to suggest increased killing quotas for local packers.

One of my constituents sent me a clipping from the Tulsa Daily World of May 29, 1945, which he says describes a good example of some more OPA bungling. He further says:

Meat is almost nonexistent here with the market flooded with cattle and no market in which they can be sold and turned into meat.

I quote the following from the clipping of the Tulsa Daily World:

CATTLE QUOTA SLASH CLOSES LOCAL PLANTS—BUYERS IDLE WHILE STEAKS AND ROASTS ON HOOF MILL ABOUT PENS AT YARDS IN CITY; PRICES SAG ON MOST CLASSES OF ANIMALS

(By Lorren Williams)

Tulsa's critical meat situation reached famine proportions Monday when local packing plants closed down for the week under the abbreviated slaughter quotas set by the Office of Price Administration.

Several hundred head of cattle which ordinarily would have been purchased by a dozen buyers for local concerns milled and bawled in the pens at the stockyards, while potential steaks and roasts which would have gone into the ovens of Tulsa housewives before the end of the week went begging.

Prices sagged from 50 cents to $1 on most classes of cattle at the market, with farmers and livestock men in the Tulsa area taking another beating. Some were unable to sell their livestock, and loaded them into their trailers and trucks to take them back home.

All observers ascribed the situation squarely to the recent ruling of the OPA that cattle quotas must be cut 75 percent and hog quotas 50 percent for local packers (or those not federally inspected). All of the Tulsa packers come under this classification, and all had exhausted the quotas for May by Monday morning.

Most of the packers will not resume operations until Friday, and some not until Monday, thus cutting off Tulsa's principal meat supply for an entire week.

Many retail merchants in Tulsa who sell meat over the counter to the housewives threw up their hands in despair when they learned of the new situation.

AREA PASTURES FULL

"I haven't been able to get any meat for 2 weeks, and so I let my butcher go this morning," said one operator of a moderate-sized market.

Adding irony to the situation is the report of livestock men that the pastures in this area are full of cattle, which could move to market.

Fear is openly expressed that if the OPA quotas are not boosted within a matter of weeks, the livestock raisers in this area may face ruin. Should a dry season develop which would cause the pastures to dry up, it probably would start a marketing stampede, and with the local buyers out of the market, the only recourse would be to ship the cattle to Kansas City, Chicago, and eastern markets as grass-fed stock of poor quality.

"It was a plain case of too much cattle and not enough quota," said P. C. Hawkins, manager of the Tulsa Stockyards, who was disturbed at the slow and unsettled market, particularly on cattle. Hogs were selling about steady, although quotas have been cut 50 percent because of a scarcity of hogs in the feed lots.

Hawkins hoped, however, that the situation here would be temporary, and that the Tulsa market could return to free competition among buyers after the end of the month.

Bob Layman, manager for the National Live Stock Commission Co., 7300 Sand Springs Road, who has been in the local market for 30 years, asserted "the local buyers furnish most of the meat to the local market, and they are just not buying today."

He said there were many cattle in the yards which would have gone to local plants "and prices are down from 50 cents to $1."

Layman said buyers for Swift and Hunters were in the market at the yards but "about a dozen local fellows are out of the market, and they are the ones who make the competition. They can buy closer to the ceiling than the out-of-town packers can."

BUYER TAKES LOSS

Jay Keefer, buyer for the Tulsa Commission Co., reported he had bought about 50 cows and cattle during the day above the quoted price. He said the big packers were offering $10, and he paid $11 and $11.50 a hundred pounds so that the farmers and livestock men would not have to truck their cattle home.

"I will lose money on the deal, but I am trying to take care of my customers," said Keefer. "I figure the locals will be back in the market nex week, and will take the stuff off my hands. But I will take a loss on the deal, and I can't keep on doing that indefinitely."

Not so fortunate was L. A. Carrington, a livestock man of near Tahlequah, who brought a load of yearlings to the market and at 1:30 had not a bid on the lot. He said he supposed he would have to take the cattle back home.

"I could have done better than that in Muskogee," he lamented. "I have 175 more cattle at home that I was planning to bring to the Tulsa market, but I guess now I'll send them to Kansas City."

Joe Jarboe, of the Jarboe Commission Co., said it was a plain case of "not enough quota for the local packers. They were cut down to 50 percent of their quota of last year on hogs and 75 percent of their quota on livestock, and they didn't have enough quota last year."

Layman asserted, "The farmers have the livestock, the people have the money to buy it, but the OPA regulations just won't let the fellows around here kill."

Livestock men estimated the run of cattle and calves at 700 at the market Monday, with many of them unsold or turned back. When the peak season arrives in July and August the market often has as many as 2,000 to 3,000 cattle a day.

Many were hesitant to talk about the situation for fear it would start a stampede to market early in June, throwing many animals on the market before they are ready and causing a sharp slump in prices which would cost farmers thousands of dollars.

One buyer who was out of the market was Ed P. O'Brien, of the Stockyards Packing Co., who in an ordinary week would purchase 200 head of cattle. He wandered about the pens Monday, looking at the cattle, and watching representatives of out-of-town packers do the buying.

"It looks like the OPA wants to turn the market over to the big packers and destroy competition in the local yards," he said.

A few hundred yards away the Stockyards Packing plant was silent, and butchers had been laid off for the week.

Banfield Bros. Packing Co., 915 Apache Road, reported their plant closed down until the end of the week. With quotas on hogs cut 50 percent, spokesmen for the company said there wasn't much Tulsa could do but tighten its belt and get along without much meat.

Other plants closed down were the Brooks Packing Co. at Lake Station, the Blue Packing Co. on the Sand Springs Road, the Gabriel Packing Co., 4006 East Pine, the Banfield Frozen Food Co., 4200 Dawson Road, and the Frank Wickman Co. at Sapulpa.

SHIPMENTS EXPECTED

Some meats were destined to reach Tulsa from out-of-town packing plants. Managers of Swift & Co., 3 South Cheyenne, said the company would have available about the same amount.

It was explained that the meat supply had been allotted over the country, sometimes more and sometimes less, but on an equitable basis, but Tulsa will get about its usual allotment.

The manager asked that his name be withheld.

At Armour & Co., 1 North Detroit, it was explained that that company's quota has been cut, but the supply for Tulsa will be about normal.

Neither of these companies slaughter livestock locally, and neither could estimate the amount of meat which would be available for shipment to Tulsa.

Mr. Speaker, I am this morning in receipt of a letter from Chester Bowles, Administrator of the Office of Price Administration, dated May 30, and I suppose the same letter was sent to each Member of Congress. This letter is accompanied by a release of the OPA dated May 30, 1945, with much to say about stopping black-market operations, cutting of quotas, prosecution of black market operators, and so forth. In conclusion, the release states:

The two programs outlined in this report, as I pointed out, will not increase our total supply of meat. This can only come through the stepped up hog production, and through the increase in cattle feeding. Both of these objectives, as you know, have been dealt with in the program announced by the Vinson office a week ago.

Mr. Speaker, I call your attention to the reports which have appeared currently in the newspapers here in Washington, to the effect that those in charge of supplying our armed forces have been patrons of the black market for meats.

In the Washington News of May 30, 1945, the following item appeared:

KIN OF DESK SOLDIERS GORGING ARMY MEAT

Steaks, such as you haven't seen since the war began, chops, ham, and roasts, it developed today, are being diverted from the Army's extra-special premium grade purchases for its fighting men so the wives, children, aunts, and uncles of Pentagon chair-borne troops needn't suffer in the current meat famine.

The amounts daily being made available constitute a military secret, but the red meat is pouring into the showcases or neighborhood Army commissaries around Washington. And the public is barred from these stores, along with the Navy and soldiers just back from overseas who don't have an official desk here.

FIFTH STORE ADDED

The stores, for the exclusive use of families of Army men stationed here, have been doing such a land-office business at prices less than those charged by private business that recently it was necessary to add a fifth in order to take care of the overflow.

The situation, it develops, is causing considerable discontent, not only among the 16,000 civilian laborers of the Potomac River Naval Command, but among naval and Marine Corps personnel, who are doomed to suffer along with civilians in the city most affected by the meat famine. Naval personnel quote their commander's policy:

HERE'S NAVY POLICY

"We don't see any reason why naval personnel stationed in Washington should receive benefits civilians working just as hard cannot get. Throughout the Nation the Navy has only 64 commissaries where staples, meat, and groceries are sold. And these were established only at places like Key West, Norfolk, and Patuxent Air Base, where there were no facilities or the shopping district was inadequate."

The Army has a different opinion. The general policy of the service has been to establish commissaries where married personnel had not been able to purchase groceries "without considerable inconvenience." And are not Washington buses crowded and waiting lines long and inconvenient?

ENTRANCES GUARDED

Military police guard entrances to the five family commissaries here to check the cards of authorized customers. None without a card is supposed to enter, and to get one, proof of dependency must be established, as well as the number of persons in the family. Customarily, the Army family is assigned to buy only at the store nearest its residence, and because the stores order from the Army stocks on the basis of the customers' wants and red points, there is no reason for shortages.

The Fort Myer commissary is in a new cement building. It's large, equipped with all the latest in display technique. Vegetables with reflecting mirrors; soapflakes and soap loading one aisle. The meat counters run along the entire end of the building.

NO WAITING LINES

You don't even have to wait in line in this tremendous and efficient store run by an Army major, and manned in part by Army personnel.

Opening the fifth commissary at the Washington Quartermaster Depot, at Cameron, near Alexandria, eliminate all line-waiting in commissaries. The others are the Army War College, Walter Reed Hospital, and Bolling Field. The area each serves covers a stipulated part of the city.

But, Mr. Speaker, in the great Southwest, where cattle are raised, the farmers and cattlemen are beginning now to bring their grass-fat cattle which have been fattened with supplemental feed, to the local markets, and are either forced to return the cattle to their farms and ranches or accept a price below what they should receive for their cattle. The OPA has set such rigid quotas and so sharply reduced the number of local slaughterers and packers who are allowed to buy, that their quotas for May became exhausted before the end of the month. Hence, the cattle were brought to the market, but the local buyers who could afford to pay more than the large packers, under the OPA regulations and curtailments and rigid quotas, cannot buy these cattle. Now, in our part of the country we have plenty of fat cattle, but no steaks.

The OPA has had much to say about shipping cattle to areas where an insufficient number is produced to supply local demands. But here is a situation where the cattle were raised by neighboring farmers and ranchmen, who were encouraged by Federal agencies to feed and get them on the market; but when they arrived at the market there were no buyers because the OPA had reduced the quotas to the extent that the people where the cattle have been raised and are now available, cannot have meat to supply their own needs.

The whole situation has been so bungled by the OPA, through its numerous and changing regulations, that district and local OPA officials are giving up in disgust and resigning rather than carry out OPA orders.

Early last fall the farmers were warned against overproduction, particularly of hogs. This discouragement resulted in the sale of many brood sows that should have been kept for producing the 1945 pork which we now need. As a characteristically impractical suggestion, we found the OPA saying yesterday that the total meat supply can only be increased by stepping up the hog production and through the increase in cattle feeding, as above quoted. Everyone knows that it takes approximately 1 year to breed and rear hogs and cattle sufficient to step up production to any appreciable extent. This sounds like an attempt to blame the farmers and stock raisers, after they had been warned against overproduction last fall.

The authors of OPA regulations and directives change their rulings in such rapid succession that it is impossible for the farmers to know just what policy to pursue. They tell us to slow down production and the result is a shortage of meat, and then they tell us we must step up production. It is impossible for the farmer to change his plan of operations with the same speed with which the OPA changes its policies and directives. The OPA is now trying to "pass the buck" to the farmers, but the OPA is responsible for reduced production by discouraging the raising of hogs and cattle, and the people will hold them to that responsibility.

Where Do We Go From San Francisco?

EXTENSION OF REMARKS

OF

HON. CARL A. HATCH

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Thursday, May 31, 1945

Mr. HATCH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD remarks of the junior Senator from Louisiana [Mr. ELLENDER] on the subject Where Do We Go From San Francisco? The Senator from Louisiana participated in a debate on this question in the Free Speech Forum, on May 29, and the remarks were broadcast from Station WWDC, in Washington, and from Station WMCA in New York. I listened to the discussion, and found it not only interesting, but informative.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

Ladies and gentlemen, the United States Senate must, without delay, ratify and approve the charter of the world organization that will be agreed upon at the San Francisco Conference. We have delegated some of our best talent to represent us at the Conference and it is up to us to back their decision to the limit.

I make that statement unqualifiedly and without knowing what the charter will finally contain, but conscious of the fact that unless the United States is willing to participate in and become an active member of the organization, the world will soon again be plunged in a war that will destroy civilization.

I know that the charter will not be perfect. Many of its provisions will cause much dissatisfaction among some of the nations of the world—even among our own people—but let us hope that in the course of time, and in the light of experience, the charter will be amended so as to give assurance to the discontented. Let those who object to some of the stipulations in the charter review the history of our own Federal Constitution. They should be convinced that its success can be duplicated in the world organization, if participating nations are sincere in their desire for a permanent peace, founded upon law, justice, and devotion to the general welfare.

We should take a leading part in all of the activities and deliberations of the organization. It should meet often. The general assembly should be used as an open forum for free discussions among the representatives of the nations who have membership in the organization. In that way nations can learn more about each other. Suspicion, jealousy, and greed can, to an appreciable extent, be dissipated, and as nations become better acquainted with each other, it is my hope and belief that there will spring among them more team work to foster world peace.

We should encourage the use of a world court to settle international disputes among nations. I realize that it will require much time and effort to create a court that will inspire confidence among the nations of the earth. Under proper guidance, and in time, I can foresee the adoption of a code of rules and regulations founded on law, justice, and equity that will form the basis for deciding international disputes among nations in the same manner that the common law of England is used today to settle disputes among individuals. Why is that not feasible if nations are sincere in their desire to further peace among the peoples of the earth?

As leading advocates of such a plan we could point with pride to our performance in the two global wars that engulfed the world in the last 25 years. We never have sought more territory for our own aggrandizement. All that we have asked for is to be permitted to maintain our own form of government and in return accord the same right to other nations. We should be able to give convincing proof of the futility of war and the absolute necessity of settling disputes amicably in the future.

Until the world organization has been firmly established and has proven its ability to maintain peace, we should not agree to disarm. We should maintain a substantial Navy, a sizable air force, and a fairly large mechanized Army—not so much for our own protection but to assist in maintaining world peace.

We should, by all means, retain in trust such of the conquered islands in the Pacific, or portions thereof as, in the judgment of our Army and Navy advisers, are necessary for our own security and to aid us in preserving the peace of the world.

We should assist in carrying out the common program of purposes and principles embodied in the Atlantic Charter, else the world may remain in turmoil and a lasting peace may become but a dim hope. The vexing Polish question should be amicably settled at an early date, and I do believe there is much merit to the proposed settlement tentatively agreed upon at Yalta. Let us not forget that the Curzon line was set by arbitration and it was when Russia was weak and unable to resist that the Poles extended their conquest from the Curzon line to the east. Let it further be known that within this conquered territory only 7 percent of the population were Poles.

All nations should have free access to the seas. The Panama Canal, the Suez Canal, the Dardanelles, and similar channels should be open, free from tolls to all nations except for such charges as may be necessary to retire existing obligations which may have been incurred for their construction and to pay the cost of their maintenance and operation.

We should take the lead in the establishment of world trade. No nation can cope with us in industrial production. We have demonstrated our ability in the last 4 years. For our own good it is imperative that we lower our tariff barriers by extending the Reciprocal Trade Agreements Act, as advocated by President Truman.

The Congress should enact without delay the two Bretton Woods proposals. One creating a monetary fund to stabilize the value of all currencies in terms of each other, and the other establishing an international bank, the functions of which will be to finance the construction of long-range productive projects in war-torn countries. Both proposals involve an investment of about $6,000,000,000 on our part and should go far toward building a durable peace and reestablishing without much delay a stable world trade. We have spent almost $200,000,000,000 to fight the Axis Nations in an effort to preserve our way of life, and why we should quibble over an investment of $6,000,000,000 in an effort to avert future wars does not make sense to me. Those suggestions are not a cure-all but are essential to our own welfare. Before the world recovers from the shock of war my guess is that we will be compelled to venture still further in world affairs in our efforts to solve the problems of battered nations.

All people are looking to us for leadership. We stand in a position to blaze the trail and we should not hesitate to take advantage of our situation while opportunity knocks.

Jefferson Day Dinner Address by Hon. Olin D. Johnston, of South Carolina

EXTENSION OF REMARKS

OF

HON. FRANK P. BRIGGS

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Thursday, May 31, 1945

Mr. BRIGGS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very informative and inspirational speech delivered by the junior Senator from South Carolina [Mr. JOHNSTON] at the Jefferson Day dinner, May 26 last, at Sioux Falls, S. Dak.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

On April 12, while waiting in Chicago for my train to carry me to Sioux Falls to attend the Jefferson Day dinner, I learned the sad news that our President, Franklin D. Roosevelt, had died. Our Jefferson Day dinner in this city was then postponed and I returned to Washington.

Permit me to say that in my opinion the people of this Nation suffered a great loss by the death of President Roosevelt. He will go down in history as one of the greatest Presidents the United States has ever had. It takes time for a nation or people to properly evaluate the worth of a man, so in years to come we will look back upon his acts and deeds and appreciate them much more than we do at the present time.

I firmly believe that his election in 1932 saved this country from a revolution. We must remember that Germany, Italy, and other nations were falling into the hands of dictators. If any man had been nominated on the Democratic ticket in 1932 who had wanted to be a dictator, he could have easily become one in the United States.

In my opinion, any person would have beaten Herbert Hoover in 1932, for the people were disgusted with the Republican Party and wanted something to be done that would give their children meat and bread and a place to sleep. The historians writing this period, I believe, will give credit to whom credit is due for saving us from dictatorship.

It is hardly necessary for me to tell a Sioux Falls audience that my State, South Carolina, is an agricultural State like yours. I am a country boy from an agricultural State. In addition, I spent 12 years of my life working in the cotton mills of my State—and for your information, South Carolina has in operation one-fourth of the textile spindles of the whole United States.

I am proud of my heritage and I am glad that I am a farmer and I know that you are likewise proud of your accomplishments as farmers. I feel that you can quote with me the ode entitled "I Am the Farmer":

"I am the provider of all mankind. Upon me every human being constantly depends. A world itself is built upon my toil, my products, my honesty.

"Because of my industry, America, my country, leads the world; her prosperity is maintained by me; her great commerce is the work of my good hands, her 'balance of trade' springs from furrows on my farm. My reaper brings food for today—my plows hold promises for tomorrow.

"In war I am absolute; in peace I am indispensable—my country's surest defense and constant reliance. I am the very soul of America, the hope of the race, the balance wheel of civilization. When I prosper men are happy, when I fail all the world suffers.

"I live with Nature, walk in green fields under the golden sunlight out in the great alone, where brain and brawn and toil supply mankind's primary needs; and I try to do my humble part to carry out the great plan of God.

"Even the birds are my companions; they greet me at the new day's dawn and chum with me until the evening prayer is said. If it were not for me the treasuries of the earth would remain securely locked; the granaries would be useless frames; man himself would be doomed speedily to extinction of decay."

The world today is in a chaotic condition. We are facing the greatest crisis in civilization. Today we stand at the end of the European war and our armies are advancing against the enemy—Japan. We look forward to an early victory in this war.

When peace comes we will have a battle against as great, if not a greater enemy, as that of the Germans and Japanese. That battle will be known as the postwar conflict.

The democratic ideals will be necessary in order to preserve the rights and liberties of the individuals of this Nation. Our great party has always been the party of the masses. From the very beginning there were two lines of thought—one led by Hamilton and the other by Jefferson.

Today both parties are claiming to be advocates of the Jeffersonian principles of States' rights. I like to think of our Government and the laws of the land being made to protect the weak against the strong. This being so, how can we afford to let the Republican Party gain control of our Government when the principles they have practiced from the beginning are unequal rights and privileges to the few.

Of course, the Republican Party will not openly advocate special privileges to the few and unequal rights, but in reality, let's look at the picture for a few minutes. They do shout individualism from the housetops. What does this mean? Turn loose big business without control and you have unequal rights and privileges to the few. Our great party has tried to help the individuals at the bottom of the ladder.

Farmers in South Dakota have been helped. Let me give you a comparison of the South Dakota farmers' cash returns with prices all farmers paid for things they bought and with their interest and tax rates, showed that the buying power of income from farming in the State in 1935–39 yearly average was 142 percent greater than in 1932 and 335 percent greater in 1944 than in 1932, the last year of the Hoover administration.

In 1932 the total annual receipts amounted to only $59,471,000. The 5-year period ending 1939 the annual receipts averaged $93,800,000. The cash receipts for sale of farm products in South Dakota during the year 1944 totaled $340,849,000 and the Government added to that in Government payments $13,813,000, which brought the year's cash returns to farmers of this State to $354,662,000.

The farmers of South Dakota should be congratulated in the way they have used this increased income. The record shows that on January 1, 1944, the South Dakota farm mortgage debt was only approximately $105,000,000, compared with approximately $462,000,000 at the peak on January 1, 1924, another Republican year.

Let me remind you again how the people were suffering at the close of the Republican administration. Farm foreclosures and other forced sales in the State of South Dakota for the year ending March 15, 1933—the year Hoover went out—was 78 foreclosures and forced sales in every thousand farms. I thought I would mention this. Lest we forget! Lest we forget!

No Republican can accuse the Democratic Party of bringing on the great depression of 1929 through 1933. Even though we oft'times heard the remark "Prosperity is just around the corner," but the corner was never reached. But, the people created another corner by electing a Democratic President of the United States.

I mentioned a few moments ago that the battle after the war would be known as the "Postwar conflict." We will have many problems to solve. There will be more than one front—the very first front that will face us in the postwar period will be unemployment.

Now is the time to begin to fight against the maladjustments of our economic system and the greatest implement is to produce jobs for the men and women who will be returning to their homes from the war.

It must be our fight to see that every man and every woman has a job to do and that every citizen of our Nation will have sufficient food, clothes, shelter, and medical care. This cannot be done through the means of relief by the Federal Government.

This reminds me of a story I once heard. There was a group of pelicans which secured their living by feeding off the refuse from a sardine factory on the Pacific coast. When, because of war conditions, the factory closed, the pelicans were faced with starvation.

The story goes that they had many conferences among themselves wondering what to do, for many of them—particularly the younger ones—had never known anything but a bountiful supply of food. At an indignation meeting, resolutions were offered complaining to their Congressmen and Senators demanding relief from the public till. But the older heads among them wisely advised that under the circumstances, "If we wish food, we must relearn the art of fishing for it."

This fable, I think, pictures to us what may happen after the war. We must learn to be energetic and work. Some people wonder why it was that the Germans could come

back so quickly after the First World War. The answer is they did not mind working. Any person or any nation that becomes lazy and fails to work cannot hope to prosper and progress.

I mentioned earlier in my speech that the Republicans shout and want to restore to the people of the United States the right of individualism. I did not mean by that that we should not give the individuals in this Nation the right to develop to their greatest extent, but at the same time, we must throw proper governmental restrictions around monopolists in order to guarantee individuals their proper protection.

Jefferson always fought for the rights of the laboring people, and when I say laboring people I mean farmers or any one else who earns his livelihood by the sweat of his brow.

Let me quote from a letter written by Thomas Jefferson to William Johnson in 1823:

"Still further to constrain the brute force of the people, they (the tories and reactionaries) deem is necessary to keep them down by hard labor, poverty, and ignorance, and to take from them, as from bees, so much of their earnings as that unremitting labor shall be necessary to obtain a sufficient surplus barely to maintain a scanty and miserable life. * * * And in the convention which formed our Government they endeavored to draw the cords of power as tight as they could obtain them."

That is Jefferson speaking—not Olin Johnston. Bear in mind that Tories of that day were Republicans and reactionaries—the same as we have today.

To combat the authoritative Tories seeking to draw the cords of power as tight as they could obtain them, Jefferson fought for States' rights, seeking to protect the great body of the people against the will of a minority who were hoping to appropriate the earnings of labor and set up an Old World feudalism with all its glittering trappings.

Today, in their fight against the progressive measures of the Democratic administration, the Republicans have picked up the phrase "States' rights," and even have the temerity to call themselves Jeffersonians. Nothing could be further from the truth.

The Republicans have stolen the phrase because they can no longer turn to Hamilton—the father of their party—for comfort and the advancement of their philosophy—characterized for generations by exploitation of the common man.

The Republicans use the phrase "Jeffersonian" in a hopeless effort to protect private vested interests—a raid against the continued progress and welfare of the people as a whole. Their conception of States' rights and that of Jefferson stand poles apart.

The Democratic Party, unlike the Republican Party, has always been interested in preserving the rights and extending the liberties of the common man.

Let me quote again from a letter from Jefferson to William Johnson written in 1823:

"Our (object) was to maintain the will of the majority of the convention, and of the people themselves. We believed that man was a rational animal, endowed by Nature with rights and with an innate sense of justice, and that he could be restrained from wrong and protected in right, by moderate powers, confided to person of his own choice and held to their duties by dependence on his will. * * * The cherishment of the people then was our principle—the fear and distrust of them that of the other party."

Jefferson was a great prophet and political philosopher. Reading from a letter written by Jefferson to John Adams in 1821, we find Jefferson saying the following:

"I shall not die without a hope that light and liberty are on a steady advance. We have seen indeed once within the record of history, the complete eclipse of the human mind continuing for centuries. Even should the cloud of barbarism and despotism again obscure the liberties of Europe, this country remains to preserve and restore light and liberty to them. In short, the flames kindled on the 4th of July 1776 have spread over too much of the globe to be extinguished by the feeble engines of despotism; on the contrary, they will consume these engines and all who work them."

How true are his words today.

Only a few days ago I stood at the great memorial in Washington erected to Jefferson's memory. I read the following words, which are his own:

"I am not an advocate for frequent changes in laws and constitutions, but laws and institutions must go hand in hand with the progress of the human mind, as that becomes more developed, more enlightened, as new discoveries are made, new truths discovered and manners and opinions change, with the change of circumstances, institutions must advance also to keep pace with the times. We might as well require a man to wear still the coat which fitted him when a boy as civilized society to remain ever under the regimen of their barbarous ancestors."

Today, as always, the Democratic Party, is carrying out the principles of Thomas Jefferson—the greatest of all Democrats.

Approximately 25 years ago, the Senate of the United States refused to ratify the Treaty of Versailles and enter the League of Nations. In my opinion, had the Senate ratified the Treaty and entered the League of Nations, we would not be at war today.

Instead of ratifying the League of Nations, the Republican administration sank our battleships, junked our planes, and did away with most of our Army and Navy.

Some Republicans will suggest that we do the same thing again. So, now is the time for America to say to the entire world that she will be prepared in the future with a modern Army, a powerful Navy, and an invincible Air Force, so that never again will there be another Pearl Harbor.

We live in a democratic country but our Senate of the United States, on March 19, 1920, failed to follow the wishes of the people of the United States. Even a majority of the Senate was for entering into the League of Nations but not two-thirds of the Senate needed for ratification. The vote in the Senate was 49 for and 35 against.

I cannot help but quote the words of our great Democratc President, Woodrow Wilson, who said, "I can predict with absolute certainty that within another generation there will be another war if the nations of the world do not concert the methods by which to prevent it."

Oh, how true were those words. We did have another war in the next generation. It has cost us almost a million casualties and has cost us, the United States, almost $300,000,000,000 and the end is not yet.

Today, there are men and women fighting your battle in this great war. I well remember my experience in the last war in France and Germany and how I longed for the day to come when victory would be ours and we would return to our homes, but I expected of the people back home, that they maintain a wholesome civilization for me and my comrades when we returned home.

Out on the battlefields our boys are sacrificing to the greatest extent. They are undergoing hardships, they are even giving of their life's blood to preserve the American way of life, which our forefathers gave to us. As we have been handed the torch of freedom and decency, we must hold high this torch so that when these boys return we can say to them, we have not failed you in your expectations of us. And when that day arrives, we must with all of our souls, feel that the fight has just begun. We must not do as we did after the last war—become selfish, self-satisfied, lazy, indifferent, and complacent. If we do, in 25 years from now, we will have the same wars of destruction to fight. This must not happen again. The Democratic Party is determined to see to it that everything humanly possible is done to set up an international organization to prevent another world war and bring about a permanent peace.

May God guide all of us to that end.

Decoration Day Service at Grave of Franklin D. Roosevelt

EXTENSION OF REMARKS

OF

HON. KENNETH McKELLAR

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Thursday, May 31, 1945

Mr. McKELLAR. I ask unanimous consent that the address of Hon. Frank C. Walker, former Postmaster General, at the memorial service at the grave of Franklin D. Roosevelt, under the auspices of the Roosevelt Home Club, Hyde Park, N. Y., on May 30, 1945, be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The people of our land think it good to meet with their neighbors on this day and to pay to the brave who have gone from them tributes of love and gratitude.

Here in this quiet garden we, friends and neighbors, are gathered in such a meeting. We who are here near this grave are but a handful of those who today honor the name of Franklin Roosevelt and invoke God's mercy upon him. Mourning his loss, people throughout our country and throughout the world cling together today to lessen, by sharing it, the sorrow that is in their hearts.

The grace was given us gathered here to be close to him as friends and as neighbors. We know his qualities from intimate association. Yet in the most remote communities of America and of the whole world, Franklin Roosevelt is thought of in the same terms and loved for the same qualities that bring us to his grave today.

What made Franklin Roosevelt what he was? Was it his talent of leadership, his force of character, his courage? Was it the deep humanity which was so much a part of him and which suffering peoples in their hours of anguish recognized?

Courage, force of character, leadership, humanity, all these he had.

Human he was, and men loved him for it. Warm and generous, friendly and tender, gifted with captivating charm and buoyancy of spirit, he was the people's man.

They knew he was their own, that his hopes were their hopes. The humblest and most obscure knew they were in his thoughts—as much a part of them as were the mighty. They gave him their trust and their love. They knew that he saw, beyond their gropings and their failures, the grandeur which was in them.

When he erred they forgave him, for they knew he was theirs. And to them he gave of himself in generous measure. Rarely in history have whole peoples so taken from one man's fire the flame of courage. Never before did whole peoples look so searchingly and hopefully to one man to win for themselves and their children peace among nations.

Men and women of all races and creeds, of all stations in life, rejoiced to see in him one as human as themselves. They identified themselves with him. They merged their hopes with his.

They saw the courage with which he rose above his own affliction and looked to him to lend them some share of that courage. He never failed them.

His first words as President gave them the courage they had sought and could not find. In the years and in the crises that followed he inspired and quickened them.

There was need for this man's gifts, need for such a leader. When men driven to desperation looked in the faces of their hungry children, it was good that they knew that the head of the state was one who could not bar from his heart the sufferings of any human being. It was good for the world that his people trusted him and dared to follow him along the hard path which they would have to walk if they were to keep their freedom. And so he led the people in the democratic way of life. He led them to accept simple truths.

Economic collapse, or the onrush of tyrants, or military distaster or differences among allies could not shake his courage. Despair and defeat vanished before his voice.

Under his leadership and by the glory of his example, America looked into the face of evil and resolved to strike it down, however great or horrible the cost.

And so it was that when the forces of aggression against which he had warned the world so often began to roll over the free peoples of the earth, he roused this peace-loving Nation into a sense of its mortal danger. He led it to become the great arsenal of the world, the staunch bulwark of democracy, the stone wall of freedom.

When the attack came upon us, we had begun to feel our strength. We had allies, allies whom we had armed, whom we had enabled to stand in the breach until we were ready.

He spoke to his people and the world. He gave them courage, as well as arms. The beaten, the oppressed and the voiceless had their champion. The greedy and the tyrannical shouted their menaces, and the spokesman for America and for the world gave answer to them. He spoke in words which all might understand. He spoke boldly, clearly, and triumphantly. Always he spoke for his friends, and his friends were the honest people of the earth.

From the depths of defeat this man led the nations of the world to victory. Through the dark months his courage sustained their courage, his skill and energy and leadership created the greatest forces of might in the history of the world. His was the guiding genius which showed the way to triumph over the forces of evil.

The trials and the years brought him finally to a new eminence. Not by force, but by reason and by the trust which he earned, he became the leader of peoples who looked to him for the peace of the future world, from every continent on earth.

His wisdom and foresight told him that the victory of arms is but the prelude to the battle for peace and that true victory must come on the battlefields of the spirit after the guns are silent.

Today men are beginning to lay a foundation for that world peace and security. And as they work and think, there is one name in their minds and in their hearts—Franklin D. Roosevelt.

It was in his home near his garden that the words of Christ were first made known to him: "Thou shalt love thy neighbor as thyself."

At home under his leadership the corporal works of mercy became a part of the Nation's code.

He taught his countrymen that they must be good neighbors to each other, and that they must be good neighbors to their fellowmen wherever God placed them on earth.

His countrymen and his fellow citizens of the world know that he loved his neighbor—his fellow man—with deep and real love.

His neighbors throughout the world know the sore loss that has come to them—a loss which has brought sorrow to countless hearts.

By God's grace, his neighbors who learned so much from him have learned how to bear that loss:

Scarcely had word of his death been received when a man from a far off land exclaimed that only the combined effort of all men for the common good could meet that irreparable loss.

We who are here, friends and neighbors of Franklin Roosevelt—and his friends and neighbors everywhere—must now see that what he said and what he did will survive for the good of all mankind. When he lived among us, the exalted rostrum from which he spoke brought his voice to millions. It is for his friends and neighbors, for the good of all men, to see that he shall speak, even more eloquently, from his last resting place in this garden.

In ancient Athens it was the custom to bury those who fell at the forefront of battle in a sepulcher laid in some beautiful spot apart from the city. Then a man from the seat of Government would be asked to come and express the gratitude of his fellow citizens. It was thus that Pericles stood before the Athenians one day, four centuries before Christ, and told what the brave had lost and what they had gained.

"So they gave their bodies to the commonwealth," he said, "and received, each for his own memory, praise that will never die, and with it the grandest of all supulchers—not that in which their mortal bones are laid, but a home in the minds of men, where their glory remains fresh to stir to speech or action as the occasion comes by. For the whole earth is the sepulcher of famous men; and their story is graven not only on stone over their native earth, but lives on far away, without visible symbol, woven into the stuff of other men's lives."

He is gone. We shall not see him on earth again.

Here in his own garden at the sun dial, at a spot of his own choosing, he rests.

Here, close to his home, where his character was early molded—close to the library where Americans of the future will read the record of his struggle for them and for the good people of the world—here lies our friend and neighbor.

He had a simple faith in God and where his beloved head really rests, God's hand will smooth his pillow.

Compulsory Military Training

EXTENSION OF REMARKS

OF

HON. ROBERT A. TAFT

OF OHIO

IN THE SENATE OF THE UNITED STATES

Thursday, May 31, 1945

Mr. TAFT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address on the subject Compulsory Military Training in Peacetime Will Destroy Government by the People, delivered by me at the Gettysburg National Cemetery on May 30, 1945.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Fellow citizens of the United States of America, I am greatly honored to be invited to come here today to the Gettysburg National Cemetery and express, inadequately I know, the obligation which we feel to those who fell on the greatest battlefield of the Civil War, and the reverence which their service to us still inspires 82 years later. I know that I cannot express that obligation and that reverence as effectively as it has been many times expressed before upon this occasion. I can only relate the sacrifices of our soldiers to the more immediate problems which we face today.

The soldiers of 1863 gave their lives to preserve the Union and make permanent the Government which had proved to the world that a Nation, founded for the purpose of securing freedom, and governed by its own people, could survive through a great war without being destroyed from within by the very forces of freedom developed in a free country. Many other American boys have fought since then to preserve our people and their freedom. Our hearts are full today with our gratitude and devotion to those who are fighting now and who have fought in this war, those who have given and those who have risked their lives that our Nation may be preserved and may preserve its freedom.

In these wars with Germany and Japan, we are now approaching the great sacrifices of the Civil War—we have suffered a million casualties among our boys in the Army, Navy, and Air Force. About 300,000 have been killed, or missing and probably killed. That means that there are 300,000 families who mourn a beloved son, 300,000 wives and mothers to whom this war has brought tragedy and grief. Too many newspapers and too many individuals have come to accept the military attitude that American boys are only pawns in the game, that we can properly sacrifice so many impersonal lives for this goal, and so many impersonal lives for that goal. But every life is a boy with a father and mother, or a wife or sweetheart. We should never forget the awful catastrophe that war is, that it means the destruction of all the hopes and purposes which have formed the ideals of hundreds of thousands of American individuals and families. Let us remember today that very few purposes can justify the sacrifices which we are calling upon our boys to make. Let us remind ourselves that neither foreign conquest, nor hate, nor revenge, can justify such a loss, that the only purpose of this war that can justify its continuance is to insure the future peace and freedom of the American people. Let us not gloat because we burn or destroy the city of an enemy, and remember that such destruction can only be justified as a means of bringing this war to a quicker end. The moment that we can achieve a peace which will guarantee the prevention of future aggression on the part of Japan, it is our duty to all those whom we honor here today to see that peace is brought about, whether by arms or by negotiation.

But we have a further duty to the men who are suffering in this war when peace has been brought about. There can be little doubt now that the defeat of our enemies will prevent attacks upon this country from without for many years to come. We are all agreed that that result may be strengthened and assured by the creation of an international organization to preserve peace. We hope that such an organization can insure peace, not only in the immediate future, but for generations to come. The San Francisco Conference, under the most severe handicaps of political and economic differences will at least establish an international forum constantly working to prevent the recurrence of war.

But we must constantly remind ourselves that the only purpose of this war, the only purpose of the battle fought here at Gettysburg in 1863, the only purpose of any war in which this country has been engaged is to maintain here at home the freedom which was won in 1776, the freedom to work out here the destiny of the American Republic.

American foreign policy and international organizations are only a means to that end. And so we should be equally concerned here today that we retain in Washington the policies necessary to assure that freedom. It is useless to destroy totalitarianism in Germany and Japan and then establish it in the United States.

There is real danger of just that result for the whole thought of the world has moved steadily toward the totalitarian philosophy, toward the subjection of the individual to the state instead of a government by the people. Government controls such as peacetime military conscription which would have been indignantly rejected in the nineteenth century, are given serious consideration, even in this country. Totalitarian thought has spread over the world. When Mussolini established a dictatorship in Italy, many of our citizens thought that a little benevolent despotism was a good thing for the Italian people. Hitler brought it to Germany, the military caste brought it to Japan, largely because so many people lost faith in the efficacy of democratic government. We see it also on our side, in the great Russian Soviet, in Chiang Kai-shek's China, in Brazil, in Argentina and in many other Latin-American countries. It has made progress because so many people have been persuaded that it is perhaps desirable to surrender individual freedom and let someone dictate their lives better than they themselves can arrange them. In this country many people who would indignantly deny any soft feeling for State control are advocates of measures which lead inevitably in that direction because they are dissatisfied with the necessary slow progress involved in a government where all the people are given a voice.

I believe that freedom can only be preserved if we retain government by the people all the time. I heard a United States Senator argue that we could have freedom and democracy even though Congress delegated all its powers to the President during the war and adjourned, because, he said, we could meet again and take those powers away. There are two fallacies in that view. While that form of government lasts, there is no freedom and it is not government by the people. Secondly, if it lasts too long, the powers granted by the people are never returned to them. That has been the history of popular government from the days of Greece and Rome through the Middle Ages to Germany and Japan today.

The best protection of freedom is to maintain continuous rule by the people. It cannot be done without constant vigilance against the turning over of power to governments and to men who are in effect beyond the reach of the people. The very size of the Republic today leads to a delegation of power. The machinery by which 135,000,000 people govern themselves is necessarily so complicated that it is hard to devise a system in which the real voice of the people is heard. Hundreds of bureaus have been created, and even here in Washington we don't know how many bureaus there are or what it is that they are doing. Each one is a little kingdom in itself. When the ordinary man comes to Washington, he has a hard enough time to find out which is the bureau which is bossing him, and an even harder time to get consideration for his views. More than a hundred Government corporations have been created, even less accountable to Congress than the bureaus. Washington is a vast rabbit warren of bureaucrats, all issuing regulations having the force and effect of law and building up a control to which the people gradually come to conform their lives.

The war has required a suspension of many freedoms, and the people have become so used to regulations that they almost forget what freedom is. The danger of totalitarian government is that the people do get used to it, as to a narcotic. The time has come to remember that many of these restrictions on freedom were only created to preserve freedom and should be abandoned when freedom is assured. The size of the Republic, the complexity of modern problems in the economic field, all lead the people to the easy course of turning over the problems to someone else, to some expert, perhaps, to solve the whole business. Instead of thinking out problems for themselves, inhabitants of a totalitarian world would accept the advice of supposedly expert columnists or radio commentators, who are also too busy to think out their problems, and who accept what is handed to them by the Government. A people unconcerned with their own liberty want every problem to be handled by a czar. They are impatient with Congress if Congress takes time to argue a case on its merits. A frame of mind in dealing with public questions which moves on waves of emotion, engulfing editors, writers, and broadcasters alike, and demands solutions today for every complex problem, is a frame of mind leading to totalitarian government.

While we talk constantly of democracy and free enterprise, I see too many of the very people who use that language advocating measures which deny it. Too many businessmen believe in controls of the NRA code variety, quotas, cartels, division of production, the fixing of minimum coal prices, and other measures to protect business from excessive competition. Labor unions, which ought to be the very core of democracy, are ruled by perpetual leaders almost without the formality of reelection.

At this very moment demands are being made that Congress give up its power to fix tariffs and to provide for the reorganization of the Government departments, on the ground that democratic processes are too slow and ineffective. Arbitrary power must be granted to carry through the currently popular theories.

Every bill proposes that Congress delegate its power to make law to some board, and the Supreme Court itself is dominated by the thought that the people themselves and their represenatives are incompetent even to prescribe standards, but must give power to make law to administrative agencies. Nearly every bill introduced proposes increased Federal power, and the reduction of the power of States and local governments where the people's voice can be heard. In education, in health, and in unemployment compensation, Federal bureaus seek wide and arbitrary power to affect the lives of millions of individuals.

People who think themselves sincere believers in democratic government want everything desirable at once, and the more attractive the goal, the less they care about the method. If this frame of mind were carried to its logical conclusion, it would lead to the turning over of all power to a benevolent dictator to carry out the good things which he promises and which he presents in a sufficiently attractive package.

Of course, this general attitude makes the ground fertile for Government propaganda. A desirable end such as peace or extended foreign trade is linked with certain particular methods and panaceas proposed and highly recommended by the Government, or accompanied by a demand for broad power to solve the problem without further interference from Congress. Anyone who is opposed to this particular panacea is at once labeled as opposed to peace or foreign trade, and probably pictured as a reactionary, a Fascist, or even a Republican. All the arguments for the favored remedy are blared over the radio and broadcast in pamphlets, and no argument is admitted against it. The first Dumbarton Oaks proposal was pictured as so letter perfect, that I am still getting attacks on Senator VANDENBERG'S amendments by people who don't know that the State Department has accepted them. Bretton Woods and the revised reciprocal trade treaties are pictured as the only cures for all foreign-trade difficulties. The question is not the desirability of these various delegations of people's power, it is the frame of mind which seems to be willing to abandon that power without question. It is the frame of mind which avoids the discussion of the merits of a problem and accepts the voice of the state as the voice of God.

Nothing is so dangerous to democracy as a vast machine of propaganda, for it strikes at the very root of democratic government. Government by the people can only endure if it is founded on intelligent decision based on accurate knowledge.

This afternoon I wish to speak particularly about one step now proposed, supported by Government propaganda, which seems to me to strike at the very basis of freedom, for which our boys are fighting. It is the proposal that we establish at once compulsory conscription for military training in time of peace. The proposal is that we establish in this country a continuous 12 months' military training for every boy, the same military set-up which we have gone to war to abolish in Germany and Japan. Whether we become a militaristic and totalitarian country depends more on this measure than any other. It does not relate to any limited class or group. It reaches every family and every boy. It subjects them completely to the domination of the Government for a year during their most formative period. It keeps them under constant supervision as reserves for years thereafter. The power to take a boy from his home and subject him to complete Government discipline is the most serious limitation on freedom that can be imagined. Many who have accepted the idea favor a similar Government-controlled training for all girls.

There is no doubt that the Government, and particularly the War and Navy Departments, are straining every nerve to secure the enactment of this legislation before the war ends. Secret meetings are being held in the Pentagon Building and elsewhere. On April 26 the chief executive officers of some 40 or more women's organizations were invited there, and it is said they were addressed by the Secretary of War, the Secretary of the Navy, the Under Secretary of State, General Marshall, Admiral King, and other high-ranking officers. The ladies were requested not to disclose the substance of the speeches made or identify the War Department or its officials with the sponsorship of the plan. One newspaper stated that the ministers of various churches were invited to a similar meeting and attended, and that Negro organizations have been approached. Invitations went out from a citizens committee in New York to hear Secretary Forrestal, Under Secretary Grew, and General Weible at an off-the-record luncheon on May 25. Government propaganda is bad enough when it is open, but it is inexcusable when secret. We may expect a flood of open propaganda after the ground has been prepared, and everyone who is opposed to the plan will be pictured as for war and for unpreparedness.

We have fought this war to preserve our institutions, not to change them. We have fought it to permit us to work out our problems here at home on a peaceful foundation, not on a foundation dominated by military preparations for another war. The question of the best form of military organization should not be an emotional problem. It should be dealt with by argument and not by propaganda. But the methods being used threaten the freedom of this country, for if they are successful they can be used to fasten upon us every kind of regulation, price control for business, wage control for labor, production control for farmers.

If we approach this problem logically and not emotionally, the first question should be how large an Army we need to insure our freedom. Why not discuss what the right size is so that we can determine the best

method of providing it? How can we tell how large an Army we do need until the peace is made and the organization of the world effected? It seems to me impossible to pass intelligently on the need for conscription at this time. Must we not see first what kind of a world is established at San Francisco and at the peace table?

There are approximately 1,250,000 American boys in every age group. Is it necessary to train them all for a full year at a cost of at least two and a half billion dollars a year? This would provide reserves of about twelve and a half million men between the ages of 18 to 27. Is any such reserve necessary? Certainly, it is not needed in a hurry, for the armies we now have will be the best possible reserve for the next 3 or 4 years. The Selective Service Act expressly provides that all drafted men at the end of the war shall be transferred to the reserve and remain there for 10 years. Apparently, the argument for doing this job now is that the people might not be willing to do it later. That is certainly a typical totalitarian argument. It is an attempt to base a great permanent national policy on war emotion, because the proponents are afraid of government by the people when they have time to think it over.

It seems improbable to me that the training of a million and a quarter boys a year would ever be necessary. The vast reserve provided could only be needed for a great overseas expedition like that in which we are now engaged. For such an expedition, it would take several years to organize ships, planes, and munitions, just as it did in this war. We would surely have to have new modern equipment in many fields, and it would take longer to build it than it would to train the men, as we found in this war. It would seem that for sudden attack, or for attack from the air or from attack by rockets the great mass of millions of reserves would be of little value. I should think we rather need an expert Army with the most modern weapons. In the event of a sudden attack, our main reliance would have to be a Regular Army of highly trained and technically trained men, and during such an attack they would not be much aided by 10,000,000 reserves. The argument that we can save in the size of a professional army by having many millions of reserves bears all the earmarks of a propaganda argument instead of one based on common sense.

Having determined that we need an Army of a certain size, with certain reserves, we could then decide whether we could get it by voluntary means in the American tradition. Suppose we need a million men in the armed forces. We expect to have at least 50,000,000 people working at civilian jobs in this country. Surely we can make the Army sufficiently attractive as an occupation for 2 percent of these to be willing to volunteer. With good pay, reasonable treatment for men and their families, and provision for retraining and retirement when a man is too old to stay in the Army, I don't see why Army life cannot be made just as attractive as working daily on a machine, mining coal, or engaging in hundreds of other occupations. Many jobs in the Army should give highly technical training with interesting knowledge which makes the trainees capable of advancement in other activities in life.

To provide the necessary Reserves, it could be made worth the while of many boys to take the necessary training. Many alternative plans have been suggested to a year's conscription. For instance, adequate reserves might be provided by training 200,000 boys in each age group. It should be possible to obtain volunteers in that number for a 3-month course and basic training during one summer, courses in school and a later 3-month summer course in the field. The boys could be paid a sum which would assist them in their regular education during the winter. Additional courses could be provided for those who wish to become Reserve officers. What I have suggested is only one idea and there may be many others. The Army will immediately criticize any plan, because they are determined to have conscription. They want the boys for 12 months consecutively because they want to change their habits of thought, to make them soldiers, if you please, for the rest of their lives. Nothing less will do. We are indeed bankrupt of ideas if we cannot provide a method by which necessary military forces and Reserves are provided by an American voluntary system.

The other arguments for conscription seem to me almost too trivial to discuss. It is said it will teach the boys discipline and that they need it. My own opinion is that we need more initiative and original thinking and less discipline rather than more. Our present Army is not the most disciplined Army in the world, but there isn't any better Army for the simple reason that the boys do some thinking for themselves.

It is said the Army will improve their health, and that they need it because so many failed to pass the strict health requirements of the Army. As a matter of fact, the great bulk of defects were those relating to teeth, eyes, mental, nerves, and heart conditions, all of which had arisen long before the age of conscription. There is nothing to show that the Army would conscript any of these boys. To improve their health, we must reach them at a much younger age.

The argument that it would improve the morals of our boys has almost been dropped because of its foolishness. If there is one place where morals will not be improved, it is in the vicinity of Army camps.

It is true that there are some boys who are benefited by Army control, but to improve a few, let us not change the whole character of the American life which I believe has been the cause of success in this war.

It is said that we are going to teach the boys citizenship in the camps. This argument makes clear a real danger in the whole system. By handing boys over for 12 months to the arbitrary and complete domination of the Government, we put it in the power of the Government to indoctrinate them with the political doctrines then popular with the Government. It has all the dangers of Federal education and none of its advantages. Attempts along this line have been made with the present Army, and a large amount of propaganda sent out to be taught to the soldiers. In wartime it is bad enough; in peacetime, it would be intolerable.

Some have supported this project on the ground that the training is only to be part military and a considerable amount of it is to be character training along other lines. We have already a complete school system in this country. If it isn't adequate and does not give education in citizenship, we can well spend our time and money in trying to improve that system. As a matter of fact, it is already the finest system of education the world has even seen.

Military conscription is essentially totalitarian. It has been established for the most part in totalitarian countries and their dictators led by Napoleon and Bismarck. It has heretofore been established by aggressor countries. It is said it would insure peace by emphasizing the tremendous military potential of this country. Surely we have emphasized that enough in this war. No one can doubt it. On the contrary, if we establish conscription every other nation in the world will feel obliged to do the same. It would set up militarism on a high pedestal throughout the world as the goal of all the world. Militarism has always led to war and not peace. Conscription was no insurance of victory in France, in Germany, or in Italy. The countries with military conscription found that it was only an incident and not the determining factor in defense or in victory.

Military training by conscription means the complete regimentation of the individual at his most formative period for a period of 12 months. If we admit that in peacetime we can deprive a man of all liberty and voice and freedom of action, if we can take him from his family and his home, then we can do the same with labor, we can order the farmer to produce and we can take over any business. If we can draft men, it is difficult to find an argument against drafting capital. Those who enthusiastically orate of returning to free enterprise and at the same time advocate peacetime conscription are blind to the implications of this policy. They are utterly inconsistent in their position. Because of its psychological effect on every citizen, because it is the most extreme form of compulsion, military conscription will be more the test of our whole philosophy than any other policy. Some say it is unconstitutional. It makes very little difference whether it actually violates the terms of the Constitution. It is against the fundamental policy of America and the American Nation. If adopted, it will color our whole future. We shall have fought to abolish totalitarianism in the world, only to set it up in the United States.

Government by the people can only exist if the people are individuals who think. It can only exist if the individual is free to rule the state and if he is not ruled by the state. We must be constantly vigilant to keep alive the thinking of free men, and there is no such threat to that thinking as the course which would impose on the Nation compulsory military training. We have no greater obligation to the men who fought at Gettysburg, we have no greater obligation to the men who fought in Europe and who are fighting in the Pacific, than to preserve here in America a state in which the individual shall be free to think and be master of his own soul, and where the people shall be free to govern their own Government.

Memorial Day Address by Ensign Hudson Hyatt, United States Naval Reserve

EXTENSION OF REMARKS

OF

HON. HAROLD H. BURTON

OF OHIO

IN THE SENATE OF THE UNITED STATES

Thursday, May 31, 1945

Mr. BURTON. Mr. President, it is not often we have an opportunity to hear a Memorial Day address by a man who is actively in the service at the time. It so happened that there came to me recently a Memorial Day address written by an ensign in the Navy now serving in the Pacific Ocean area. I had occasion yesterday to read it in connection with a Memorial Day address at the home of Admiral of the Fleet Ernest J. King, in Lorain, Ohio. I ask unanimous consent to have printed in the Appendix of the RECORD this unique and timely Memorial Day address by Ensign Hudson Hyatt, USNR.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

We gather today to do honor to our dead who lie in the jungles of Guadalcanal, the barren sands of Eniwetok and Tarawa, the coral rocks and hills of Saipan, Guam, and

Tinian, the volcanic ash of Iwo Jima, the verdant death-strewn valleys of Okinawa. We honor those who died on the icy Murmansk run, who perished in Tunisia, who fell at Sicily, Anzio Beachhead, the deadly hills of Italy, who were shot or bombed in Normandy, Belgium, and the Rhineland. We honor equally the unknown GI Joes and Franklin Roosevelt, the Colin Kellys and Ernie Pyles—the thousands from the lowest to the highest, the unknown to the heroes, who died in this great struggle.

We honor them; we mourn their loss. But we do more: we rededicate ourselves today to that for which they died. They died because democracy and tyranny cannot flourish side by side. They gave their lives for the ultimate freedom of man. They are now blood brethren with those who died at Valley Forge, Gettysburg, and the Argonne.

We who survive are by the same token, blood brethren of those who lived to frame the Constitution, who extended freedom to all races, and who erected a League of Nations. We who survive have the greatest task in history, to make enduring for all time the liberty for which our dead have given their lives. If we fail, their lives will have been given in vain. If we succeed, and succeed we must, we can do no greater honor to them than to erect a parliament of man in which all nations and all men shall find equality, justice—and peace. To this task, in honor of those who perished in the struggle, we dedicate ourselves and our posterity.

Memorial Ceremony at Muir Woods in Memory of Franklin Delano Roosevelt

EXTENSION OF REMARKS
OF

HON. WAYNE L. MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Thursday, May 31, 1945

Mr. MORSE. Mr. President, on May 19 the United Nations Conference on International Organization held a memorial exercise in the beautiful redwood grove in California called Muir Woods, in memory of and out of respect to the late President Franklin D. Roosevelt. I ask unanimous consent to have printed in the Appendix of the RECORD the proceedings at the exercises, including a letter from Capt. Richard L. Neuberger commenting on the exercises.

There being no objection, the matters were ordered to be printed in the RECORD, as follows:

THE UNITED NATIONS CONFERENCE
ON INTERNATIONAL ORGANIZATION,
San Francisco, May 23, 1945.

The Honorable WAYNE L. MORSE,
United States Senate.

DEAR WAYNE: Last Saturday, May 19, 1945, we had a most impressive memorial ceremony at Muir Woods in honor of President Roosevelt. Field Marshal Smuts gave the principal address, a guard of honor of wounded soldiers from Letterman General Hospital was on hand, and Secretary of State Stettinius formally dedicated an appropriate plaque to our beloved President. Pedro Leao Velloso, chairman of the Brazilian delegation to the Conference, also spoke briefly on the program.

The ceremony was most awe-inspiring and historic, particularly in view of the setting in a great cathedral-like grove of redwood trees nearly 350 feet in height. It was attended by many delegates and by both Navy and Army personnel. The plaque is now in temporary form, but later will be reproduced in bronze. Because President Roosevelt loved the far West and was a great American conservationist, we all thought that Muir Woods National Monument was a highly fitting place in which to honor his memory.

For your interest, I am enclosing herewith the talks made at Muir Woods, which is near Mill Valley, Calif., by both Field Marshal Smuts and Mr. Stettinius. I hope you like them. Incidentally, you will find the exact wording of the plaque dedicated to the President at the end of Mr. Stettinius' remarks.

I hope you and yours are well.

Faithfully,

RICHARD L. NEUBERGER,
Captain, United States Army.

ADDRESS DELIVERED BY THE HONORABLE EDWARD R. STETTINIUS, JR., SECRETARY OF STATE, IN TRIBUTE TO FRANKLIN DELANO ROOSEVELT, AT MUIR WOODS NATIONAL MONUMENT, MILL VALLEY, CALIF.

This magnificent grove is a fitting place in which to honor the memory of Franklin Delano Roosevelt.

Trees were an important interest in his life. I have often heard him talk of the trees he planted and grew at Hyde Park. He rests for all time in hallowed ground surrounded by these and older trees that held for him such cherished memories.

These great redwoods at Muir Woods National Monument are the most enduring of all trees. Many of them stood here centuries before Christopher Columbus landed in the New World. They will be here centuries after every man now living is dead. They are as timeless and as strong as the ideals and faith of Franklin D. Roosevelt.

Our beloved President is gone, but his spirit, like these trees, lives on to inspire and strengthen all those who shared his hopes for mankind. In the days to come he will still be here in spirit to help guide us toward lasting peace.

In the presence of representatives of the Unted Nations, who are joined in the great purpose of making peace secure, I now dedicate this plaque to Franklin D. Roosevelt. It will be cast in bronze with these words inscribed upon it as a reminder to posterity of this historic occasion and of the world's eternal debt to a great man:

"Here in this grove of enduring redwoods, preserved for posterity, members of the United Nations Conference on International Organization met on May 19, 1945, to honor the memory of Franklin Delano Roosevelt, thirty-first President of the United States, chief architect of the United Nations, and apostle of lasting peace for all mankind."

ADDRESS DELIVERED BY FIELD MARSHAL J. C. SMUTS, PRIME MINISTER OF THE UNION OF SOUTH AFRICA AND CHAIRMAN OF THE SOUTH AFRICAN DELEGATION, AT THE UNVEILING IN THE MUIR WOODS NATIONAL MONUMENT ON SATURDAY AFTERNOON, MAY 19, OF A PLAQUE IN MEMORY OF THE LATE PRESIDENT ROOSEVELT

It is fitting that the memorial which the Secretary of State will unveil to the memory of President Roosevelt should be placed in this unique setting, in this botanical paradise, which forms one of the most beautiful features in the magnificent scenery of San Francisco. For he was ever a lover of nature, of trees and plants and all things beautiful. And both at his home in Hyde Park and in other parts of this spacious land he initiated the planting of trees, not only for beauty but also for use and for the protection against the ruder forces of nature. Here among the great redwoods this great man will find fitting and congenial company. Here henceforth will be the company of the giants.

Both the time and the place for this ceremony are appropriate. The official period of mourning for him is over; and this tribute to his memory is rightly placed at the seat of the great Conference which he himself selected but in the hour of victory did not survive to open himself.

To him personally his going in the supreme hour of certain and assured victory was indeed gain. No moment is greater or more fitting for the passing of the hero than the hour of victory. Such was Roosevelt's going from the personal point of view—the intolerable burden dropped when the great task was done. There was the added glory of the great leader killed by the herculean job he had done—for such indeed was Roosevelt's fate. The mystic air of the martyr was over it all. The same fate happened to Abraham Lincoln, whose glory was as much in the moment and the manner of his going as in the vast labors he had successfully accomplished. To Lincoln it was gain; to Roosevelt it was release from burdens borne, but too heavy for any man, let alone for a stricken man, to continue to bear.

But what a loss to Lincoln's country, what a loss to Roosevelt's world. What a difference it might have made to the generation that followed after Lincoln if his wisdom and wide humanity and greatness of soul had been brought to bear on the postwar problems of his young nation and sorely tried country. For the personal factor counts and is a real and mighty force in the affairs of men. What a glory it is for a country to have produced such leadership as theirs in the hour of need and at its call. But the gain is even greater than the glory. Such men are an asset beyond prize, and their going produces an emptiness which nothing can fill.

For look at the world situation which Roosevelt has left behind him. But first let us look for a moment at the man Roosevelt himself.

His is a very remarkable case of leadership and self-training for it through suffering and will power. People are apt to forget that he was a sick man carrying such burdens—physically only half a man. By all the usual tests he should have been written off when, in the prime of manhood, he was struck down by fell disease. But in fact the calamity produced the man; called forth unsuspected reserve forces in his personality; changed the good companion, the apparently easy-going man of good position and good fortune into the statesman that has left a trail of glory behind. The will to conquer his fate, to overcome his physical disability, and to make good changed apparent softness into the hardest-tempered steel. He conquered fate by conquering himself, and in that self-conquest brought out what was latent in him, and so set out on a career as remarkable as that of any other man in this era of outstanding leaders. Self-mastery was the key to his success and to a career which students and historians will follow with deep interest in the future. Will power to win through, purification through suffering—such were the steps by which this remarkable personality was, so to say, reborn and made fit to play his great historical part. Roosevelt's case, on the purely human level, is a call and an inspiration to all who suffer under cruel misfortune never to give in or surrender, but to use adversity as a stepping stone to a higher self, to fresh soul force and the sublimation of the self or the personality. So Roosevelt equipped himself for the call to duty in the great economic and social crisis of his country 12 years ago. And so he trained himself for the call of the world in one of the gravest crises of all history.

I met him at various stages in his life both before and after his illness. I last saw him at Cairo in December 1943 on his return from the Teheran Conference, and was deeply grieved to see how dreadfully tired he was while still carrying on the heaviest burdens with high courage and a gay spirit. If he had lived, what a service he could have rendered the world in the great period which now looks ahead.

For the colossal victory in Europe—the greatest in all recorded history—which we have been celebrating this week, is not the end of the crisis. This is only the first great phase. The march of destiny continues. Japan has still to be conquered, and her proud spirit humbled in the dust, before Asia could also be set free in this tide of liberation which is sweeping over the world. Nor will the successful writing of the world charter at San Francisco be the end. The supreme problem of a satisfactory European settlement after the war still looms ahead—the greatest and hardest of all. Victory however great, and paper plans of a future security, however well laid, will not avail us unless we can also succeed in the settlement of Europe. That remains the heart of our problem, and from the international point of view that will be journey's end for our generation.

And it is just here that we shall sorely miss Franklin Roosevelt. For that job we shall need men of Roosevelt's stature. He was the personification of America, but he was also a great European. He was the carrier of the message of the New World to the Old, the daughter's message of hope and faith and good cheer to the old mother continent of our western civilization in her sore distress. He stood not only for the overpowering might of this continent but for its fresh human outlook, its freedom from ancient wrongs and obsessions, its sanity and virile faith in democracy and in man's vast future.

We have other leaders who have piloted our passage through this war and its mortal perils. Was it not Churchill's warning voice which rang loud and clear through the prewar years, when appeasement was the prevailing mood? And has he not been the indomitable soul of our resistance and dogged struggle through the darkest years of the war? His share in the shaping of the peace will no doubt be immense. But how much more decisive and beneficent would have been the role of Roosevelt and Churchill together. We hail also that great leader Joseph Stalin, who led his people from the darkness and abasement of vast revolutionary convulsions to that unity and strength which have made the Russian war effort one of the most outstanding feats of all history. If the trio who had piloted our united war effort through all its critical phases to final victory had remained together to plan and carry out the peace, what an added confidence we should have felt in the final results. The military victory is and will be complete; the world charter will, we trust, be written; but the settlement which must complete the victory and must form the foundation for the world charter has still to be achieved. It will be the greatest task of all, and as difficult as it will be great.

For Europe lies in ruins, moral, political, and material, after the nameless suffering all have endured. Hatred, poverty, and hunger are rampant, and social and political disintegration is spreading through most of its countries. The situation will probably become worse now that the discipline of war is relaxed. Constructive statesmanship of a high order will be called for, unless Europe is to be allowed to lapse into decay and anarchy and become a breeding place for ideas and disorders no better than nazism and fascism. Our policy should be planned for healing and building up rather than destroying, for punishing the guilty while extending the helping hand to the innocent. Every effort should be made to reconstitute European society and reestablish its organs of political and social life along sound common-sense lines. Injustices should be avoided which will rankle and fester more than the memory of war, long after the war and its horrors are forgotten.

We should do everything in our power to bind the wounds, to knit Europe together into a cooperative society and community and thereby restore it once more to a position of power and glory which it has held so long and so beneficently among the continents. In doing so we shall indeed honor the work of Roosevelt and carry out the spirit of his historic declarations in the Atlantic Charter and other public documents. That would be his finest monument, and the best contribution of America and the American spirit to the pacification of Europe and its restoration to its proper place among the continents.

[From the United Nations Conference on International Organization Journal, San Francisco, Calif., of May 21, 1945]

ROOSEVELT MEMORIAL CEREMONY AT MUIR WOODS

At an impressive ceremony on Saturday afternoon, May 19, 1945, delegates and advisers to the Conference participated in the dedication of a plaque in memory of the late Franklin Delano Roosevelt at Muir Woods National Monument. First suggested by the chairman of the Brazilian delegation, Mr. Pedro Leao Velloso, the ceremony comprised speeches by Mr. Velloso, Field Marshal Jan Christian Smuts, and Mr. Edward R. Stettinius, Jr. Invitations to the ceremony were extended by Mr. Harold L. Ickes, Secretary of the Interior, who was represented by Major Tomlinson, of the National Park Service.

Emphasis was laid by Mr. Velloso on the character of the late Mr. Roosevelt, whose intelligence, vision, and force of character had, Mr. Velloso said, early enabled him to sense that this generation had a "rendezvous with destiny." As author of the good neighbor policy for the nations of the Americas, President Roosevelt sought to apply its principle of friendship to all nations of the world, Mr. Velloso said. It is for that very purpose that the United Nations have gathered in San Francisco, a task almost beyond the limits of human power to achieve. It is through the inspiration of the divine spark which animated the spirit of Franklin Roosevelt, Mr Velloso stated, that the work of San Francisco may be accomplished.

Field Marshal Smuts spoke first of the late President's love of nature and all things beautiful, which made this ceremony particularly fitting. "Here among these great redwoods this great man will find fitting and congenial company * * * the company of the giants." Mr. Roosevelt's death, the field marshal said, was, like Lincoln's, to him a gain in that it came in the hour of triumph, as befits the death of heroes, but, also like Lincoln's, it was the world's loss. For Roosevelt, whose personal history was a "call and an inspiration to all who suffer under cruel misfortune * * * to use adversity as a stepping stone to a higher self," possessed a stature and an understanding sorely needed in the tasks that lie ahead. He was the personification of America and the carrier of the message of hope and good cheer from the New World to the Old.

Europe lies in ruins, the field marshal said, and if the work of the present Conference is to last it must restore Europe to a condition of spiritual, political, and material order. This work of binding up the wounds through effective implementation of the spirit of Roosevelt's historic declarations will be the greatest monument that the nations can build to him and to the America which he represented.

Mr. Stettinius spoke briefly, thanking the Brazilian Foreign Minister and the Prime Minister of South Africa for their remarks, pointing also to the suitability of placing the memorial among the grove of great trees whose timeless age epitomized the late President's spirit. Mr. Stettinius then unveiled the replica of the plaque to be erected in bronze "as a reminder to posterity * * * of the world's eternal debt" to Franklin Delano Roosevelt, "chief architect of the United Nations, and apostle of lasting peace for all mankind."

Billionth Gallon of High-Octane Gas Produced at Baton Rouge, La., Refinery

EXTENSION OF REMARKS
OF
HON. JOHN H. OVERTON
OF LOUISIANA

IN THE SENATE OF THE UNITED STATES

Thursday, May 31, 1945

Mr. OVERTON. Mr. President, on tomorrow, June 1, the billionth gallon of high-octane aviation gasoline will be produced by the Standard Oil of New Jersey refinery located at Baton Rouge, La.

The employees and workers at this Baton Rouge plant will pause in this great war-production job for a brief ceremony to deliver the billionth gallon of high-octane gasoline to a representative of the Nation's fighting airmen. They are to be congratulated for their splendid work and cooperation with the Federal Government in the production of a product so essential to aerial warfare. In this connection, Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a news release covering this event.

There being no objection, the news release was ordered to be printed in the RECORD, as follows:

BATON ROUGE, LA., May 30.—Production of the billionth gallon of high-octane aviation gasoline at the Standard Oil Co. of New Jersey refinery here will be reached Friday, M. W. Boyer, vice president and general manager, has announced.

The Baton Rouge refinery is the second in the Nation to reach the billion gallon mark in finished high octane gasoline, the first being another affiliate of the Standard Oil Co. (New Jersey), the Humble Oil and Refining Co., Houston, Tex., which achieved the distinction in December. The Baton Rouge refinery has in addition manufactured the components of high octane to be shipped for blending purposes at other refineries, which, totaled with the finished product, sends its production well over the billion and a half mark.

Refinery workers will pause in their war production job for a brief ceremony at the plant Friday to deliver the symbolical billionth gallon to a representative of the Nation's fighting airmen. Accepting for the men who fly the planes powered by 100 octane aviation fuel will be Maj. James F. Collins, a native of Baton Rouge, who distinguished himself in the Pacific aerial fighting. He holds the Distinguished Service Cross and the Distinguished Flying Cross. He now is stationed at Eglin Field, Fla.

A distinguished special guest will be Maj. Gen. Troy T. Middleton, commander of the Eighth Army Corps, now on leave at his home in Baton Rouge. Middleton, cited a number of times by Gen. George Patton for his outstanding leadership, was Commandant of Cadets at Louisiana State University when Collins was a member of the cadet corps.

Since the entrance of the United States into the war most of the Baton Rouge refinery's equipment and processes for making products from petroleum has been turned to the manufacture of products useful in winning the war. Figures recently released in Washington show that 1 out of every 15 planes used in all theaters of combat have been fueled with high-octane gasoline produced at the Baton Rouge refinery.

Thousands of hours of pre-Pearl Harbor research in laboratories at the Baton Rouge

refinery made it possible for volume production of high-octane and other products essential to the successful prosecution of the war—butadiene, perbunan, buna-S, butyl rubber, in an amazingly short time after war was declared. Baton Rouge designation as the "cradle of the synthetic rubber industry" in the United States resulted from the pioneer rubber experiments begun here in 1931 by the Standard Oil Co. of New Jersey.

A partial list of the production facilities employing new processes and new materials built for the first time at Baton Rouge include:

The first fluid catalytic cracking plant in the world to go into commercial production, pioneering the process that made possible large-scale output of 100-octane gasoline, synthetic rubber, and other war-essential petroleum products. The "cat cracker" was developed in the Esso research laboratory at the Baton Rouge refinery during the years 1930 to 1940.

The first full-scale plant to produce buna-N, specialty synthetic rubber.

The first full-size plant for cracking oil into its component parts to produce butadiene, buna-S's basic raw material.

The first "quickie" plan for the production of butadiene.

The first large-scale butadiene plant in the country to be finished and placed in operation by the oil industry.

The first plant to produce butyl rubber, used for inner tubes and specialty purposes.

Major Collins will arrive by plane in Baton Rouge Thursday. While in Baton Rouge he will be the guest of Charles P. Manship, publisher of the Baton Rouge State-Times and Morning Advocate, and Mrs. Manship, with whom he lived while a student at LSU. Collins is the godfather of the Manships' grandson, 2-year-old Douglas L. Manship, Jr.

Back in this country almost 2 years, after exploits which included leading an attack which smashed a Jap aircraft carrier in the Battle of Midway, Collins is now in charge of accident investigation and prevention at Eglin Field and other fields assigned to Eglin.

He is the son of Mr. and Mrs. J. F. Collins, of Meridian, Miss., residents of Baton Rouge until about 1928.

Friday afternoon's program will begin at 2:45 o'clock with a 15-minute concert by the Esso Refinery Band.

Observance of Independence Week

EXTENSION OF REMARKS

OF

HON. RAYMOND E. WILLIS

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Thursday, May 31, 1945

Mr. WILLIS. Mr. President, on behalf of myself and my distinguished colleague from Indiana [Mr. CAPEHART], I ask unanimous consent to have printed in the Appendix of the RECORD a recent proclamation by the Governor of the State of Indiana, the Honorable Ralph F. Gates. This proclamation urges the official observance of Independence Day, or the Fourth of July, as we have come to term it popularly, for a period of five significant days, as the body of the document will reveal. I believe the idea of dedicating each day to a separate one of the significant freedoms which Americans enjoy is a particularly good one. We have been informed that this is the concept of a young Hoosier, Mr. William Fifield, of Gary, Ind., and that it has the support of the United States Junior Chamber of Commerce. But no matter whence it comes, we find it worthy and hope to bring it thus to the attention of other States and of the Nation itself, with the hope that it will gain general recognition and approval throughout the United States.

There being no objection, the proclamation was ordered to be printed in the RECORD, as follows:

PROCLAMATION

INDEPENDENCE WEEK, JUNE 30 TO JULY 4

Whereas Independence Day always has symbolized those indispensable freedoms which have been the foundation of our country's greatness and which have been enjoyed uniquely by the peoples of the United States of America; and

Whereas the significance of Independence Day should be continued and nurtured by a more adequate and comprehensive annual observance of the historic event that gave life to freedom of speech, freedom of religion, freedom of press, freedom of opportunity, and freedom of self-government; and

Whereas the Indiana Junior Chamber of Commerce, through its Americanism committee, passed a motion urging that I, as Governor, in issuing a proclamation setting aside a week as Independence Week designate therein certain days to represent the various freedoms which we have and which we cherish: Now therefore

I, Ralph F. Gates, Governor of Indiana, do hereby designate and urge the observance of Independence Week from June 30 to July 4, in the State of Indiana, with each day being observed as follows:

Saturday, June 30, freedom of speech.
Sunday, July 1, freedom of religion.
Monday, July 2, freedom of press.
Tuesday, July 3, freedom of opportunity.
Wednesday, July 4, freedom of self-government.

In witness whereof, I have hereunto set my hand and caused the seal of the State of Indiana to be hereto affixed this 16th day of May 1945.

[SEAL]

RALPH F. GATES,
Governor.
RUE J. ALEXANDER,
Secretary of State.

Health Features of Social Security Amendments of 1945

EXTENSION OF REMARKS

OF

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, May 31, 1945

Mr. WAGNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD a letter addressed to me by Dr. Ernst P. Boas, chairman of the Physicians Forum, a statement issued by Mr. William Green, president of the American Federation of Labor, and a statement issued by Mr. Philip Murray, president of the Congress of Industrial Organizations, all three endorsing the bill S. 1050 entitled "The Social Security Amendments of 1945," which I introduced, together with the distinguished junior Senator from Montana [Mr. MURRAY], on May 24.

There being no objection, the letter and statements were ordered to be printed in the RECORD, as follows:

PHYSICIANS FORUM,
New York, N. Y., May 25, 1945.

The Honorable ROBERT F. WAGNER,
United States Senate,
Washington, D. C.

DEAR SENATOR WAGNER: In the name of the Physicians Forum I wish to congratulate you and Senator MURRAY on the introduction of your revised social security bill. As physicans, we are concerned particularly with the health provisions of the bill, provisions we are competent to evaluate. We commend your plan for Federal grants-in-aid for the construction of hospitals and health facilities, for the extension of public health, maternal and child health and welfare services, and for research and professional education. We also approve your proposed national health insurance plan, providing for prepaid personal health service insurance. After mature study we are convinced that such insurance offers the best means to extend the benefits of modern medicine to all our citizens, many of whom today receive inadequate medical care.

We second your statement that health insurance is not socialized medicine, nor State medicine, and note that under the provisions of the bill full freedom of choice is given both to doctor and patient, and that adequate safeguards are established to protect competent existing medical services and institutions.

Your efforts to make the bill as perfect an instrument as possible is shown by your acceptance of many suggestions made by physicians and others who were interested in the objectives of your previous social security bill, S. 1161. You have succeeded in providing a fair balance between the principles of administrative responsibility and democratic administration. You have provided for decentralization of administration, as well as adequate participation of doctors and public in both local and general administration.

It is our hope that you will be successful in bringing about enactment of this legislation, which, particularly in the difficult postwar years, will be so vital to the health and welfare of our country.

Sincerely yours,

ERNST P. BOAS, M. D.,
Chairman, the Physicians Forum.

President William Green, of the American Federation of Labor, issued the following statement on the introduction yesterday (Thursday) of the new Wagner-Murray social security amendments:

"The American Federation of Labor wholeheartedly endorses and supports the new Wagner-Murray social security bill introduced as an improved substitute for the Wagner-Murray-Dingell bill.

"Enactment of this measure will provide the American people with a well-rounded social-security program for their protection during the transition period between war and peace and during the years to come.

"Particularly important at this time are the provisions for a comprehensive unemployment compensation system, with uniform benefits throughout the Nation. Only by such action can millions of war workers and returning servicemen be adequately safeguarded against unnecessary hardship arising from temporary unemployment during the reconversion period and in any subsequent economic crisis.

"In addition, the new Wagner-Murray bill offers basic protections against the economic hazards of illness, temporary disability, extended disability, old age, and retirement. It extends the benefits of old age and survivors' insurance to 15,000,000 persons now excluded.

"The American Federation of Labor is proud of the fact that it originally sponsored this legislation and has consulted closely with Senator WAGNER and his colleagues in efforts to improve and perfect it.

"A full measure of social security against the hazards of our complicated economic civilization must be guaranteed by a humane government to every American family.

"Social security means more than protection to the individual and his family. It provides insurance for the free enterprise system against its own shortcomings and serves to buttress the American way of life.

"The American Federation of Labor calls upon the Congress of the United States to approve this important measure without delay."

President Philip Murray, of the Congress of Industrial Organizations, today issued the following statement on amendments to the Social Security Act proposed by Senators WAGNER and MURRAY and Representative DINGELL:

"The CIO welcomes the introduction of a revised social security bill by Senators WAGNER and MURRAY and Congressman DINGELL and urges its members to lend every support to early hearings before the appropriate congressional committees. The American people want an adequate system of social security throughout the country, covering the widest possible group of Americans, including agricultural and domestic workers and the self-employed. We want to see the aged properly cared for.

"We expect early action on emergency unemployment compensation. Persons temporarily or permanently disabled should be properly protected by insurance. Where the blind, the aged, or dependent children and others in need of public assistance are not sufficiently provided for, the Federal Government should aid the States in meeting these needs.

"Finally, we favor early action to meet America's health needs. Our war production proved that Americans can afford the social security our people want and need.

"In the months immediately ahead the CIO proposes to conduct a Nation-wide discussion among CIO unions in preparation for presenting testimony at the forthcoming hearings."

The FEPC Bill

EXTENSION OF REMARKS

OF

HON. THEODORE G. BILBO

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Thursday, May 31, 1945

Mr. BILBO. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the message of the mayor of a leading California city, vetoing a resolution of the city's board of supervisors approving the California Fair Employment Practices Act.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

MAYOR LAPHAM GIVES REASON FOR VETOING RESOLUTION INDORSING FEPC BILL

In vetoing a resolution of the board of supervisors approving assembly bill 3, the California Fair Employment Practices Act, Mayor Roger Lapham stated his objections at length in writing. His statement is such an important contribution to public discussion of this matter that the News herewith publishes it in full for the information of readers. (The Editor.)

After a great deal of thought I am returning, marked "disapproved," your proposal 4800 reading as follows:

"Resolved, That this board of supervisors does hereby approve of the purposes of assembly bill No. 3, the California State Fair Employment Practices Act, and be it further

"Resolved, That copies of this resolution be sent to his honor the mayor with the request that they be transmitted to Mr. Don Cleary, the legislative representative at Sacramento."

To understand fully the meaning of proposal 4800, a careful reading of assembly bill 3 is necessary.

Section 2 of this bill defines its purposes and reads as follows:

"It is hereby declared as the public policy of this State that it is necessary to protect and safeguard the right and opportunity of all persons to seek, obtain, and hold employment without discrimination or abridgment on account of race, creed, color, national origin, or ancestry.

"It is recognized that the practice of denying employment opportunity and discriminating in the terms of employment for such reasons, foments domestic strife and unrest, deprives the State of the fullest utilization of its capacities for development and advance, and substantially and adversely affects the interests of employees, employers, and the public in general.

"This act shall be deemed an exercise of the police power of the State for the protection of the public welfare, prosperity, health, and peace of the people of the State of California."

It is very plain that the use of the police powers of the State to accomplish a desirable objective—viz, no discrimination or abridgment in employment or in union membership on account of race, creed, color, national origin, or ancestry—is the main purpose of the bill. I repeat, the exercise of the police powers of the State to attain a desired objective is the meat and core of assembly bill 3.

If I had approved proposal 4800, I would have committed myself to all the policies clearly defined in section 2. Without any doubt, all fair-minded people believe that no person should be deprived of employment or of union membership because of race, creed, color, national origin, or ancestry; but it is highly questionable whether the State police power is the right instrument to accomplish what is sought.

The act as drawn creates a State fair employment practice commission of five members, appointed by the Governor. The commission is granted broad powers to formulate policies to effectuate the purposes of the act. It can, among other things, hold hearings, subpena witnesses, compel their attendance, and administer oaths.

The act makes it an unlawful practice for an employer, "because of race, creed, color, national origin, or ancestry" of any person, to refuse to hire or employ him. It also makes it unlawful for any labor organization, because of "race, creed, color, national origin, or ancestry," to "exclude, expel, or restrict from its membership such persons."

In making its decisions the commission is not bound by technical rules of evidence, and orders of the commission shall be enforced by the District Court of Appeals upon petition of the commission. Judicial review of commission orders shall be by certiorari and disobedience of an order of the court enforcing commission orders shall be punishable as contempt of court. In the case of employees of a political subdivision of the State, decisions of the commission must be appealed to the Governor.

I am aware that the State of New York and the State of New Jersey recently enacted antidiscrimination laws very similar to that proposed by assembly bill 3. The New Jersey act became effective a few weeks ago. The New York act takes effect on July 1 next.

Despite recent legislative trends to compel nondiscrimination in hiring and in union membership by the use of governmental police powers, I cannot conscientiously endorse this method. Based on my experience in the field of management-labor relations, it is my considered judgment that passage of antidiscrimination laws is not in the public interest or in the interest of any minority group. I do not believe that you can solve the always present and eternal problems of human relations by legislation.

History teaches that prejudice exists, has always existed, and probably will continue to exist. We have heard of cause and effect. I do not believe that you can remedy effect unless you remove the cause. How to minimize the cause—in this case, prejudice—is our ever-present problem. I do not believe that prejudice leading to discrimination in employment or in union membership can be eliminated overnight. The evolution of civilization is a slow process. The pendulum swings back and forth; but always, despite set-backs, moving toward a higher plane. Education—the cultivation of tolerance and the effort to understand the other man's viewpoint—is a much more effective approach than legal compulsion. The passage of laws aimed to cure human-relationship problems overnight only irritates and aggravates and tends to set back progress in this particular field. Successful enforcement of any law is largely dependent on the almost unanimous support of public opinion. Based on experience, as evidenced by the repeal of the National Prohibition Act, I do not believe antidiscrimination legislation will have the public support necessary to accomplish enforcement.

A more rational approach would be for all employers individually and collectively to practice sincerely no discrimination in employment and for labor organizations to make certain no man fitted for a job is denied an opportunity for livelihood because of race, creed, color, national origin, or ancestry. In my opinion, voluntary efforts along these lines will be more helpful and effective than creating more laws and commissions. But to attain that goal—to avoid legal compulsion—forward-looking business and labor leaders should assume affirmative responsibility.

At this point I should like to have it clearly understood that the existence or nonexistence of this statute can in no way affect the tenure of men and women presently employed by the city and county of San Francisco under civil-service provisions of the charter. With the exception of those employed on a limited tenure basis, the charter guarantees continuation of present employment. The same instrument also guarantees an equal opportunity to participate in all future civil-service examinations, regardless of race, color, creed, or national origin.

May I here emphasize what forward looking people are now concerned about, the problem of making peacetime jobs. Assembly bill 3, if passed, in no way solves that problem. It cannot help by adding even one job.

When there are more men and women than there are jobs, there will be job competition. If assembly bill 3 passes, it would leave to five individuals (and much will depend on the type of commissioner) final determination of thousands of complaints. It is certain that the commission will be besieged by those who charge discrimination in the hope that the commission will order hiring of the men or women whom the employer—for good business reasons—has refused first choice.

I did consider disapproving this proposal on the same grounds as I have others—that the subject was not the business of the board

of supervisors or the mayor. However, the more I studied Assembly Bill No. 3, the more I realized it dealt with a fundamental issue, of concern not only to the city but to the State and the Nation. For that reason, I have felt impelled to express fully and freely my own views on the merits of the issue.

I am aware that some holding political office prefer not to publicize their real opinions on issues of this kind because they are fearful of political retaliation which may be exerted by various pressure groups. I believe such fears should not influence any executive of a political subdivision. I believe the public is entitled to know the honest convictions of any elected executive.

I realize full well my own reasons for disapproving assembly bill 3 may be misunderstood and perhaps deliberately misinterpreted. I believe that all of us should recognize that discrimination is a matter which must be constantly considered and studied and that there can be honest differences of opinion how best to secure the desired objective.

I again repeat—I am against all discrimination or abridgment in employment or in union membership because of race, creed, color, national origin, or ancestry. But it is my conviction that man-made laws—the compulsory method—is not the right way to deal with a human-relations problem of this kind.

ROGER D. LAPHAM,
Mayor.

The Missouri Valley Authority

EXTENSION OF REMARKS
OF
HON. HUGH BUTLER
OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Thursday, May 31, 1945

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "A River and an Issue," published in the May 21, 1945, issue of the Omaha Evening World-Herald.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A RIVER AND AN ISSUE

Those who advocate and those who oppose a Missouri Valley Authority are at last bringing their fight to the people.

It is about time. The issue has become enveloped in confusion.

The confusion is spread, in large measure, by outsiders who know little about the river, but who are convinced that the issue is one of liberalism against toryism. They see in Senator MURRAY'S MVA bill a rallying point for the forces of the left. They attack the opponents of MVA as tools of the Power Trust and reactionaries of assorted hues.

The great plan to harness the resources of the river must not be permitted to become a sounding board for the yapping social uplifters. The people of the valley must not allow the Pick-Sloan program to be wrecked by forces that scarcely know of its existence, forces which seek to use our river for the promotion of an ideology.

If the men and women who advocate an MVA had the interest of the people of this valley at heart, which would concern them most, the actual development of the river for flood control, irrigation, navigation, and power or the means by which such a development shall be constructed and administered?

We know now from the evidence before the Senate Commerce Subcommittee that their emphasis is not upon the development of the river but upon the TVA method.

These new bleeding hearts who have just recently located the Missouri River on their maps don't give a whooping darn about the dams and the power plants, the navigation channel and the irrigation works.

What they are after is another charter for regional socialism, which is opposed by the governors and State legislatures of the Missouri Valley as well as by the overwhelming majority of the citizens who know what the conflict is about.

Time after time, Chairman OVERTON, of the Senate subcommittee, propounded this question to witnesses favoring the Murray MVA bill:

"What argument have you to advance that some unknown authority can do a better job in the Missouri Basin than will be done through the use of the dams that are constructed through the Army engineers and the Bureau of Reclamation?"

One can look in vain through the pages of the subcommittee testimony for an answer to that question. Most of the witnesses confess their ignorance of the Army-Bureau program, known as the Pick-Sloan plan, and now the law of the land. They talk instead of the TVA and the glories of regional planning—and in the vaguest terms, for there is nothing concrete in the MVA program excepting the form of control.

If any further evidence were needed, it can be found in the editorials and magazine propaganda emanating from the eastern seaboard. Last week the New York Post turned its guns on the Army engineers and with a sneer proclaimed that the Army does not like the MVA because "the Army is concerned with floods, not the level of the Kansas farmer's income."

Frantically, other MVA-ers are turning the attack from the Army engineers to certain mysterious and possibly fictitious power interests. They are attacking the governors, the legislatures, and the valley Members of Congress for their criticism of the MVA idea and they are claiming the support of the people for MVA when, as Missouri Valley residents well know, there is no such support.

Is it any wonder, then, that in this effort to discredit existing Government agencies, in the hunt for dark and devious opponents, that the MVA doubtless wishes it had; in the efforts to defeat a sound and tangible program with a vague three-letter slogan—is it any wonder that the citizens of the Missouri Valley are confused?

It is none too early for the earnest advocates of both sides to arrive on the scene. Perhaps they will be able to answer the one question that would resolve the Missouri River controversy for a great many people. It is simply this: How will an MVA do a better job for the Missouri River than the Pick-Sloan plan, which is now the law?

That is the issue. The MVA should stand or fall on its proponents' ability to answer it.

Resettlement of West Africa by Negroes

EXTENSION OF REMARKS
OF
HON. THEODORE G. BILBO
OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Thursday, May 31, 1945

Mr. BILBO. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter I have received from a leading Negro of Baltimore, Md. I invite the attention of my colleagues to the contents of this letter, so that there may be a general understanding that the proposition to resettle the American Negro in West Africa is meeting with the approval of Negroes throughout the country.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

BALTIMORE, MD., *May 20, 1945.*

Senator BILBO.

DEAR SIR: I saw in the People's Voice of your wonderful Back to Africa Move for colored people of America. I think that's a great idea that you have. I think God has installed that in your mind. You must keep up the fight. God will bless you in many ways. We know that we have many in our race that are willing to return to their motherland as free people; not as a subject under any European flag, under the protection of the American Government until we get strong enough to go for ourself. Those who want to stay, let them stay here. The Negroes have played a big part in this war, also every war this country has fought. I think it is high time he should be rewarded. The ones that think he can remain here and get to be the President someday of the United States of America, let them remain. Your plans are only fulfilling the Bible. You keep up the good work; do not let anyone discourage you, there will be millions ready to go back to the land which God gave them. That is the only plan that will solve this race problem. We have men in our race that can do for others, why not let them do for themselves. We can build a government by the black man and for the black man in our motherland, Africa. Africa is our motherland which God gave to our foreparents. It's a part of every black man on earth. The Jewish people are demanding homeland for their race. Why don't the black man wake up before it is too late?

Although we realize we are American citizens, we were the first to shed our blood for the American flag. You cannot find in the history where a black man has ever been a traitor to this country. I think that is more than any one can say about any other race. I know God has given you the wisdom to see the future. May God bless you, that you may succeed in your plans.

For the success of my race,

W. L. JACKSON.

Address of Most Reverend Richard J. Cushing, D. D.

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 31, 1945

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include herein a splendid and inspiring speech made by the Most Reverend Richard J. Cushing, D. D., archbishop of Boston, at a joint meeting of Catholics, Protestants, and Jews, held in Boston recently:

When representatives of three large religious groups in the United States gather to work for social justice, there is hope of international peace ahead. Probably no one, anywhere in the world, really doubts that justice belongs to the whole human race in

all its entirety; those who know God know that it is the reflection in finite things of His eternal justice. But only those whose life is centered in God will be stirred to sustain an unyielding battle until the man-made barriers that impede the flow of justice be torn down and crushed into dust.

That is why a meeting like this is important. We are, however, realists, and we cannot but acknowledge to ourselves that so far our efforts have had but slight results. This same disheartening observation might have been made by the forward-looking founders of our country, leaders who not only were to witness the driving of the wedge into the almost hopelessly blind wall of colonial prejudices, but were themselves to produce the historic document which at the same time that it declared us politically free presented to the world a statement of the true and eternal principles of just Government upon which our Nation is built.

It is those principles which urge us, the political descendants of the founding fathers, to defend all liberties wherever we see them attacked or endangered, and the success that rewarded the consecrated leadership of our first war gives us encouragement and hope that the thoughtfulness that should attend a new postwar era will help us rid our country of the evils that are now gnawing at the entrails of our society.

The motives that drove the early immigrants across the ocean to America were many and varied, but back of most of them was the specter of persecution, in front of them the promise of freedom. That held true, certainly, for the majority of the English who came to New England, to Maryland, to Pennsylvania in the seventeenth century, and for the Germans and the Irish who opened up the lands beyond the Alleghanies in the eighteenth century. It was but natural that those immigrants would bring with them the hatred and the fears upon which they had been fed in a Europe that had been shattered religiously and was beginning to crumble politically. The colonial schools and colleges which trained the children of those immigrants took prejudices for granted and even regarded them as safeguards of their society.

In that atmosphere of accepted bigotry and respectable intolerance, it would have been easy for the leaders of the colonists, when they decided to make the break with the mother country, to drift with the tide of popular narrowness so long as their own fortunes and positions were secure. But their leadership was of better stuff. Even while, and though, revolutionary armies were being recruited by an old familiar appeal to bigotry, the founding fathers of our Nation were stripping things down to fundamentals, patiently placing principle before policy, drawing on the wisdom of all ages, adapting it and casting it into a new mold. They not merel, personally broke with previous bigotry but officially they began to build their policies on new principles of sane civic tolerance.

NECESSITY OF GOD

In their Declaration of Independence, they announced a Government which recognized God as the source of authority and the fountain-head of the rights of man, rights which must be respected by just governments everywhere. Ancient Greece and Rome, the medieval Italian republics, the social philosophy of the great European kingdoms, the political theories of the British Constitution, all gave of their experience and their theories to the founding fathers, but they gave that previous history a fresh note and a new departure when they actually set up a government on the acceptance of the inalienable rights of man as a self-evident truth, a truth admitting of neither qualification nor debate.

There was another premise, however, basic to their new thought. From one point of view, the character of our Nation might be truly called a declaration of dependence—of dependence on God. It is a way of saying that without God there can be no true democracy. The Declaration is the substance of our Government, and the substance of that Declaration is its insistence upon the God-given character of the rights of man. That doctrine is the soul that gives America its characteristic breath of life.

Now we are fighting, nation against nation, in global warfare, to save that soul—to save it for ourselves, to make it possible for others. We know only too well that the world has brought sorrow and desolation upon itself by forgetting God and glorifying man as man, supreme and omnipotent. Analyze the ideologies that threaten us: Nazism glorifies man in race. Communism glorifies man in the masses. Fascism glorifies man in the mere citizen of the state. Shintoism glorifies man in the god-emperor. These are the ugly philosophies behind the forces that attacked us—against which we are fighting, we who believe that "all men are created equal, that they are endowed by their Creator with certain inalienable rights." Make no mistake about the outcome of this war. Despite our recent victory, the war is still lost unless it succeeds in maintaining for ourselves and for the world the everlasting principles enshrined in our Declaration of Independence. One of these is the doctrine of the divine origin of the rights of man. Another is the human duty of acknowledging the rights of God.

Some day our armed forces will defeat our last enemy. Then, when the power of our totalitarian foes has been overthrown, we shall rejoice that our homes and our altars will be safe. But will they be safe in any permanent sense? Can we be sure? It might be wiser to say: "Our homes and our altars will be safe unless someone destroys them from within." That possibility still exists.

STANDARD OF MORALITY

Here is a paradox to consider. On several foreign fronts Americans have fought and are fighting with the zeal of crusaders to preserve the God-given rights of man. But on the home front, meanwhile, men and women—many men and many women—are abandoning the standards of morality which protect those rights, are making a mockery of that "pursuit of happiness" which should be the exercise of those rights, sometimes even presuming to use as their excuse for their actions the demands which wartime acceleration makes upon their health and nervous systems.

About 100 years ago a certain political faction died a quiet death after its members became known as "barn burners." The name came from the well-publicized act of a misguided farmer who, with more zeal than intelligence burned down his barn to get rid of rats. I am sorry to note evidence that there are barn burners aplenty among us. Our victory over the Axis will be hollow, indeed, if in winning it we wilfully sacrifice at home the very things that we fought abroad to save.

Concentrating upon the defeat of the enemy, we may lose sight of our ultimate goal: to remain a strong Nation living in accordance with a definite set of principles and a definite moral code. Such a Nation we have hitherto been, especially when the training ground of our sound citizenry was the home, when God-fearing parents reared God-fearing children in His love, and dedicated the home to the exalted service God Himself assigned to it. It needs but a moment's reflection to see that certain aspects of the war program are fraught with danger to this unit—this cell—of society. Juvenile delinquency, increase of major crimes, divorce, defeatism, excessive luxury, and the rapid rise of communism and other subversive systems of thought are at work tearing down the very sources of our strength, blasting the ideals we proclaimed so passionately as we asked our best boys to go forth to fight and die for them on distant battlefields.

Five years ago I used to hear much talk about the American way of life. You and I know boys who gladly died for what they then heard about it. I must confess to a certain uneasiness when I now hear less often about it. Can it be that those who stayed at home are less willing to live by that tradition than those who went abroad were willing to die for it?

To lay the blame for the appalling conditions in our society on the war is to cloud the issue and shirk our own responsibility. The war only aggravated a case of moral anemia from which we had been suffering ever since first we began to exclude God from our lives. We are paying now for this, our initial crime. No people ever denied God without eventually turning on their fellowmen. The convenient example of the moment—the horrible example, if you will—is, of course, the Nazi state. A distinguished Jewish columnist recently gave a flawless analysis of the religious, or rather the irreligious, roots of Nazism. It is worth repeating here tonight, for its application is universal. Wherever Christian nations diminish or deny their integral faith because of their attachment to any doctrine or practice inconsistent with that faith, immediately the seeds of destruction are sown. George Sokolsky writes that it was his emphasis on race—a non-Christian emphasis—that forced Hitler to hate not Judaism alone, but Christianity. "He could not imagine that the intellectually dominating forces of Western civilization, the Old and New Testaments, were written by men who were not Aryans. If the apostles were Jews, how could Christianity be anything but offensive to Aryans? If Christ came from among those peoples, Christ must be inferior to Thor. The emphasis here is not anti-Jew. If we are to understand the confusions in Hitler's mind, it must be pro-Aryan, pro-Nordic. In a word, everything in history that is not Aryan, not German, was, to his mind, trash."

WAR AGAINST GOD
